DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2005

WEDNESDAY, FEBRUARY 4, 2004

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

MILITARY POSTURE

The committee met, pursuant to notice, at 9:34 a.m. in room HR–2118, Rayburn House Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Roberts, Sessions, Collins, Ensign, Talent, Chambliss, Graham, Dole, Cornyn, Levin, Kennedy, Reed, Akaka, Bill Nelson, Ben Nelson, Dayton, Bayh, Clinton, and Pryor.

Committee staff members present: Judith A. Ansley, staff director; Marie Fabrizio Dickinson, chief clerk; Cindy Pearson, assistant chief clerk and security manager; and Leah C. Brewer, nominations and hearings clerk.

Majority staff members present: Charles W. Alsup, professional staff member; L. David Cherington, counsel; Regina A. Dubey, research assistant; Brian R. Green, professional staff member; William C. Greenwalt, professional staff member; Ambrose R. Hock, professional staff member; Gregory T. Kiley, professional staff member; Thomas L. MacKenzie, professional staff member; Elaine A. McCusker, professional staff member; Lucian L. Niemeyer, professional staff member; Paula J. Philbin, professional staff member; Lynn F. Rusten, professional staff member; Joseph T. Sixeas, professional staff member; Scott W. Stucky, general counsel; Diana G. Tabler, professional staff member; and Richard F. Walsh, counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Daniel J. Cox, Jr., professional staff member; Madelyn R. Creedon, minority counsel; Kenneth M. Crosswait, professional staff member; Gabriella Eisen, research assistant; Evelyn N. Farkas, professional staff member; Richard W. Fieldhouse, professional staff member; Creighton Greene, professional staff member; Jeremy L. Hekhuis, professional staff member; Bridget W. Higgins, special assistant; Maren R. Leed, professional staff member; Gerald J. Leeling, minority counsel; Peter K. Levine, minority counsel; and William G.P. Monahan, minority counsel.

Staff assistants present: Michael N. Berger, Andrew W. Florell, and Sara R. Mareno.

Committee members' assistants present: Christopher J. Paul, assistant to Senator McCain; Arch Galloway II, assistant to Senator Sessions; James P. Dohoney, Jr. and Derek J. Maurer, assistants to Senator Collins; Lindsey R. Neas, assistant to Senator Talent; Clyde A. Taylor IV, assistant to Senator Chambliss; Aleix Jarvis and Meredith Moseley, assistants to Senator Graham; Christine O. Hill, assistant to Senator Dole; Russell J. Thomasson, assistant to Senator Cornyn; Sharon L. Waxman, Mieke Y. Eoyang, and Jarret A. Wright, assistants to Senator Kennedy; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; William K. Sutey, assistant to Senator Bill Nelson; Eric Pierce, assistant to Senator Ben Nelson; Todd Rosenblum, assistant to Senator Bayh; Andrew Shapiro, assistant to Senator Clinton; and Terri Glaze, assistant to Senator Pryor.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good morning, everyone. I am not sure what the precedents are for the Senate Armed Services Committee commandeering the other body's chamber, but nevertheless, sitting up here, I feel somewhat like a bishop. A very impressive setting. I thank my distinguished friend, the chairman of the House Armed Services Committee, Duncan Hunter; and the ranking Democrat, another dear friend, Ike Skelton; and Robert Rangel, the staff director.

The committee meets today to receive annual testimony from the Secretary of Defense and the Joint Chiefs of Staff—this morning represented by the Vice Chairman, General Pace, in the absence of General Myers, who had the untimely loss of his brother, Chuck Myers.

Senator MCCAIN. Mr. Chairman, I do not think we have order here.

Chairman WARNER. I think you have a point, and I cannot judge from the noise up here. We will ask the audience to refrain from conversation, please. Thank you.

We are to receive the posture of the United States Armed Forces and President Bush's defense budget request for fiscal year 2005 and the Future Years Defense Program (FYDP). Secretary Rumsfeld and Vice Chairman Pace, we welcome you again back before the committee and commend you once again for the outstanding leadership that you both continue, as a team, to provide our Nation and to our men and women in uniform and their families.

There are few precedents for the challenges you face in this post-September 11 world, but in every way you have met the challenges.

I start today by recognizing the men and women of the Armed Forces of the United States who, together with a coalition of nations, liberated Iraq, a country larger than Germany and Italy combined, in roughly 3 weeks. This combined force accomplished this with unprecedented precision and casualties were far below the estimates. Nevertheless, we grieve each and every one who was lost or wounded and express our compassion to their families.

Iraq, a nation that for decades had known only tyranny and oppression, is now moving forward to a future of freedom and opportunity for all of its people.

While the mission of the U.S. and the coalition forces continues in Iraq, much has been accomplished since Operation Iraqi Freedom began last March. The world is a safer place and Iraq is a better place because, along with many nations, the U.S. confronted a brutal dictator who has defied the mandates of the international community for over a decade.

Disagreements will continue about the process and the timing of the decision to use force, but on one thing there can be no disagreement: the professionalism, the performance, and the sacrifices of the men and women in uniform were, are, and always will be inspiring. Every American is justifiably proud of the U.S. Armed Forces. The security of the United States of America is in good hands today with its military.

As we meet this morning, hundreds of thousands of our service members are engaged around the world and here at home, defending our Nation in Operation Enduring Freedom, Operation Iraqi Freedom, and other military operations in the ongoing global war on terrorism. These brave men and women and their families deserve our continued support, and they will get it from this committee—the equipment, the resources, the support they need to perform their missions today and tomorrow and into the future.

We must remember that defense of our homeland begins on the distant battlefields of the world. Our forward-deployed forces are and will remain our first line of defense. This committee's responsibility will continue to be to ensure that these troops remain the best equipped, the best trained, and the most capable forces in the world.

I am encouraged by my initial review of the President's defense budget for the fiscal year 2005. This request of $401.7 billion for the Department represents a 5-percent increase over the fiscal year 2004 authorized level and the fourth straight year of growth for the defense budget. This sends a strong signal to the world of America's commitment to freedom, and the President and you, Mr. Secretary, deserve special recognition because we know the competitive forces in our budget today. But to get this increase was necessary.

As Congress works its will on the budget request, we must be mindful of potential problems. We are putting increased demands on our forces around the world, increased demands on their families, and increased demands on our Reserve and National Guard. We are blessed with a military that is responding to these demands with extraordinary commitment, but even the best military has its limits.

As we proceed with the hearing today—and I am going to ask unanimous consent that the full balance of my statement be included in the record—we are learning of the President's initiative to strengthen America's Intelligence Community. I commend the President for this leadership, and we await greater details about the commission envisioned and its membership. In testimony before this committee last week, Dr. David Kay, former Special Adviser to Director Tenet, told us that, based on the findings to date of the Iraq Survey Group (ISG)—that is the military force in country conducting the survey—prewar estimates about large stockpiles of weapons of mass destruction (WMD) may have been incorrect.

As Dr. Kay stated, "We were almost all wrong, and I certainly include myself there."

While that is one serious finding to date, he also told us of positive findings: that the ISG had discovered a quantum of evidence that includes evidence of Saddam Hussein's intent to pursue a WMD program on a large scale; evidence of actual and ongoing chemical and biological research programs; evidence of an active program to use the deadly chemical ricin as a weapon, a program that was only interrupted by the start of the war in March; evidence of ballistic missile programs that clearly violated terms of the United Nations (U.N.) Security Council resolution; and there was much more.

The work of the ISG under General Dayton and Mr. Duelfer continues. Final judgments should in fairness await the outcome of their work.

Dr. Kay also told us that he had found absolutely no evidence of any intelligence analyst being pressured to change or exaggerate any intelligence conclusions. On the contrary, he reminded us all that the basic assessment of Iraq's WMD holdings had been consistent since 1998, when U.N. inspectors left Iraq. Dr. Kay as well as many others have reminded us that intelligence efforts often differ from what is later actually found on the ground. The important thing is when they differ to understand why.

Based on the intelligence available to the President, not only U.S. intelligence but that of the U.N. and other nations, Dr. Kay felt that the President could have reached no other conclusion: Iraq had caches of chemical and biological weapons, had used them in the past, and was likely to use them in the future.

As Dr. Kay stated, "It was reasonable to conclude that Iraq posed an imminent threat. What we learned during the inspection made Iraq a more dangerous place potentially than in fact we thought it was even before the war."

As I stated earlier, the world is a safer place and Iraq is a better place because a real and growing threat has been eliminated. We did the right thing at the right time to rid Iraq of this brutal regime.

There are currently six ongoing investigations—the President's contemplated commission would be the seventh—concerning Iraqi WMD programs, including, most importantly, the ISG. As I mentioned, it is an ongoing operation, fully funded by Congress. It is under the direction of General Dayton and Charles Duelfer. It is important that the work of these investigations be completed, and I hope that we will receive from the Secretary some estimates of the timetable in which that is likely to be done.

An independent panel can build on the good work already begun and ultimately contribute to the recommendations on how to make our Intelligence Community stronger and more effective.

The security of our troops in harm's way and of our Nation will be improved by these reviews. I wish to commend the distinguished chairman of the Intelligence Committee. I am privileged to serve on that committee with him, and I believe that that committee has done notable work, and perhaps you will comment on that in the course of the hearing.

Mr. Secretary, I hope you can address your views on these issues related to the Iraqi WMD and the current situation in Iraq in your opening testimony. For example, the President's National Security Adviser, Condoleezza Rice, stated, "There are differences between what we knew going in and what we found on the ground." The question to you is, what steps are you taking to ensure that the ongoing intelligence activities of defense intelligence agencies, particularly the Defense Intelligence Agency (DIA) and the National Security Agency (NSA), are as complete and analytically rigorous as possible?

We must bear in mind that a lot of focus is on the Central Intelligence Agency (CIA) and George Tenet, but our distinguished witness today has under his jurisdiction a very considerable component of the Intelligence Community.

Mr. Secretary, are you beginning to examine your prewar planning and preparation in light of the findings we know to date? There have been public accusations of manipulation or exaggeration of prewar intelligence by policymakers. You are among the first of the administration witnesses to testify before Congress on this subject. I say to you most respectfully, how do you respond?

I have been privileged to have known you and worked with you for I suspect over 30 years and, speaking for myself, I have absolutely 100 percent confidence in your integrity. But you should look us square in the eye and give us your own views on this subject.

Mr. Secretary, the plan as laid down by Ambassador Bremer and approved by the Iraqi Governing Council calls for a series of steps over the next few months culminating in the transfer of sovereignty to Iraqi authority on June 30 of this year. Are these milestones and final target dates achievable? What significant challenges remain? What accommodations are being made to ensure our troops can continue to operate and the ISG can continue its important work in a sovereign nation, presumably, after this transfer on the 30th?

Again, gentlemen, we welcome you. General Pace, we will have the opportunity to hear your testimony and your views, and I would certainly invite you to make any comments that you wish to make about the WMD program.

Senator Levin.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

The committee meets today to receive annual testimony from the Secretary of Defense and the Joint Chiefs of Staff on the posture of the U.S. Armed Forces and President Bush's defense budget request for fiscal year 2005 and the Future Years Defense Program.

Secretary Rumsfeld and Vice Chairman Pace, we welcome you back before the committee and commend you, once again, for the outstanding leadership you both continue, as a team, to provide our Nation and to our men and women in uniform and their families. There are few precedents for the challenges you face in this post-September 11 world, but you have been equal to the task.

I start today by recognizing the men and women of our Armed Forces who, together with a coalition of nations, liberated Iraq, a country larger than Germany and Italy combined, in roughly 3 weeks. This combined force accomplished this with unprecedented precision and casualties far below estimates. Iraq, a nation that for decades had known only tyranny and oppression, is now moving forward to a future of freedom and opportunity for all of its people.

While the mission of U.S. and coalition forces continues in Iraq, much has been accomplished since Operation Iraqi Freedom began last March. The world is a safer place, and Iraq is a better place, because, along with many nations, the U.S. confronted a brutal dictator who had defied the mandates of the international community for over a decade. Disagreements will continue about the process and timing of the decision to use force, but on one thing there is no disagreement: the professionalism, performance, and sacrifice of our troops was, is, and always will be, inspiring. Every American is justifiably proud of the U.S. Armed Forces. The security of America is in good hands with today's military.

As we meet this morning, hundreds of thousands of our service members are engaged around the world and here at home, defending our Nation in Operation Enduring Freedom, Operation Iraqi Freedom, and other military operations in the ongoing global war on terrorism. These brave men and women, and their families, deserve our continued support. They will get it from this committee—the equipment, the resources, the support they need to perform their missions.

As President Bush remarked when he signed last year's Defense Authorization Act in November:

> "Every member of the United States military is now involved in a great and historic task. The stakes for our country could not be higher. We face enemies that measure their progress by the chaos they inflict, the fear they spread, and the innocent lives they destroy. America's military is standing between our country and grave danger. You're standing for order and hope and democracy in Afghanistan and Iraq. You're standing up for the security of all free nations, and for the advance of freedom."

Our President continues to provide the strongest of leadership.

We must remember that defense of our homeland begins on the distant battlefields of the world. Our forward deployed forces are—and will remain—our first line of defense. This committee's responsibility will continue to be to ensure that these troops remain the best equipped, best trained, most capable forces in the world.

It is critical that we fully honor the service of our men and women in uniform, and that we keep faith with their dedication to duty through adequate pay raises, timely modernization of equipment and facilities, and sustained investment in those programs that enhance the quality of life of our service personnel and their families.

I am encouraged by my initial review of the President's defense budget request for fiscal year 2005. This request of $401.7 billion for the Department represents a 5-percent increase over the fiscal year 2004 authorized level, and the fourth straight year of growth for the defense budget. This sends a strong signal to the world of America's commitment to freedom.

As Congress works its will on this budget request, we must be mindful of potential problems. We are putting increased demands on our forces around the world, increased demands on their families, and increased demands on our Reserve and National Guard. We are blessed with a military that has responded to these demands with extraordinary commitment, but even the best military has its limits.

As we perform our annual budget review, we must—and we will—carefully analyze the effects of these challenges on our men and women in uniform, and their families. Congress will, I am confident, make the investments needed to ensure we have the people and the capabilities necessary to meet these challenges.

There will be many questions. To assist Congress, I hope you can address some of these questions in your testimony this morning, including:

- Do we have enough people, the right mix of people, and the capabilities in the Armed Forces to meet the threats of the foreseeable future?
- Are we doing all we can to ensure that our forces deployed overseas—both active and Reserve components (RC)—have the best possible equipment and support?
- Are the lessons learned from recent military operations being rapidly shared and integrated across the entire force and with our allies?
- What increased role can we realistically expect NATO and other nations to play in the global war on terrorism?
- As we reposition forces to meet new global threats, do we have the facilities, infrastructure, and mobility assets we will need?

These are but a few of the complex issues we must work on together to solve in the months and years ahead.

As we proceed with this hearing today, we are learning of the President's initiative to strengthen America's intelligence community. I commend the President for his leadership.

In testimony before this committee, last week, Dr. David Kay, former Special Advisor to Director Tenet, told us that, based on the findings of the Iraq Survey Group,

to date, prewar estimates about large WMD stockpiles may have been wrong. As Dr. Kay stated, ". . . we were almost all wrong, and I certainly include myself here." While that is one serious finding, to date, he also told us that the ISG had discovered a quantum of evidence, that includes:

- evidence of Saddam Hussein's intent to pursue WMD program on a large scale;
- actual, ongoing chemical and biological research programs;
- an active program to use the deadly chemical "ricin" as a weapon a program that was only interrupted by the start of the war in March; and,
- evidence of ballistic missile programs that clearly violated the terms of U.N. Security Council Resolutions.

Dr. Kay also told us that he had found absolutely no evidence of any intelligence analyst being pressured to change or exaggerate any intelligence conclusions. On the contrary, he reminded us all that the basic assessment of Iraq's WMD holdings had been consistent since 1998, when U.N. inspectors left Iraq. Dr. Kay, as well as many others, have reminded us that intelligence efforts often differ from what is actually found on the ground later. The important thing is when they differ, to understand why.

Based on the intelligence available to the President not only U.S. intelligence but that of the U.N. and other nations, Dr. Kay felt that the President could have reached no other conclusion: Iraq had caches of chemical and biological weapons, had used them in the past, and was likely to use them in the future. As he stated, ". . . it was reasonable to conclude that Iraq posed an imminent threat. What we learned during the inspection made Iraq a more dangerous place, potentially, than, in fact, we thought it was even before the war."

As I stated earlier, the world is a safer place and Iraq is a better place because a real and growing threat has been eliminated. We did the right thing to rid Iraq of this brutal regime.

There are currently six ongoing investigations concerning Iraqi WMD programs, including the work of the Iraq Survey Group funded by Congress and under the direction of General Dayton and Charles Duelfer. It is important that the work of these investigations be completed. An independent panel can build on the good work already begun and, ultimately, contribute to the recommendations on how to make our intelligence community stronger and more effective. The security of our troops in harm's way and of our Nation will be improved by these reviews.

I hope you can address your views on these issues related to Iraqi WMD and the current situation in Iraq in your opening testimony. For example:

- The President's National Security Advisor, Condoleeza Rice, has stated, ". . . there are differences between what we knew going in and what we found on the ground." What steps are you taking to ensure that the ongoing intelligence activities of Defense intelligence agencies particularly DIA and NSA are as complete and analytically rigorous as possible?
- Are you beginning to examine your pre-war planning and preparation in light of the findings we know, to date?
- There have been public accusations of manipulation or exaggeration of pre-war intelligence by policy makers. You are among the first in the administration to testify before Congress on this subject. How do you respond to these accusations?
- The plan, as laid down by Ambassador Bremer and approved by the Iraqi Governing Council calls for a series of steps over the next few months, culminating in a transfer of sovereignty to Iraqi authority on June 30 of this year. Are these milestones and final target date achievable? What significant challenges remain?
- What accommodations are being made to ensure our troops can continue to operate, and the ISG can continue its important work, in a sovereign nation after this transfer of sovereignty?

Again, gentlemen, I thank you for your service. Your continued commitment to our uniformed and civilian personnel and their families, your leadership during time of war, and your focus on preparing our Armed Forces to meet the threats of the future have greatly enhanced our national security.

Senator Levin.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Thank you, Mr. Chairman.

Let me first join you in welcoming Secretary Rumsfeld, General Pace, and Dr. Zakheim back to the Armed Services Committee for

their annual posture hearing. Much has happened in the world since our last posture hearing. The rapid advance of our Armed Forces in Operation Iraqi Freedom (OIF) and the total collapse of the Iraqi regime stand as a testament to the courage and to the dedication of our men and women in uniform, who remain by far the best trained, best equipped, and most capable military force in the world today. They are the standard against which all other military forces are measured.

Unfortunately, military operations in Iraq did not come to an end with the President's announcement on May 1. In early July, General Tommy Franks announced that continued violence and uncertainty in Iraq would make significant reductions in U.S. force levels unlikely for the foreseeable future. Six months later, we still have roughly 125,000 troops in Iraq, with almost 180,000 more serving in support roles outside of the country. We are in the process of rotating in fresh units to ensure that we will be able to sustain this presence for years to come.

The current rotation of U.S. forces into Iraq will result in a drawdown to 110,000 troops. The drawdown is based upon the belief that Iraqi police in the Iraqi Civil Defense Corps (ICDC) will be able to take the lead in providing security in Baghdad and other Iraqi cities. I am concerned that this will set the Iraqi security forces up for failures, as there is a real question as to whether they are ready to take on and defeat the insurgents who are targeting Iraqis as well as U.S. and other coalition forces.

The new Iraqi army, whose mission is limited to external defense, will not have a role in providing domestic security for their fellow citizens. I remain convinced, as I have written to Secretary Rumsfeld, the President, and others in the administration, that the recall of units of the Iraqi army at the middle grade and below would have been a better way to help handle the insurgent threat.

Our troops in Iraq face extremely hazardous conditions, including improved explosive devices, ambushes, car bombs, mortar attacks, and shoulder-fired antiaircraft missiles.

In addition, roughly 10,000 American troops continue to engage in military operations against hostile forces in Afghanistan. Tens of thousands more soldiers, sailors, airmen, and marines are deployed in Korea and other hot spots around the world, including numerous countries that had not seen an American in uniform before September 11, 2001.

Congress and the American people will provide the support that is needed by our troops in the field. In less than a year, we have enacted two emergency supplemental appropriation acts, for $62 billion and $87 billion, to cover the costs of our operations in Iraq and Afghanistan. It has been reported that an additional supplemental appropriation of $50 billion to $55 billion will likely be required to fund continued operations over the next fiscal year.

I have no doubt that if our troops need the money Congress will provide it. However, that money should have been part of the budget before us, not left to a supplemental and therefore not part of the projected budget deficit. A fair deficit projection would have included those costs since we are planning on those costs.

The pace of operations has placed a great strain on our forces. We have seen the imposition of stop-loss requirements to prevent

troops from leaving the force when their term of service is finished. Some have been deployed for extended periods, and some have been deployed repeatedly. Some units have been told that they would be going home soon, only to have their tours of duty extended. Others have been denied clear information about when their deployments would end. In the last 2½ years, we have seen the largest sustained call-ups of National Guard and Reserve components since the establishment of an all-volunteer military force.

A year ago, as our Nation was being prepared to go to war in Iraq, a number of us expressed the view that our cause would be strongest and our long-term success would be more certain if we actively solicited the support of the international community. While America's Armed Forces have proven and continue to prove every day that they are ready to take on any military challenge anywhere in the world, I continue to believe that we are paying a steep price for the failure to obtain the political support of the international community, which would make the occupation one of the world community, to include Muslim nations, and not just an occupation by Western nations. It would therefore be less difficult and less dangerous.

The strains on our Armed Forces are very real. Concerns about morale and potentially about recruitment and retention are real. The risks posed to our Guard and Reserve system are real. These are issues that we must do everything in our power to help address.

Finally, in the wake of the testimony of Chief Weapons Inspector Dr. David Kay, who concluded that the prewar intelligence on Iraqi WMD was fundamentally wrong, this committee has a particular responsibility to look into how intelligence failures affected planning for and the conduct of Operation Iraqi Freedom. I am deeply concerned that my request to the Department of Defense (DOD) for information concerning the impact that intelligence had on the planning for and the conduct of Operation Iraqi Freedom has so far been denied by the Department.

My specific request was for a briefing on the planning process generally, including how the intelligence affected that planning, and an overview of the final approved war plan for Operation Iraqi Freedom to the extent that it can be shared with Congress.

I am also concerned that it has taken so long for the Department to respond to my request of November the 25th of last year for information relating to the Office of Special Plans, which was established by Under Secretary Feith and which reportedly involved the review, analysis, and promulgation of intelligence outside of the U.S. Intelligence Community.

My specific request in the case of the Office of Special Plans was for documents relating to the establishment, functions, and responsibilities of that office and the Policy Counterterrorism Evaluation Group, and for documents produced by either of those two entities, a list of personnel directly related to those two offices, and communications from those two offices to key agencies.

Finally, this morning apparently some of the information was delivered to us. But after, just at a quick perusal of that information, we also see that much of what we asked for is still being denied by the Department, and that is simply indefensible. We have an ob-

ligation and a responsibility to oversee the operations of this Department. I have been repeatedly promised that information by Mr. Feith and there just was no justification for the long delay in forwarding what information came to us this morning. I do hope, Mr. Secretary, that you will straighten this out for us.

I look forward to the testimony of our witnesses and I welcome them all back to this committee.

Chairman WARNER. Thank you, Senator Levin.

Mr. Secretary.

STATEMENT OF HON. DONALD H. RUMSFELD, SECRETARY OF DEFENSE; ACCOMPANIED BY HON. DOV S. ZAKHEIM, COMPTROLLER, DEPARTMENT OF DEFENSE; GEN. PETER PACE, USMC, VICE CHAIRMAN, JOINT CHIEFS OF STAFF; HON. STEVEN CAMBONE, UNDER SECRETARY FOR INTELLIGENCE; AND HON. DAVID S.C. CHU, UNDER SECRETARY FOR PERSONNEL AND READINESS

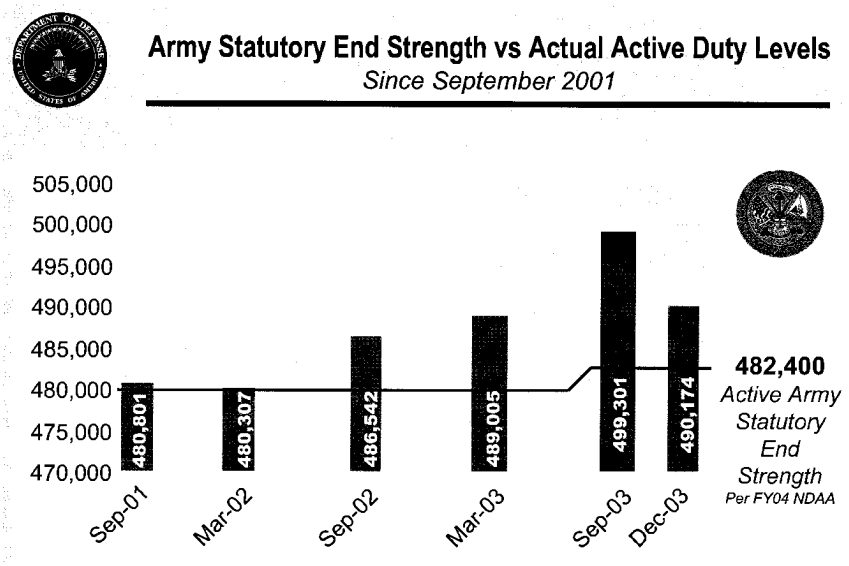
Secretary RUMSFELD. Thank you very much, Mr. Chairman, members of the committee. I appreciate this opportunity to testify on our DOD budget and request that my full statement be included in the record.

I, too, regret that General Myers could not be with us today because of the loss of his brother. I have, in addition to General Pace and Dr. Zakheim, brought two individuals, two under secretaries, along in the event that there are questions on the intelligence side or on the force level side. Dr. David Chu is here and is available, and Dr. Steve Cambone. Dr. Chu of course is the Under Secretary for Personnel and Readiness, and Dr. Cambone is the Under Secretary for Intelligence.

I, too, want to commend the courageous men and women in uniform and also the civilians in the DOD that serve all over the globe as well. What they have accomplished since our country was attacked 28 months ago is truly impressive. They have helped to overthrow 2 terrorist regimes, to capture or kill 45 of the 55 most wanted in Iraq, including Saddam Hussein and his sons, to capture or kill close to two-thirds of known senior al Qaeda operatives, and to disrupt terrorist cells on several continents. We value their service, their sacrifice, and the sacrifice of their families as well.

When this administration took office 3 years ago, the President charged us to change the status quo and prepare the Department to meet the new threats of the 21st century. To meet that charge, we have fashioned a new defense strategy, a new force sizing construct, a new approach to balancing risks. We have issued a new unified command plan, taken steps to attract and retain the needed talent in our Armed Forces, including targeted pay raises and quality of life improvements for the troops and their families.

We have instituted what we believe to be more realistic budgeting so that the Department now looks to budget supplementals for unknown warfighting costs and not to simply sustain readiness. We have completed a nuclear posture review. We have transformed the way the Department prepares its war plans. We have adopted a new lessons-learned approach during Operation Iraqi Freedom and undertaken a comprehensive review of our global force posture. With your help, we are establishing the new National Security Per-



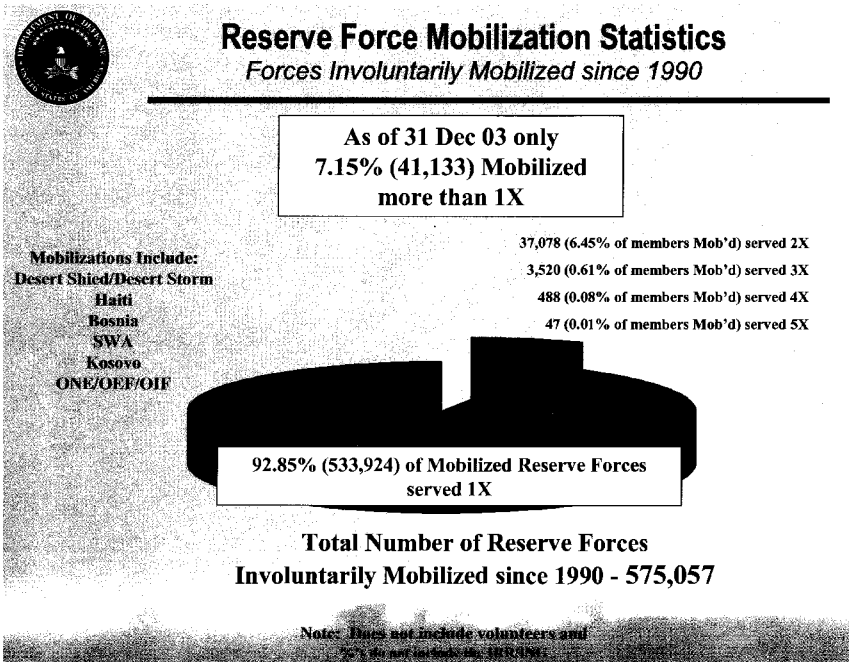
sonnel System (NSPS) that should better enable us to manage our 746,000 civilian employees.

The scope and scale of what has been done, what has been accomplished, and what has been initiated is substantial. Our challenge is to build on these efforts even as we fight the global war on terror.

One effect of the global war on terror has been a significant increase in operational tempo and an increased demand on the force. To manage the demand on the force, we have to first be very clear about what the problem really is, so that we can work together to fashion appropriate solutions.

The increased demand on the force we are experiencing today is, we believe, very likely a spike, driven by the deployment of 115,000 troops in Iraq. For the moment, the increased demand is real, and we have taken a number of immediate actions. We are increasing international military participation in Iraq. We have accelerated the training of Iraqi security forces, now more than 200,000 strong. Our forces are hunting down those who threaten Iraq's stability and transition to self-reliance.

Another way to deal with the increased demand on the force is to add more people. Well, we have already done so—we might want to put up a chart there——



—a fact that many people seem not to understand. Using the powers granted by Congress, we have already increased Active-Duty Force levels by nearly 33,000 above pre-emergency authorized end strength. We have done this over the past 2 years, as you can see. If the war on terror demands it, we will not hesitate to increase force levels even more using those emergency authorities provided by Congress.

But it should give us pause that even a temporary increase in our force levels was and remains necessary. Think about it. At this moment we have a pool of about 2.6 million men and women, active and Reserve. Yet the deployment of 115,000 troops in Iraq has required that we temporarily increase the size of the force by 33,000. That suggests strongly that the real problem is not the size of the force per se, but rather the way the force has been managed and the mix of capabilities at our disposal. It suggests that our challenge is considerably more complex than simply adding more troops.

General Pete Schoomaker, the Army Chief of Staff, compares the problem to a rain barrel in which the spigot is near the top. When you turn the spigot on, it only draws off the water at the very top. The task—you have two choices: You can either increase the size of the barrel and leave the spigot where it is or you can lower the spigot and start drawing on the contents of the entire barrel.

The answer in my view is most certainly not a bigger rain barrel. The answer is to move the spigot down so that all the water is accessible and can be used and so that we can take full advantage of the skills and talents of everyone who serves in the Guard and Reserve.

Another chart, please, Commander.

I do not know if you can see that up there. But I keep hearing people talk about the stress on the Guard and the Reserve. The fact is that since September 11, 2001, we have mobilized only 36 percent of the Selected Reserve, a little over one-third of the available forces in the Selected Reserve. But while certain skills are in

demand, as the chart shows, only a very small fraction of the Guard and Reserve, just 7.15 percent, have been involuntarily mobilized more than once since 1990, 13 years ago. Over 13 years we have mobilized only 7.15 percent of the Guard and Reserve involuntarily more than once.

That means that the same people are getting stressed and they are getting used and used, but the vast majority of the Guard and Reserve are not being used. Over 60 percent have not been mobilized to fight the global war on terror. Indeed, I am told that a full 58 percent of the current selected Reserve, or about 500,000 troops, have not been involuntarily mobilized in the past 10 years.

Now, what does that tell us? First, it argues that we have too few Guard and Reserve Forces with the skill sets that are in high demand. We obviously, therefore, have too many Guard and Reserve Forces with skill sets that are in little or no demand.

Second, it indicates that we need to rebalance the skill sets within the Reserve components and also between the active and the Reserve components so that we have enough of the right kinds of forces available to accomplish the needed missions.

Third, it suggests that we need to focus on transforming the forces for the future, making sure we continue to increase the capability of the force, thus our ability to do more with the forces that we have. We are working to do just that.

In looking at our global force posture review, some observers had focused on the number of troops, tanks, and ships that we might add or remove from a given part of the world, Europe, Asia, or somewhere else. I would submit that that may well not be the best measure. If you have 10 of something, say ships, and you reduce the number by 5, you end up with half as many. But if you replace the remaining half with ships that have double the capability, then you have really not reduced your capability even though the numbers have been reduced.

That is true of troops. That is true of aircraft. It is true of going from dumb bombs to precision bombs. Today the Navy is reducing force levels. Yet, because of the way they are arranging themselves, they will have more combat power available than they did when they had more people. In Operation Iraqi Freedom, the Navy surged more than half of the fleet to the Persian Gulf region for the fight. With the end of the major combat operations, instead of keeping two or three carrier strike groups forward, they quickly redeployed all their carrier strike groups to home base. By doing so they reset the force in a way that will allow them to surge over 50 percent more combat power on short notice to deal with future contingencies.

The result? Today six aircraft carrier strike groups are available to respond immediately to any crisis that might confront us—all while the Navy is moderately reducing the size of its Active Force.

The Army, by contrast, has put forward a plan that, by using emergency powers, will increase force levels by about 6 percent. Because of the way he will do it, the Army estimates that they will be adding, not 6 percent, but up to 30 percent more combat power. Instead of adding more divisions, Pete Schoomaker and the acting Secretary of the Army are focusing instead on creating a 21st cen-

tury modular army made up of self-contained, more self-sustaining brigades that are available to work for any division commander.

As a result, the intention is that 75 percent of the Army's brigade structure would always be ready in the event of a crisis. The Army plans will increase the number of active and Reserve brigades significantly over the next 4 years, but because we will be using emergency powers we will have the flexibility to reduce the number of active troops if, as, and when the security situation permits.

The point is this: The focus needs to be on more than just numbers. We should be focusing on finding ways to better manage the forces we have and on increasing the speed, agility, modularity, capability, and usability of those forces. Today DOD has several dozen initiatives under way to improve management of the force and to increase its capability. We are investing in new information age technologies and less manpower-intensive platforms and technologies.

We are working to increase the jointness of our forces, taking civilian tasks currently done by uniformed personnel and converting them into civilian jobs, freeing military personnel for military tasks. We have begun consultations with allies and friends about ways to transform our global force posture to further increase our capability. We are working to rebalance the active and Reserve components, taking skills that are found almost exclusively in the Reserves and moving forces out of low-demand specialties, such as heavy artillery, and into higher demand capabilities, such as Military Police, civil affairs, and Special Operations Forces.

A number of the members of the committee have served in the Guard and Reserve. Each of us knew when we signed up that it was not simply to serve 1 weekend and 2 weeks active duty. We signed up so that if war was visited on our country we would be ready to become part of the Active Force, and on September 11 war was visited on our country.

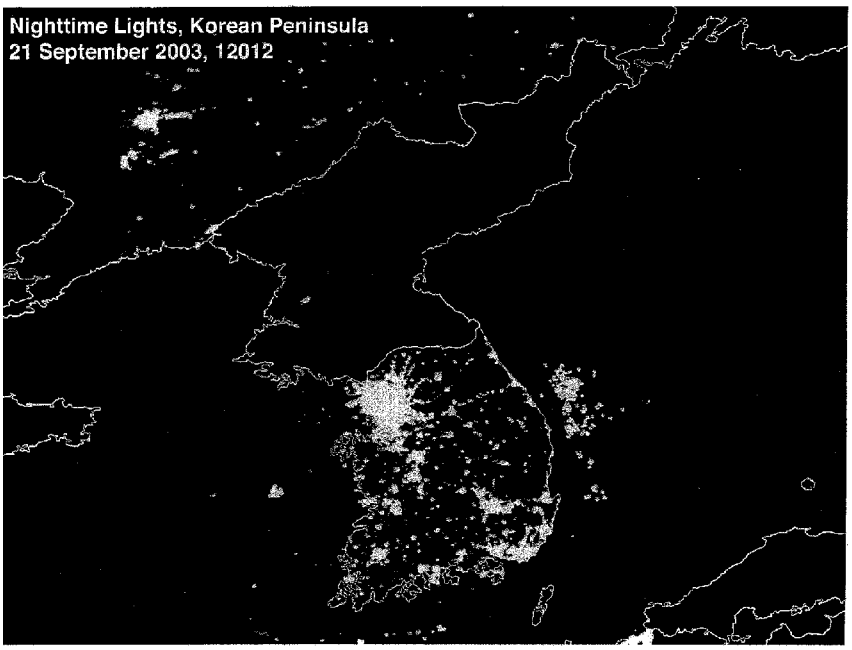
If we were not to call up the Guard and Reserves today, then why would we have them at all? This is the purpose of the Guard and Reserve. It is what they signed up for, and, God bless them, the vast majority are eager to serve, a fact borne out by the large number of those who stepped forward and volunteered to be mobilized for service in Afghanistan and in Iraq.

Our responsibility is to do everything we can to see that they are treated respectfully, managed effectively, and that we have the tools they need to win today's wars and to deter future conflicts.

Today, because DOD has the flexibility to adjust troop levels as the security situation may require, we believe that a statutory end strength increase will take away our flexibility to manage the force. First, if the current increased demand turns out to be a spike, the Department would face a substantial cost of supporting a larger force when it may no longer be needed.

Second, if we permanently increase statutory end strength, we will have to take the cost out of the DOD top line. That will require cuts in other parts of the defense budget—crowding out investments and the programs that will allow us to manage the force better and to make it more capable.

I urge Congress not to lock us into a force size and structure that may or may not be appropriate in the period ahead. During the period of the emergency, we have all the flexibility that is required and we have been using it.



The 2005 budget before you is in a real sense a request for a second installment on funding for the transformational priorities set out in the President's 2004 request. In 2005, we have requested $29 billion for investments in transforming military capabilities. We have requested additional funds to strengthen intelligence, including critical funds to increase DOD human intelligence capabilities, persistent surveillance, as well as technical analysis and information-sharing.

We have requested $11.1 billion to support procurement of nine ships in 2005. In all, the President has requested $75 billion for procurement in 2005 and $69 billion for research, development, testing, and evaluation.

We also need your continuing support for two initiatives that are critical to the 21st century transformation, the Global Posture Review and the Base Realignment and Closure (BRAC) Commission scheduled for 2005. These are important initiatives. We need BRAC to rationalize our infrastructure and the new defense strategy and to eliminate unneeded bases and facilities that are costing the taxpayers billions of dollars to support. We need the global posture changes to help us reposition our forces around the world so that they are stationed—not where the wars of the 20th century happened to end, but rather arranged in a way that will allow them to deter and, as necessary, defeat potential adversaries who might threaten our security or that of our friends and allies in the 21st century. These two are inextricably linked.

Mr. Chairman, the President has asked Congress for $401.7 billion for fiscal year 2005. It is an enormous amount of taxpayers' hard-earned money. Such investments will likely be required for a number of years to come because our Nation is engaged in a struggle that could well go on for a number of years. Our objective is to ensure that our Armed Forces remain the best trained, best equipped fighting force in the world and that we treat the volunteers who make up the force with the respect commensurate with their sacrifice and their dedication.

Before turning to questions, let me make some comments in response to your request on the subject of intelligence and WMD and the testimony that Dr. Kay presented to this committee. During my confirmation hearing before this committee, I was asked what would keep me up at night, and I answered, "Intelligence." I said that because the challenge facing the Intelligence Community today is truly difficult. Their task is to penetrate closed societies—and you might want to put that picture of a closed society up——

—and organizations and try and learn things our adversaries do not want them to know.

That is the Korean Peninsula. The Demilitarized Zone (DMZ) is the line in the middle. South Korea, the same people as in North Korea, has light. It is a satellite photo. It has light and energy and opportunity and a vibrant, democratic system. North Korea is a dark, dark country. The little dot of light to the left in the center of North Korea is Pyongyang.

So their task is to penetrate these closed societies and organizations, to try and learn things that our adversaries do not want them to know, the Intelligence Community, often not knowing precisely what it is that we need to know, while our adversaries know precisely what it is that they do not want them to know. That is a tough assignment.

Intelligence agencies are operating in a era of surprise, when new threats can emerge suddenly, with little or no warning, as happened on September 11. It is their task to try to connect the dots before the fact, not after the fact. It is hard enough after the fact, but they are trying to connect the dots before the fact so action can be taken to protect the American people.

They have to do this in an age when the margin for error is modest, when terrorist networks and terrorist states are pursuing weapons of mass destruction and the consequences of underestimating a threat could be the loss of potentially tens of thousands of lives. The men and women in the Intelligence Community have a tough and often thankless job. If they fail the world knows it, and when they succeed, as they often do, to our country's great benefit, their accomplishments often have to remain secret.

Though we cannot discuss those successes always in open session, it would be worth the committee's time to hear of them, and I hope and trust that the Director of Central Intelligence, George Tenet, will be able to make some of those recent examples of successes—and there have been many—public so that the impression that has and is being created of broad intelligence failures can be dispelled.

I can say that the Intelligence Community's support in Afghanistan and Iraq, as well as the global war on terror overall, have contributed to the speed, the precision, and the success of those operations and saved countless lives. We are blessed that so many fine individuals have stepped forward to serve in the Intelligence Community and are willing to work under great pressure and in more than a few cases risk their lives.

They faced a difficult challenge in the case of Iraq. They knew the history of the Iraqi regime, its use of chemical weapons on its own people and its neighbors. They knew what had been discovered during the inspections after the Persian Gulf War, some of which was far more advanced, particularly the nuclear program, than the pre-Gulf War intelligence had indicated. They were keen observers of the reports of the U.N. Special Commission (UNSCOM) in the 1990s. They and others did their best to penetrate the secrets of the regime of Saddam Hussein after the inspectors left in 1998.

It was the consensus of the Intelligence Community and of successive administrations of political parties and of Congress that reviewed the same intelligence and much of the international community, I might add, that Saddam Hussein was pursuing WMD. Saddam Hussein's behavior throughout that period reinforced that conclusion. He did not behave like someone who was disarming and wanted to prove he was doing so. He did not open up his country to the world, as Kazakhstan, Ukraine, and South Africa had previously done and as Libya is doing today.

Instead, he continued to give up tens of billions of dollars in oil revenues under U.N. sanctions when he could have had the sanctions lifted and received those billions of dollars simply by demonstrating that he had disarmed if in fact he had. Why did he do this?

His regime filed with the U.N. what almost everyone agreed was a fraudulent declaration and ignored the final opportunity afforded him by U.N. Security Council Resolution 1441. Why?

Congress and the national security teams of both the Clinton and the Bush administrations looked at essentially the same intelligence. They came to similar conclusions: the Iraqi regime posed a danger and should be changed. Congress passed regime change legislation in 1998. In the end, the coalition of nations decided to enforce the U.N.'s resolutions.

Dr. David Kay served in Iraq for some 6 months directing the work of the ISG and reporting to Director Tenet. He and the ISG have worked hard under difficult and dangerous conditions. They have brought forward important information. Dr. Kay is a scientist and an extremely well experienced weapons inspector. He has outlined for the committee his hypothesis on the difference between prewar estimates of Iraq's WMD and what has been found thus far on the ground.

While it is too early to come to final conclusions, as he indicated, given the work that is still to be done, there are several alternative views that are currently being postulated. First is the theory that WMD may not have existed at the start of the war. I suppose that is possible but not likely.

Second is that it is possible that WMD did exist but was transferred in whole or in part to one or more other countries. We see that theory put forward.

Third, it is possible that the WMD existed but was dispersed and hidden throughout Iraq. We see that possibility proposed by various people.

Next, that it is possible that WMD existed but was destroyed at some moment prior to the end—the beginning of the conflict—or that it is possible that Iraq had small quantities of biological or chemical agents and also a surge capability for rapid buildup and that we may eventually find it in the months ahead.

Or, finally, there is the theory that some have put forward that it could have been a charade by the Iraqis, that Saddam Hussein fooled his neighbors and fooled the world; or that Saddam Hussein fooled the members of his own regime; or that the idea that Saddam Hussein himself might have been fooled by his own people, who may have tricked him into believing that he had capabilities that Iraq really did not have.

These are all theories that are being put forward today. This much has been confirmed: The Intelligence Community got it essentially right on Iraq's missile programs. Iraq was exceeding the U.N.-imposed missile range limits and documents found by the ISG show evidence of high-level negotiations between Iraq and North Korea for the transfer of still longer-range missile technology. If we were to accept that Iraq had a surge capability for biological and chemical weapons, his missiles could have been armed with WMD and used to threaten neighboring countries.

It is the job of Dr. Kay's successor, as the chairman indicated, and the ISG to pursue these issues wherever the facts may take them. It is a difficult task. Think, it took us 10 months to find Saddam Hussein. The reality is that the hole he was found hiding in was large enough to hold enough biological weapons to kill thousands of human beings. Our people had gone past that farm several times—had no idea he was there. Unlike Saddam Hussein, such objects, once buried, can stay buried. In a country the size of California, the chances of inspectors finding something buried in the ground without their being led to it by people knowledgeable about where it was are minimal.

As Dr. Kay has testified, what we have learned thus far has not proven Saddam Hussein had what intelligence indicated and what we believed he had. But it also has not proven the opposite.

The ISG's work is some distance from completion. There are some 1,300 people in the ISG in Iraq working hard to find ground truth. When that work is complete, we will know more. Whatever the final outcome, it is important that we seize the opportunity to derive lessons learned to inform future decisions. In the DOD, the Joint Forces Command has done an extensive review of Operation Iraqi Freedom. The Intelligence Community is also looking at lessons learned. It is doing it under the leadership of Director Tenet

with Dr. Kerr. It is being done in other elements of the community as well.

It is important also that we step back and take a look at the bigger picture and see that U.S. intelligence capabilities are strengthened sufficiently to meet the threats and challenges of this century. The President has announced that he will be forming a bipartisan commission on strengthening U.S. intelligence capabilities. The commission will review the past successes of the Intelligence Community as well as the cases that have not been successes, to examine whether the Intelligence Community has the right skills, the proper resources, and the appropriate authorities to meet the challenges and the threats of the 21st century.

Intelligence will never be perfect. We do not, will not, and cannot know everything that is going on in this world of ours. If at this important moment we mistake intelligence for irrefutable evidence, analysts might become hesitant to inform policymakers of what they think they know and what they know that they do not know, and even what they think. Policymakers bereft of intelligence will find themselves much less able to make prudential judgments, the judgments necessary to protect our country.

I am convinced that the President of the United States did the right thing in Iraq, let there be no doubt. I came to my conclusions based on the intelligence we all saw, just as each of you made your judgments and cast your votes based on the same information. The President has sworn to preserve, protect and defend the Nation. With respect to Iraq, he took the available evidence into account; he took into account September 11; he took into account Saddam Hussein's behavior of deception; he took into account Iraq's ongoing defiance of the U.N. and the fact that he was still shooting at U.S. and U.K. aircraft and the crews that were enforcing U.N. resolutions in northern and southern no-fly zones; and he took into account the fact that this was a vicious regime that had used WMD against its own people and its neighbors and murdered and tortured the Iraqi people for decades.

The President went to the U.N. and the Security Council and passed a seventeenth resolution, and he came here to this Congress and, based on the same intelligence, you voted to support military action if the Iraqi regime failed to take that final opportunity to cooperate with the U.N.

When Saddam Hussein did pass up that final opportunity, the President nonetheless gave him an ultimatum, a final final opportunity to leave the country. Only then, when all alternatives had been fully exhausted, did the coalition act to liberate Iraq. Ours is a safer world today, and the Iraqi people are far better off for that action.

Senator Warner asked in his opening statement if I know of any pressure on intelligence people or manipulation of intelligence, and the answer is absolutely not. I believe that Senator Roberts has attested to that from the analysts and witnesses that he and his committee have interrogated over a period of many months. I believe that Dr. Kay answered exactly the same way—that he talked to analyst after analyst and no manipulation of the data and no indication of anyone expressing concern about pressure.

I thank you, Mr. Chairman, and I would be happy to turn it over to General Pete Pace.

[The prepared statement of Secretary Rumsfeld follows:]

PREPARED STATEMENT BY HON. DONALD H. RUMSFELD

INTRODUCTION

Mr. Chairman, members of the committee, I am pleased to be here today to discuss the progress in the global war on terrorism, our transformation efforts, and to discuss the President's 2005 budget request for the Department of Defense.

First, I want to commend the courageous men and women in uniform and the Department civilians who support them. They are remarkable—and what they have accomplished since our country was attacked 28 months ago is truly impressive. In less than 2½ years, they have:

- Overthrown two terrorist regimes, rescued two nations, and liberated some 50 million people;
- Captured or killed 45 of the 55 most wanted in Iraq—including Iraq's deposed dictator, Saddam Hussein;
- Hunted down thousands of terrorists and regime remnants in Iraq and Afghanistan;
- Captured or killed close to two-thirds of known senior al Qaeda operatives;
- Disrupted terrorist cells on most continents; and
- Likely prevented a number of planned terrorist attacks.

Our forces are steadfast and determined. We value their service and sacrifice, and the sacrifice of their families, who also serve.

We thank the members of this committee for the support you have shown for the troops during the global war on terror. With your support, we have the finest Armed Forces on the face of the Earth.

We have a common challenge: to support the troops and to make sure they have what they will need to defend the Nation in the years ahead.

We are working to do that in a number of ways:

- By giving them the tools they need to win the global war on terror;
- By transforming for the 21st century, so they will have the training and tools they need to prevail in the next wars our Nation may have to fight—wars which could be notably different from today's challenges; and
- By working to ensure that we manage the force properly—so we can continue to attract and retain the best and brightest, and sustain the quality of the All-Volunteer Force.

Each represents a significant challenge in its own right. Yet we must accomplish all of these critical tasks at once.

When this administration took office 3 years ago, the President charged us with a mission—to challenge the status quo, and prepare the Department of Defense to meet the new threats our Nation will face as the 21st century unfolds.

We have done a good deal to meet that charge. Consider just some of what has been accomplished:

- We have fashioned a new defense strategy, a new force sizing construct, and a new approach to balancing risks—one that takes into account not just the risks in immediate war plans, but also the risks to people and transformation.
- We have moved from a "threat-based" to a "capabilities-based" approach to defense planning, focusing not only on who might threaten us, or where, or when—but more on how we might be threatened, and what portfolio of capabilities we will need to deter and defend against those new threats.
- We have fashioned a new Unified Command Plan, with
  - A new Northern Command, that became fully operational last September, to better defend the homeland;
  - The Joint Forces Command focused on transformation; and
  - A new Strategic Command responsible for early warning of, and defense against, missile attack and the conduct of long-range attacks.
- We have also transformed the Special Operations Command, expanding its capabilities and its missions, so that it can not only support missions directed by the regional combatant commanders, but also plan and execute its own missions in the global war on terror, supported by other combatant commands.

• We have taken critical steps to attract and retain talent in our Armed Forces—including targeted pay raises and quality of life improvements for the troops and their families.
• We have instituted realistic budgeting, so the Department now looks to emergency supplementals for the unknown costs of fighting wars, not to sustain readiness.
• We have reorganized the Department to better focus our space activities.
• Congress has established a new Under Secretary of Defense for Intelligence and an Assistant Secretary of Defense for Homeland Defense.
• We have completed the Nuclear Posture Review, and adopted a new approach to deterrence that will enhance our security, while permitting historic deep reductions in offensive nuclear weapons.
• We have pursued a new approach to developing military capabilities. Instead of developing a picture of the perfect system and then building the system to meet that vision of perfection, however long it takes or costs, the new approach is to start with the basics, roll out early models faster, and then add capabilities to the basic system as they become available.
• We have reorganized and revitalized the missile defense research, development, and testing program, and are on track to begin deployment of our Nation's first rudimentary ballistic missile defenses later this year.
• We have established new strategic relationships, that would have been unimaginable just a decade ago, with nations in Central Asia, the Caucasus, and other critical areas of the world.
• We have transformed the way the Department prepares its war plans—reducing the time it takes to develop those plans, increasing the frequency with which they are updated, and structuring our plans to be flexible and adaptable to changes in the security environment.
• We adopted a new "Lessons Learned" approach during Operation Iraqi Freedom, embedding a team with U.S. Central Command that not only studied lessons for future military campaigns, but provided real-time feedback that had an immediate impact on our success in Iraq.
• We made a number of key program decisions that are already having a favorable impact on the capability of the force. Among others:
    • We are converting four Trident nuclear-powered ballistic missile submarines (SSBN) into conventional nuclear-powered cruise missile attack submarines (SSGN) capable of delivering special forces and cruise missiles into denied areas.
    • The Army has deployed its first Stryker brigade to Iraq, is completing conversion of the second, and is replacing the Crusader with a new family of precision artillery that is being developed for the Future Combat System.
    • We have revitalized the B–1 bomber fleet by reducing its size and using the savings to modernize the remaining aircraft with precision weapons and other critical upgrades.
• We have also undertaken a comprehensive review of our global force posture, so we can transform U.S. global capabilities from a structure driven by where the wars of the 20th century ended, to one that positions us to deal with the new threats of the 21st century security environment.
• Using authority granted to us last year, we have established a new Joint National Training Capability, that will help us push joint operational concepts throughout the Department, so our forces train and prepare for war the way they will fight it—jointly.
• We have worked with our Allies to bring NATO into the 21st century—standing up a new NATO Response Force that can deploy in days and weeks instead of months or years, and transforming the NATO Command Structure—including the creation of a new NATO command to drive Alliance transformation.
• With the help of Congress last year, we are now establishing a new National Security Personnel System that should help us better manage our 746,000 civilian employees, and we are using the new authorities granted us last year to preserve military training ranges while keeping our commitment to responsible stewardship of the environment.

The scope and scale of what has been accomplished is remarkable. It will have an impact on the capability of our Armed Forces for many years to come.

We will need your continued support as we go into the critical year ahead.

Our challenge is to build on these successes, and continue the transformation efforts that are now underway. In 2004, our objectives are to:

• Successfully prosecute the global war on terror;
• Further strengthen our combined and joint warfighting capabilities;

- Continue transforming the joint force, making it lighter, more agile and more easily deployable, and instilling a culture that rewards innovation and intelligent risk-taking;
- Strengthen our intelligence capabilities, and refocus our intelligence efforts to support the new defense strategy and our contingency plans;
- Reverse the existing WMD capabilities of unfriendly states and non-state actors, and stop the global spread of WMD;
- Improve our management of the force;
- Refocus our overseas presence, further strengthen key alliances, and improve our security cooperation with nations that are likely partners in future contingencies;
- Continue improving and refining DOD's role in homeland security and homeland defense; and
- Further streamline DOD processes, continuing financial management reform, and shortening acquisition cycle times.

So, we have an ambitious agenda. But none of these tasks can be put off.

Our task is to prepare now for the tomorrow's challenges, even as we fight today's war on terror.

MANAGING THE FORCE

One effect of the global war on terror has been a significant increase in operational tempo, which has resulted in an increased demand on the force. Managing the demand on the force is one of our top priorities. But to do so, we must be clear about the problem—so we can work together to fashion the appropriate solutions.

The increased demand on the force we are experiencing today is likely a "spike," driven by the deployment of nearly 115,000 troops in Iraq. We hope and anticipate that that spike will be temporary. We do not expect to have 115,000 troops permanently deployed in any one campaign.

But for the moment, the increased demand is real—and we are taking a number of immediate actions. Among other things:

- We are increasing international military participation in Iraq.
  - As the President noted in his State of the Union address, 34 countries now have forces deployed in Iraq with U.S. forces and Iraqi security forces.
  - Japan began deploying its Self-Defense Forces to Iraq last month—the first time Japanese forces have been deployed outside their country since the end of World War II.
- As more international forces deploy, we have accelerated the training of Iraqi security forces—now more than 200,000-strong—to hasten the day when the Iraqis themselves will be able to take responsibility for the security and stability of their country, and all foreign forces can leave.
- As we increase Iraq's capability to defend itself, our forces are dealing aggressively with the threat—hunting down those who threaten Iraq's stability and transition to self-reliance.

Another way to deal with the increased demand on the force is to add more people. We have already done so. Using the special powers granted by Congress, we have increased force levels by nearly 33,000 above the pre-emergency authorized end strength.

- The Army is up roughly 7,800 above authorized end strength;
- The Navy is up roughly 6,000;
- The Marine Corps is up some 2,000, and
- The Air Force is up about 17,000.

If the war on terror demands it, we will not hesitate to increase force levels even more using our emergency authorities. Because we are using emergency powers, we have the flexibility to reduce force levels in the period ahead, as the security situation permits, and as our transformation efficiencies bear fruit.

But it should give us pause that even a temporary increase in our force levels was, and remains, necessary. Think about it: At this moment we have a force of 2.6 million people, both active and Reserve:

- 1.4 million Active Forces,
- 876,000 in the Selected Reserve—that is the Guard and Reserve Forces in units; and
- An additional 287,000 in the Individual Ready Reserves.

Yet, despite these large numbers, the deployment of 115,000 troops in Iraq has required that we temporarily increase the size of the force by some 33,000.

That should tell us a great deal about how our forces are organized.

It suggests strongly that the real problem is not the size of the force, per se, but rather the way the force has been managed, and the mix of capabilities at our disposal. It suggests that our challenge is considerably more complex than simply adding more troops.

General Pete Schoomaker, the Army Chief of Staff, compares the problem to a barrel of rainwater, on which the spigot is placed too high up. When you turn it on, it only draws water off the top, while the water at the bottom can't be used. The answer to this problem is most certainly not a bigger rain barrel; the answer is to move the spigot down, so that more of the water is accessible and can be used.

In other words, our challenge today is not simply one of increasing the size of the force. Rather, we must better manage the force we have—to make sure we have enough people in the right skill sets and so that we take full advantage of the skills and talents of everyone who steps forward and volunteers to serve.

Consider another example: I keep hearing people talk about the stress on the Guard and Reserve—that we can't keep calling them up for repeated mobilizations. Well the fact is, since September 11, 2001, we have mobilized roughly 36 percent of the Selected Reserve—a little over one-third of the available forces—and most of those mobilizations are concentrated in certain skill sets. For example:

- We have called up 86 percent of enlisted installation security forces
- 69 percent of enlisted law enforcement forces
- 67 percent of enlisted air crews
- 65 percent of enlisted special forces
- 56 percent of civil affairs officers
- 51 percent of military police officers
- 48 percent of intelligence officers

But, while certain skills are in demand, only a tiny fraction of the Guard and Reserve—just 7.15 percent—have been called up more than once since 1990. The vast majority of our Guard and Reserve Forces—over 60 percent—have not been mobilized to fight the global war on terror. Indeed, I am told that a full 58 percent of the current Selected Reserve—or about 500,000 troops—have not been involuntarily mobilized in the past 10 years.

What does that tell us?

- First, it argues that we have too few Guard and Reserve Forces with certain skill sets that are high demand and too many Guard and Reserve with skills that are in little or no demand.
- Second, it indicates that we need to rebalance the skill sets within the Reserve component, and between the active and Reserve components, so we have enough of the right kinds of forces available to accomplish our missions.
- Third, it suggests that we need to do a far better job of managing the force. That requires that we focus not just on the number of troops available today—though that is important—but on transforming the forces for the future, making sure we continue to increase the capability of the force, and thus our ability to do more with fewer forces.

We are working to do just that.

MASS VS. CAPABILITY

One thing we have learned in the global war on terror is that, in the 21st century, what is critical to success in military conflict is not necessarily mass as much as it is capability.

In Operation Iraqi Freedom, coalition forces defeated a larger adversary. They did it not by bringing more troops to the fight, which we could have done, but by overmatching the enemy with superior speed, power, precision and agility.

To win the wars of the 21st century, the task is to make certain our forces are arranged in a way to ensure we can defeat any adversary, and conduct all of the operations necessary to achieve our strategic objectives.

In looking at our global force posture review, some observers have focused on the number of troops, tanks, or ships that we might add or remove in a given part of the world. I would submit that that may well not be the best measure.

If you have 10 of something—say ships, for the sake of argument—and you reduce the number by 5, you end up with 50 percent fewer of them. But if you replace the remaining five ships with ships that have double the capability of those removed, then obviously you have not reduced capability even though the numbers have been reduced.

The same is true as we look at the overall size of the force. What is critical is the capability of the Armed Forces to project power quickly, precisely, and effectively anywhere in the world.

For example, today the Navy is reducing force levels. Yet because of the way they are arranging themselves, they will have more combat power available than they did when they had more people.

In Operation Iraqi Freedom, the Navy surged more than half the fleet to the Persian Gulf region for the fight. With the end of major combat operations, instead of keeping two or three carrier strike groups forward deployed, as has been traditional Navy practice, they quickly redeployed all their carrier strike groups to home base. By doing so, they reset their force in a way that will allow them to surge over 50 percent more combat power on short notice to deal with future contingencies.

The result? Today, six aircraft carrier strike groups are available to respond immediately to any crisis that might confront us. That capability, coupled with the application of new technologies, gives the Navy growing combat power and greater flexibility to deal with global crises—all while the Navy is moderately reducing the size of its Active Force.

The Army, by contrast, has put forward a plan that, by using emergency powers, will increase the size of its Active Force by roughly 6 percent or up to 30,000 troops above authorized end strength. But because of the way they will do it, General Schoomaker estimates the Army will be adding not 6 percent, but up to 30 percent more combat power.

This is possible because, instead of adding more divisions, the Army is moving away from the Napoleonic division structure designed in the 19th century, focusing instead on creating a 21st century "Modular Army" made up of self-contained, more self-sustaining brigades that are available to work for any division commander.

So, for example, in the event of a crisis, the 4th Infantry Division commander could gather two of his own brigades, and combine them with available brigades from, say, the 1st Armored Division and the National Guard, and deploy them together. The result of this approach is jointness within the Service, as well as between the Services. That jointness—combined with other measures—means that 75 percent of the Army's brigade structure should always be ready in the event of a crisis.

The Army's plan would increase the number of active and Reserve brigades significantly over the next 4 years. But because we will be using emergency powers, we will have the flexibility to reduce the number of troops if the security situation permits—so the Army would not be faced with the substantial cost of supporting a larger force as the security situation and the efficiencies permit.

Yet even if the security situation, and our progress in transformation, were to permit the Army to draw down the force, the new way they are arranging their forces will ensure the U.S. still has more ground combat power—more capability.

So we have two different approaches:

- In one case, the Navy is reducing force levels while increasing capability;
- In the other, the Army is increasing troop levels—but doing so in a way that will significantly increase its capability.
- In both cases, the increase in capability of each Service will be significant.

The point is: our focus needs to be on more than just numbers of troops. It should be on finding ways to better manage the forces we have, and by increasing the speed, agility, modularity, capability, and usability of those forces.

DOD INITIATIVES

Today, using authorities and flexibility Congress has provided, DOD has several dozen initiatives underway to improve management of the force, and increase its capability.

Among other things:

- We are investing in new information age technologies, precision weapons, unmanned air and sea vehicles, and other less manpower-intensive platforms and technologies.
- We are working to increase the jointness of our forces, creating power that exceeds the sum of individual services.
- We are using new flexibility under the Defense Transformation Act to take civilian tasks currently done by uniformed personnel and convert them into civilian jobs—freeing military personnel for military tasks.
- This year, we will begin to move 10,000 military personnel out of civilian tasks and return them to the operational force—effectively increasing force

levels by an additional 10,000 service members in 2004. An additional 10,000 conversions are planned for 2005.

• We have begun consultations with allies and friends about ways to transform our global force posture to further increase capability.

We are also working to rebalance the active and Reserve components. We are taking skills that are now found almost exclusively in Reserve components and moving them into the Active Force, so that we are not completely reliant on the Guard and Reserve for those needed skills. In both the active and Reserve components, we are moving forces out of low demand specialties, such as heavy artillery, and into high-demand capabilities such as military police, civil affairs, and Special Operations Forces.

Already, in 2003, the Services have rebalanced some 10,000 positions within and between the active and Reserve components. For example, the Army is already transforming 18 Reserve field artillery batteries into military police. We intend to expand those efforts this year, with the Services rebalancing an additional 20,000 positions in 2004, and 20,000 more in 2005—for a total of 50,000 rebalanced positions by the end of next year.

We are also working to establish a new approach to military force management called "Continuum of Service." The idea is to create a bridge between the active and Reserve components—allowing both Active and Reserve Forces greater flexibility to move back and forth between full-time and part-time status, and facilitating different levels of participation along that continuum.

Under this approach, a reservist who normally trains 38 days a year could volunteer to move to full-time service for a period of time—or some increased level of service between full-time and his normal Reserve commitment, offering options for expanded service that do not require abandoning civilian life. Similarly, an active service member could request transfer into the Reserve component for a period of time, or some status in between, without jeopardizing his or her career and opportunity for promotion. It would give military retirees with needed skills an opportunity to return to the Service on a flexible basis—and create opportunities for others with specialized skills to serve, so we can take advantage of their experience when the country needs it.

For example, coalition forces in Iraq need skilled linguists—so under the Continuum of Service approach we have recruited 164 Iraqi-Americans into a special Individual Ready Reserve program, and expect to deploy the first program graduates to Iraq this spring.

The "Continuum of Service" would allow the Armed Forces to better take advantage of the high-tech skills many reservists have developed by virtue of their private sector experience—while at the same time creating opportunities for those in the Active Force to acquire those kinds of skills and experiences. It encourages volunteerism and improves our capability to manage the military workforce in a flexible manner with options that currently exist only in the private sector.

We have also been working to fix the mobilization process. We have worked hard over the past year to add more refined planning tools to the process, and make it more respectful of the troops, their families, and their employers. Among other things:

• We have tried to provide earlier notifications, giving troops as much notice as possible before they are mobilized, so they can prepare and arrange their lives before being called up;

• We have worked to ensure that when they are called up, it is for something important and needed—and not to replace someone in a task that could wait until a contingency is over;

• We've tried to ensure that the number of people who have been recently mobilized is as small as possible, and that as many of the forces as possible that are remobilized or extended are volunteers;

• We have tried to limit tours, and give the troops some certainty about the maximum length of their mobilization and when they can expect to resume civilian life. We are doing better, but in my opinion, the process is still not good enough.

We are working each day to make the process better, and more respectful of the brave men and women who make up the Guard and Reserve.

As you can see, we have a number of initiatives underway that we are confident will improve the management and treatment of the Guard and Reserve Forces.

The men and women who make up the Guard and Reserve are all volunteers. They signed up because they love their country, and want to serve when the country needs them.

A number of you on this committee have served in the Guard and Reserve, as have I. Each of us knew when we signed up, it was not to serve 1 weekend a month and 2 weeks active duty. We signed up so that if war was visited upon our country, we would be ready to leave our work and family, and become part of the Active-Duty Force.

Well, on September 11, war was visited on our country. Our nation was attacked—more than 3,000 innocent men, women, and children were killed in an instant. At this moment, in caves and underground bunkers half-a-world away, dangerous adversaries are planning new attacks—attacks they hope will be even more deadly than the one on September 11.

We are a nation at war. If we were not to call up the Guard and Reserves today, then why would we want to have them at all? Why were we asking them to sacrifice time with their families every month to train? Why are the taxpayers paying for postservice benefits, including healthcare and retirement pay, that add up to between $250,000 and $500,000 per reservist?

This is the purpose of the Guard and Reserve. It is what they signed up for. I know that the vast majority are eager to be in the fight—a fact born out by the large number of those who stepped forward and volunteered to be mobilized for service in Iraq.

Our challenge—our responsibility—is to do everything we can to see that they are treated respectfully, managed effectively, and that they have the tools they need to win today's war, and to deter future wars.

We are working to do just that—to better manage the force, and to transform the force to make it more capable for the 21st century.

Today, with authority granted by Congress, DOD has the flexibility to adjust troop levels, as the security situation requires.

- We have authority to increase or decrease, as need arises.
- We are using that authority; and
- We are working on a number of new initiatives that will allow us to better manage and transform the force.

However, we believe that a statutory end strength increase would take away our current flexibility to manage the force:

- First, if the current increased demand turns out to be a spike and if we are successful in the transformation and rebalancing initiatives underway, the Department would face the substantial cost of supporting a larger force when it may no longer be needed—pay and benefits, such as lifetime healthcare, for each service member added, not to mention the additional costs in equipment, facilities, and force protection.
- Second, if we permanently increase statutory end strength, instead of using the already available emergency powers, we will have to take the cost out of our top line. That will require cuts in other parts of the defense budget—crowding out investments in the very programs that will allow us to manage the force and make it more capable.

None of us has a crystal ball to see into the future. You have given us the authority to adjust the size of the force and the flexibility to deal with unknowns. We have been using that authority over the past 2-plus years, even as we work to implement comprehensive measures to better manage the force. I urge Congress to not lock us into a force size and structure that may or may not be appropriate in the period ahead.

Instead, help us to support the Armed Services with the transformational initiatives they now have underway; help us rebalance the Active and Reserve Force, and give the troops more options to contribute along an expanded continuum of service; help us add capability, and transform the force for the future.

2005 BUDGET

The President's 2005 budget requests the funds to do just that.

The President's first defense budgets were designed while our defense strategy review was still taking place. It was last year's budget—the 2004 request—that was the first to fully reflect the new defense strategies and policies.

One of the key budget reforms we implemented last year is the establishment of a 2-year budgeting process in the Department of Defense—so that the hundreds of people who invest time and energy to rebuild major programs every year can be freed up and not be required to do so on an annual basis, and can focus more effectively on implementation.

The 2005 budget before you is, in a real sense, a request for the second installment of funding for the priorities set out in the President's 2004 request.

We did not rebuild every program. We made changes to just 5 percent of the Department's planned 2005 budget, and then only on high-interest and must-fix issues—and then only when the costs incurred to mitigate risks could be matched by savings elsewhere in the budget.

The President's 2005 budget requests continued investments to support the six transformational goals we identified in our 2001 defense review:

- First, we must be able to defend the U.S. homeland and bases of operation overseas;
- Second, we must be able to project and sustain forces in distant theaters;
- Third, we must be able to deny enemies sanctuary;
- Fourth, we must improve our space capabilities and maintain unhindered access to space;
- Fifth, we must harness our advantages in information technology to link up different kinds of U.S. forces, so they can fight jointly; and
- Sixth, we must be able to protect U.S. information networks from attack—and to disable the information networks of our adversaries.

In all, in 2005, we have requested $29 billion for investments in transforming military capabilities that will support each of these critical objectives.

The President's 2005 budget requests $10.3 billion for missile defense, including:

- $9.2 billion for the Missile Defense Agency—an increase of $1.5 billion above the President's 2004 request; and
- $1 billion for Patriot Advanced Capability–3, the Medium Extended Air Defense System, and other short and medium range capabilities;

The budget also includes $239 million in funding for accelerated development of Cruise Missile Defense, with the goal of fielding an initial capability in 2008;

The 2005 budget request includes critical funds for Army Transformation, including:

- $3.2 billion to support continued development of the Future Combat Systems—an increase of $1.5 billion over the 2004 budget; and
- $1.0 billion to fund continued deployment of the new Stryker Brigade Combat Teams, such as the one now serving in Iraq.

We have also requested additional funds to strengthen intelligence, including critical funds to increase DOD Human Intelligence (HUMINT) capabilities, persistent surveillance, as well as technical analysis and information sharing to help us better "connect the dots."

To enhance our communications and intelligence activities, we are requesting:

- $408 million to continue development of the Space Based Radar (SBR)—which will bring potent and transformational capabilities to joint warfighting—the ability to monitor both fixed and mobile targets, deep behind enemy lines and over denied areas, in any kind of weather. SBR is the only system that can provide such capability.
- $775 million for the Transformational Communications Satellite (TSAT) which will provide the joint warfighter with unprecedented communication capability. To give you an idea of the speed and situational awareness the TSAT will provide, consider that transmitting a Global Hawk image over a current Milstar II, as we do today, takes over 12 minutes with TSAT it will take less than a second.
- $600 million for the Joint Tactical Radio System, to provide wireless internet capability to enable information exchange among joint warfighters.

The budget also requests $700 million for Joint Unmanned Combat Air Systems (J–UCAS)—a program that consolidates all the various unmanned combat air vehicle programs, and focuses on developing a common operating system.

The budget requests $14.1 billion for major tactical aircraft programs, including:

- $4.6 billion for the restructured Joint Strike Fighter (JSF) program;
- $4.7 billion to continue procurement of the F/A–22;
- $3.1 billion to continue procurement of the F/A–18E/F; and
- $1.7 billion to support development and procurement of 11 V–22 aircraft.

The budget requests funds for Navy fleet transformation, including $1 billion to continue funding the new CVN–21 aircraft carrier, and $1.6 billion to continue development of a family of 21st century surface combatants including the DDX destroyer, the littoral combat ship, and the CG(X) cruiser.

We have requested $11.1 billion to support procurement of 9 ships in 2005. Fiscal year 2005 begins a period of transition and transformation for shipbuilding as the last DDG 51 destroyers are built, and the first DD(X) destroyer and Littoral Combat Ship are procured. This increased commitment is further shown in the average ship-

building rate for fiscal years 2005–2009 of 9.6 ships per year. This will sustain the current force level and significantly add to Navy capabilities.

In all, the President has requested $75 billion for procurement in 2005 and $69 billion for Research, Development, Testing and Evaluation—funds that are vital to our transformation efforts.

Another area critical to transformation is joint training. Last year, Congress approved funding to establish a new Joint National Training Capability (JNTC), an important initiative that will fundamentally change the way our Armed Forces train for 21st century combat.

We saw the power of joint warfighting in Operation Iraqi Freedom. Our challenge is to bring that kind of joint warfighting experience to the rest of the forces, through both live and virtual joint training and exercises. Thanks to the funds authorized in the 2004 budget, the JNTC's initial operating capability is scheduled to come online in October of this year. We have requested $191 million to continue and expand the JNTC in 2005.

With your help, we have put a stop to the past practice of raiding investment accounts to pay for the immediate operation and maintenance needs. The 2005 request continues that practice. We have requested full funding for the military's readiness accounts, providing $140.6 billion for Operation and Maintenance (O&M) including $43 billion for training and operations. These funds are critical to transformation because they allow us to pay today's urgent bills without robbing the future to do so.

We have also requested funds to support pay and quality of life improvements for the troops—including a 3.5 percent military base pay raise. We have requested funds in the 2005 budget that will also help the Department keep its commitment to eliminate 90 percent of inadequate military family housing units by 2007, with complete elimination projected for 2009. We have requested funds to complete the elimination of out-of-pocket housing costs for military personnel living in private housing. Before 2001, the average service member had to absorb over 18 percent of these costs. By the end of fiscal year 2005, it will be zero. These investments are important to the troops, and also to their families, who also serve—and deserve to live in decent and affordable housing.

I am also appointing a commission to conduct a comprehensive review of military compensation and benefits, with a view toward simplifying and improving them. Today, we have too many pay categories that serve overlapping purposes, or provide incentives where they are most needed. Before making major changes, I urge you to allow the Department to first develop a comprehensive and integrated set of compensation proposals, which we will submit to you next year.

We are also making progress in getting our facilities replacement and recapitalization rate in proper alignment. When we arrived in 2001, the Department was replacing its buildings at a totally unacceptable average of once every 192 years. Today, we have moved the rate down for the third straight year, though it is still too high—to an average of 107 years. The 2005 budget requests $4.3 billion for facilities recapitalization, keeping us on track toward reaching our target rate of 67 years by 2008. We have funded 95 percent of facilities maintenance requirements—up from 93 percent in fiscal year 2004.

The budget also supports our continuing efforts to transform the way DOD does business. With the passage of the Defense Transformation Act last year, we now have the needed authority to establish a new National Security Personnel System, so we can better manage DOD's civilian personnel. Initial implementation will begin this year, and cover roughly 300,000 of DOD's 746,000 civilian employees.

Yet, while progress has been made, the Defense Department still remains bogged down by bureaucratic processes of the industrial age, not the information age. We are working to change that. To help us do so, we have requested funds for a Business Management Modernization Program that will help us overhaul DOD management processes and the information technology systems that support them.

We have also requested that Congress nearly double the Department's General Transfer Authority, from the current limit of $2.1 billion to $4 billion, or roughly 1 percent of the DOD budget. In an age when terrorists move information at the speed of an email, money at the speed of a wire transfer, and people at the speed of a commercial jetliner, it is critical that we have the ability to shift funds between priorities.

We also need your continuing support for two initiatives that are critical to 21st century transformation: the Global Posture Review, and the Base Realignment and Closure (BRAC) Commission round scheduled for 2005.

Mr. Chairman, I cannot overemphasize the importance of proceeding with both of these initiatives.

We need BRAC to rationalize our infrastructure with the new defense strategy, and to eliminate unneeded bases and facilities that are costing the taxpayers billions of dollars to support.

We need the Global Posture Review to help us reposition our forces around the world—so they are stationed not simply where the wars of the 20th century ended, but rather are arranged in a way that will allow them to deter, and as necessary, defeat potential adversaries who might threaten our security, or that of our friends and allies, in the 21st century.

These two efforts are inextricably linked.

It is critical that we move forward with both BRAC and the Global Posture Review—so we can rationalize our foreign and domestic force posture. We appreciate Congress' decision to authorize a BRAC round in 2005—and will continue to consult with you as we proceed with the Global Posture Review.

CONCLUSION

Mr. Chairman, the President has asked Congress for a total of $401.7 billion for fiscal year 2005—an increase over last year's budget. Let there be no doubt: it is a large amount of the taxpayer's hard-earned money. Such investments will likely be required for a number of years to come because our Nation is engaged in a struggle that could well go on for a number of years to come.

Our objective is to ensure that our Armed Forces remain the best trained, best equipped fighting force in the world—and that we treat the volunteers who make up the force with respect commensurate with their service, their sacrifice, and their dedication.

Their task is not easy: they must fight and win a global war on terror that is different from any our Nation as fought before. They must do it, while at the same time preparing to fight the wars of 2010 and beyond—wars which may be as different from today's conflict, as the global war on terror is from the conflicts of the 20th century.

So much is at stake.

Opportunity and prosperity are not possible without the security and stability that our Armed Forces provide.

The United States can afford whatever is necessary to provide for the security of our people and stability in the world. We can continue to live as free people because the industriousness and ingenuity of the American people have provided the resources to build the most powerful and capable Armed Forces in human history—and because we have been blessed with the finest young men and women in uniform—volunteers all—that the world has known.

They are courageous; they are selfless; and they are determined. They stand between this nation and our adversaries, those who wish to visit still further violence on our cities, our homes and our places of work. The men and women of the Armed Forces are hunting the enemies of freedom down—capturing or killing them in the far corners of the world, so they will not kill still more innocent men, women, and children here at home.

We are grateful to them and proud of them. We stand ready to work with you to ensure they are treated with the dignity they deserve, and the respect they earn every day.

Thank you, Mr. Chairman. I'd be pleased to respond to questions.

Chairman WARNER. Thank you, Mr. Secretary. That was a very strong, informative, and forthright statement, and I commend you for it.

General PACE. Mr. Chairman, members of the committee: Thank you very much for this opportunity, and thank you, Mr. Chairman, for your words of condolence to General Myers and his family. I know they deeply appreciate that.

General Myers did write a written statement for submission to this committee, and I would ask that his statement be accepted.

Chairman WARNER. Without objection, the statement of all witnesses today will be incorporated in entirety in the record.

General PACE. Thank you, sir.

Sir, I will keep my remarks short, but I would be remiss if I did not say a couple of things. First, thank you to this committee and to Congress for your strong, sustained, bipartisan support of the

military. I would like to dwell on that for a second. This is not a pro forma statement. You said in your statement, Mr. Chairman, that we have the best trained, best equipped, most capable Armed Forces in the world. We have that because of the resources that Congress provides, and we deeply appreciate it.

Second, a thank-you to the service men and women who serve our country. They are magnificent. They are doing everything we are asking them to do, and we are very proud of what they are doing.

Next, their families who serve at home, whose sacrifices at home are often as equal to or greater than the servicemen and women that they are providing support to overseas—we owe a great debt of gratitude as a Nation to their families.

We also should thank the employers of our National Guard and Reserve. We could not do what we are doing without the skills of our Guard and Reserve. They are quality people, and because they are quality people, there is no doubt in my mind that there are businesses around the United States that have gaps of quality in them because their reservist or their guardsman is away from home. We deeply appreciate the employers' support of those members so they can help protect our country.

We are a Nation at war, but we are not alone. We have invaluable coalition partners, and, together with those coalition partners, we will protect our homelands and we will defeat terrorism.

This will be a long and difficult fight, but it is a fight worthy of the extraordinary efforts of your soldiers, sailors, airmen, marines, and coast guardsmen. When you visit them—and many of you have and we thank you for that—you look them in the eye. You know they get it. They understand what is at stake. They are proud of what they are doing. They know that their good works do not always make the evening news, but they also know that the roads, the hospitals, schools, electric grids, power plants, all the things that they are doing to help restore the basics of society in both Iraq and Afghanistan, are in fact critical to success.

Their extraordinary efforts have been and must continue to be matched here at home by our collective will, patience, and commitment. Our Nation and those who defend her deserve no less.

I am proud to sit here before you today representing all the men and women of our Armed Forces. I am proud to be a part of this process with you, and I look forward to your questions.

[The prepared statement of General Myers follows:]

PREPARED STATEMENT BY GEN. RICHARD B. MYERS, USAF

I am privileged to report to Congress on the state of the United States Armed Forces.

As they were a year ago, our Nation's soldiers, sailors, airmen, marines, and guardsmen are currently operating within our borders and around the globe with dedication, courage and professionalism, alongside our coalition partners, to accomplish a variety of very demanding missions. Global terrorism remains a serious threat, and the stakes in the global war on terrorism remain high.

Over the past year, I have told you that with the patience, will, and commitment of our Nation we would win the war on terrorism. The support we have received from Congress has been superb. From congressional visits to deployed personnel, to support for transformational warfighting programs, to funding for security and stability operations, to improved pay and benefits for our troops, your support for our service men and women has enabled us to make significant progress in the war on terrorism.

We are winning. Saddam Hussein no longer terrorizes the Iraqi people or his neighbors; he is in custody awaiting justice. The Iraqi people are well on their way to establishing a prosperous and peaceful future. They have already assumed a significant role in providing for their own security, and the list of important accomplishments in every sector—education, medical care, business, agriculture, energy, and government, to name a few—is long and growing. We have made substantial progress in Afghanistan as well. The recent Constitutional Loya Jirga is an encouraging example of democracy in action. In both countries, as in the Horn of Africa and other areas, U.S. and coalition personnel work together to capture or kill terrorists, while at the same time improving infrastructure and economic conditions so that peace and freedom can take hold.

Despite the operational demands on our forces, we remain ready to support the President's National Security Strategy to assure our allies, while we dissuade, deter and defeat any adversary. The draft National Military Strategy (NMS), developed in consultation with the service chiefs and combatant commanders describes the ways we will conduct military operations to protect the United States against external attack and aggression, and how we will prevent conflict and surprise attack and prevail against adversaries. The strategy requires that we possess the forces to defend the U.S. homeland and deter forward in four critical regions. If required, we will swiftly defeat the efforts of two adversaries in an overlapping timeframe, while having the ability to "win decisively" in one theater. In addition, because we live in a world marked by uncertainty, our forces must also be prepared to conduct a limited number of lesser contingencies while maintaining sufficient force generation capabilities as a hedge against future challenges.

We appreciate your continued support giving our dedicated personnel the warfighting systems and quality of life they deserve. Our challenge for the coming year and beyond is to stay the course in the war on terrorism as we continue to transform our Armed Forces to conduct future joint operations. We cannot afford to let our recent successes cause us to lose focus or lull us into satisfaction with our current capabilities. The war is not over, and there is still dangerous work to do. To meet this challenge, we continue to focus on three priorities: winning the war on terrorism, enhancing joint warfighting, and transforming for the future.

WAR ON TERRORISM

Twenty-eight months after the terrorist attacks on September 11, defeating global terrorism remains our military's number one priority. We will continue to fight this war on many different fronts, because terrorism comes in many different forms. The stakes remain high, but our resolve remains firm.

The more experience we gain in this fight, the more we recognize that success is dependent on a well-integrated military, interagency and coalition effort. This means the coordinated commitment of the military, diplomatic, informational, economic, financial, law enforcement, and intelligence resources of our Nation—all instruments of our national power. On the international level, coalition military and interagency cooperation has been remarkable. In Iraq, coalition forces from 34 nations are working hard to bring peace and stability to a country brutalized for 3 decades. In Afghanistan, 37 nations are working to secure a democratic government and defeat al Qaeda and remnants of the Taliban regime, with NATO assuming an increasing role in stability and reconstruction efforts.

We have made significant strides coordinating U.S. Government efforts within the interagency and with our coalition partners. One of the ways we have been successful at coordinating interagency efforts is through venues such as the Strategy Working Group, the Senior Leadership Review Board and the Regional Combating Terrorism Strategies. Continued success in this war will depend largely on our ability to organize for a sustained effort and coordinate seamlessly among all government agencies. An even more demanding task is coordinating the efforts of our coalition partners, now numbering more than 90 nations. Coalition contributions have been significant, ranging from combat forces, to intelligence, logistics, and medical units. They have complemented our existing capabilities and eased the requirement for current U.S. forces in Iraq and Afghanistan. Coordinating the efforts of our coalition partners is critical to combating the remaining terrorist threat.

The al Qaeda network, though damaged, remains resilient, adaptable and capable of planning and executing more terrorist acts, such as the attacks in Saudi Arabia and Turkey toward the end of 2003. Al Qaeda continues to receive support and recruit operatives from sympathizers around the world. Al Qaeda will increasingly focus on Iraq as today's jihad. As the network consolidates its efforts in Iraq, the threats of attacks will grow. In fact, four al Qaeda audiotapes released in 2003 prominently mentioned Iraq, demonstrating Osama bin Laden's emphasis on staging

attacks there. Ansar al-Islam also remains a formidable threat in Iraq, despite damage inflicted by coalition forces during Operation Iraqi Freedom (OIF). Its key leadership remains at large and continues to plot attacks against U.S. and coalition interests.

Other terrorist groups also pose significant threats to U.S. interests, and we believe that some of these terrorist groups have developed contingency plans for terrorist attacks against U.S. interests abroad. The Revolutionary Armed Forces of Colombia continue to conduct terrorist attacks throughout Colombia. They currently hold three U.S. hostages captured in early 2003, and directly threaten efforts to bring peace, stability and an end to the drug trade in Colombia. Jemaah Islamiyah in Southeast Asia is another terrorist group that shares al Qaeda's goals and methods, adding to the transnational terrorist threat. The intelligence that led to recent heightened alert levels in the U.S. show that the threat of a major terrorist attack against the U.S. homeland remains very real.

Disturbingly, terrorist groups continue to show interest in developing and using chemical, biological, radiological, and nuclear (CBRN) weapons in terrorist attacks. Terrorists have attempted to acquire military-grade materials, and interest in CBRN weapons and materials by several groups is well documented.

The coalition's efforts in the war on terror represent the significant first step in curtailing WMD proliferation. Our strategy for combating WMD calls for the combatant commanders to detect, deter, deny, counter, and if necessary, interdict WMD and its means of delivery. Combating WMD relies on a continuum of interrelated activities, employing both defensive and offensive measures, and confronting the threat through mutually reinforcing approaches of nonproliferation, counterproliferation, and consequence management. This multi-tiered and integrated effort will greatly reduce the threat of WMD falling into the hands of terrorists. Following the liberation of Iraq and the collapse of Saddam Hussein's brutal regime, the countries of Iran, and most recently, Libya have been more forthcoming about their illegal WMD programs to the international community. This should also help to apply international pressure on North Korea and its nuclear declarations.

To counter the potential threat of the proliferation of WMD, the President's Proliferation Security Initiative (PSI) is the most far-reaching attempt to expand our efforts to impede and interdict the flow of weapons of mass destruction, their means of delivery, and related materials, between state and non-state actors of proliferation concern. It is part of a larger effort to counter proliferation of weapons of mass destruction and missile-related technology by interdicting shipments of these materials by air, land, and sea. To date, there are 11 partner nations actively participating in PSI operations and exercises. Our goal is to expand PSI participation in order to be postured to respond quickly to assist in the interdiction of the proliferation trade.

OIF AND OEF OPERATIONS

U.S. Central Command (CENTCOM) is still center-stage in the war on terrorism, and doing a magnificent job under difficult circumstances. Iraq is well on its way to becoming a sovereign country. Our coalition is strong, with 34 countries directly supporting stability and security in Iraq. As part of the 15 November 2003 agreement, the U.S., our coalition partners, and the Iraqi Governing Council are forging plans and agreements to allow for the transfer of sovereignty to Iraq this June. Since the end of major combat operations, we have made steady progress towards meeting our objectives. Essential services are being restored, and a political transformation is already underway in Iraq. Security in Iraq is steadily improving, and we are transitioning to a time when the face of security in Iraq is an Iraqi face, and coalition forces are in the background.

Today, coalition forces continue to rout out remnants of the former regime attempting a desperate last stand. Using intelligence provided by Iraqi citizens, we are conducting thousands of raids and patrols per week alongside Iraqi security forces. We have seized massive amounts of ammunition, and captured or killed 45 of the 55 most wanted former Iraqi leaders, as well as thousands of other Saddam loyalists, terrorists and criminals. We have captured or killed all of the top five, most notably Saddam Hussein and his sons, Uday and Qusay.

The Iraq Survey Group is continuing its examination of Saddam's WMD programs by interviewing Iraqi citizens, examining physical evidence, and analyzing records of the old regime. We know that this process will take time and patience, and must be able to stand up to world scrutiny.

Our soldiers, sailors, airmen, marines, and guardsmen in Iraq are now supporting over 203,000 Iraqi security forces. The Iraqi police continue to expand their training pipelines in Jordan and Iraq, producing hundreds of trained officers each month. We

are well on track to meet our goal of 71,000 Iraqi police by August 2004. The Facilities Protective Service has fewer training requirements and has already reached its goal of 50,000 members. They have taken over security from coalition forces at most fixed site locations, such as power lines and parts of the oil infrastructure—key targets for sabotage. Our goal for the Border Enforcement Force is to have 25,700 members by December 2004. They will relieve coalition forces guarding checkpoints along Iraq's border. U.S. military forces continue to vet former members of the Iraqi military and other security services for employment in the new Iraqi security services, but Iraqis are formally in charge of de-Baathification efforts and have established guidelines for that process. The Emergency Supplemental Appropriations Act for Defense and for the Reconstruction of Iraq and Afghanistan 2004 that Congress approved last year was instrumental in enabling our planned accelerated development of these security forces, and we are grateful for that support.

The New Iraqi Army continues to train additional battalions. Iraq's Army needs more than just military skills. They must have a deep-rooted sense of professionalism, focused on protecting all Iraqis while operating firmly under civilian control. The new army will reflect Iraq's religious, regional, and ethnic mix, will be apolitical, and indoctrinated in their role of defense and security. We will spend the time and resources necessary to ensure the Iraqi Army is a well-trained and highly capable force.

The linchpin of our security efforts during this transition period is the Iraqi Civil Defense Corps (ICDC), which is currently planned for a force of 40,000 by the summer of 2004. The ICDC is a light military force, created to deal with the current stability issues in Iraq. As we have done from the beginning, we continue to reassess the security environment in Iraq. These security assessments could change force goals for the various components of Iraqi security forces. With the resources allocated from the supplemental, we have made great headway in providing them with vehicles, uniforms and other gear, including communications systems that will enable them to succeed in their critical tasks. Military commanders in Iraq tell me that the Iraqi Civil Defense Corps has been highly effective, and as such, we increased the goal from 18 to 36 Battalions and provided $124 million extra funding to reinforce the success of this Iraqi Security Force.

These supplemental funds also provided commanders with one of the most successful tools in winning the hearts and minds of the Iraqi and Afghan people, the Commander's Emergency Response Program (CERP). These funds provide commanders and the resourceful young troops they lead with the means to respond to urgent humanitarian and stabilization and reconstruction needs such as water and sanitation projects, irrigation and small-scale agriculture assistance, school house repairs, and civic cleanup projects. This program is an invaluable tool for establishing relationships with the Iraqi and Afghan people, assisting in economic development, and creating a safer environment.

The United Nations and the international community are also playing vital roles in the political and economic transformation of Iraq. Over 70 countries and international organizations including the U.S., pledged $33 billion at the Madrid Donors Conference. U.N. Security Council Resolution 1511 called upon Iraqis, initially through the Iraqi Governing Council, to determine the course and speed of their political reformation. In response, the Iraqi Governing Council has submitted its plan and timetable for selecting a transitional National Assembly and interim government, drafting a constitution and holding elections. It is an ambitious schedule, but one that they can accomplish with our help.

In addition to security and political progress, we continue to help Iraq rebuild the infrastructure required for economic progress and a stable democracy. The Coalition Provisional Authority (CPA) and Task Force Restore Iraqi Electricity are managing a comprehensive maintenance and upgrade program designed to improve power generation, transmission, efficiency and capacity to meet the future needs of the Iraqi people. Through the coordinated efforts of the Army Corps of Engineers and the Iraqi Ministry of Electricity, we met the initial October 2003 goal of 4,400 megawatts (MW) of peak power generation. The next goal is 6,000 MW of power by 1 June 2004. In order to meet this goal the CPA developed the Power Increase Plan to offset recent system failures from severe weather and continuing sabotage and looting. This plan increases electrical power generation through an increase of generator rehabilitation and maintenance projects, the increase of new power generators to the national power grid, increasing electrical power imports from other nations, and improving system-wide power transmission and distribution. Other progress continues throughout Iraq in potable drinking water projects, supplying hospitals with medical supplies, providing school supplies for Iraqi school children and rebuilding classrooms. Living conditions are improving everyday in Iraq, as many of you have seen for yourselves on recent trips to Iraq.

In Afghanistan, our military strategy combines both combat and stability operations. U.S. and coalition forces are conducting combat operations to rid Afghanistan of al Qaeda and Taliban remnants, and stability operations to assist in building Afghan security institutions, governing bodies, and economic prosperity. A few weeks ago the interim Afghan government held their first Constitutional Loya Jirga, approving a new constitution for Afghanistan.

Security and stability operations are being conducted by 11 Provincial Reconstruction Teams (PRTs) operating throughout Afghanistan, with 1 more PRT planned for this year. PRT representatives are making great strides improving the quality of life for the Afghan people by building schools, clinics, wells, roads, and other community infrastructure projects. Reopening the Kabul-to-Kandahar road was a major success. Our efforts have increased security and stability in Afghanistan.

In August 2003, NATO assumed responsibility for the International Security Assistance Force (ISAF) in Afghanistan. In October 2003 the United Nations Security Council passed a resolution extending ISAF's mission in Afghanistan for 1 year, and authorizing ISAF to operate outside Kabul and its environs. In February 2004, a Canadian officer will assume command of the NATO ISAF headquarters from the German commander. NATO's role in Afghanistan is expanding. The first phase of NATO expansion included transfer of responsibility for the U.S. PRT at Konduz to NATO, with Germany as lead nation, and temporary NATO deployments outside Kabul. NATO is planning future ISAF expansion throughout Afghanistan.

The Afghan National Army (ANA), now numbering 5,785 trained personnel, is at the forefront of efforts to improve security and stability and establish a strong national identity among the Afghan people. They are well on their way to reaching the annual throughput goal of 10,800 personnel by June 2004. To date the ANA has performed well, fighting side-by-side with U.S. and coalition forces during recent successful combat operations to capture or kill Taliban, Hezb-I-Islami-Gulbiddin, and al Qaeda elements. Most of the funding provided in the Afghanistan portion of the Fiscal Year 2004 Emergency Supplemental is being targeted to efforts that strengthen the ANA, such as new infrastructure and equipment that will also improve recruitment and retention efforts. These efforts include increased pay, plans to field 15 new regional recruiting centers by this spring, and establishing military benefit packages.

Congress has demonstrated its commitment to the future of Afghanistan, but there is still much more the international community could and should contribute to the reconstruction of Afghanistan. The Afghan government, with the help of the U.S. Government, is seeking more donations for several infrastructure projects such as a new Ministry of Defense headquarters, a hospital in Kabul, and a military academy, as well as donations of certain equipment, weapons and ammunition.

In neighboring Pakistan, working closely with President Musharraf, we have been able to increase coordination among U.S., Coalition, Afghan, and Pakistani Forces along the Pakistan-Afghanistan border. The Pakistani government has taken some initiatives to increase their military presence on the border, such as manned outposts, regular patrols and security barriers, including areas of the Pakistan federally Administered Tribal Areas, an area historically avoided by Pakistan's military forces. The Tripartite Commission consisting of U.S., Afghan, and Pakistan representatives concluded its fifth session in December, and among its accomplishments was the establishment of a subcommittee to investigate means to prevent cross-border conflict. U.S./Pakistani military cooperation continues to improve, and we are helping Pakistan identify equipment requirements for their counterterrorism efforts.

Operations in the Horn of Africa remain an essential part of the war on terrorism. The Joint Task Force Horn of Africa at Camp Lemonier, Djibouti is conducting counterterrorist and civil affairs operations in Eastern Africa. Although these operations have impacted al Qaeda's influence in the region, a continued military presence is essential to stop the movement of transnational terrorists and demonstrating to the region our resolve to wage the war on terrorism in Africa.

In support of Operation Enduring Freedom (OEF)—Philippines, U.S. Pacific Command (PACOM) used congressionally-approved funds this past year to continue counter-terrorism training for the Armed Forces of the Philippines. A small contingent of U.S. military personnel remains in the southern Philippines managing these efforts and other humanitarian assistance projects.

OTHER OVERSEAS OPERATIONS

U.S. European Command (EUCOM), in accordance with Secretary of Defense (SECDEF) guidance, has developed a concept for the reduction of U.S. forces supporting U.S. Kosovo Force in the Province of Kosovo, and U.S. Stability Forces in

Bosnia-Herzegovina. Implementation of this plan is dependent on the North Atlantic Council's Periodic Mission Review recommendation for the Balkans.

When EUCOM concludes the Georgia Train and Equip Program in May 2004, they will meet their objective of improving Georgia's ability to confront transnational terrorism operating within Georgia. Training is being provided for two staffs, four battalions, and one mechanized/armor company team. To build on this success and momentum, EUCOM is reviewing a possible follow-on Georgia Capabilities Enhancement Program to sustain and improve the Georgian military's newly acquired capabilities, and demonstrate a continued U.S. commitment to the Georgian Armed Forces' development.

Maritime Interdiction Operations took on a new global focus last year, beyond the historical CENTCOM and EUCOM missions, when the President approved Expanded Maritime Interception Operations to interdict terrorists and their resources globally. Expanded Maritime Interception Operations are now significant mission areas for every deployed battle group, especially along maritime transit lanes and choke points. Results from these maritime operations, such as in the Mediterranean Sea, have produced lower insurance premiums in the shipping industry, considerably less illegal immigration in countries such as Spain, Italy, and Greece, and a reduction in crime at sea. Maritime Interdiction Operations are a truly international effort. German and Spanish led multi-national naval forces patrol the CENTCOM area of responsibility, and this past year coalition naval forces have been responsible for boarding over 30 ships within EUCOM's area of responsibility.

U.S. Southern Command (SOUTHCOM) continues to support counternarcotics trafficking and counterterrorism efforts in the Caribbean and Central and South America. They are assisting the Colombian military in its fight against designated terrorist organizations by providing military advice, training, and equipment with an emphasis on the pursuit of narcoterrorist leadership, counternarcotics tactics, and security for major infrastructure such as the Cano Limon pipeline. SOUTHCOM supported the formation of the Colombian Army Special Operations Command and is continuing its efforts to train the Commando Battalion, and a Ranger-type unit. Training was successfully completed for the first Colombian Commando Battalion, and training has begun for the second battalion. The Colombian military has been very successful over the past year in their fight against narcoterrorism. The Tri-Border Area between Argentina, Brazil, and Paraguay is another focal point for drug and arms trafficking, money laundering, document fraud and Islamic terrorist-supported activities in South America. U.S.-sponsored multilateral exercises are promoting security, improving effective border control, and denying terrorist groups such as Hizballah, Hamas, and other Middle Eastern terrorist safe havens, restricting their ability to operate.

SOUTHCOM is also providing nearly 2000 military personnel to manage detainee operations at Guantanamo Bay, Cuba. We operate in close coordination with several U.S. agencies. We are constantly reviewing the status of each detainee, and to date have transferred 87 of the detainees who were determined to be of no intelligence or law enforcement value, or no threat to the U.S. or its interests, back to their countries of origin for release. Four detainees have been transferred back to their country of origin, under an agreement for continued detention by that country. More await similar agreements to allow for transfer or continued detention. A number of detainees have been assessed as high intelligence and or law enforcement value, or pose a significant threat to U.S. interests. These detainees will remain for further exploitation. Other cases are being considered for referral to the Military Commission, although no one has been referred to date. Information gleaned from detainees, many of whom continue to make threats against Americans, has already helped prevent further terrorist attacks against the U.S. and our allies. Furthermore, continued detention of those who pose a threat to U.S. interests prevents those enemy combatants from returning to the battlefield.

In accordance with the Unified Command Plan 2002 Change 2 implemented last year on 1 January 2004, U.S. Strategic Command (STRATCOM) reported significant progress in all of their new mission areas: global strike; missile defense; DOD information operations; and command, control, communications, computers, intelligence, surveillance, and reconnaissance missions. Further, they are on schedule to achieve full operational capability in each of the newly assigned mission areas this year. The Secretary of Defense (SECDEF) has already approved the Information Operations Roadmap, which has 57 wide-ranging recommendations that aid combatant commanders in planning and executing fully integrated information operations.

As we become more reliant upon information to conduct operations, the defense of our network is paramount. This requires properly trained people, common operating standards, and a well-stocked arsenal of information assurance tools. We are working diligently to centralize network operations and defense, and to formalize in-

formation sharing policy, guidance, and procedures. These steps, along with our cryptographic modernization plan, will safeguard our vital information.

We are formalizing the role of U.S. Special Operations Command (SOCOM) in the war on terrorism. In the near future, we will be recommending a change to the Unified Command Plan assigning SOCOM specific responsibility to coordinate DOD actions against terrorist networks. We are also drafting planning guidance that will designate SOCOM as the supported commander for planning and, when directed, executing operations against terrorist networks. These changes will provide SOCOM and all of DOD improved focus in our global effort to combat terrorism.

CURRENT HOMELAND DEFENSE OPERATIONS

Last year, U.S. Northern Command (NORTHCOM) reached full operational capability in their mission to deter, prevent and defeat threats and aggression aimed at the U.S. and its territories. Upon SECDEF approval, NORTHCOM can now deploy Quick Response Forces (company-sized units) and Rapid Response Forces (battalion-sized forces) to support time-sensitive missions such as defense of critical infrastructures or consequence management in support of the Department of Homeland Security (DHS). To improve interagency collaboration, DOD has been working with DHS to develop and implement the National Response Plan, a national-level, all-hazards plan that will integrate the current family of Federal Domestic Emergency Response Plans into a single plan.

The Joint Staff has developed a contingency plan (CONPLAN) for consequence management operations, and NORTHCOM and PACOM have developed supporting plans. NORTHCOM's Joint Task Force Civil Support maintains strong interagency relationships to integrate command and control of DOD forces with Federal agencies to manage the mitigation of chemical, biological, radiological, nuclear, and explosive (CBRNE) incidents. This past summer, DOD, Nevada National Guard and Reserve units, Federal Emergency Management Agency (FEMA), 27 other Federal agencies, and Nevada State and local agencies participated in a consequence management exercise in Nevada called Determined Promise 2003. I was thoroughly impressed by the coordination and cooperation among active and Reserve component forces, Federal, State, and local authorities. We are conducting similar exercises across the country.

In regards to antiterrorism and force protection measures, the Joint Staff is working to ensure that combatant commanders at home and abroad have the resources to mitigate threats and respond to emergent requirements through the Combating Terrorism Readiness Initiatives Fund. My staff is involved in developing and updating antiterrorism standards and policies to reflect current worldwide operations and lessons learned so that we can address any vulnerabilities. We coordinate with various agencies in the areas of training, planning, operations and intelligence sharing, all essential for developing sound antiterrorism policies.

In an effort to improve the security of U.S. military installations and personnel around the world, the Joint Staff has created the Antiterrorism Enterprise Portal, an evolving web-based portal that aggregates the resources and programs required to support the DOD Antiterrorism Program. This portal is fast becoming DOD's one-stop location for antiterrorism/force protection information.

A program that complements this portal capability is the Joint Protection Enterprise Network (JPEN). Operated by NORTHCOM, this network provides the means to share unclassified force protection information rapidly between military installations in the continental United States, increasing their situational awareness and security significantly. Although currently operating only on military installations, JPEN has the potential to be expanded to share terrorist information with Federal, State, and local agencies as well.

The war on terrorism requires collecting relevant data and turning it into knowledge that will enable us to detect and preempt the plans of an elusive, skilled enemy dispersed across the globe. Although many obstacles remain, we are making significant progress in the area of information sharing. The Joint Intelligence Task Force for Combating Terrorism (JITF–CT) at DIA is a prime example of effective intelligence cooperation in the war on terrorism. In the area of counterterrorism, we are making significant progress toward transparency and full information sharing. JITF–CT has experts from 12 intelligence and law enforcement organizations, and JITF–CT personnel are embedded in 15 other organizations, including some forward deployed personnel.

READINESS FOR FUTURE OPERATIONS

Our Nation's number one military asset remains the brave men and women serving in our Armed Forces. This past year, they demonstrated to the world their dedi-

cation, perseverance, and compassion as they liberated the Iraqi people and worked to bring peace and prosperity to the region. The administration, Congress, and DOD have made raising their standards of living a top priority. The 2004 budget provided an average military pay raise of 4.15 percent and targeted increases of up to 6.5 percent for some enlisted personnel. The 2005 budget's proposed reduction of out-of-pocket housing expenses from 3.5 percent to 0 is a sound investment, as are future pay increases based on the Employment Cost Index plus .5 percent.

DOD has a focus group that continues to look at programs to enhance the combat effectiveness and morale of service and family members associated with OIF and OEF. Areas where we have made significant progress are Rest and Recuperation Leave, danger area benefits to include incentive options for extended tours of duty in Iraq and Afghanistan, exchanges, childcare and communications initiatives.

All Services generally met or exceeded active duty and Reserve component recruiting and retention goals in both fiscal years 2002 and 2003 and entered fiscal year 2004 with healthy Delayed Entry Program levels. However, recruiting and retention of both active and Reserve personnel will continue to require attention and continued investment as we face the challenges of an improving economy and the high operations tempo associated with the war. I view all of the quality-of-life issues as inseparable from overall combat readiness, and we greatly appreciate congressional support for all of these initiatives.

The overall readiness of our Armed Forces—whether forward deployed, operating in support of contingency operations, or employed in homeland defense—remains good. Our forces are the world's best trained and, possess the requisite personnel, equipment, and resources necessary to accomplish the military objectives outlined in the Strategic Planning Guidance. Challenges do exist, especially with regard to ground forces in Iraq. We are currently in the midst of rotating our combat troops in Iraq—a feat that will rival any in history. We will continue to examine force levels and size them appropriately as security dictates.

We continue to rely heavily on our Reserve and Guard personnel, who are playing critical roles in homeland defense, and serving with distinction around the world in the war on terrorism. Some missions like the ones in Bosnia-Herzegovina and Kosovo are almost exclusively made up of Reserve and Guard units, and they are doing a magnificent job. We are well aware of the strains on members, their families, and their employers, and continuously seek better ways to support them.

There are several initiatives underway, collectively by DOD, the Services, combatant commands, and the Joint Staff to reform the mobilization process and to relieve the stress on the force. United States Joint Forces Command (USJFCOM), in conjunction with the Services, is leading the mobilization reform effort by evaluating policy changes and identifying other solutions to streamline the mobilization/demobilization process, and preliminary recommendations are expected in early 2004. Two Operational Availability sub-studies were conducted last year and identified the active component/Reserve component mix and low density/high demand assets as two areas of immediate concern to relieve stress on the Reserve component forces. As an example, the Army has already begun converting some Reserve component artillery forces into Military Police forces to meet one of the expected high demand roles of the foreseeable future. This, and other ongoing rebalancing efforts will ensure that Active and Reserve Forces continue to complement each other. The Services are actively engaged in reviewing how much of a given capability they need for this new security environment, and which capabilities belong in each component. Other key DOD areas of concern are reducing the need for involuntary mobilization of the Reserve component early on in rapid response operations, establishing a more rigorous process for reviewing joint force requirements, and ensuring efficient use of mobilized Reserve component personnel. A comprehensive Rebalancing the Force Report by Assistant Secretary of Defense (Reserve Affairs (ASD(RA)) will summarize these efforts, while a study by Assistant Secretary of Defense (Health Affairs (ASD(HD)) will define Reserve component requirements for homeland defense.

U.S. Armed Forces are capable of achieving all assigned objectives in the defense strategy. However, current stresses on the force remain considerable. The increased demands of the war on terrorism, sustaining post-conflict operations in Iraq and Afghanistan, and other global commitments are unlikely to change significantly in the near-term. Moreover, while committed globally, our Armed Forces must continue to defend the homeland, reconstitute forces returning from contingency operations, transform to meet future challenges, strengthen joint and combined warfighting capabilities, and maintain readiness. Today, given these commitments and requirements, we are carefully managing the risk in executing an additional major combat operation.

When units return home from combat operations, they must undergo a reconstitution process, which generally means a drop in their readiness. However, this does

not necessarily indicate that a unit is either unavailable for or incapable of executing part or all of their assigned wartime missions. We have initiated new measures in the current readiness reporting system to identify Service and combatant command requirements, determine the scope of required reset actions, and develop appropriate solutions to mitigate shortfalls and manage risk. Our workload remains high, but we remain prepared to accomplish those missions assigned to us.

Army units returning from OIF I/OEF require focused maintenance efforts to return them to pre-hostility readiness levels, while continuing to meet combatant commanders' maintenance requirements. The Army's goal is to return OIF I/OEF active duty units to pre-deployment readiness within 6 months and Reserves within 1 year after return to home station. However, some critical aviation systems may require additional time in order to complete depot level repairs. Funding was programmed from the 2004 supplemental for these organizational and depot level maintenance requirements. Army Materiel Command is the lead agency for developing a plan to repair major equipment items from OIF I/OEF. Approximately 1,000 aviation systems, 124,400 communications and electronics systems, 5,700 combat/tracked vehicles, 45,700 wheeled vehicles, 1,400 missile systems, 6 patriot battalions, and 232,200 various other systems are included in this repair plan. As OIF II and beyond maintenance requirements are further defined, DOD will refine estimates and update costs.

Combatant commanders and the Services identified preferred munitions as one of their risk areas of concern via periodic readiness reporting. Supplemental funding, as well as augmented annual budget requests, have allowed us to meet our requirement for Joint Direct Attack Munitions and laser-guided bomb kit demands. In the near-term, we are focused on improving how we determine our munitions requirements. Over the long-term, we plan to field improved guided munitions systems that build on our already superb precision-delivery capabilities.

Our military training areas are facing competition from population growth, environmental laws, and civilian demands for land, sea, and airspace. The Services are proud of their success in protecting the environment, endangered species and cultural resources. We are grateful to Congress for their assistance in the Fiscal Year 2004 Defense Authorization Act, which precluded designating certain DOD lands as critical habitat, and preserved valuable Navy training while ensuring protection of marine mammal species. Having the world's most sophisticated weapons systems and simulators cannot substitute for our most important military training activities, air, land, and sea maneuver and live-fire training. Some installations, ranges, and training areas are losing critical military value because encroachment is impairing their capability to provide useful readiness and operational support. Such facilities should be reviewed during the next round of Base Realignment and Closure. We will continue to seek congressional support that balances environmental concerns and readiness.

Our Nuclear Readiness continues to evolve. In December 2001, the Nuclear Posture Review established a New Triad composed of Offensive Strike capabilities (both nuclear and non-nuclear), Defenses (active and passive) and Responsive Infrastructure in order to respond to a wide range of contingencies. DOD is in the midst of a Strategic Capabilities Assessment to assess the progress in fielding the New Triad and determine the number and types of forces to meet the President's goal of 1,700 to 2,200 operationally deployed strategic nuclear warheads by 2012.

We continue our efforts to ensure we can operate effectively in a CBRN environment, since our potential adversaries, both nation states and terrorists, seek to acquire and develop weapons of mass destruction, including biological warfare agents. Vaccinations represent an important countermeasure against biological threats and provide our military personnel with the best available protective measures. To date, approximately 695,000 military personnel have been vaccinated against anthrax and more than 520,000 military personnel have received smallpox vaccinations. The anthrax and smallpox vaccination programs are very successful, and it is imperative to develop effective countermeasures against other biological threats to protect our warfighters.

While our warfighting team has always included contractors, their involvement is increasing. The Joint Staff is leading a joint group to develop overarching DOD policy for management of contractor personnel during contingency operations.

We must also reexamine our ability to get to the fight. The Mobility Requirements Study 2005, completed in 2000, is the current baseline mobility requirements document. DOD is actively engaged in conducting a new full-scale mobility study that reflects our current defense strategy and incorporates lessons learned from OEF and OIF to further clarify strategic lift requirements. The goal is to complete a new Mobility Capabilities Study by June 2005, in time to influence preparation of Program Objective Memorandum-08 (POM–08).

Sustaining our overseas presence, responding to complex emergencies, prosecuting the global war on terrorism, and conducting operations far from our shores are only possible if our ships and aircraft are able to make unencumbered use of the sea and air lines of communication. Our naval and air forces must be able to take advantage of the customary, established navigational rights that the Law of the Sea Convention codifies. We strongly support U.S. accession to the convention.

Although C–17 production is not planned to terminate until fiscal year 2008, production of several C–17 long lead items is planned to close in fiscal year 2006. The Air Force and DOD are studying the benefits and risks (including financial and war fighting) of continuing or terminating the C–17 long lead items production line, and plan to complete this assessment in time to inform the fiscal year 2006 POM and the Enhanced Planning Process.

Increasing costs, decreasing reliability and maintainability, and an increased need for air-refueling capability dictate modernization of the KC–135 fleet. Congress has authorized the Air Force to lease 20 and purchase 80 new Boeing 767 tanker aircraft. In early December 2003, DOD suspended negotiations with Boeing, pending the outcome of ongoing Inspector General investigations. Based on the results of that investigation, the Air Force will recommend a cost-effective strategy for acquiring a suitable replacement for the KC–135 fleet to meet joint warfighting requirements to support our National Security Strategy.

The F–35 Joint Strike Fighter (JSF) will be a giant leap over existing attack/fighter capabilities. JSF is in the third year of an 11-year development program, and we have seen some design challenges. The current design challenge for all three variants is weight, which impacts performance requirements, particularly for the Short Takeoff and Vertical Landing variant. Design teams are working diligently to solve this issue, and we have moved the first planned production procurement to the right 1 year, and added extra money to the development. The weight issue is within normal parameters of design fluctuation, and this issue will be worked out through the development and design process.

Protection of our troops remains a top priority. Interceptor Body Armor (IBA) was in the initial fielding phase at the start of OIF. The Army has been aggressively managing this critical item, and accelerated fielding and production rates when CENTCOM identified the need due to the threat situation. The Army has been issuing the IBA directly for use in the combat theater of operations. IBA consists of an Outer Tactical Vest (OTV) and a set of Small Arms Protective Inserts (SAPI). As of 26 January, 93 percent of the troops and DOD civilians operating in Iraq had been outfitted with IBAs with SAPI. The OTV and SAPI assets needed to equip the remainder of the force are in theater being distributed. During the upcoming force rotation, all OIF II forces will be outfitted in Kuwait prior to entering Iraq. We will continue to work diligently to provide the best protective equipment for our servicemen and women and DOD civilians.

The up armored version of the high mobility multi-purpose wheeled vehicle (HMMWV) has proven to be effective at protecting our soldiers against mines, improvised explosive devices (IED) and direct fire weapons. Currently there is a shortfall in Iraq and worldwide. To fill this shortfall, in the near term, the Joint Staff, the Services, and the combatant commanders are conducting an aggressive campaign to redistribute worldwide inventories of up armored HMMVVs to Iraq. In the longer-term, Congress' Emergency Supplemental provided funding to accelerate production of up armored HMMVVs to meet CENTCOM requirements by January 2005.

OIF reaffirmed how critical the deployment and distribution process is to joint warfare. The Joint Staff is working with DOD and the Service logistics experts to develop an integrated end-to-end deployment and distribution process that is responsive to rapid projection of forces, the delivery and handoff of joint forces, and worldwide sustainment in support of the Joint Forces Commander.

During the fiscal year 2004 budget cycle, Congress voiced concern over the Department's overseas basing plans. Since then, our global posture strategy has matured. We are now in the process of detailed consultation with our allies and Members of Congress. The overseas portion of the fiscal year 2005 military construction budget submission includes projects at enduring locations. These projects reflect our combatant commanders' most pressing base and infrastructure needs. I urge Congress to support our combatant commanders and fund the overseas military construction projects submitted in the fiscal year 2005 budget request. These projects contribute directly to our readiness and the quality of life our personnel deserve.

JOINT WARFIGHTING

Protecting the U.S., preventing future conflicts, and prevailing against adversaries require our military to sustain and extend its qualitative advantage against a very diverse set of threats and adversary capabilities. Maintaining our qualitative advantage begins with improving education programs across the Services. We must also adapt and transform organizations and functions to eliminate gaps and seams within and between combatant commands, agencies at all levels of government, and potential coalition partners. Information sharing is at the forefront of this effort.

Recent operations in Afghanistan, Iraq, the Philippines, and Africa have demonstrated the impact timely sharing of intelligence has on planning and executing military operations. Since this is a global war requiring an international effort, we must also improve coalition command and control capabilities, and consolidate the numerous networks that exist today. These disparate networks hinder our ability to plan in a collaborative environment and exercise timely and effective command and control with our multinational partners.

We must also review policies and implement technology that safeguard our vital sensitive information while ensuring critical operational information is shared with all those who fight beside us. JFCOM has been tasked to take the lead in identifying specific multinational information sharing requirements and recommending policy changes. Our goal is to establish a multinational family of systems with common standards as part of the Global Information Grid enterprise services. I view this as a top priority and ask for congressional support—information sharing with our allies is critical to winning the war on terrorism.

During OIF, our military forces benefited from unprecedented situational awareness through a common operational picture. In particular, one new system, Blue Force Tracker, was critical to the success of our forces as they sped towards Baghdad. Some of the 3rd Infantry Division, V Corps, and I Marine Expeditionary Force (MEF) vehicles were equipped with transponders that automatically reported their positions as they maneuvered across the battlefield—greatly improving situational awareness for our battlefield commanders, and reducing the potential for blue-on-blue engagements. Despite significant improvements in joint combat identification, challenges remain to reduce incidents of friendly fire, and maximize the synergy of combined arms to provide all front-line tactical units with friendly and threat information during decisive engagements. To address these challenges, JFCOM has the lead in the comprehensive effort to improve Joint Battle Management Command and Control, which includes the integration of Common Operational and Tactical Pictures, Combat Identification, and Situational Awareness across the force.

We are taking command and control lessons learned from OIF like the capability to track Blue Forces, and running them through the Joint Capabilities Integration and Development System process to help shape future systems requirements. The objective is to ensure all of the critical considerations of Doctrine, Organization, Training, Material, Leadership and Education, Personnel, and Facilities (DOTMLPF) are employed in an approach that synchronizes material and non-material solutions.

We are also improving our military war planning process. The Joint Staff has developed an adaptive planning process—whose key concepts are agility and speed—to reduce the time to develop and update war plans, while adding flexibility and adaptability to respond to the rapid changes in the global strategic security environment. The goal is to provide the President and SECDEF the best options possible. We have also been developing a collaborative campaign-planning tool for crisis action planning and execution. These tools should allow commanders the ability to assess multiple courses of action, rapidly compressing plan development time while increasing plan flexibility.

Our warfighting effectiveness is also enhanced by our Joint Exercise Program, which provides combatant commanders with the means to train battle staffs and forces in joint and combined operations, evaluate their war plans, and execute security cooperation plans with our allies and coalition partners. In order to improve joint training opportunities, JFCOM has established a Joint National Training Capability (JNTC), which will achieve Initial Operational Capability in October 2004. JNTC will combine live and virtual play at multiple locations. The goal is to provide realistic joint combat training against an adaptive and credible opposing force, with common ground truths, and high quality exercise feedback.

Strategic airlift is available to exercises only on an as-available basis, since it is prioritized for operational needs first. Providing the personnel and assets to accomplish meaningful joint training during this period of high operations tempo (OPTEMPO) has also been challenging. To balance these competing requirements, the combatant commanders are reviewing their fiscal year 2004 exercise programs

with a view to canceling, downsizing, or postponing exercises. We must continue to balance operational and exercise requirements against operations/personnel tempo (OPS/PERSTEMPO) and available lift.

Prior to combat operations in Iraq, we established a process for adapting OIF lessons learned for future operations as rapidly as possible. JFCOM has the lead role in turning identified operational level lessons learned into required capabilities through the Joint Capabilities Integration and Development System. A consolidated OIF After Action Review will be presented to Congress in July 2004. The top three OIF Strategic Lessons Learned, from the Joint Staff perspective, are the need for an improved deployment process (including Reserve component mobilization), redistributing specialties between the active and Reserve components, and improving the Phase IV planning and transition process.

Phase IV transition and Stability Operations require significant adjustments in how we plan, train, organize, and equip our forces. We can expect future adversaries to attempt to offset U.S. military strengths through asymmetric means, to include terrorist insurgency, as combat operations transition to post conflict operations. The lessons learned process continues during stability operations in Afghanistan and Iraq.

The Joint Staff, in coordination with the Services and the combatant commanders, is revising the National Military Strategy to link strategic guidance to operational warfighting and serve as a military plan to implement the National Defense Strategy and the National Security Strategy. The National Military Strategy provides the context for other military documents such as the Joint Operations Concept, Joint Strategic Capabilities Plan, and other plans. It will incorporate lessons learned from Operations Noble Eagle, Enduring Freedom, and Iraqi Freedom and establish specific military priorities, objectives, employment concepts, and capabilities for combatant commands and Services. The 2004 National Defense Authorization Act requires that the National Military Strategy include the Chairman, Joint Chiefs of Staff (CJCS) annual risk assessment, which is due 15 February 2004.

CONSIDERATIONS AND RECOMMENDATIONS FOR GOLDWATER-NICHOLS ACT

For the past 18 years, joint operations have been improving under the provisions of the Goldwater-Nichols Act. The act strengthened civilian control of the military and facilitated better military advice to the President, SECDEF, National Security Council (NSC) and Congress. Now, it is time to consider new ideas for improving the effectiveness and efficiency of the military instrument of power in today's new security environment.

The war on terrorism and other recent military operations have demonstrated the need for improved interagency cooperation, integration and execution of National Security Council decisions. We also need to improve how we coordinate the efforts of international, regional and non-governmental organizations. I fully support initiatives to formalize a mechanism that creates effective lines of authority and provides adequate resources to execute interagency operations. For example, designating the Chairman of the Joint Chiefs of Staff as the principal military advisor to the Homeland Security Council would improve homeland defense and prosecution of the war on terrorism beyond our borders.

Joint Officer Management codified in the 1986 Goldwater-Nichols legislation was based on the threats and force structure evident late in the Cold War. We are developing a strategic plan to shape joint officer management based on the type and quantity of officers needed to perform current and future joint missions, and the education, training, and experience joint officers require. This strategic approach will ensure future joint officers meet the needs of joint commanders.

We are already taking some initiatives to improve our Joint Professional Military Education system, with the goal of educating and training the right person for the right task at the right time. Historically, we waited until officers became majors and lieutenant colonels before we provided them with joint education. We are finding that the war on terrorism requires noncommissioned officers and junior officers from all Services to work in the joint environment more often than they have before. We are developing courses tailored to the needs of our younger troops that expose them to joint warfighting far earlier in their careers. To improve joint officer management and education, and prepare officers for joint duty earlier in their professional careers, I request consideration to allow the Service War Colleges to teach Joint Professional Military Education (JPME) Phase Two and the authority to determine the appropriate length of the Joint Forces Staff College's JPME Phase II course. We also have pilot programs providing joint education to Senior Noncommissioned Officers and our Reserve and Guard component members. Additionally, we are reviewing our joint general and flag officer training programs to ensure our senior officers are pre-

pared to command joint task forces and work effectively with interagency and coalition partners.

Today, the chairman remains well positioned to assist in providing strategic direction to the Armed Forces, assess impacts on the long-term readiness of the force, and evaluate current and potential levels of risk associated with global military activities. Already, we are in the process of transforming our internal processes make them more responsive in the current dynamic environment. In a similar vein, I request we also reevaluate and streamline our current reporting requirements to Congress, many of which seem of questionable utility. I propose the formulation of a working group composed of members from the House Armed Services Committee (HASC), Senate Armed Services Committee (SASC), House Appropriations Committee (HAC), Senate Appropriations Committee (SAC), Office of the Secretary of Defense (OSD), Office of Management and Budget (OMB), and Joint Staff to identify the best means and frequency of communications to meet congressional oversight needs.

TRANSFORMATION OF THE U.S. ARMED FORCES

We cannot focus solely on the threats we face today and assume there are not other, perhaps even more challenging threats on the horizon. Maintaining our unchallenged military superiority requires investment to ensure the current readiness of deployed forces while continuing to transform military capabilities for the future. Our adversaries will learn new lessons, adapt their capabilities, and seek to exploit perceived vulnerabilities. Therefore our military must transform, and must remain ready, even while we are engaged in war.

Before the events of September 11, transforming the force was viewed as DOD's greatest near-term challenge. Since then, we have had to fight battles in the mountains of Afghanistan, in the cities of Iraq, and around the world for the security of America. Putting transformation on the back burner and focusing solely on the fight at hand is simply not an option. We are fighting a war unlike any we have fought before—it demands new ways of thinking about military force, new processes to improve strategic agility, and new technologies to take the fight to the enemy. DOD continues to invest heavily in transformation, both intellectually and materially. Given that transformation begins with innovative thought, we have developed a suite of concepts that will define how the joint commander will fight in 2015 and beyond.

We recently published an overarching concept document titled Joint Operations Concepts to provide a framework for developing capabilities and defining concepts. Using this document as a foundation, the Joint Staff completed development of five joint functional concepts to define how joint warfighting will be conducted across the range of military operations. These functions include force application, protection, command and control, battlespace awareness, and logistics. Meanwhile, the combatant commands have been working on four high-level operating concepts that include strategic deterrence, stability operations, homeland defense, and major combat operations.

Collectively, functional and operating concepts define how we want to fight in the future, and will help us transform from the threat-based force of the Cold War to a capabilities-based force postured to respond to a wide variety of threats, some of which we cannot confidently predict today. To aid the Joint Requirements Oversight Council in determining warfighting needs with a capabilities-based approach, we are developing joint integrating concepts. These concepts are far more focused than functional and operating concepts, and define specific tasks to be conducted. They are designed to bridge the gap between how we want to fight and the capabilities we need. Examples include urban operations, global strike operations, and forcible entry operations. The functional, operating, and integrating concepts will continue to evolve over time. The first round of this very important concept work should be done within the year.

For each functional concept area we have established a Functional Capability Board to integrate the views of the combatant commands, Services, defense agencies, Joint Staff, and OSD. These boards comprise functional experts from across DOD who will provide the best advice possible for our planning, programming, and acquisition processes. Functional Capability Boards also support a new process called the Joint Capabilities Integration and Development System, which replaces the previous Cold War-era Requirements Generation System. The new system recognizes that less expensive programs can have a significant impact on joint operations. Virtually all programs are reviewed through the JROC process for potential joint impact before they get a green light, ensuring all Service future systems are born joint.

Based on the recommendations of the Joint Defense Capabilities Study—the Aldridge Study—we established the Strategic Planning Council chaired by SECDEF, and composed of the Service Secretaries, the Joint Chiefs, principal under secretaries, and the combatant commanders. The first meeting was held 28 January 2004. To capture and disseminate this top-down strategic direction, we will produce a new Strategic Planning Guidance document as the mechanism to provide subordinates with this strategic guidance. The first Strategic Planning Guidance document should be complete by February 2004.

We are also developing an Enhanced Planning Process that integrates DOD-wide lessons learned, experimentation, concept development, study results, capability gap analysis, and technology development into a collaborative capabilities planning function. The goal is to offer distinct and viable alternatives to senior leadership rather than a consensus driven, single point solution, and implement their decisions into the Joint Programming Guidance document, the first of which will be issued in May 2004.

These three transformational process initiatives—Functional Capability Boards, Joint Capabilities Integration and Development System, and the Enhanced Planning Process—work together improving our planning and programming agility for future joint capabilities. JFCOM is working with the Functional Capability Boards to incorporate lessons learned from OEF and OIF into a list of materiel and nonmateriel recommendations to the Joint Requirements Oversight Council to turn lessons learned into identified capabilities needs as quickly as possible.

JFCOM is also coordinating with the Services, combatant commands, other U.S. agencies, and coalition partners to ensure experimentation efforts support the warfighter. One of JFCOM's key experimentation initiatives is the Standing Joint Force Headquarters, which will provide combatant commanders a rapidly deployable command and control team, along with supporting information systems and reachback capabilities, that will enable us to respond to regional conflicts with smaller and more effective joint operational headquarters. JFCOM is establishing the prototype Standing Joint Force Headquarters this year, and in fiscal year 2005 we will field the communications portion known as the Deployable Joint Command and Control System to CENTCOM and PACOM. EUCOM and SOUTHCOM receive follow on systems in fiscal year 2006 and fiscal year 2007. The Deployable Joint Command and Control System will use state-of-the-art information technology to enhance Joint Force command and control.

Communications systems are a prime target for transformational ideas. The Joint Tactical Radio System is a software programmable radio that will provide seamless, real-time, voice, data and video networked communications for joint forces. It will be scalable allowing additional capacity (bandwidth and channels) to be added, backwards-compatible to communicate with legacy systems, able to communicate with multiple networks, and able to accommodate airborne, maritime and land based systems. It provides the tactical warfighter with netcentric capabilities and connectivity to the Global Information Grid, and is essential to meeting our 21st century joint communications warfighting requirements.

Transformation also means developing multiple, persistent surveillance capabilities that will let us "watch" situations and targets by looking, smelling, feeling, and hearing with a variety of long-dwell sensors from space, air, ground, sea and underwater and integrating these capabilities into a "system of systems." The exploitation of Measurement and Signature Intelligence (MASINT), holds great promise. MASINT collects information from many diverse sources to detect, characterize and track a target or activity by its distinctive properties, or "signatures" that are very difficult to conceal or suppress. Last year, DIA created its Directorate for MASINT and Technical Collection to develop new forms of technical collection and integrate MASINT into collection strategies and operations.

Another example of the transformational technologies we have just fielded is the Army's Stryker Brigade, which is centered on a new, fast, and quiet vehicle that can deliver 11 troops to the fight. This effort is far more than simply fielding a new vehicle; it is also a new way to organize a brigade, and link that brigade to a networked command and control system that shares intelligence, surveillance, and reconnaissance information. Our Stryker Brigade Combat Teams (BCTs) are organized and trained to take advantage of this new technology. The first Stryker BCT is already proving its worth in Iraq.

To reduce our vulnerability to weapons of mass destruction, we have made progress on providing missile defenses for our homeland, our deployed forces, and our friends and allies. In the coming year, we plan to deploy six ground-based interceptors in Alaska and four in California to provide an initial capability to defend the U.S. from ballistic missile attack. The Patriot missile defense system and the emerging AEGIS-based SM–3 system will provide short and medium range missile

defenses, as well as critical surveillance and tracking essential to our Ballistic Missile Defense System. Coupled with an upgraded launch detection capability provided by the Space-Based Infrared System, our ballistic missile defenses will continue to improve significantly over the next few years.

The Global Positioning System (GPS) offers an excellent example of a system that transformed modern warfare. GPS delivers worldwide positioning, navigation and timing data that provide U.S. and allied forces an all-weather, precision engagement capability. Over the last decade, the success of combat operations was largely due to GPS-aided precision-guided munitions. We must continue to modernize GPS, improve capabilities, protect U.S. and allied access to reliable military positioning, navigation and timing information, and deny this information to our adversaries, while minimizing impacts to peaceful civil users. We are engaged with NATO and the European Union to resolve our concerns with the proposed Galileo system, a civil satellite system that puts at risk our programmed military enhancements to GPS. A U.S. interagency team has made significant headway with some tough technical issues over the past year, but continued negotiations are essential to address the remaining technical, and more importantly, the political issues. Once these issues are resolved, we can confidently move forward with our vision of space superiority to support future joint and coalition operations.

As recent military operations have demonstrated, space is a critical dimension of the battlespace. Lessons learned from OEF and OIF highlight our increasing reliance on space communication assets and our demand for bandwidth. Our challenge is meeting future warfighter requirements in the face of an aging satellite constellation. Despite a planned 10-fold increase in capability through Advanced Extremely High Frequency (EHF) and Wideband Gapfiller Systems, projected capacity may not meet the growing demand. This shortfall will potentially impact our ability to maintain a technological advantage over our adversaries. Work on Transformational Satellite Communications continues, which is designed to improve communications for mobile systems, particularly those that provide intelligence, surveillance, and reconnaissance. Our unmanned aerial vehicles and the Army's Future Combat System place heavy demands on bandwidth, particularly when real-time video feeds are required. The frequency spectrum is critical not only to joint warfighting, but to all Federal, State, and local agencies to ensure national security and public safety. Military and civilian technology is rapidly moving to a wireless medium. As pressures from commercial sources to free up more Federal spectrum mount, we must ensure our long-term spectrum accessibility for our military forces.

These are just a few examples of our ongoing transformation efforts. We are working hard to integrate old systems with new, in innovative ways. Interoperating between our own legacy and transformational systems is a challenge for us, but it is an even greater challenge to our coalition partners, who must participate in key decisions on how transformation will enhance combined operations in the future.

Over the past year, NATO has achieved great success in progressing toward a transformed military organization. The alliance has developed, approved, and begun implementing a new, more streamlined command structure, which will make it viable in the 21st century global security environment. The catalyst for modernization will be the new Allied Command Transformation, which will maintain a close partnership with JFCOM. Also, on the forefront of transformation, NATO has created the NATO Response Force, a key enabler of NATO's new operational concept. It is designed to be a combined, deployable, sustainable, and lethal force intended to be NATO's first responders, able to respond quickly to a crisis anywhere in the world. In a display of NATO's new focus, on August 11, 2003, NATO assumed command of International Security Assistance Force (ISAF) in Afghanistan, the first out of area mission in the history of the Alliance. To be an effective joint force in the future, we must ensure that our allies keep pace with our transformation efforts.

CONCLUSION

Responding to today's dynamic threat environment requires our Armed Forces to be innovative, agile, and flexible. With Congress' strong support, our military has made significant progress combating terrorism, improving our joint warfighting capabilities, and transforming our military into a 21st century fighting force. We appreciate your efforts to help us be responsive to a changing world, and make that world a safer and better place.

Chairman WARNER. Thank you very much, General.

Members of the committee, we have a quorum present, and it is the desire of the chair and the ranking member to address to the committee promotions of three flag officers and general officers who

are in combat commands today. I propose that we briefly go into executive session to consider and act upon several important nominations.

[Whereupon, at 10:27 a.m., the hearing was recessed, the committee proceeded to other business in executive session, then reconvened the hearing at 10:29 a.m.]

Chairman WARNER. Colleagues, the Secretary will be addressing the House in the posture statement beginning at 1 o'clock. We will therefore have to conclude our work by the hour of 12:00, so we will hold to 5-minute rounds for each member. I will proceed at this point in time.

Mr. Secretary, I thought your comprehensive statement on transformation is one that this committee will try and support in every way. Do you know of any special legislation that you will further require for the implementation of this package? The legislative package is in the normal sequence of events to come to the committee here in a week or so, but perhaps you could tell us at this time. An example is the important institution of reform in the civil service that you proposed last year and which I think in large measure was adopted. Any other legislative proposals you could alert us to at this time?

Secretary RUMSFELD. Mr. Chairman, there is nothing of the magnitude of the new national security personnel system that we will be proposing. But there will be a number of smaller items, lesser items, that we will be recommending for approval, consideration of the committee.

Chairman WARNER. Do you feel that the budget provides the needed dollars to implement the transformation that you have undertaken and continue to undertake?

Secretary RUMSFELD. I do.

Chairman WARNER. That involves not only pay and benefits for the military, but also the acquisition of new equipment?

Secretary RUMSFELD. I do.

Chairman WARNER. The plan of the United States Army under the direction of a very able Chief of Staff and a very able Acting Secretary requires sort of fracturing the existing force into another series of units. Are they going to be fully equipped?

Secretary RUMSFELD. They will be. Pete Schoomaker and I briefed the President on the Army's proposal. The President approved it. General Schoomaker will be presenting it to this committee at a time of your choosing. It is important that it be considered carefully.

It has multiple dimensions. Not only does he intend to go from 33 to 48 brigades over a period of 4 or 5 years—5?

General PACE. Four years to 43, sir, and then an additional 4 to the 48.

Secretary RUMSFELD. So it is 4 years to the 43 brigades and then an additional period for the remaining 5 brigades, with an off ramp in the event they are not needed.

But, in addition, he intends to more fully equip these brigades with division capabilities that currently are only at the division level and to make them more modular, so that they can be mixed and matched and deployed. There is no doubt in my mind but that

if this plan is completed in the time frame indicated then we will have a much improved tooth-to-tail ratio.

Chairman WARNER. Thank you.

Returning to the question of the WMD, the ISG, the military force augmented by a number of civilians from the Agency and other departments of the government, is one that is under the command of General Dayton, and now Mr. Duelfer will join. Is the funding adequate for them to continue and fulfil their mission? Because you and I both stressed that this mission must be completed.

You described in your statement a number of, as you call it, "theories" of things that could have happened. Now, we wish to develop all the facts that we can possibly find to determine the answers to the various theories that you have represented.

Secretary RUMSFELD. The ISG has somewhere between 1,200 and 1,300 people currently assigned.

Chairman WARNER. That is correct.

Secretary RUMSFELD. General Dayton is the individual who is responsible for those people. He had reported to Dr. Kay, and Dr. Kay had the responsibility for the judgment calls as to the pace at which people should be interviewed and interrogated, the pace at which various documentation should be translated, and all of those judgment things that are more appropriate to the CIA than the DOD.

General Dayton has done a superb job of managing that task. There is a natural tension. You never have enough Arabic speakers or enough people to go over all the documentation that exists. They do not exist in our country or even through contractors. On the other hand, they have a good cadre of these folks. As you said, they come from all departments and agencies. It is fully budgeted for in this budget, and they are doing a terrific job under very difficult circumstances.

The tension that exists is our people are not currently being killed by WMD; they are being killed by terrorists. The same individual that one might interrogate or the same document that one might translate could produce information, for example, on the location of Saddam Hussein; it could produce information on counterterrorism, and it could produce information on the location of WMD. You do not know that as you go through that process.

So we are continuing to focus on WMD, but we are also focusing on counterterrorism.

Chairman WARNER. The mission basically remains the same?

Secretary RUMSFELD. It does.

Chairman WARNER. The structure of leadership remains the same?

Secretary RUMSFELD. It is identical.

Chairman WARNER. You will keep this committee informed if at any time you feel those resources of a significant amount have to be diverted away from that mission?

Secretary RUMSFELD. Dr. Cambone, am I correct when I said that the mission has not been altered?

Dr. CAMBONE. Yes, sir.

Secretary RUMSFELD. It has not.

Chairman WARNER. Fine. Thank you very much.

I was pleased that you directly answered my question with regard to the WMD. You also added your personal dimension to it, which is important because you have served under a number of presidents for a very long time in many challenging tasks, and you understand government service and the importance of being honest and forthright, as you are.

General Pace, on the question of the transfer of sovereignty, you have looked at the various steps that have to be performed. One of them General Abizaid addressed, and in our preliminary discussions in preparation for this hearing you felt that he might have been misquoted with regard to the appropriate protections of the coalition forces and the ability of them to continue their work, not only the ISG, but the hunting down of the insurgents and the terrorists.

Are you satisfied, one, that the schedule can be kept; and, two, that the basic military missions of the coalition forces can continue after June 30?

General PACE. Sir, your Armed Forces right now are currently protected by the provisions of U.N. Resolution 1511, which gives us the protections of an agreement like the Status of Forces Agreement (SOFA) as we do what we do right now in Iraq. Our State Department, working with the U.N., working with the Iraqi Governing Council, knows exactly the kinds of protections that our Armed Forces will continue to need after the turnover of sovereignty, and they are working that.

General Abizaid has had his input to that. We are watching that very carefully. We will ensure that our soldiers, sailors, airmen, marines, and coast guardsmen continue to have the requisite protection of their own individual rights as they do the mission that we have asked them to do.

Chairman WARNER. Lastly, Mr. Secretary, the forces under your supervision in the military are dependent on intelligence daily, I mean today, tomorrow, and in the future. While there are six and possibly seven investigations of the questions associated with WMD, we cannot wait until the final outcome to make some corrective measures. Are you personally looking at the DIA, the NSA, and other organizations, and contributing also your views to the greater Intelligence Community, about such corrections that have to be made today to see that the men and women of the Armed Forces and indeed others engaged in intelligence work that are on the front lines are receiving accurate, to the best we can, intelligence?

Secretary RUMSFELD. Yes, sir. The things that are under way with respect to the DOD: number one, we are participating with the Director of Central Intelligence's (DCI), review of lessons learned that is led by Mr. Kerr. The DIA has its own lessons learned activity under way, as do the Services.

In addition, we, needless to say, have been cooperating with the 9/11 Commission. We have been cooperating and will be cooperating with the commission to be appointed.

I should add, however, that the intensive lessons learned activity that took place looking from the U.S. perspective after the Iraq war and also from the Iraqi perspective, interrogating Iraqi military people, has provided information as well with respect to intel-

ligence. So there have been a whole series of things that the people have been proceeding on in an orderly way.

Chairman WARNER. Corrective measures are taken as you and others deem they are appropriate?

Secretary RUMSFELD. Absolutely.

Chairman WARNER. In a timely way to protect our people?

Secretary RUMSFELD. As the lessons are learned, they are implemented and have been. That process has been under way and ongoing.

Chairman WARNER. Thank you.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

There was an article about a week ago in the press that said that in two rounds of talks at the U.N. and Washington the United States told U.N. representatives that everything is on the table except the June 30 deadline for handing over power to a new Iraqi Government. Is that an accurate description of the President's position, that there will be no extension of that deadline regardless of the situation on the ground or regardless of whether or not that deadline has the support of the U.N.?

Secretary RUMSFELD. First, let me come right back to that, but let me clarify some confusion. I have been reading things where critics and people have been saying that the Iraqi security situation is not sufficiently good that we could turn over sovereignty and then leave on June 30. There was never any intention to do that.

Senator LEVIN. I just wonder, though, if you could answer my question——

Secretary RUMSFELD. I will.

Senator LEVIN.—because of the time problem.

Secretary RUMSFELD. Okay.

Senator LEVIN. Is that the position of the administration, that there will be no extension despite whatever happens on the ground and even if the U.N. does not support the turnover of sovereignty on that date?

Secretary RUMSFELD. A decision on changing the date or changing whatever are really decisions for the President and not for me. These issues involving the governance pass-over are things that are basically in the hands of the President and the NSC, not the DOD.

Senator LEVIN. Thank you.

On the WMD issue, in September 2002, DIA produced a classified study called "Iraq—Key WMD Facilities: An Operational Support Study." Part of that study has now been declassified. It included the following statement: "There is no reliable information on whether Iraq is producing and stockpiling chemical weapons or where Iraq has or will establish its chemical warfare agent production facilities." That is from a September DIA study, which was classified until recently.

[The information referred to follows:]

Defense Intelligence Agency

- A Defense Intelligence Agency product completed in September 2002 entitled *Iraq – Key WMD Facilities – An Operational Support Study* was a planning document produced in support of United States Central Command.

- This study was not a DIA assessment of Iraq's weapons of mass destruction program or capability. It addressed issues related to Iraq's chemical, biological, and nuclear program infrastructure.

- DIA stands solidly behind the Intelligence Community's assessment that Iraq had an on-going chemical weapons program that was in violation of United Nations sanctions.

- The following is the declassified section on Iraq's chemical warfare program from the classified DIA study:

Chemical Warfare (CW) Program

A substantial amount of Iraq's chemical warfare agents, precursors, munitions, and production equipment were destroyed between 1991 and 1998 as a result of Operation DESERT STORM and UNSCOM actions. Nevertheless, we believe Iraq retained production equipment, expertise and chemical precursors and can reconstitute a chemical warfare program in the absence of an international inspection regime. Iraq's successful use of chemical weapons in the past against Iranian troops and Kurdish civilians increases the likelihood of a chemical warfare reconstitution. Iraq has not signed the Chemical Weapons Convention (CWC).

There is no reliable information on whether Iraq is producing and stockpiling chemical weapons, or where Iraq has —or will —establish its chemical warfare agent production facilities. Unusual munitions transfer activity in mid-2002 suggests that Iraq is distributing CW munitions in preparation for an anticipated US attack. Iraq retains all the chemicals and equipment to produce the blister agent mustard but its ability for sustained production of G-series nerve agents and VX is constrained by its stockpile of key chemical precursors and by the destruction of all known CW production facilities during Operation Desert Storm and during subsequent UNSCOM inspections. In the absence of external aid, Iraq will likely experience difficulties in producing nerve agents at the rate executed before Operation Desert Storm.

Iraq is steadily establishing a dual use industrial chemical infrastructure that provides some of the building blocks necessary for production of chemical agents. In addition, Iraq has renovated and added production lines at two facilities formerly associated with Baghdad's chemical warfare program — Habbaniyah I and Habbaniyah II. Activities include building reconstruction, salvage operations, and equipment movement and deliveries in the months that followed the 1998 expulsion of United Nations inspectors. Baghdad is rebuilding portions of its chemical production infrastructure under the guise

of a civilian need for pesticides, chlorine, and other legitimate chemical products, giving Iraq the potential for a small "breakout" production capability.

Although we lack any direct information, Iraq probably possesses CW agent in chemical munitions, possibly including artillery rockets, artillery shells, aerial bombs, and ballistic missile warheads. Baghdad also probably possesses bulk chemical stockpiles, primarily containing precursors, but that also could consist of some mustard agent or stabilized VX.

Iraqi doctrine for the use of chemical weapons evolved during the Iran-Iraq war, and was fully incorporated into Iraqi offensive operations by the end of the war in 1988. Iraq demonstrated its ability to use chemical weapons during that conflict in the following roles: in a defensive role to disrupt or halt an overwhelming enemy offensive; as a preemptive weapon to disrupt staging areas before an offensive attack; and as an offensive weapon during well-staged attacks to regain territory. Authority for use of chemical weapons during that war eventually became delegated to corps commanders. The Iraqis delivered chemical agents with artillery, multiple rocket launchers, mortars, and aerial bombs dropped by fixed wing aircraft and helicopters. Iraq also used chemical agents against Kurdish civilians in 1988. Historical precedent suggests Saddam already may have deployed chemical weapons to western Iraq, as he did during Operation DESERT STORM, to be used against Israel in the event of coalition military action that threatens the regime.

Iraq will develop various elements of its chemical industry to achieve self-sufficiency in producing the chemical precursors required for CW agent production. Iraq might construct a new dedicated CW facility or facilities at remote sites to avoid detection or, alternatively, upgrade the production capabilities at its Habbaniyah I and II facilities to produce the agent mustard and binary components necessary for the production of nerve agents.

Now, on September 19, 2002, the same month of that classified DIA assessment, you publicly stated that Saddam has, "amassed large clandestine stockpiles of chemical weapons" and "we know he continues to hide biological and chemical weapons, moving them to different locations as often as every 12 to 24 hours and placing them in residential neighborhoods."

How do you explain the contrast between the DIA-reported intelligence that said there was no reliable information about production or stockpiling of chemical weapons and your public statements that you knew that Saddam has such weapons? What explains the discrepancy there?

Secretary RUMSFELD. First, let me say that, on your prior question, I would never say never on the deadline myself. Clearly the goal is to pass sovereignty as soon as possible, but what judgments the President might or might not make depend on the way the world evolves.

Needless to say, I am sure I never saw that piece of intelligence and whether or not it was the DIA's view overall or an analyst's view I cannot tell from the way you have presented it. I have relied not on any one single intelligence entity, like the DIA or the CIA. I have relied on the Intelligence Community's assessments, and the Intelligence Community's assessments were what they were, and they were as I stated them.

Senator LEVIN. Do you see a difference between saying with certainty that we know something and saying that there is some evidence of something?

Secretary RUMSFELD. I do.

Senator LEVIN. That was not the way in which the public statements of the administration were made. It was not that there is evidence or that there is belief. It was the statements of great certainty, that we know that there are amassed stockpiles of weapons, we know where they are. Everything was stated with certainty. What is not part of any of those investigations, those six that you have mentioned, is a review of the policymakers' certainty in their statements and what was the basis in intelligence for those statements of certainty.

That is one of the issues here, as to whether or not those statements, made with certainty by many members of the administration, should be reviewed in terms of what the intelligence was that did or did not back up such certain statements. I am not asking the question. I just want to let you know that that is not being looked at by any of the investigations that you refer to. The investigation or inquiry that I am attempting to make at the Armed Services Committee with my staff is to look at that issue as well as all the other issues.

But here is my question for you. It relates to the operation of Under Secretary of Defense for Policy Doug Feith. He made an analysis of the links between al Qaeda and Iraq and apparently presented a briefing to you on that analysis of the intelligence. Apparently the briefing that he made to you was then made to the DCI, the Intelligence Community staff, the NSC, and then to the Office of the Vice President.

Was the Feith operation supposed to look at intelligence through a different prism from the rest of the Intelligence Community? Why was it formed other than for that? Why did it bypass the usual channels with the product of his analysis? It is kind of a two-part question.

Secretary RUMSFELD. There was something that the press has characterized as an intelligence cell in the Office of Policy, Mr. Feith's office. It had two people in it at any given time. The people changed, and there may be two more. Maybe there were four or five at some point.

All they did was to try to, as I understand it—and I talked to Mr. Feith about this. Their task was simply to read the intelligence, not to gather intelligence, but to read the intelligence that existed and to assist him in developing policy recommendations in his role as Under Secretary for Policy.

At one moment, you are quite right, two people who had been looking at this thought they had an interesting approach to it. He asked me to be briefed. I sat there and listened to them. I said, "Gee, that is interesting; why do you not brief the people at CIA?" They did.

Senator LEVIN. And the Vice President.

Secretary RUMSFELD. I did not say that. I said exactly what I said. I asked them to brief the people at the CIA, and they did that. I do not know if they briefed anyone else besides that, but they did do what I asked.

The implication that this two-person activity, or four or five over time, was gathering intelligence or doing something unusual is just not correct, as I understand it.

Senator LEVIN. My question, though, was it intended that they look at intelligence through a different prism?

Secretary RUMSFELD. No. As I understand it, just what I said. Their task was to take the intelligence that existed, look at it and see what they could figure out about it, just as I do when I read it and you do when you read it. In this case, Doug Feith asked a couple of people—there are mountains of this stuff and it is a big task to integrate it in your mind. He had this small group doing that, and they looked at terrorist networks, which seems to me to be a perfectly logical thing to do after September 11.

Senator LEVIN. Thank you. My time is up.

Chairman WARNER. Senator McCain.

Senator MCCAIN. Thank you.

Mr. Secretary, I am certainly glad to hear of the increase of 30,000 members in the United States Army, although it was done in a rather bizarre fashion by the Chief of Staff of the Army, as I understand. It is usually an announcement made by the Secretary of Defense, but it is not important.

But a year and a half ago a number of us on this committee recognized the need for additional Marine Corps and Army troops, and I am sorry it took you so long to reach that conclusion. The reason I say that is because 40 percent of the troops in Iraq now will be Guard, National Guard, and Reserves and, despite your testimony, from my conversations with Guard and reservists around the country, you are going to see a very large exodus of members of the Guard and Reserve because of the incredible deployment burden that has been laid upon them. I hope that I am wrong, but that is what I am hearing from National Guardsmen and reservists throughout the Nation.

Mr. Secretary, is it your intention still not to provide this committee with the communications concerning the Boeing decision, despite the fact that there is an Inspector General (IG) investigation and a Department of Justice investigation, and this is an issue of very serious consequence? I only have 5 minutes, Mr. Secretary.

Secretary RUMSFELD. Let me comment. First of all, it seems to me that your suggestion that it took us a long time to increase the size of the Army is not correct. The Army has been being increased over a 2-year period, under the emergency authorities authorized by Congress. General Schoomaker has only been in for a short period of months and he has fashioned a plan, presented it, and it seems to me a perfectly proper approach for the Chief of Staff of the Army to be the one discussing the way the Army is going to be organized and arranged. I do not consider it strange or unusual.

In terms of the exodus issue from the Army, we certainly hope not. Pete Pace, do you want to comment on the retention and recruiting in the Army?

General PACE. Sir, I can, sir. It is a snapshot in time, and we all need to be attentive to how we use our folks and what the downstream effects are. But, currently, all our retention goals, all of our recruiting goals, are being met. In fact, those Army and Guard units that are notified of going overseas, they have had an

increase in those whose window was coming up for retention or getting out. They have increased that number by about 130 percent across the board.

So the immediate snapshot is one of heroes—not victims—stepping forward to support their country. But you are correct, Senator, we do need to keep an eye on it that we have them doing missions that are viable, missions that they should be conducting, that we treat them with respect, that they know ahead of time when they can be called up, that they know how long they are going to be called up for, and that they know when they are going to be demobilized—all things we need to do better.

Senator MCCAIN. We will see. I hope I am wrong. That is not what I am hearing from the people that actually are being deployed and are returning, including in my own State.

But please answer the question about whether you intend to turn over the documents to this committee or not, particularly in light of actual criminal investigations that are going on.

Secretary RUMSFELD. The first thing I would say is that you have not received a definitive answer in a long period and for that, I regret that. The complexity of it, as I understand it, is that it is not a DOD issue in total. It is a matter of a longstanding practice of the DOD and other executive branch departments of not turning over internal documents that reflect advice and opinions of employees as they advise senior decisionmakers. You are aware of this. E-mails are considered that type.

With respect to the tanker issue, because of the concerns that a great many people have raised and the criminal investigation—the investigation, I should say, that you mentioned——

Senator MCCAIN. You answered my question, Mr. Secretary. I would like your long answer to be made part of the record, okay?

Secretary RUMSFELD. Fair enough.

[The information referred to follows:]

There is a longstanding practice in the Department of not turning over internal documents that reflect the opinions of our employees as they advise senior decisionmakers. Electronic mail, like any other document, is subject to this principle. Generally, electronic mail messages that have been disclosed outside the executive branch or that do not reflect communications of Federal employees in advising on decisions will be turned over. Those internal electronic mail messages that do reflect advice to decisionmakers will not be turned over. It is important that officials of this Department receive open and candid advice and assessments from its employees. Turning over documents containing the frank opinions and candid advice of employees at many levels in the Department could discourage them from providing the crucial communications that our officials need to make the important decisions they are charged to make. On the proposed tanker program, we have provided, in addition to documents, comprehensive explanations of this program in testimony, briefings, and interviews. We stand willing to provide briefings and interviews on this and other important issues as we have in the past.

Senator MCCAIN. Does it bother you when there are e-mails that have already been disclosed that say things, for example from Boeing, "Boeing doing good stuff, Rudy and Andy met with Bill Schneider, Bill Schneider very supportive, will work issue in OSD"? Understand, Mr. Schneider is Chairman of the Defense Science Board (DSB), which will be, according to what you are about to tell me, reexamining the requirement. So you have the fox guarding the henhouse.

Does it bother you, "We have ghostwritten several op-eds, including former Commander in Chief of the Pacific Fleet (CINCPAC) Archie Clemins, we will have one in Navy Times and maybe in Air Force Times, and get an early bird when published"?

Does it bother you when the Secretary of the Air Force calls in the Boeing lobbyist—these are according to the e-mails that we got from Boeing and why we need your e-mails, Mr. Secretary—and says, "You have to put pressure on Mike Wynne." He chastises the Boeing lobbyist for not putting pressure on Mike Wynne?

Does it bother you when, even after you had put a pause on the Boeing tanker deal, that Mr. Sambur sends out an e-mail that says the "lease should be published today because all concerns concerning Ms. Druyun have been resolved"?

Does it bother you when there are many members of the Defense Policy and Science Board who were lobbying DOD and Air Force officials to approve the lease of 100 Boeing 767s? Some of them are mentioned in the Boeing e-mails: Richard Perle, Bill Schneider, General Fogleman, Admiral Jeremiah, and Admiral Clemins.

Does not all of this bother you, Mr. Secretary, that this incestuous relationship went on between Boeing, the United States Air Force, the Secretary of the Air Force in particular, and Mr. Sambur, and none of these people have been called to account for this kind of behavior?

Secretary RUMSFELD. Senator McCain, I personally and we the Department take seriously any and every allegation of wrongdoing.

Senator MCCAIN. These are facts, Mr. Secretary. These are facts on paper, of e-mails that were sent within the DOD and by Boeing.

Secretary RUMSFELD. As you are well aware, there is a DOD Inspector General's investigation of the entire aspect of this, and we are proceeding in an orderly and systematic way to try to come to the truth as to what took place. I assure you that if there has been wrongdoing, as there appears to have been, we will take appropriate action.

I would say one other thing. When I left the DOD in 1977, I made it a point not to be connected with anything related to the Defense Department that was for profit. I did it so that I could always feel I could say whatever I wanted on a defense issue and not have someone do what you just did and suggest that, simply because I was connected to a defense company, therefore what I said——

Senator MCCAIN. I am not suggesting——

Secretary RUMSFELD. Just a minute.

Senator MCCAIN. I am not suggesting, Mr. Secretary. I am telling you that Admiral Clemins, who is on your board, had ghostwritten by Boeing an article praising the tanker lease.

Secretary RUMSFELD. I understand what you said, and I say we are looking into those things. But I do not think that simply reading off all of those names of people who happen to serve the government in a nonprofit way, on the Defense Science Board or the Defense Policy Board or some other advisory board of the DOD, that they are suddenly supposed to be in a cellophane package and not have any other thoughts or any other role in life. We understand——

Senator MCCAIN. I am talking about their actions. I am talking about their actions, not their position, Mr. Secretary.

Secretary RUMSFELD. Well, we are looking into it. If we find any wrongdoing, I can assure you we will take appropriate action, as we have in the past.

Senator MCCAIN. Well, the Senate Armed Services Committee has the responsibility of oversight of the activities of your Department, and I do not see how we are going to be informed as to exactly what happened unless we see the communications and what went on in this decisionmaking process.

I thank you, Mr. Chairman.

Chairman WARNER. I listened to you in your response to Senator McCain and you acknowledged that your Department was tardy in the response to some of the material which can be forthcoming, because, as the Senator said, this committee has oversight responsibilities, and we must continue to perform those and not just await IG reports and the like.

I thank you.

Secretary RUMSFELD. The IG reports, well, I will not get into the details, but the reason for the delay is because it is not totally a DOD decision. It is a decision for the executive branch, and we have to coordinate with the White House and the Office of Management and Budget.

Chairman WARNER. Thank you, Mr. Secretary.

Senator Kennedy.

Senator KENNEDY. Thank you very much, Mr. Chairman, Mr. Secretary, General Pace. Thank you for representing the servicemen and speaking about their continued service to the country, which all of us are grateful for.

Mr. Secretary, the U.S. Iraqi weapons inspector David Kay made it clear in recent days that his exhaustive postwar inspections leave little doubt that Saddam Hussein had no WMD at the time the war began. His conclusion is a devastating refutation of the Bush administration's case for war in Iraq and seriously undermines our credibility in the world.

Until now, the administration has resisted the independent investigation of the issue, but now it is proposing investigation by a committee handpicked by the administration, with findings to be made only after the 2004 election. The White House agenda is clear—to blame the failure, the administration's case for war, on the Intelligence Community rather than the administration's manipulations and misrepresentations on the available intelligence.

The debacle cannot all be blamed on the Intelligence Community. Key policymakers made crystal-clear the results they wanted from the Intelligence Community. Mr. Kay said, "We were all wrong." He is wrong. Many in the Intelligence Community were right. There were clear warnings from the Intelligence Community. The dissents within the Intelligence Community to many of the positions taken by the administration were not noted or glossed over.

As Senator Levin pointed out, your own DIA in September 2002 said: "There is no reliable information"—"no reliable information," Mr. Secretary—"whether Iraq is producing, stockpiling, chemical weapons or where Iraq has or will establish its chemical warfare agent production facilities."

The State Department Bureau of Intelligence and Research (INR) concluded: "The activities we have detected do not add up to a compelling case that Iraq is currently pursuing what INR would consider to be an integrated, comprehensive approach to acquire nuclear weapons. INR considers the available evidence inadequate to support such a judgment."

Department of Energy intelligence disagreed that the famous tubes were a nuclear weapons program. The INR also concluded that the tubes were not intended for use in Iraq's nuclear weapons.

Greg Thielmann, a retired career State Department official who had served as Director of the Office of Strategic Proliferation and Military Affairs at the INR, said it all last July: "Some of the fault lies with the performance of the Intelligence Community. Most of it lies with the way senior officials misused the information they were provided." He said: "They surveyed the data, picked out what they liked. The whole thing was bizarre. The Secretary of Defense had this huge Defense Intelligence Agency and he went around it."

Lieutenant Colonel Karen Kwiatkowski, a recently retired Air Force intelligence officer who served in the Pentagon during the buildup to the war, said: "It was not intelligence; it was propaganda. They take a little bit of intelligence, cherry-pick it, make it sound much more exciting, usually by taking it out of context, usually by juxtaposition of two pieces of information that do not belong together."

We have seen in the examples that were mentioned this morning, for example just on the issues of stockpiling on chemical weapons, as mentioned by Senator Levin, in 2002 DIA said no reliable information on whether producing and stockpiling. You said in 2002 before this committee, "We do know that." "We do know that." I understand the Intelligence Community never says "We know." But you said in September, "We do know that."

In October the National Intelligence Estimate (NIE) said we have 100 metric tons, 500 metric tons of chemical weapons. We found that out in the last year. Secretary Powell says in February, "That is a conservative estimate." The stockpile of 100 tons to 500 tons—"That is a conservative estimate."

Then you say in March 2003, "We know where they are." "We know where they are." That is an extraordinary leap, and that extraordinary leap was wrong.

Do you not think that that independent commission ought to be really reflective of men and women that can look hard and fast, at not just what the intelligence was, but how it was manipulated, and interrogate career individuals in the Intelligence Community that believe that to be the case?

Secretary RUMSFELD. Senator Kennedy, you might not have been here for my opening statement on the intelligence piece, but there was not a single thing in there that blamed the Intelligence Community or put any cast on it even slightly like you suggested.

Second, I never have gone around the Intelligence Community. The Intelligence Community does not always agree. You have hundreds of people, and they have footnotes and they have different opinions. You develop a consensus. I have stuck with the consensus——

Senator KENNEDY. Are we not entitled to hear what the dissent was as well?

Secretary RUMSFELD. Absolutely.

Senator KENNEDY. Did we ever? Was that provided——

Secretary RUMSFELD. Absolutely.

Senator KENNEDY. Will you provide where these dissent positions were provided us prior to the time that we voted?

Secretary RUMSFELD. I am not in the Intelligence Community. I do not deal with the Intelligence Community committees in Congress. I am saying that within the executive branch, when intelligence is circulated it includes footnotes, it includes differing opinions, as it always has for the last 30 years to my certain knowledge.

Next, you have twice or thrice mentioned manipulation. I have not heard of it. I have not seen any of it, except in the comments you have made.

Third, I am told by Dr. Cambone sitting behind me that the document you read from and possibly the same document that Senator Levin read from also has a paragraph in it that says the following: "Although we lack any direct information, Iraq probably possesses chemical warfare agent in chemical munitions, possibly including artillery rockets, artillery shells, aerial bombs and ballistic missile warheads. Baghdad also probably possesses bulk chemical stockpiles primarily containing precursors, but that also could consist of some mustard agent and stabilized VX." That is in the same document, I am told.

Last——

Senator KENNEDY. You said "probable" and "possible," "probable" and "possible" rather than "we know." It is a big difference.

Secretary RUMSFELD. I am coming to "we know."

I could be wrong. I am asked a lot of questions. I use a lot of words, and I am sure from time to time I say something that in retrospect I wish I had not. However, I remember the moment I said "we know" something, and it was this: The forces had gone in, out of Kuwait into Iraq, and they were moving up and they had gotten in a day or two possibly, and they were a long way from Baghdad.

As everyone on this committee will remember, the suspect sites, which is what they generally call them, for WMD that the Intelligence Community produced, the suspect sites tended to be north. They tended to be in the Baghdad and north area. Our troops were a long way from even Baghdad. I was asked, "Where are the WMD?" I think I said: "We know where they are. They are up north; they are not down here." I was referring to the suspect sites.

You are quite right. Shorthand "we know where they are" probably turned out not to be exactly what one would have preferred in retrospect.

But let me say one other thing. General Pace, would you please describe what the United States Armed Forces did every day by putting on chemical gear? They believed, we believed, everyone believed, they had chemical weapons. These people did not get into these——

General PACE. Yes, sir. What we did, sir, was, as you would expect, prepare for the potential capabilities of the enemy. Even if

you disregard all of the intelligence that was current at that time, if you simply looked at the fact that he had used chemicals against his own people, had used chemicals against Iran, it was prudent for military planners to believe that he might use chemicals against us when we attacked.

So as we went across the line of departure, as we crossed from Kuwait into Iraq, all of our troops were in mission protective chemical gear, and they stayed in that, either just the suits themselves, sometimes the boots and the gloves, and on occasion the mask as well, as the tactical intelligence changed. They put that gear on and stayed in that well past the line at which we thought, which was about 60 miles south of Baghdad—well north of that line, they stayed in chemical protective gear.

It was reinforced by discoveries on the battlefield, like 3,000 brand new sets of chemical protective suits and atropine injectors that were found on the Iraqi side when they uncovered them in a school. Those kinds of discoveries led us to believe that if the Iraqis themselves had that kind of equipment and we knew we did not have chemical weapons, that they were preparing to use it.

That is the kind of environment inside of which we wore the chemical protective gear. It was not only for the troops who were on the ground, but everyone in theater. The Navy guys at sea, the Air Force folks where they were, all had the chemical equipment right there with them and practiced daily getting into it in case they were attacked.

Senator KENNEDY. Thank you, Mr. Secretary.

I just say that in your September 19, 2002, testimony to the committee you said five times that Iraq has or we know they have WMD.

Thank you, Mr. Chairman.

Secretary RUMSFELD. I am not going to go back and quote the comments from the previous administration and President Clinton and Vice President Gore and Secretary Cohen and all of that the way you have. I can just say that the stream of intelligence over a period of a long time in both administrations led the same people in similar jobs to the same conclusions.

Chairman WARNER. Mr. Secretary, that is an important point. You must recognize, we are slightly handicapped, that our offices are locked. We cannot get to a lot of the information we had intended to bring with us this morning. I will see that our record will remain open for an indefinite period of time until our offices are once again opened and material is available to members to put in the record and ask such further questions as may be appropriate.

But you are quite correct on that, Mr. Secretary, and there is a continuity between the manner in which these facts were brought to the attention of the American public by the succession of the Clinton and the Bush administrations. I think in time we will get the answers to it.

But I would like to note one thing. In the mystery of where these weapons may be, perhaps it will be solved, but we should thank God that they were not there to be used against our troops, bottom line.

Yes, Senator.

Senator LEVIN. Mr. Chairman, I just want to make it clear that the record will be kept open and not just for whatever submission you referred to, but for other submissions and for additional questions, given the short period of time that we have to question the Secretary.

I wonder, just how long would that record be kept open? A couple of days?

Chairman WARNER. You and I will consult. We have to know when our offices are opened, and that is an undetermined period of time.

We will now proceed to Senator Roberts.

Senator ROBERTS. Thank you, Mr. Chairman.

Senator Kennedy has indicated that we need somebody to take a hard look at the intelligence that is hard and fast. Senator Kennedy, if I could have your attention.

Senator KENNEDY. Excuse me.

Senator ROBERTS. I am hard; I am fast; I am from Dodge City; and I am chairman of the Select Committee on Intelligence. We have under Senate Resolution 400 marching orders to investigate or to make an inquiry in regards to the timeliness and the credibility of the prewar intelligence in reference to WMD and any terrorist activity, the atrocities that were committed in Iraq, which are obvious, and also regional stability.

I want people to know that in this committee, with this hard and fast and tough chairman from Dodge City, we have had a 7-month, 24–7, 10 staff members, work just tremendous overtime effort. We have a working draft over 300 pages long that will be presented to the members of the Intelligence Committee as of tomorrow.

We have interviewed over 200 analysts, including critics, including people mentioned by Senator Kennedy. I must say that, after repeated interviews by our staff, to date we still have yet to find any coercion or intimidation on the part of any analyst to change their analytical product. It is the most comprehensive inquiry in intelligence in at least a decade.

After this Thursday, we will meet again after a week, after members of the Intelligence Committee are able to digest and educate themselves to what is in this report. We hope to agree on a report. That may be a little tough, but we are going to get that job done. We will be making some recommendations, as opposed to simply pointing fingers of blame.

We will redact the classified material. We will work with the Agency to get that done. We will have deadlines. We will make a public report. I hope we can do it in March.

If there are any egregious policy decisions that we find in this report, we will look into it. Under Secretary Feith will again appear before the Intelligence Committee, along with his subordinates. CIA Director Tenet will also appear, and I cannot emphasize enough how aggressive, how strongly I feel that we will let the chips simply fall where they may.

Over the course of the inquiry that we hope to complete soon in the Intelligence Committee, we have found a large and consistent body of analysis, as you have indicated, Mr. Secretary, over 10 years in regards to Saddam Hussein in reference to his WMD capability. This intelligence was used, the famous word "used," by the

executive, by President Clinton, by President Bush, and also by those of us in Congress. It was used on the no-fly zones, on the sanctions, on the targeted bombing attacks, and, finally, in regards to military action.

I would just like to quote the President when he indicated that "We simply cannot allow our adversaries to build arsenals of nuclear, chemical, and biological weapons and missiles to deliver them. There is no more clear example of this threat than Saddam Hussein. The UNSCOM inspectors believe that Iraq still has stockpiles of chemical and biological munitions, a small force of Scud-type missiles, and the capacity to restart quickly its production program and build many more weapons. Let me be clear: A military operation cannot destroy all the weapons of mass destruction, but it can and will leave him significantly worse off than he is now in terms of the ability to threaten the world with these weapons or to attack his neighbors. He will know that the international community continues to have the will to act when he threatens again."

That statement was made by President Clinton, and I am not trying to point out President Clinton or President Bush. The key question is, did you find this intelligence to be true and consistent prior to the military action? I think your answer is going to be "yes." I think that is going to be stressed all the way through this hearing and your answer. So I will leave that to you to answer that question, after I have answered it for you.

Secretary RUMSFELD. I agree. It has become developed and adjusted as one goes along, but the threads have been consistent.

Senator ROBERTS. All right. Now, as everybody knows, there has been a global Intelligence Community failure, on the other hand, in regard to whether or not they had WMD stockpiles and a challenge really to recommend systemic reform. You have gone over some action steps that the military is taking. If I can find my list, you said the DCI is having a review with the Kerr report. The DIA is conducting their review. All the Services are conducting their reviews. You are working with the 9/11 Commission.

We have the House Intelligence Committee investigation, the Senate Intelligence Committee investigation, and now this outside Warren Commission type of investigation. There are at least six or seven panels now doing investigation on the systemic reform that must take place because of the mistake in regard to the stockpiles. I hope the hell there is somebody left down at the CIA to actually conduct the global war on terrorism, with all of these activities.

But I guess my question to you is, we will have Mr. Tenet up again. We will have Secretary Feith up again. We will get our work done. I trust that you are committed to really trying to find out how we can do this better because, as the Senator has indicated—I am talking about Senator Kennedy now—many strong statements were made. I believed that we would find the WMD. Dr. Kay believed that. Dr. Duelfer even still believes that. Still there was a failure in regard to intelligence.

Would you have any comment?

Secretary RUMSFELD. Well, Dr. Kay is probably correct when he said that we are not completed; we are 85 percent down the road, and there is more to be looked at. We will know ground truth be-

fore it is over, and the ISG and Dr. Duelfer have a big task to finish it up.

I agree completely; the country, the President of the United States, is determined to get to the bottom of this question. Your committee is determined; Congress is determined; and I am sure we will as a country get the answers as to what took place. I personally believe that the independent commission that the President has proposed is a good thing to do. I agree with you that there are a great many people looking at this, but it is a big subject. It is an important subject.

As we go into the 21st century and look at the challenges and threats we face, we have to have a high degree of confidence that we understand them and we understand what we know about them and what we do not know about them.

Chairman WARNER. Thank you, Senator Roberts.

Senator ROBERTS. As we say as individual Senators, I know my time has expired, but I do want to quote Dr. Kay in regards to: The world is far safer with the disappearance and removal of Saddam Hussein. When we have the complete record, you are going to discover that after 1998 it became a regime that was totally corrupt. Individuals were out for their own protection. In a world where we know others were seeking the WMD, the likelihood at some point in the future of a seller and a buyer meeting up would have made that a far more dangerous country than even we anticipated with what may turn out to be not fully accurate estimating.

I thank the chairman for his leniency.

Chairman WARNER. Thank you very much.

Senator Reed.

Senator REED. Thank you very much, Mr. Chairman, Mr. Secretary.

I do not think I am the only one who is alarmed at the significant costs associated with Afghanistan and Iraq that are not included in this budget, and alarmed that these off-book transactions are potentially dangerous and misleading.

Secretary RUMSFELD. Pardon me, I am having trouble. What was misleading?

Senator REED. Well, I think there is a number of costs that we assume——

Secretary RUMSFELD. A number of what?

Senator REED. Costs.

Secretary RUMSFELD. Costs?

Senator REED. Costs associated with Iraq and Afghanistan: the ongoing commitment of over 100,000 troops, the recapitalization of equipment, the bonuses that we will have to use to maintain troop strength. All these costs do not seem to be properly included within the budget going forward. There seems to be a prospective reliance upon a supplemental sometime down the road.

Secretary RUMSFELD. Well, Senator——

Senator REED. May I complete?

Secretary RUMSFELD. Sure.

Senator REED. It seems that the operative logic here is that if it cannot be properly or accurately estimated, then it is assumed to be zero or it is excluded from the budget. In fact, what I find alarming is that seemed to be the logic that applied to post-combat

operations in Iraq last year, when many people on this committee asked for estimates about the cost of ongoing operations, the costs of occupation, and we were told essentially, "Well, we cannot estimate them, so we will not include them in our specific budget request."

That led to a $79 billion—a huge supplemental last year. I feel we could be on the same track.

I just want your view, Mr. Secretary.

Secretary RUMSFELD. Well, Senator, I am confused by your comment. Last year we came before Congress and had a plug number to propose—or 2 years ago, I guess it was—for Afghanistan. We were told by Congress: "Do not do that. Supplementals are for wartime operations; we will not consider any proposals for the wartime operation in Afghanistan or Iraq."

The reason the budget is cast the way it is cast is because Congress insisted that it be cast the way it is currently cast.

Senator REED. Well, Mr. Secretary, I do not believe I insisted on that; did I?

Secretary RUMSFELD. You are a Member of Congress.

Senator REED. I know, but I am not going to accept an argument saying that we forced you to disregard costs, not to include proper estimates, not to include in your proposal to Congress what you think you need.

Secretary RUMSFELD. Senator, we were zeroed out. We proposed it, and it was zeroed out. We were told, "Do not do it this way."

Senator REED. Do you think that is the right approach, Mr. Secretary?

Secretary RUMSFELD. No. Obviously, we wanted——

Senator REED. Then why do you not propose a budget that reflects accurately all the costs that you anticipate over the next year for Afghanistan and Iraq?

Secretary RUMSFELD. The decision was made, after Congress rejected that approach, that the executive branch would try to use supplementals for the purpose of wartime operations, but not for various things that just were not included in the budget.

Senator REED. Mr. Secretary, as I recall the debate about the $10 billion, it was not the fact that we were telling you do not put the money in. We wanted to know what you were going to spend it for. You wanted $10 billion unconditional, to be spent anyway you wanted. That is a usurpation of our responsibility to appropriate money for specific items.

You have the obligation to come before us with a detailed estimate of the cost and what you propose to do in the way of covering those costs. I cannot understand how you can argue that we are forcing you to disregard costs.

Secretary RUMSFELD. I did not suggest that at all. That was your statement, not mine, Senator. What we are doing is we will come before Congress with the proposal for what should be spent in a supplemental. There will be the details; there will be the justification, just as there would have been in the budget.

Senator REED. Why can you not include those costs today in your budget, so that we can make appropriate decisions about offsets, about priorities? This is to me extraordinarily ineffective and misleading budgeting, and it is not because Congress has ordered you.

I would suspect that the law requires you to send up a budget here that covers all your anticipated costs.

Secretary RUMSFELD. Well, Senator, if you go back over the years you will find that every war has been funded by supplementals. That is what has been done throughout my adult lifetime. I do not know a single situation where there has been a war that has been funded by a budget——

Senator REED. Mr. Secretary——

Secretary RUMSFELD.—that is developed a year and a half before and then submitted to Congress for a war that is ongoing.

Senator REED. Mr. Secretary, we both understand that supplementals are used to cover unanticipated costs that arise after the budget documents are presented and because of other exigencies that take place. You know fully well, as we all do, that we will be committing over 100,000 troops to Iraq, other troops to Afghanistan. These troops have costs. Their costs are numerous, myriad costs. Yet you are telling us now that, because we have told you you have to operate with a supplemental, you are not putting those costs in the budget?

Chairman WARNER. Senator, your time is up.

I would like to observe that the Appropriations Committee has a lot to do with the supplementals and the policy governing those supplementals. I believe if you will consult with Senator Inouye and Senator Stevens that this is their domain and they made that decision. If I am incorrect, Mr. Secretary——

Senator REED. Mr. Chairman, the Secretary basically said that he has not included all the costs that he anticipates this year for operations in Afghanistan and Iraq in this budget, and, therefore, we are not getting a full picture in the budget of the anticipated, the known, the most likely military operations of this Government for the next year.

Secretary RUMSFELD. I would phrase it quite close to that, but not exactly—that it is not possible to predict costs a year in advance in a war. Wars are uncertain things. It is possible to say, you are correct, Senator, that the funds for the ongoing conflict in the global war on terror and Afghanistan and Iraq are not in the budget. That was specified in the budget when it was presented. That is the pattern that has developed during the 3 years I have been back in this post, as I understand it, as a result of an interaction between the executive and the legislative branches at a level far above me.

Chairman WARNER. Senator Chambliss.

Senator CHAMBLISS. Thank you, Mr. Chairman.

Mr. Secretary and General Pace, let me make sure that we remind you, as you do every opportunity you have and every opportunity we have, to convey to our men and women in uniform how much we appreciate the great job they are doing. As we go through this budget process, we want to make sure that we pass a budget that is reflective of the great work that they are doing and the great appreciation that all Americans have for that terrific work that all of our men and women are doing.

I want to talk about a couple of specific issues, Mr. Secretary, relative to the budget. The two issues are first of all tactical air (TACAIR) and second air mobility. I know this is probably General

Myers' specialty, but again you and I have talked about each of these in enough detail that I know you are prepared on this.

First of all with respect to TACAIR, we have been talking about this train wreck that may be forthcoming down the road relative to Joint Strike Fighter, F/A–18, F–15, and the F–22. I note with very much approval that you have 24 F–22s funded in this authorization proposal. Last year during the Senate deliberations on the budget we had an issue relative to the F–22 and we worked through it. I am assuming because of your proposal that you are satisfied that procurement of F–22 is on time, on schedule, and continues to be on budget.

Second, with respect to the TACAIR issue, I note that we are having some problems with the Joint Strike Fighter. It is the same kind of problems we always have with every aircraft—I do not care what it is. We experienced it with the F–22, and our critics were quick to jump on us with respect to the F–22. But I want to make sure that you are satisfied that this weight issue on the Joint Strike Fighter is not something that is going to delay that, that both of these programs are on schedule, and that this train wreck that we have all feared may be forthcoming is going to be able to be avoided.

Secretary RUMSFELD. Well, I certainly hope you are right. The F–22 has a cost cap on it. It had some troubles with the software, and the costs have gone up. The Joint Strike Fighter has a weight problem, and that is being worked on. As you properly indicate, that is not unusual in programs of this type. It is in its very early stages.

If one talks to the experts in the Air Force, they seem reasonably confident that they have noted the problems, have addressed them, and have people proceeding on them in an orderly way.

Do you want to add anything to that, Dov?

Dr. ZAKHEIM. Yes. Senator, as you well know, this is not a problem that is unique to the United States. This is an issue that always arises when you go from computer-aided design to actual engineering. It affects every country that builds an airplane.

The decision that was taken, which was very prudent, was to deal with the issue now and to have cost control and essentially to get our arms around the problem now instead of taking some systems out and then having to reintegrate them later on at a much higher cost to the taxpayer. Of course, the Joint Strike Fighter is an international program and all our partners have agreed to this approach.

Senator CHAMBLISS. I am taking the response from both of you that you are very comfortable with the schedule of both of those programs at this point?

Secretary RUMSFELD. I am never comfortable. They are always complicated; they are always difficult; they always seem to take a little longer than you wish; and they always seem to cost a little more than you would hope. But the folks that are working on them believe they have their arms around the problems, and they are working on them hard.

Senator CHAMBLISS. Mr. Chairman, I note my time has expired.

Senator SESSIONS [presiding]. I believe Senator Warner asked that Senator Akaka be recognized. Senator Akaka, you are next.

Senator AKAKA. Thank you very much, Mr. Chairman.

I would like to begin by permitting Senator Levin 30 seconds.

Senator LEVIN. Thank you very much, Senator Akaka.

The issue of whether or not an intelligence investigation by an outside commission should be a truly outside commission or one just appointed by the President we can save for another place. If it is going to be independent, it has to be independent of the President, and that means Congress has to be involved in the selection of that commission and the rules. That is number one.

Another issue, which we are not going to resolve here, is we believe on the Democratic side that the Intelligence Committee should look at the use of intelligence by the policymakers, not just at the production and creation by the Intelligence Committee. That is another issue for another place and another day.

I want to put in the record something relative to the alleged continuity of intelligence between the Clinton administration and the Bush administration. I am going to put in the record three tables that were produced by the Carnegie Endowment. Table 3 compares pre–2002 intelligence assessments with October NIE assessment in 2002. So I am going to go down the list and put these tables in the record comparing pre-October intelligence with post-October 2002 intelligence.

> "Iraq reconstituted its nuclear program after 1998": pre-2002, probably not; October 2002, yes.
>
> "Iraq attempted to enrich uranium for use in nuclear weapons": pre-2002, maybe; October 2002, yes.
>
> "Iraq attempted to purchase uranium from abroad": pre-2002, no; October 2002 NIE assessment, yes.

Now, on the chemical weapons programs: "Iraq had large stockpiles of chemical weapons:" pre-2002, maybe; October 2002 NIE, yes.

> "Iraq had covert chemical weapon production facilities": before 2002, not sure; October 2002, yes.

On and on, the significant differences in the intelligence between before and after October 2002, laid out in this Carnegie Endowment study. I would ask that these be made part of the record.

[The information referred to follows:]

TABLE 3. SUMMARY OF IRAQ'S NUCLEAR WEAPON PROGRAM

PREWAR CONCERNS	PRE-2002 INTELLIGENCE ASSESSMENTS	OCTOBER 2002 NIE ASSESSMENT	UN FINDINGS 2002–2003	ADMINISTRATION STATEMENTS	EVIDENCE SINCE MARCH 2003
Iraq reconstituted its nuclear program after 1998.	**PROBABLY NOT.** Consensus was that Iraq "probably continued low-level theoretical R&D."	**YES.** Iraq restarted its nuclear program after UNSCOM left in 1998: "probably will have a nuclear weapon during this decade." Department of State disagreed.	**PROBABLY NOT.** No evidence that Iraq had restarted a nuclear program. The IAEA dismantled all known aspects of the program in the 1990s. ElBaradei: majority of Iraqi nuclear sites "deteriorated substantially" over decade.	**YES.** Saddam restarted Iraq's nuclear program and would acquire nuclear weapons fairly soon. Bush: "We don't know whether or not he has a nuclear weapon."	**NO.** No signs of any active program. Kay: "to date we have not uncovered evidence that Iraq undertook significant post-1998 steps to actually build nuclear weapons or produce fissile material."
Iraq attempted to enrich uranium for use in nuclear weapons.	**MAYBE.** Concern that "Baghdad may be attempting to acquire materials that could aid in reconstituting its nuclear weapons program."	**YES.** Iraq imported aluminum tubes and high-strength magnets for uranium enrichment—but the Department of Energy and Department of State disagreed.	**NO.** IAEA: Unlikely the tubes or magnets could be used for a centrifuge program.	**YES.** Vice President Cheney: Iraq was procuring equipment to enrich uranium. Iraq purchased high-strength tubes and magnets for uranium enrichment.	**NO.** No evidence that the tubes or magnets were meant for uranium enrichment. Iraqi scientists maintain the tubes were for rockets. Kay: "the evidence does not tie any activity directly to centrifuge research or development."
Iraq attempted to purchase uranium from abroad.	**NO.** None of the pre-2002 reports mention any attempts to purchase uranium, although most noted that "a sufficient source of fissile material remains Iraq's most significant obstacle to being able to produce a nuclear weapon."	**YES.** "Iraq also began vigorously trying to procure uranium ore and yellowcake." Department of State rejected reports that Iraq sought to buy uranium in Africa.	**NO.** IAEA: The documents supporting the African uranium claim were forgeries.	**YES.** President Bush: "The British government has learned that Saddam Hussein recently sought significant quantities of uranium from Africa."	**NO.** In July 2003, various reports revealed that U.S. officials were aware that the evidence for the African uranium claim was unfounded. The administration acknowledged that the remark should not have appeared in the president's State of the Union address.

TABLE 4. SUMMARY OF IRAQ'S CHEMICAL WEAPON PROGRAM

PREWAR CONCERNS	PRE-2002 INTELLIGENCE ASSESSMENTS	OCTOBER 2002 NIE ASSESSMENT	UN FINDINGS 2002–2003	ADMINISTRATION STATEMENTS	EVIDENCE SINCE MARCH 2003
Iraq had large stockpiles of chemical weapons.	**MAYBE.** Pre-2002 reports did not report the existence of chemical weapon stockpiles. Discrepancies in Iraqi accounting suggested that "Iraq may have hidden an additional 6,000 CW munitions."	**YES.** "High confidence" that Iraq had chemical weapons, probably between 100 and 500 metric tons.	**NOT SURE.** UNMOVIC uncovered several chemical warheads, but no significant stockpile. Iraq failed to provide evidence that it destroyed significant quantities of chemical munitions and precursor materials.	**YES.** Certain that Iraq had vast chemical weapon stockpiles including mustard gas, sarin nerve gas, and VX, and was hiding them from inspectors.	**NO.** No chemical weapons found. Appears none were produced after 1991. Kay: "Iraq did not have a large, ongoing, centrally controlled CW program after 1991."
Iraq had covert chemical weapon production facilities.	**NOT SURE.** Iraq "rebuilt key portions of its chemical production infrastructure for industrial and commercial use" in addition to purchasing dual-use equipment.	**YES.** Iraq "has begun renewed production" of chemical agents, including mustard, sarin, cyclosarin, and VX.	**PROBABLY NOT.** UNMOVIC inspections did not find any active production facilities or evidence of hidden chemical weapon production capability.	**YES.** Iraq hid its chemical program. Secretary Powell: "We know that Iraq has embedded key portions of its illicit chemical weapons infrastructure within its legitimate civilian industry."	**NO.** No open or covert chemical munitions or production facilities found. Some low-level research activity and dual-use programs possible.

TABLE 5. SUMMARY OF IRAQ'S BIOLOGICAL WEAPON PROGRAM

PREWAR CONCERNS	PRE-2002 INTELLIGENCE ASSESSMENTS	OCTOBER 2002 NIE ASSESSMENT	UN FINDINGS 2002–2003	ADMINISTRATION STATEMENTS	EVIDENCE SINCE MARCH 2003
Iraq had current biological weapon stockpiles.	**NOT SURE.** "We are concerned that Iraq may again be producing BW agents."	**YES.** "High confidence" that Iraq had biological weapons.	**NOT SURE.** UNMOVIC inspectors could not find evidence of any BW agents or biological weapons.	**YES.** Iraq had a stockpile of biological weapons. President Bush: Iraq had "a massive stockpile of biological weapons that has never been accounted for, and capable of killing millions."	**NO.** No weaponized biological agents found.
Iraq had reconstituted its biological weapon program.	**YES.** December 2001 report: "Baghdad continued to pursue a BW program," and Iraq had a "knowledge base and industrial infrastructure that could be used to produce quickly a large amount of BW agents at any time."	**YES.** Iraq had an active bioweapon program that was larger than before 1991.	**NOT SURE.** UNMOVIC inspections did not reveal evidence of a continued biological weapon program. However, Iraq did not provide evidence that it had destroyed BW agents.	**YES.** Iraq was producing and developing several different types of biological agents and the means to disperse them. President Bush: "Right now, Iraq is expanding and improving facilities that were used for the production of biological weapons."	**NO.** No evidence of an active biological weapon program. ISG found some evidence of intent to restart program at future date, and some possible dual-use research.
Iraq possessed at least seven mobile biological weapon laboratories.	**NO COMMENT.** No pre-2002 report mentions mobile biological laboratories.	**YES.** Iraq had an unspecified number of mobile biological agent laboratories.	**NOT SURE.** UNMOVIC did not uncover evidence of mobile biological weapon facilities.	**YES.** Secretary Powell: "We know that Iraq has at least seven of these mobile biological agents factories."	**PROBABLY NOT.** Two vans found, but neither tested positive for biological agents. DIA: the labs are most likely for producing hydrogen artillery weather balloons.

Chairman WARNER. Without objection. The Secretary should be given the opportunity to put in the record a rebuttal.

Senator LEVIN. That was on Senator Akaka's time, so I appreciate it——

Chairman WARNER. I understand that.

Secretary RUMSFELD. I would be happy to. I will say this; George Tenet was the DCI in the last administration and this administration, and he has indicated repeatedly that there are, as I said, threads of the intelligence that are consistent and provide continuity over a sustained period of time. He is the DCI.

[The information referred to follows:]

Defense Authorization Request for FY 2005 and the Future Years Defense Program

Background: Rebuttal to three charts taken from the *Carnegie Endowment for International Peace Report: WMD in Iraq, Evidence and Implications* inserted into the hearing record. Specifically:
Table 3: Summary of Iraq's Nuclear Weapon Program
Table 4: Summary of Iraq's Chemical Weapon Program
Table 5: Summary of Iraq's Biological Weapon Program

Insert: On page 14 of the report, the authors state:

> Although the complete story cannot yet be told, a massive amount of information is available from ***declassified*** U.S. intelligence...This study sorts through this mass of material, disentangles many of its complexities, and lays out a much clearer ***if still incomplete***, picture of what was known, uncertain, and unknown at each stage. From this ***we offer partial answers*** to these questions and point to issues that need fuller attention by *bodies with access to* ***the full classified record*** and to others that need further analysis and public debate. (Emphasis added)

By the authors' own admission this report is incomplete due to the exclusion of all classified U.S. intelligence. This exclusion limits the thoroughness of their report and impacts the validity of many of their assessments. The October 2002 NIE Assessment of the Iraqi WMD Programs was the result of the hard work and dedication of all branches of the Intelligence Community working together to provide their best judgment of the situation. As true professionals, they operated with due diligence and care throughout the process.

Senator LEVIN. Thank you, Senator Akaka.

Chairman WARNER. Thank you very much.

Senator Cornyn.

Senator LEVIN. No, no. Senator Akaka still has the rest of his time.

Senator AKAKA. General Pace, various lessons learned reports have highlighted the problems associated with theater logistics during Operation Iraqi Freedom. My understanding of the problem is that there were two major drivers: first, shipments. Shipments were not well-configured for in-theater distribution when they left the United States, which shifted a major burden onto the deployed units there. Second, this problem was exacerbated by the lack of timely deployment of distribution units and equipment.

My first question to you is, what is your assessment of these problems. Has DOD taken steps to ensure that these problems will not arise again as new units are deployed into Iraq?

General PACE. Thank you, Senator. As I think you know, Senator, we had, as part of our prewar workup with the team that was going to be leading it in Central Command, folks who were focused on lessons learned. They went down to Tampa. They worked with the leadership in Tampa. They went with the forces overseas and they have worked with the forces since they have come back to collect just the kind of data you are talking about.

When we looked at deploying the force, we knew that we did not need to repeat what we did last time, to move so much gear to theater. Literally last time, I am told, although I do not know the exact figures, about 90 percent of the logistics that were taken to the theater and Operations Desert Shield-Desert Storm had to be

put back aboard ships and brought home. We wanted to avoid that problem.

We wanted to make sure that we had the tooth forward and the tail sufficient, but coming up behind to support. In the process of doing that, the number of ships that were available, the numbers of planes that were available, were allocated by the Transportation Command commander in support of the troops on the ground.

In doing so, there were certainly lessons about how to load ships and the kinds of things that, had they been there a little sooner, would have helped. But we have absorbed those lessons and we are taking those and redesigning our logistics system to make a joint logistics system. What we were able to do in this last one was coordinate and de-conflict each Service's logistics push forward. What we need, as we had with the joint fighting force, we need a joint logistics system that allows us to better coordinate and get the right gear to the battle at the right time.

Were there problems? Certainly, sir. We have identified the problems and we are working on them.

Chairman WARNER. Thank you very much, General.

Senator Cornyn.

Senator CORNYN. Mr. Secretary, the London Financial Times reports February 4, 2004, that the "U.S. is preparing to cut its troop levels in Europe by up to a third."

[The information referred to follows:]

London Financial Times
February 4, 2004

Pentagon Preparing To Slash Number Of US Troops In Europe By A Third

By Judy Dempsey

The US is preparing to cut its troop levels in Europe by up to a third, diplomats said yesterday. The reduction would be one of the biggest redeployments since the second world war.

Contrary to some earlier expectations, Washington does not now intend to open large, permanent bases in eastern Europe - allaying fears in some western European capitals that the Pentagon was planning to punish "Old Europe" for its opposition to the war against Iraq.

"If anything, the troops taken out of (western) Europe will be sent home," said a Nato diplomat.

"From there, they will be sent on exercises or training missions to small bases established on a temporary basis in Poland, Romania or Bulgaria. The old days of the giant US barracks with the shops, the schools and ice-cream parlours are over."

Romania and Bulgaria will be particularly disappointed that the US will not make bigger redeployments in their countries, although east European diplomats played down their concerns.

The Pentagon said no final decision had been taken on troop reduction levels.

The US has 119,000 troops in Europe, 80,000 of whom are stationed in Germany. Washington had more than 300,000 troops plus dependants in western Europe at the height of the cold war.

Russia has warned against moves by Nato or the US to shift forces eastwards. Colin Powell, US secretary of state, told Vladimir Putin, Russia's president, last week that Washington had no intention of encircling Russia.

"We are not looking to move bases, of the kind we used to have during the cold war, closer to Russia just to put a base closer to Russia," Mr Powell said in Moscow. "What we're interested in are, perhaps, forward operating locations that we could train at temporarily, or we can have access agreements at particular airfields that make it easier for us to deploy to particular areas of potential crisis. That's what this is about."

Diplomats said the Pentagon was aiming to create flexible, small units that could be moved quickly to temporary bases. General Jim Jones, the US commander in Europe and Nato's military chief, wants to create these structures for Nato as well.

The US is not preparing to cut the number of troops in Europe in one big sweep. The redeployment could take a couple of years.

"Much is at stake," said a German diplomat. "Entire villages have built their future around the bases, particularly in Germany. You just can't destroy those 60-year-old relationships."

My question is, with the ongoing Global Defense Posture Review and the likely decision to bring home troops from overseas bases, whatever that number may be—and perhaps you could comment on that—not to mention the decision to temporarily increase Army end strength levels, how will these be factored into the BRAC process?

Secretary RUMSFELD. The BRAC process is just getting under way, and, of course, one would hope that the answer to your question would be that the BRAC Commission would do it skillfully. But at the moment we do not have a good solid number as to the number of forces that would be coming out of Europe, although

there certainly will be forces coming out of Europe and also some out of Asia as well as elsewhere.

The BRAC process task will be to look at that and see that, if the theory is right that there is something like 20 percent base capacity, facility capacity, excess at the present time. If that is true and then one brings forces home from overseas, one would think that the excess capacity here at home would be somewhat less than that and the BRAC Commission would have to take those things into account.

Senator CORNYN. My next question has to do with the fiscal year 2003 creation of the Assistant Secretary of Defense for Homeland Defense, the purpose of which was to better coordinate and provide policy oversight for DOD homeland defense activities. Could you please explain how you see DOD's role in homeland defense evolving and how that will be factored into the BRAC process as well?

Secretary RUMSFELD. Well, I do not know that it will have a relationship with the BRAC process. The forces we have, of course, around the world are available for homeland defense. The ones that are here are closest. The ones that are elsewhere are available. The principal responsibility for homeland defense, as we know, is the first responders, depending on the nature of the problem.

But very quickly the DOD gets engaged. For example, at the Olympics last year in Salt Lake City we had a lot of forces there. In fact, we had a lot more forces there than we did in Afghanistan at that time. When there is a difficulty like at the Senate Office Building today, we have a chem-bio unit that is coming up to assist in that.

But the Assistant Secretary for Homeland Defense task is to keep us in the Department sensitive to the responsibilities of the Department with respect to supporting the first responders here in the United States and to working closely with the Homeland Security Department and in the interagency process to see that there are the kinds of exercises and testing of systems to see that we are prepared and able to respond and coordinate properly with the people who have the principal responsibility.

Senator CORNYN. Well, I know, for example, in my State the military bases frequently have memoranda of understanding with local communities so that if there is an emergency of some nature on base that the fire department, the first responders, off base can augment the resources available on base and vice versa. That is the thrust of my question.

But to that extent, do you deem that relevant to the process? I mean, is that going to be factored in somehow or another?

Secretary RUMSFELD. Well, certainly the statute lists a whole series of things that need to be taken into consideration, and I would think that those kinds of considerations would be included.

Senator CORNYN. Thank you.

Chairman WARNER. In the instance of the last question and other questions, you might amplify for the record your responses, so that we can move along here expeditiously. I thank the witnesses and the questioners.

[The information referred to follows:]

Homeland defense mission requirements will be factored into the military value evaluation of DOD's installations within the Base Realignment and Closure process 2005 analytical effort.

The criterion to be used in the Base Realignment and Closure process is as follows (as published in the Federal Register on February 12, 004):

Military Value

1. The current and future mission capabilities and the impact on operational readiness of the Department of Defense's total force, including the impact on joint warfighting, training, and readiness.

2. The availability and condition of land, facilities and associated airspace (including training areas suitable for maneuver by ground, naval, or air forces throughout a diversity of climate and terrain areas and staging areas for the use of the Armed Forces in homeland defense missions) at both existing and potential receiving locations.

3. The ability to accommodate contingency, mobilization, surge, and future total force requirements at both existing and potential receiving locations to support operations and training.

4. The cost of operations and the manpower implications.

Other Considerations

5. The extent and timing of potential costs and savings, including the number of years, beginning with the date of completion of the closure or realignment, for the savings to exceed the costs.

6. The economic impact on existing communities in the vicinity of military installations.

7. The ability of both the existing and potential receiving communities' infrastructure to support forces, missions, and personnel.

8. The environmental impact, including the impact of costs related to potential environmental restoration, waste management, and environmental compliance activities.

Homeland defense mission requirements will be factored into the military value evaluation of DOD's installations within the BRAC 2005 analytical effort.

The security of our Nation, whether expressed as homeland defense, domestic preparedness, or the global war on terrorism, is the primary DOD mission. Both the Base Realignment and Closure legislation and DOD's implementation of it ensures that homeland defense and security are considered in the BRAC process. Specifically, criterion two requires DOD components to consider "the availability and condition of land, facilities, and associated airspace . . . as staging areas for the use of the Armed Forces in homeland defense missions." Additionally, as a mission of DOD, all of these issues (homeland defense, domestic preparedness, and the global war on terrorism) are captured by the requirements of criteria one and three.

Senator Ben Nelson.

Senator BEN NELSON. Thank you, Mr. Chairman.

Mr. Secretary, General, it is a pleasure to be able to recognize the men and women in the military and the wonderful job that they do. It is also a sobering experience for my colleagues and I to call the parents, the spouses of those who have been lost in Iraq or anywhere around the world.

My question today is going to be a basic question. General Pace, last November I asked Acting Secretary of the Army Les Brownlee when every soldier in Iraq would be equipped with the most advanced body armor. I asked this question after a constituent called my office to complain that his son was conducting house to house searches in Iraq and still wearing kevlar. Secretary Brownlee said that all troops in Iraq would have the advanced body armor by December.

My question, of course, is, do you know if this is now the case?

General PACE. Sir, it is the case. In fact, it was January, last month, that 100 percent of DOD military and civilians in Iraq had been issued to them individually the advanced body armor. As we rotate the force, before they go into Iraq the new troops will have issued to them the new body armor. Thanks to the funding of Con-

gress, we have been able to take the initial capacity of industry—when this war began, it was still in the technology environment. We were able to take that 1,600 set per month capacity, and we have built it up now, thanks to your funding, to 25,000 sets per month. We have met the objective and we will be able to ensure that everyone continues to have it as they enter the country.

Senator BEN NELSON. I now hear that the 1057th Transportation Company, part of the 37th Theater Supply Command, is not outfitted with advanced body armor. They have some newer vests, but not the insert of the body armor. Their mission, as you may know, is the transportation of supplies and personnel into southern Iraq, which then also takes them into harm's way on a very regular basis.

Do you know whether they have or can you look into that if you do not know whether they have it by now?

General PACE. Sir, I will find out specifically whether or not every soldier in that unit currently has that. I can tell you for a fact that there are sufficient sets in Kuwait and in Iraq to have every single service member and DOD civilian with their own personal set. It is the plan as they rotate to ensure that each gets a set before they go in. But I will find out on that unit.

Senator BEN NELSON. Thank you. I know that all of you are committed to the best protection for our men and women in uniform. You can appreciate the fact that when a call comes in from a parent concerned about the safety of his son or daughter, that is a matter of critical interest, as well it should be. I will communicate that information back to that very concerned parent.

General PACE. Thank you, sir.

Senator BEN NELSON. Thank you very much.

Thank you.

Chairman WARNER. Thank you, Senator. That is a very important series of questions.

Senator BEN NELSON. And my time is up.

Chairman WARNER. Thank you very much.

Senator Collins——

Secretary RUMSFELD. Mr. Chairman, could I just make a quick comment?

Chairman WARNER. Yes, sir.

Secretary RUMSFELD. On reflection, Senator Levin mentioned a Carnegie report. I do not know. I have never seen it, but I suspect it is unclassified. If it came from open sources, one ought not to be surprised that there might be a difference between an open source document and what the DCI told me.

Chairman WARNER. We note that for the record. Thank you.

Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman.

Mr. Secretary, in your testimony today you have a whole section entitled "Mass Versus Capability," and you state, "Critical to success in military conflict in the 21st century is not necessarily mass as much as it is capability." But the fact is, whether we are talking about troops or weapons systems or body armor or ships, numbers still matter.

For that reason, I want to talk to you about the shipbuilding budget. Our naval fleet now consists of only 294 ships, and there

are some projections that say that as cruisers and destroyers are decommissioned, the number may drop to as low as 180 ships. The Chief of Naval Operations has testified many times that a more appropriate fleet size would be approximately 375 ships. I realize that these ships of the future are going to be far more capable ships, but nevertheless the Chief of Naval Operations is still saying that our fleet size is considerably too small.

There are also reports that the Navy is slipping construction of a second DDX destroyer by 1 year, from fiscal year 2006 to 2007. If that occurs, it will be the first year in more than 20 years that our military will not be procuring a major surface combatant. That threatens to exacerbate what is already a shortfall in the number of ships that would ideally be maintained in our fleet. But it also raises serious questions about the impact on our industrial base.

I would like you to discuss the shipbuilding budget in light of the Chief of Naval Operations' belief that we are significantly underfunding shipbuilding and also with regard to the possibility of the DDX destroyer construction slipping.

Secretary RUMSFELD. Yes, Senator Collins. This is the Chief of Naval Operations and the Secretary of the Navy's proposed budget for shipbuilding. This is their recommended budget. You are right: the ships at the end of fiscal year 2003 have dropped below 300 to 296. You are also correct that in the case of ships, capability is important, to be sure, but numbers do also matter because of presence. I agree completely with that.

The DDX situation as I understand it, they provided a gap year, a delay of a year, to allow lessons learned from the first ship to be applied to the following ships. That was the judgment that was made in the Department of the Navy.

With respect to the total shipbuilding program over the forward year defense plan, the numbers go from 7 to 9 to 6 to 8 to 8 to 17, the 17 being because the ships nature, the littoral ships, and that you can do more of them.

But we agree that, with the program that the Department of the Navy has put forward, it is a less manpower-intensive Navy. It is important that what they have arranged is a surge capability so that they are going to be able to provide greater seapower in more places, at more times, than had been the case in the past.

General Pace, do you want to comment on it?

General PACE. I can. Let me just take for example, ma'am, aircraft carriers, which in the past have been one-third on deployment—about four on deployment, one-third coming back and reconstituting and changing out ship's crews, and one-third getting ready for the next deployment. You have had generically about four that you could get to a battle right away.

What Admiral Clark has done in his transformation of the Navy has made it so that he is going to be able to provide to any combatant commander anywhere in the world six of these carrier battle groups on demand. He is doing that by things like integrating Marine Corps and Navy aviation, so he has the wings that fly off the carriers working together as a unit and trained up.

I will not take more of your time.

Senator COLLINS. We are going to have to have further discussions on that.

In closing, let me just say very quickly that I am also very concerned about reports that I am hearing from Federal employees' representatives and from the Office of Personnel Management (OPM) on the progress with the new personnel system. I will be following up in writing with some of those concerns.

Chairman WARNER. Senator, you keep a very watchful eye on this man's Navy. Thank you very much.

Senator Pryor.

Senator PRYOR. Thank you, Mr. Chairman.

Mr. Secretary, thank you again for being here and doing what you do. Let me commend you on one thing in your budget, if I may, and that is your treatment of housing for our men and women in uniform. Basically the way you have it structured now the housing is now a tax-free benefit that they receive, and that is a very positive thing. It is good for morale and good for the quality of life.

There is one thing that I would love to work with you on this year, though, Mr. Secretary, and that is that, given the structure of the earned income tax credit and also the child tax credit, our men and women in uniform, even in a combat zone, could be penalized under the Federal tax system for serving in the military, and they could lose up to $4,000 a year.

I do want to work with you on that this year. I was not aware if you were aware of that problem and if it is something that you perceive as a problem that we can solve in your budget.

Secretary RUMSFELD. I am not aware of what you are referring to, but we would be happy to look into it and work with you.

Senator PRYOR. I look forward to working with you on that.

I also want to look at Halliburton. I know there has been a recent spate of news stories about Halliburton. One said it overbilled about $28 million for food service over in the region in and around Iraq. I believe that was five different facilities if I have my facts straight. Then there was the story that we have all read and seen about overbilling for gasoline.

There is another story about $6.3 million in overbilling for sort of unspecified services. I am not quite sure what that is, but I was reading some of the press clips on that.

As I see these stories, I am sensing a pattern with Halliburton's billing practices. Mr. Secretary, I was wondering if you had that same concern that I do about Halliburton's billing practices?

Secretary RUMSFELD. I will just make a brief comment and then Dov can comment on it, Dr. Zakheim.

A prime contractor ends up with subcontractors. The subcontractor ends up then billing the prime, and the prime bills the person letting the contract. We have hundreds and thousands—not hundreds of thousands, but hundreds and probably thousands—of auditors. They are constantly looking at all of these things.

In these things, they frequently come up with differences of opinion. They are all making the press, and that is fair enough. Those are all also things that we are concerned about, and the auditors are crawling all over them.

Dov?

Dr. ZAKHEIM. Yes, Mr. Secretary.

Senator, let me first tell you that in April of this year, with the Secretary's approval, I sent a team of auditors to Iraq. With the ex-

ception of the one press report about the $6.3 million, and I will get back to that, every single report, in fact every single revelation, came from our auditors in our Department. Those auditors are also working with our inspector general and with the General Accounting Office (GAO), because they are on top of not just the issues you just raised, but of every single contract in Iraq, are every single contractor.

You are right about the $28 million. That reflects what our auditors found relative to 5 of 58 facilities, and they are still working their way through the other 53. Kellogg Brown and Root (KBR) has agreed that there will be a withhold on that charge simply because there is a disagreement over how to estimate the number of people being served.

With respect to the gasoline, again $61 million was identified. That has gone to the Inspector General, so I really cannot say very much more about that.

With respect to the $6.3 million, that was something that KBR found themselves and they reported it. That gives you an indication, and it goes back to what the Secretary said: The prime contractor is doing its best to do the right thing when it has literally billions of dollars in contracts not that such funds have necessarily already been received and spent, but in terms of the size of the undertaking. A good part of that, the logistics, or "logcap" as it is called, was something they were awarded several years before the Iraq war and was for worldwide support.

The basic issue that our auditors are finding is that of relationships with subcontractors, and we are working our way through that.

Chairman WARNER. Thank you very much.

Senator PRYOR. Mr. Chairman, I am out of time. Thank you.

Chairman WARNER. Thank you.

Senator Ensign.

Senator ENSIGN. Thank you, Mr. Chairman.

Mr. Secretary, I want to try to protect you from something you said today that hopefully nobody will hold against you in the future. You said that we will know before it is over. In other words, "we will know"—and I just want to make sure that you had a chance to correct that.

Secretary RUMSFELD. Thank you. I'll correct it right now. We will know what we know, but we may not know all we would like to know when it is over. I thank you very much for that. You have saved me a tough question from Senator Levin a year from now. [Laughter.]

Senator LEVIN. No, he has not. [Laughter.]

Senator ENSIGN. I actually do want to go along that line of questioning, though, simply because I want to point out something that everybody is saying. That is that we basically know we have an intelligence failure, we think we know we have an intelligence failure, but yet members of the panel are saying it like it is fact.

The reason that I am bringing that out is because to their best guess, they are saying it like it is fact, just like when you were before this committee, just like you said today, we know because in all probability we should know whether or not there were WMD and things like that.

We should be a little more careful, but it certainly was not the intent of anybody on this committee to mislead the American public, hopefully it was not, just like I do not believe it was your intent on the "we know" comments.

Secretary RUMSFELD. No indeed.

Senator ENSIGN. So that is really important.

But when we are doing these intelligence investigations—the most important part for all of us to keep in mind is that this should not be a witch hunt to find somebody, to find a scapegoat. It is important, if people did something wrong or if they purposely did something and misled people, then they should be held accountable. But the purpose it seems to me for the investigation, just like we did an intelligence investigation after the missiles of October, was so that we could improve our intelligence-gathering capabilities.

We know right now that we have some problems. We have known that, actually, maybe for quite some time, and some people have been arguing that we need to improve the human intelligence instead of relying so much on our high-tech stuff.

I guess I would just like maybe your comment on the focus, where the focus should be into the future. You have put up that satellite photo of North Korea. Okay, we identify, but how do we get into the future? How do we really improve our intelligence capabilities into the future?

Secretary RUMSFELD. Well, my impression is that Director Tenet has done a lot to improve intelligence over these past years. The funding has been increased. Improving human intelligence—there has been a good deal of effort on that. It takes a long time, years, 4, 5, 6, 7 years, to actually strengthen that aspect of it.

I am hopeful that the Senate Intelligence and the House Intelligence Committees, when they complete their report, will have thoughts on this subject, and certainly the commission will have thoughts on this subject.

Senator ENSIGN. I guess one of the other comments that I want to make of us leaning forward, because of the media attention that has been focused on intelligence and possible intelligence failures, is that it will stop us from doing the right thing in the future. Some people might use this as we cannot trust our Intelligence Community.

What Dr. Kay said has to be emphasized more than we can possibly emphasize it, in that, yes, there were probably some intelligence failures, but it does not take away from the fact that it may have been a more dangerous world than we thought. I am hoping that it does not change the administration's policy on forward-leaning, the idea of preemption, the idea of, "If we could have prevented September 11, would we not have done everything we possibly could?"

What we did in Iraq was prevent more September 11s, and I am hoping that this recent revelation does not change administration policy.

Secretary RUMSFELD. Senator, you are on a very important point. We have to know that there are always going to be intelligence failures, and there also are going to be intelligence successes and they have saved people's lives.

Second, there is a risk that policymakers would hesitate to make decisions or that analysts would hesitate to explain what they thought. One thing that is important that worries me about the discussion here this morning: it is critically important that there be interaction between users of intelligence and suppliers of intelligence. Each informs the other.

The implication that if there is an interaction between a policymaker and a supplier of intelligence that somehow or other that is pressure or that is manipulation or that is not right or fair to them is wrong, because we each learn from each other. Inattentive users of intelligence have a responsibility to interact with suppliers, and the suppliers learn from that—of intelligence—and the user of intelligence learns, because they end up talking to each other in a very open way. That is a healthy thing, not a worrisome thing.

Senator ENSIGN. Mr. Chairman, my time has expired and for the record I would like to ask the Secretary and your people to give us an idea of when you will have a plan on transforming the Guard and the Reserve, the idea of that spigot, when, approximate timetable you will have a plan for us.

Secretary RUMSFELD. We have the plan, and we can brief you at your desire, whenever, particularly the Army. General Schoomaker is well along in it, and the Navy and the Air Force have some Reserve Forces, and they have some plans also.

Senator ENSIGN. Thank you.

Chairman WARNER. Thank you, Senator.

Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman.

Mr. Secretary, I share the concern of Senator Reed about the fact that there is no money in the budget you submitted for fighting the ongoing wars in Afghanistan and Iraq. In your testimony you refer to the unknown costs of fighting wars. I guess I am incredulous that that is not something that DOD and the service branches can quantify fairly accurately. That is what you do. With all your experience and success in the private sector as well as the public sector, I just cannot believe that that is an unknowable figure for fiscal year 2005.

Can we just, given that it is not in there, try to identify what we, for the purposes of our discussion and our decisionmaking, or it is already a factor in the transportation bill that we are considering now? I have seen numbers that said $4 billion a month is the cost of the current operation in Iraq—these are published reports—and $800 million in Afghanistan. Is it for estimation purposes reasonable to extrapolate that for fiscal year 2005?

Secretary RUMSFELD. Senator, fiscal year 2005 starts October 1, 2004. It is what, 10 months from now? The budget for 2005 that was submitted by the President this week was prepared starting in January 2003 and completed in November 2003, and given to the OMB, sent up to Congress in January 2004 for the year that starts in October 2005 and goes to September 2006.

Now, if one thinks about it, that is anywhere from at the minimum 12 and at the maximum 24 months in advance. We do not know, we cannot know, how many troops we are going to want in Iraq in the period——

Senator DAYTON. Mr. Secretary, you must for planning purposes be making some assumptions. I am just asking you, can we reasonably assume on an estimated basis that the numbers I just read—$4 billion a month for the current operation in Iraq, $800 million a month for the current operation in Afghanistan, multiplied by 12 are an approximation for what it, under a best guess, will cost?

Secretary RUMSFELD. You get into best guesses and you misinform people.

Senator DAYTON. I consulted last night an oracle. I said, who is best qualified to shed some light on this, and I went looking for Rumsfeld's Rules. I discovered it is not that easy to find them now. You are off the Web site. You are probably one of the few in the administration who practices them, especially as it relates to budget matters.

But a couple of them that come to mind are: "Be precise. Lack of precision is dangerous when the margin of error is small." This is Stephen Friedman. I do not know if he is quoting you precisely. He references a couple of them. "If you cannot measure it, you cannot manage it. That which require to be reported on you will improve if you are selective."

It seems to me if we are going to manage—our role is to manage and we are making decisions first now in the next couple weeks about overall Federal budget and then as an authorizing committee about levels for the—this is the lineup we have and the timetable we are on. If you will not give us numbers, how can we manage and fulfil our responsibilities?

Secretary RUMSFELD. My first choice would have been to do it. I tried to do it 2 years ago, and I was told by Congress, "Do not do it." Now, that is a fact.

Senator DAYTON. But "Congress" covers a multitude of sins. I am only one.

Secretary RUMSFELD. You said that. I did not.

Senator DAYTON. I did not have a role in that. I do not agree with Congress all the time, but I guess I am trying just to go back again because we are going to have to deal with this. Is this a state secret, what this estimate is for 2005?

Secretary RUMSFELD. Of course not. What one can do and what we tried to do—in fact, what we proposed and were rejected on 2 years ago—was to say: "Look, you have alternative futures. You could end up with 115,000 troops in Iraq, or it could go up because the security situation could deteriorate and you might have to do something else, or it could go down because the Iraqi security forces exceed 200,000 and are capable of taking over a number of those responsibilities. It could be any one of those."

We came in with a budget that said that and said here is a midpoint; we do not know whether it will have to go up or stay the same or go down. We were told: "Listen, wars are funded with supplementals; do it that way."

Senator DAYTON. My time is up.

Chairman WARNER. Senator Sessions.

Senator DAYTON. Thank you, Mr. Chairman.

Chairman WARNER. Thank you.

Senator SESSIONS. It may be in terms of spending money and Congress, "Congress" means Senator Ted Stevens. I do not know,

but if I recall it was his belief that we should do it by supplemental. It certainly gives those few in Congress who oppose the war a readily available number to claim how much we are spending as justification for their opposition from the beginning.

The intelligence issue will roll along. I do know that the truth always generally comes out. It was interesting that Dr. Kay, in his testimony the other day before us, indicated that the Republican Guard commanders in Iraq thought they had WMD. Only they would say: "No, I did not have it, but my fellow commander had it. They would interview him and he would say: I do not have it, but commander such-and-such has it." They all thought they had it, but apparently it has not been found yet.

Mr. Secretary, I commend you on continuing a steady train of transformation of the defense of America. I remember one of the first hearings I asked Mr. Wolfowitz that he had not broken enough glass, not enough people were hollering about the changes; maybe you were not making enough changes. He said: "We have a plan and a thought to move steadily forward to make our Defense Department more relevant to the threats facing America, and I think you will see us accomplish that."

Do you feel that, even with this war that fell upon us, you are on track to make us, as Coach Eddie Robinson said, "more hostile, agile, and mobile."

Secretary RUMSFELD. Indeed I do. There was a lot of discussion after September 11 as to whether the global war on terror should take precedence and we should try to forget transforming and not try to do two things at once. But, in reality, the transformation supports the global war on terror, and it is critically important.

It not only supports it, but it informs it. It gives us the impetus to achieve the kinds of transformation and changes that are so necessary.

Senator SESSIONS. Well, I thank you for having a historical vision of where we are today and where we need to go and moving steadily and effectively in that direction.

I am so proud of our Guard and Reserve. I have visited a number of their ceremonies where they were activated and left their home communities, like Foley, Alabama, and Mobile, and the crowds were enthusiastic. They feel a sense of service. They do not feel, General Pace, they are victims. They feel like they are serving America. They want to be used well. They want to be used wisely.

I have had personal interviews, Mr. Secretary, with the head of Guard and Reserve Forces, the commanders, and they tell me you are pushing them; you not only support them, but you are encouraging them to study how we activate people, to make it less burdensome on families. Would you share your personal view of how we can do better about handling Guard and Reserve?

Secretary RUMSFELD. I will indeed. We have all three Services working to rebalance the active and Reserve components so that we do not have to overuse those Guard and Reserve units that have special skills that are in short supply in the Active Force. That rebalance is going forward, and it is going forward apace.

Second, we have looked at the deployment and redeployment process, and we recognize the importance of certainty on the part of people. We are taking steps to improve the tools, the planning

tools that will enable us to do a vastly more nuanced job. I am impressed with the effort that Transportation Command is engaged in. I am impressed with the effort the Joint Forces and the Joint Staff are engaged in. We have simply got to do a better job to make sure it is respectful of them and their families and their employers.

Chairman WARNER. Thank you, Senator, for discussing that Guard issue.

Secretary RUMSFELD. Mr. Chairman, could I make one comment?

Chairman WARNER. One other thing. When you and I talked you told me a very important fact about the quantum of the Guard and Reserve which you felt, although they would serve and serve willingly, simply their skills did not match to the needs. Do you remember that discussion we had?

Secretary RUMSFELD. Exactly, and that is what General Schoomaker particularly in the Army is in the process of working very hard to do. He knows what to do; he has it calculated; he knows the units—I believe he knows the units—and he is well along in that task.

Could I make a quick comment?

Chairman WARNER. Yes.

Secretary RUMSFELD. I hate to have the meeting end without making a statement that should have been made at the time Senator McCain was asking questions. I am advised that in selecting the DSB for the tanker recapitalization evaluation, the DOD took significant measures to ensure that individuals on the task force leading the evaluation—Admiral Don Pilling, USN retired, and Dr. Ted Gold as co-chairmen—had no relationship with Boeing or the tanker lease program, and the committee can be assured that no member of the task force will have any association with Boeing or the tanker lease program.

I can further assure the committee that the chairman of the DSB, Dr. Bill Schneider, will recuse himself from any association with the evaluation or the task force efforts. Furthermore, the process and results will be entirely open since the evaluation task force will be operated in accordance with the provisions of P.L. 92–463, the Federal Advisory Committee Act, and DOD Directive 5105.4, the DOD Federal Advisory Committee Management Program.

Chairman WARNER. Thank you, Mr. Secretary. Could we get a copy of that document such that we can give it to Senator McCain?

[The information referred to follows:]

Department of Defense

DIRECTIVE

NUMBER 5105.4
February 10, 2003
Certified Current as of November 21, 2003

DA&M

SUBJECT: Department of Defense Federal Advisory Committee Management Program

References: (a) Appendix 2 of title 5, United States Code Annotated
(b) DoD Directive 5105.4, "Department of Defense Federal Advisory Committee Management Program," September 5, 1989 (hereby canceled)
(c) Title 41, Code of Federal Regulations, Subpart 102-3, "Federal Advisory Committee Management," current edition
(d) DoD Directive 5105.18, "DoD Committee Management Program," February 8, 1999
(e) through (j), see enclosure 1

1. PURPOSE

Pursuant to reference (a), this Directive reissues reference (b) to update policies and responsibilities for the administration of the Federal Advisory Committee Act (FACA) within the Department of Defense.

2. APPLICABILITY

This Directive applies to the Office of the Secretary of Defense (OSD), the Military Departments, the Chairman of the Joint Chiefs of Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities within the Department of Defense (hereafter referred to collectively as "the DoD Components").

3. DEFINITIONS

3.1. Federal Advisory Committee. A committee, board, commission, council, conference, panel, task force, or other similar group that is not composed wholly of full-time or permanent part-time employees of the Federal Government and:

3.1.1. Is established by statute, or established by the President or an Agency official, and is utilized by the President or an Agency official for obtaining advice or recommendations on issues or policies that are within the scope of their official responsibilities; or

3.1.2. Is not established either by statute or by the President or an Agency official, but is under the actual management control of the President or an Agency official or employee and is utilized by them for obtaining advice or recommendations on issues or policies that are within the scope of their official responsibilities.

3.2. Special Government Employee. An individual who is retained by the Federal Government to perform temporary duties, with or without compensation, for a period not to exceed 130 days during any period of 365 consecutive days.

4. POLICY

4.1. DoD Federal Advisory Committees shall be established and administered consistent with the FACA (reference (a)), Subpart 102-3 of title 41, Code of Federal Regulations (reference (c)), and this Directive. Their number shall be kept to the absolute minimum required. They shall be established only when they are determined to be essential and terminated when they are no longer carrying out the purpose for which they were intended.

4.2. The following are excluded from coverage under reference (c) and the provisions of this Directive:

4.2.1. Advisory committees specifically exempted from the Act by law.

4.2.2. Advisory committees created by a non-Federal entity (such as a contractor or private organization), if such committees are not actually managed or controlled by an officer or employee of the Executive Branch.

4.2.3. Meetings initiated by one or more Federal officials with more than one individual for obtaining the advice of individual attendees and not for the purpose of utilizing the group to obtain consensus advice or recommendations.

4.2.4. Groups assembled to meet with one or more Federal officials for the purpose of exchanging facts or information.

4.2.5. Meetings of two or more DoD Federal Advisory Committee or subcommittee members convened solely to gather information or conduct research for a DoD Federal Advisory Committee, to analyze relevant issues and facts, or to draft proposed position papers for deliberation by the DoD Federal Advisory Committee.

4.2.6. Inter-Governmental and Intra-Governmental committees composed wholly of full-time or permanent part-time officers or employees of the Federal Government.

4.2.7. Local civic groups whose primary function is that of rendering a public service with respect to a Federal program, or any State or local committees, councils, boards, commissions, or similar groups established to advise or make recommendations to State or local officials.

4.2.8. Committees established to perform primarily operational, as opposed to advisory functions.

4.2.9. Meetings initiated by the President or one or more Federal officials for obtaining advice or recommendations from a single individual.

4.3. The DoD Committees that are not DoD Federal Advisory Committees shall be established and administered consistent with the provisions of DoD Directive 5105.18 (reference (d)).

4.4. The DoD Federal Advisory Committees shall not be established to make decisions, conduct Agency operations, or perform functions that are capable of being carried out by existing Agency staffs.

4.5. Membership of each DoD Federal Advisory Committee shall be balanced in terms of the points of view represented and functions to be performed. The DoD Federal Advisory Committees requiring technical expertise shall include members with demonstrated professional or personal qualifications relevant to the committee's work. The DoD officials sponsoring a DoD Federal Advisory Committee shall develop criteria for membership consistent with these requirements and document the reasons for membership selections.

4.6. Except when otherwise specified by the President or the Congress, the Secretary of Defense, the Deputy Secretary, or their designee shall approve the

appointment of members to DoD Federal Advisory Committees. Appointees may not serve longer than 4 years, unless an extension is approved by one of these officials.

4.7. Members of DoD Federal Advisory Committees who are not full-time or permanent part-time employees of the Federal Government shall be appointed as Special Government Employees. Such appointments shall be made annually and consistent with authoritative guidance, such as administrative instructions or manuals, published by the cognizant DoD Component.

4.8. Members of DoD Federal Advisory Committee who are appointed as Special Government Employees shall be encouraged to serve without compensation. A member may not be compensated unless the Head of the DoD Component to which the committee reports, or his or her designee, certifies that appointment of the member is essential to obtain the necessary balance or expertise and that, without compensation, the member would not be available to serve.

4.9. Members of DoD Federal Advisory Committee serving as Special Government Employees, who are being compensated at a basic rate of pay fixed at or above 120 percent of the minimum rate of basic pay for a GS-15 (including any applicable locality pay authorized by the President's Pay Agent under 5 U.S.C. 5304(h) (reference (e)), and expected to serve more than 60 calendar days during a calendar year, shall file a Standard Form 278, "Executive Branch Personnel Public Financial Disclosure Report." All other members serving as Special Government Employees (including those serving without compensation) must file an Office of Government Ethics (OGE) Form 450, "Confidential Financial Disclosure Report," prior to appointment as a Special Government Employee, and annually thereafter, prior to reappointment. Policies and procedures for filing financial disclosure reports are contained in DoD Directive 5500.7 and DoD 5500.7-R (references (f) and (g)).

4.10. Special Government Employees compensated at a rate of ES-5 or above are subject to a 1-year ban on post-employment representation in accordance with 18 U.S.C. 207(c) (reference (h)).

4.11. For each DoD Federal Advisory Committee, there shall be a Federal officer or employee appointed in writing as the Designated Federal Official, who shall have the authority to approve or call each meeting, approve the meeting agenda, attend each meeting, and adjourn meetings when he or she determines such action to be in the public interest.

4.12. Notification of each DoD Federal Advisory Committee meeting shall be published in the Federal Register at least 15-calendar days in advance of the date of the meeting.

4.13. Meetings of DoD Federal Advisory Committees shall be open to the public unless the Head of the sponsoring DoD Component, or his or her designee, in coordination with that Component's General Counsel, makes a written determination to close all or part of a meeting. In such instances:

4.13.1. The determination shall cite those provisions of 5 U.S.C. 552b(c)(1)(1988) (reference (i)) that justify closure.

4.13.2. A summary of meeting activities shall be prepared and maintained as part of the Committees files.

4.14. Reports, records, and minutes of DoD Federal Advisory Committee meetings and other activities shall be prepared within 90 days after a meeting and maintained and/or submitted consistent with references (a) and reference (c).

5. RESPONSIBILITIES

5.1. The Director of Administration and Management (DA&M), Office of the Secretary of Defense, shall:

5.1.1. Provide guidance on policies and procedures for the establishment and administration of DoD Federal Advisory Committees.

5.1.2. Ensure that DoD Federal Advisory Committees are established and administered consistent with references (a) and (c), and this Directive.

5.1.3. Designate a DoD Committee Management Officer who shall carry out the policies contained in references (a) and (c), and this Directive.

5.1.4. Represent the Department of Defense and maintain liaison with the General Services Administration and other Government Agencies on matters involving DoD Federal Advisory Committees.

5.1.5. Review periodically the operations and records of DoD Federal Advisory Committees for compliance with applicable laws, policies, and regulations; provide results of these reviews to the Committee's Designated Federal Official and

other appropriate officials; and ensure that actions are taken to correct deficiencies, when required.

5.1.6. Review annually the need to continue each existing DoD Federal Advisory Committee, consistent with Section 14 of the FACA (reference (a)), the public interest, and the intended purpose of the committee, and ensure that committees no longer needed are terminated in a timely manner.

5.1.7. Obtain electronic or hard copy reports and information on DoD Federal Advisory Committees, as required by and consistent with references (a), (c), this Directive, and DoD Directive 8910.1 (reference (j)).

5.1.8. Carry out, for OSD, the functions and responsibilities assigned to the Heads of DoD Components by this Directive.

5.2. The Heads of DoD Components or their Designees shall:

5.2.1. Ensure that DoD Federal Advisory Committees under their cognizance are established and administered consistent with references (a) and (c), and this Directive.

5.2.2. Submit to the DA&M requests for establishment or revision and notifications of termination of DoD Federal Advisory Committees under their cognizance.

5.2.3. Designate a Committee Management Officer to carry out assigned advisory committee responsibilities for their respective DoD Component.

5.2.4. Maintain information about the membership and activities of DoD Federal Advisory Committees under their cognizance, consistent with references (a) and (c), and this Directive.

5.2.5. Submit the electronic or hard copy reports required by references (a), (c), and (d) to the appropriate offices.

5.2.6. Approve compensation for non-Federal Government DoD Federal Advisory Committee members, except that the DA&M shall serve as the approving authority for committees sponsored by OSD officials.

5.2.7. In coordination with the cognizant General Counsel, make a determination, in writing, whenever all or part of a DoD Federal Advisory Committee meeting is to be closed to the public.

5.3. The OSD Officials who sponsor DoD Federal Advisory Committees shall carry out, for the committees under their cognizance, the responsibilities in subparagraphs 5.2.1. through 5.2.5., above.

6. EFFECTIVE DATE

This Directive is effective immediately.

Paul Wolfowitz
Deputy Secretary of Defense

Chairman WARNER. Now we will turn to Senator Clinton.

Senator CLINTON. Thank you, Mr. Chairman.

Mr. Secretary, when Senator Reed and I were in Afghanistan over Thanksgiving we learned that the North Atlantic Treaty Organization (NATO) had not yet met its obligations or its commitment to provide additional troops for the provisional reconstruction teams (PRTs) and other purposes. So far as I am aware, they still have not done so. Could you please advise us as to what, if any,

progress is being made to persuade NATO countries to contribute additional troops, as they had obligated to do so?

Secretary RUMSFELD. I know that Lord Robertson, before he left at the end of December, had worked very hard on it, and the U.S. had been involved in assisting. The new Secretary General has been working on it as well. The last time I looked, there were still, out of the totality of the requirements, a few pieces that had not been filled.

I suspect that what is happening is that the U.S., which has been under a memorandum of understanding first with the International Security Assistance Force (ISAF) and now with NATO ISAF, has worked together with them to fill in gaps as they occur from time to time. But to my knowledge, they have not fully completed everything, although they must be in the high 90 percent. Do you know?

Dr. ZAKHEIM. There is that. Also, with respect to the PRTs that you mentioned, the British are in fact in Mazar-e-Sharif. The Germans have one up and running as well. One of the issues has been where they go. We have eight of those now up and running, and the idea is to have new ones stood up. We are talking, to my knowledge, to at least five different NATO countries that have given preliminary indications that they do want to go in and set up PRTs. The question is, how do you do that in an organized fashion?

Senator CLINTON. You will keep this committee informed as it goes forward?

Dr. ZAKHEIM. Absolutely, Senator.

Senator CLINTON. Is Turkey one of those five countries?

Dr. ZAKHEIM. They are one of them, but there are several others, as I say.

Senator CLINTON. With respect to the budget, it is my understanding that, at least during the Vietnam War, the costs of the war were in the budget. Supplementals were used for additional costs. In September of this past year, I asked Ambassador Bremer when he appeared before our committee whether the administration would request an additional supplemental for Iraq and Afghanistan. He replied, "If there is any further need, I would anticipate any further request will be done through the normal appropriations process. In other words, it will come forward as part of the regular appropriations process, the 2005 budget, presumably early next year."

With respect to the comments that Congress instructed——

Secretary RUMSFELD. Excuse me. Were you referring to Iraq or Afghanistan in that last comment?

Senator CLINTON. Iraq and Afghanistan.

Secretary RUMSFELD. Both?

Senator CLINTON. Both.

With respect to the comments that you have made, Mr. Secretary, that Congress essentially told you not to do it a certain way, would you provide this committee with the names of those Members of Congress or the staff and with whom they communicated that demand in the Secretary's office at some very early date, please?

Secretary RUMSFELD. Well, it was Congress overall. They just simply took it all out. They zeroed out the $10 billion we had requested.

Senator CLINTON. But Mr. Secretary, that was for a discretionary pool of $10 billion to be used as presumably you saw fit. We are talking about a budget that connects costs to missions and functions. As late as September 2003, Ambassador Bremer, who I believe reports to you, assured this committee that there would be requests done through the normal appropriations process. Now, if there is someone in Congress—not just Congress as a large undifferentiated mass—that is saying, "Do not do that," we would like to know it.

What the response from Congress was: We are not about to give you a blank check of $10 billion to be used with no oversight. We need to clarify that, because it goes right to the heart of the authority of this body and the kind of oversight that we are expected to provide.

Indeed, it raises some questions because at least the press reports that there will be a supplemental after the election, which seems to me to be inappropriate. I would hope that we could get to a meeting of the minds as to exactly what is expected from the budget to these ongoing expenses in both Iraq and Afghanistan.

Secretary RUMSFELD. Senator Clinton, I am told that you are right, that there have been some portions of wars that have been funded through the normal process. It appears that from 1967 to 1970 in the Vietnam War they included some estimates. After 1970, I am told, they stopped putting cost estimates in because they did not prove to be very accurate and thereafter the Vietnam War was not, nor have, I believe, subsequent wars.

Second, I suppose you could say $10 billion; it would not be fair to say what you said, "Ten billion dollars to be spent any way you want, without any oversight." No department of Government does that. They always report; they always say what they are doing. They have to get it cleared, if it is major changes at all, from eight different committees. So there is plenty of oversight.

The answer to your question about what Bremer said is also correct, and that is that if you take the supplemental, a portion of it was for the Coalition Provisional Authority (CPA), $18.6 billion as I recall. He said, and I believe Mitch Daniels and later Josh Bolten said, that that was for that period and that funds for non-military purposes, the $18.6 billion, would, in fact, be put into normal appropriation process, and that is what is planned to be done.

Senator CLINTON. Planned to be done. It is not in the 2005 budget?

Secretary RUMSFELD. Anything—as I understand it—maybe you ought to say it in the Office of Management and Budget (OMB) language, Dov.

Dr. ZAKHEIM. Essentially the money was for reconstruction, and, as you recall, Senator, when that money was asked for, it was meant to extend beyond just 1 year. Then the idea was, and I believe Director Bolten has reiterated that, that once we get past that amount of money laid out, everything that is requested will become part of the normal budget and such requests are normally outside

the Defense Department budget. So I do not think there is an inconsistency there.

Senator CLINTON. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator.

Senator Graham.

Senator GRAHAM. Thank you, Mr. Chairman.

Mr. Secretary, I appreciate your generosity of time. I am just going to throw out some concepts to follow up with you later. Number one, my big fear after listening to this debate and discussion is that we are going to rush to get out of Iraq before the job is done. I know you will not do that. I want to let you understand that some of us up here know that predicting the future is a very hard thing to do. What it costs is what it costs, and what good have we done if we leave before the job is done?

I am very hopeful that in the long term Iraq will become more stable. There is one less dictator to give money to suicide bombers in the Mideast. I think we are better off, and if we want to have that discussion politically, as Senator Kerry says, bring it on.

But, bottom line, that is my political statement. Here is something that a lot of us agree on, and it may be I find myself on the outs with the Pentagon, the Guard, and the Reserve. You have tunnel vision about the role of the Guard and Reserve. The Guard and Reserve do not just answer the Nation's call; it also answers its State's call. There are 500,000 people you say that are being underutilized. I would like some information about how many times those citizen soldiers are called up to deal with disasters in Alabama, South Carolina, Virginia, California, wherever.

Second, I believe our homeland security needs are not being adequately met, that the Guard and Reserve has an additional role there that could supplement our homeland security needs. When you look at restructuring your force to meet the needs of the 21st-century war model, Iraq and other places like Iraq, let us not forget that the Guard has more missions than just that one mission.

I want to leave with you a couple thoughts. Number one, I believe that 40 percent of the force in Iraq will be Guard and Reserve in the immediate future. I believe that it is going to get worse before it gets better, and it is time to start upgrading the benefits of those who are doing a good job for this country.

Specifically, would you support reducing the retirement age from 60 to 55 for those who serve 30 years as a member of the Guard and Reserves?

[The information referred to follows:]

I do not support retirement reform that is solely for the purpose of reducing the age of eligibility. Simply reducing the eligibility age would provide an immediate benefit only to individuals who are already retired or eligible for retirement, and provides no immediate benefit to the vast majority of members who are bearing the burden of activation and deployment today. I view the Reserve retirement system as part of a total Reserve compensation package that should enable the Department to shape the force and achieve strategic human resource management objectives. It should enhance retention, particularly among members bearing increased burdens of mobilization; attract members to the force, both prior service and non-prior service personnel; and enhance personnel management flexibility. We need to make a careful examination of this issue in the context of total compensation. I will be forming an advisory committee to look at the total compensation program, including Reserve retirement.

Secretary RUMSFELD. First, Senator, I agree completely. The President has said that we should stay in Iraq as long as is necessary and not a day longer. There is no suggestion of a premature departure.

Second, I am not sure I agree completely with what you said about the Guard and Reserve. The implication of what you said was that they necessarily were the only forces available for U.S. needs, home needs, and domestic needs, and I do not agree with that. The Active Force also does a lot with respect to fighting fires or hurricanes or various other things that may happen. We look at it as a total force concept.

Senator GRAHAM. Right. But the primary mission of the Guard in its day-to-day training is title 32, not title 10.

Secretary RUMSFELD. I understand, but I would not want to leave the impression that the Active Force is disinterested in homeland defense or in the domestic needs that they get called up to assist on.

Senator GRAHAM. No, sir, and I do not want to give you the impression that the Active-Duty Forces are somehow not doing everything. They are doing everything and then some. So I have some problems with you on end strength, too.

But I do not want to get tunnel vision about the role of the Guard. Unlike the Active-Duty Forces, which have done a marvelous job, that are stretched too thin, are being asked to do too much in my opinion. You cannot rearrange the pie until you grow the pie. That is just my opinion about this. The Guard has a specific function, unlike the Active Forces, under title 32.

Chairman WARNER. Ladies and gentlemen, we have to move right along.

Senator GRAHAM. Thank you.

Chairman WARNER. That is an important question, and I would hope you would provide your response for the record, because this distinguished member of our committee is an active member of the National Guard.

Senator GRAHAM. I am not part of the solution. I am probably part of the problem. I am not up here tooting my horn.

Chairman WARNER. If we do not stop, he is going to call you to active duty and send you overseas.

Senator GRAHAM. If that happens, you know we are really in trouble.

But I do want to work with you, Mr. Secretary, to address the Guard and Reserve role in its entirety, to look at end strength, not just from an army like Iraq but maybe an army like North Korea, and see if this makes sense. But stay the course. The investigation will be done by an independent group. You have done a great job. You helped bring people out that were hurt during September 11. You are the right guy at the right time. So hang in there, and any differences I have with you will be honest differences, openly displayed. I am proud of what you have done for our country, so hang in there.

Secretary RUMSFELD. Thank you very much.

Chairman WARNER. Well stated. Thank you very much.

Now, gentlemen, the two of you will wrap up.

Senator Bayh, you lead off.

Senator BAYH. Thank you, Mr. Chairman.

Chairman WARNER. We are obligated to yield these chambers back to the other body here.

Senator BAYH. I will move quickly. Thank you, Mr. Chairman.

I would like to touch upon just a couple of things I hear frequently from the public, the first dealing with the adequacy and the quality of the intelligence we receive. I am interested in your opinion as a consumer of intelligence. I agree with all the things you said at the beginning. It is a tough and thankless assignment. We have a lot of good men and women trying to deal with circumstantial evidence, gaps in the evidence, contradictory evidence, denial and deception, etcetera, etcetera, etcetera. It is possible that good people get a lot of things right but occasionally make some mistakes.

With that as a preface, many Americans would be interested in your opinion as a consumer of intelligence. On a scale of 1 to 100, 100 being omniscience, 1 being clueless, how would you characterize the quality and the adequacy of the intelligence?

Secretary RUMSFELD. In between. [Laughter.]

Senator BAYH. Can you try and quantify it a little better? Many Americans right now look at perhaps the failure that we have experienced in Iraq, they look at the fact that we maybe underassessed Libya and Iran, and they wonder: "Gee, just we are having to make decisions of great import. Just how adequate and reliable is this information?"

Secretary RUMSFELD. You want to put that chart back up?

See previously inserted chart.

This is the problem. We are dealing with closed societies, dictatorial regimes. There is North Korea, not a light there. It is enormously difficult. The reality is we have had some wonderful successes, and some of them are not public. I hope George Tenet will make some of them public this week or next week because I think he ought to. The failures are very visible, and that is always the case.

I cannot give it a grade. It would vary depending on the collection source. It would vary depending on the target. One has to live with that in this world of ours. You end up making the best policy judgments you can off of that.

Senator BAYH. Perhaps this is a job for this commission, because when we make decisions about going to war or other things based upon understandably imperfect information, many people wonder just how imperfect is it. Is this an aberration or is this more the normal course of events?

My second question just very briefly has to do with priorities, Mr. Secretary. I hear from a number of people, not a man or woman on the street, but from people more who follow these things more regularly. They look at the situation in North Korea, with their capabilities, their experimentations with longer range missiles, and the belligerent and erratic nature of that regime. They look at Iran with their well-known connections to terrorists and the fact that their program is further advanced than we thought. They now look at what we do know about Iraq, and they say that perhaps Iran and North Korea constitute even greater threats, yet we

are spending over $100 billion to address Iraq. We obviously have used force to liberate that country and trying to introduce democracy in that part of the world, and they wonder, "Is this an appropriate ordering of priorities? Should we not be devoting more to trying to address the problems of Iran and North Korea, given now what we know?"

Secretary RUMSFELD. Well, they are each being addressed in a different way. North Korea is being addressed in a diplomatic way in the relatively early stages since they made the announcements of their capabilities. Iraq had been addressed in a diplomatic manner through 17 resolutions of the U.N. over a period of a decade and a half. Iran has just been revealed to have more advanced nuclear activities than they had indicated.

On the other hand, if you look at North Korea, they have lowered the height requirement to go into the Army to under 5 feet, to 4 feet 10, because so many people were starved. There is abuse of the food distribution system at the present time. It is hard to know what is actually going on in there. We do know there are concentration camps. We do know that there are a lot of people that are trying to flee the country.

We have imperfect knowledge in this world of ours. We do today and we will into the future. I personally believe that the President made the right decision with respect to Iraq. He is making the right decision to try diplomacy with respect to North Korea and to work those problems with the neighbors in China, Russia, and South Korea and Japan.

With respect to Iran, there is obviously ferment and turmoil going on with the young people and the women and the people who want reform in that country, going on as we meet today. Each is going to play out in a way that I suppose is different.

Chairman WARNER. Thank you, Mr. Secretary. They are very clear responses to an important question.

Senator Bill Nelson.

Senator BILL NELSON. Good afternoon, Mr. Secretary.

Secretary RUMSFELD. It is suddenly afternoon.

Senator BILL NELSON. Mr. Secretary, I spoke to you about my meeting with President Asad in Syria. When I confronted him with why he did not stop the jihadists from going from Syria into Iraq, where they are killing our men and women, he answered without an answer, saying, "Well, I cannot control my borders; you cannot control your borders."

Then he talked of the historical smuggling that goes on across that border, but then said, "I would like to cooperate with the Americans."

I have reported that conversation to many people in our government, including you, and you seemed to dismiss that that was worth following up. Can you tell me why?

Secretary RUMSFELD. Senator, my portfolio is not Syria and foreign policy. I do not believe I dismissed it, and I try not to be dismissive of anything. On the other hand, we know he has been notably unhelpful on his border. We know that he is working with Iran in funding Hezbollah and bringing them down through Damascus into Lebanon, into Israel.

Senator BILL NELSON. I confronted him with all of those, and he was not cooperative.

Secretary RUMSFELD. We know he is testing chemical weapons.

Senator BILL NELSON. I confronted him with that.

Secretary RUMSFELD. We know he has taken the Iraqi funds that are in Syria and refused to give us access to those funds, and they belong to the Iraqi people. That is a regime that has been almost consistently unhelpful.

Senator BILL NELSON. I confronted him about the withholding of those funds. But if he were sincere, I do not see that there is any down side for us to explore that——

Secretary RUMSFELD. I do not either.

Senator BILL NELSON.—because it would lessen the people going in trying to harm Americans.

Secretary RUMSFELD. Senator, we explored it with Libya, and Libya said, "Here it is, let us come in and take it out." We sent airplanes in and took it out, and it is in the United States being examined—the documentation and the materials. He is opening up his country to inspectors. That is a very good thing. There is a model there.

Saddam Hussein did not follow it. Qaddafi is following it. Asad is not.

Senator BILL NELSON. Well, General Myers was interested in that, but General Myers works for you. It might be something worth exploring, and I would respectfully suggest that that is in the interests of the United States.

Secretary RUMSFELD. I agree.

Chairman WARNER. Senator——

Senator BILL NELSON. Mr. Chairman, I have been waiting this whole time. I have one more thing.

Chairman WARNER. I was not going to cut you off. Go ahead, take 1 more minute.

Senator BILL NELSON. Good, thank you.

Chairman WARNER. I just commented I thought your question was well taken.

Senator BILL NELSON. Oh, well, you are very kind. I thought you were asking me to stop.

I have reported to you and Senator Levin on this very same thing.

Now, the other thing that——

Secretary RUMSFELD. I am going to have to ask it to end quite soon. I have the House hearing at 1:00.

Chairman WARNER. We are going to end in about a minute.

Secretary RUMSFELD. I have to make a phone call in between and get prepared for that.

Chairman WARNER. Right.

Senator BILL NELSON. Respectfully, Mr. Secretary, I was told not only about the WMD prior to the vote in the Senate, but I was specifically told what has now been made public by the President and the Secretary of State: that there were unmanned aerial vehicles (UAVs) that could be put on ships off the eastern seaboard and flown over eastern seaboard cities with the WMD. You can understand that I thought that was an imminent threat to the interests of the United States.

However, what I was not told was that there was a dispute in the Intelligence Community over the veracity of that information, specifically, as reported by The Washington Post, that it was Air Force intelligence that specifically discounted that, that it was not true.

My question to you is, why was I not told that there was this disagreement in the Intelligence Community, instead of being told that it was gospel truth that those UAVs could be flown over eastern seaboard cities?

Secretary RUMSFELD. I do not know who told you that, and I would not use the word "veracity." I would use the word "accuracy." There was a discussion in the internals, in the Intelligence Community, and I have forgotten exactly how it worked. But one agency believed that the—I am trying to—is this unclassified or classified now?

Chairman WARNER. Mr. Secretary, I suggest you answer that for the record. It is an important question, and it will give you adequate time.

Secretary RUMSFELD. It is, and there is a classified answer and an unclassified answer. I can give you an unclassified answer here and we would be happy to—Dr. Cambone can give you a classified answer in 1 minute.

Senator BILL NELSON. Mr. Secretary, everything that I have said has been unclassified.

Secretary RUMSFELD. Right. I am talking about my answer, not your question. Your question clearly is unclassified.

My understanding is there was a discussion and some people, as is usual in intelligence, believed that the equipment associated with the Iraqi UAVs—which we saw and watched tested, they flew considerable distances, they were not big, but they did have the ability to carry something, and they had some vehicles in close proximity to them during some tests. There was a debate as to whether those vehicles had a role in connection with the UAVs or whether the vehicles had a role in connection with hydrogen balloons or weather balloons or something else.

Dr. CAMBONE. Well, that is two different things.

Secretary RUMSFELD. Is that two different things? Steve Cambone, come up and answer it for me.

Senator BILL NELSON. Mr. Chairman, if you want to receive a classified answer I would be happy.

Chairman WARNER. Fine. At this point, Mr. Secretary, time has expired for everybody. You have been most patient.

I thank you, Senator, and thank you, General. We have had an excellent hearing——

Secretary RUMSFELD. Steve can give a 2-minute unclassified answer.

Chairman WARNER. All right, if you wish. Then we will proceed as you desire.

Dr. CAMBONE. Yes, sir. There was, Senator, a dispute on the role of the UAVs. The Air Force had a different view than others in the community, and I think that you have two parts of the story combined that I would like to separate for you, if I may, in a closed session.

But there was a dispute by the Air Force. It was resolved as part of the ordinary process of doing the NIEs and the estimates that are done. The Air Force maintained its dissent. What you are reporting on is an after-the-fact report of the Air Force's dissent.

But let me clean up the parts for you in a different setting.

[The information referred to follows:]

UNDER SECRETARY OF DEFENSE
5000 DEFENSE PENTAGON
WASHINGTON, DC 20301-5000

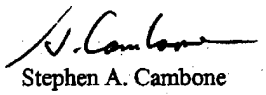
INTELLIGENCE

MAR 30 2004

The Honorable Bill Nelson
United States Senate
Washington, DC 20510

Dear Senator Nelson:

During a hearing before the Senate Armed Services Committee on 4 February 2004, you expressed concern with the Intelligence Community's assessment of Iraqi Unmanned Aerial Vehicles (UAVs) capable of carrying weapons of mass destruction. In advance of a formal response to questions for the record from the Committee, I'd like to provide the following information.



Specifically, you asked the Secretary why the Air Force's dissenting conclusion, that these UAVs could be flown over eastern seaboard cities, had not been brought to your attention.

Developing a National Intelligence Estimate (NIE) is an intense interagency process that fully involves all members of the Intelligence Community. The National Intelligence Council does footnote any agency or Services disagreements with any of the conclusions within a NIE. In this way the NIE process enables the Intelligence Community to develop a consensus, while still allowing the expression of divergent views.

The Air Force's dissent, related to the Iraqi UAV program, was included in the NIE delivered to the House and Senate Armed Services, Intelligence Committees and the Appropriations Committees' Defense Subcommittees on the 2nd and 3rd of October 2002, after it was approved by the National Foreign

Intelligence Board on October 1, 2002. Air Force's conclusions about Iraqi UAVs can be found in several sections, particularly in the Key Judgments on page 7, but also on pages 49 and 52.

Sincerely,

Stephen A. Cambone

Senator LEVIN. His question is why he was not informed of the dissent.

Dr. CAMBONE. That I cannot answer, sir.

Chairman WARNER. Okay, gentlemen——

Senator BILL NELSON. That is the question.

Chairman WARNER. We thank you very much, Mr. Secretary, General. We have had an excellent hearing.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

END STRENGTH

1. Senator MCCAIN. Secretary Rumsfeld, there seems to be some confusion relating to increasing Army end strength. The press has recently reported that you will increase Army end strength by 30,000 over 4 years. Last week, my staff was briefed by the DOD Comptroller Dr. Zakheim that those reports were false and you still oppose increasing end strength. Where do you stand on increasing Army end strength?

Secretary RUMSFELD. While I oppose a permanent increase in the Army's end strength, I strongly support a temporary increase of 30,000 that allows the necessary flexibility for the Army, while fighting the global war on terrorism, to increase the number of Active Force brigade combat teams (BCT) from 33 to 43 between now and fiscal year 2007. A determination for an additional 5 BCTs (for a total of 48) will be made at a later date. This temporary measure will enable the Army to field standardized unit designs and transition to a unit-based personnel management system. Our intent is to make the Army more ready and relevant for the unpredictable nature of the emerging strategic environment. Once this restructuring is complete, the Army will return to their authorized strength by fiscal year 2009.

2. Senator MCCAIN. Secretary Rumsfeld, paying for the 30,000 increase in troops is not included in the budget. Do you plan on relying on supplemental spending bills for the next 4 years to pay for this increase?

Secretary RUMSFELD. No decision has been made on how to pay for this increase. Since the increase is not reflected in the fiscal year 2005 request, we likely would need to fund it as part of a fiscal year 2005 supplemental.

3. Senator MCCAIN. Secretary Rumsfeld, supplemental bills are submitted by the administration for emergency spending requests. Why is future end strength considered an emergency spending request? These are the same accounting gimmicks we accused the previous administration of committing.

Secretary RUMSFELD. For fiscal year 2005, including this end strength increase in a fiscal year 2005 supplemental would be consistent with the administration position because it is directly related to the global war on terrorism, whose incremental costs are being funded in supplementals. Beyond fiscal year 2005, no decision has been made on how to fund the end strength increase.

4. Senator MCCAIN. Secretary Rumsfeld, every independent expert has called for increasing Army end strength. The demands of the global war on terror have

stretched our military thin. Will the administration continue to oppose legislative efforts by Congress to increase end strength?

Secretary RUMSFELD. While reducing stress on the Active and Reserve Forces continues to be a top priority within the Department, the addition of permanent end strength is not the most effective or efficient means to relieve stress on our forces. The Department is already using existing legislation that allows for temporary increases in end strength to meet mission requirements. Furthermore, the Army is aggressively reworking its division structure to create additional combat brigades from within existing end strength.

In addition to the Army initiatives, there are several dozen other initiatives across the Department that will reduce stress on the force while increasing our capabilities. For example, actions are underway to realign units and specialties within the active and Reserve components to reduce mobilization and deployment imbalances. Also, the Services are taking actions over the next 2 years to convert as many as 20,000 military positions that are civilian in nature to civilian status, so that more military billets will be available to support current operations.

NATIONAL CALL TO SERVICE

5. Senator MCCAIN. Secretary Rumsfeld, you are pursuing a temporary increase in manpower levels for the Army which will need to be phased out in a short time and could well reside in the Reserves. Does it not make sense to employ the Call to Service Act's 18–18–18 plan to augment the required end strength you are pursuing?

Secretary RUMSFELD. The Army has implemented the National Call to Service Plan (NCSP) and established a 1-year test to quantify the impacts of this program. We want to allow NCSP to mature and to complete the 1-year test to help us make better decisions on the program and its place in the Army. Currently, our force stabilization and modularity efforts are key elements of our transformation. Some of the increase will be covered with the 15-month variable enlistment (VEL), although it does not mesh with the Army's stabilization plan. Furthermore, the structure the Army is creating during the increase is primarily infantry and armor. If we were to fill the ranks of the new Units of Action (UAs) with 15-month VEL soldiers, we would not have a sufficient population of infantry and armor noncommissioned officers to fill the ranks of these UAs later. Considering the historical loss rates of 3-year and 4-year term soldiers, and the propensity of the 15-month VEL soldiers to not reenlist, relying on the 15-month VEL to create temporary strength would create a critical shortage of junior leaders in our future UAs.

6. Senator MCCAIN. Secretary Rumsfeld, I would like you to discuss the implementation of the 18–18–18 plan that Senator Bayh and I included in the Fiscal Year 2003 National Defense Authorization Act. If the Army is envisioning only a temporary increase in end strength, it may be well-suited for the Call to Service Act's 18–18–18 plan. What percentage of your total force will be made up of personnel under this type of contract?

Secretary RUMSFELD. The Army has implemented the NCSP and established a 1-year test to quantify the impacts of this program. We want to allow NCSP to mature and to complete the 1-year test to help us make better decisions on the program and its place in the Army. Currently, our force stabilization and modularity efforts are key elements of our transformation. The 15-month VEL cannot realistically be used, except on a marginal basis, as it does not mesh with the Army's stabilization plan. The temporary strength increase of the Army will need to occur across all parts of the military structure, not just the initial entry soldier. Our solution is focused on long-term results for shaping the Army as a whole. The Army is keeping the number of 15-month VEL accessions at approximately 2 percent of the annual accession mission. Assuming minimal reenlistment rates for these soldiers, less than half a percentage of the total force will be made up of personnel under this type of contract at any one time.

7. Senator MCCAIN. Secretary Rumsfeld, do you envision expansion of this program?

Secretary RUMSFELD. The DOD initiated the National Call to Service (NCS) enlistment option on October 1, 2003, with all four Services participating. Although the program is new, we are pleased with its start and are enthusiastic about the future of the program. We are currently evaluating the program.

8. Senator MCCAIN. Secretary Rumsfeld, what is the role of the 18–18–18 plan playing in each of the Services?

Secretary RUMSFELD. The NCS program plays a role in each of the Services as they implement the program in accordance with overall departmental guidance.

- The Air Force goal for fiscal year 2004 is 370 NCS participants. They started the program on October 1, 2003, with the first NCS enlistee on that day. To date, the Air Force has enlisted 295 NCS participants.
- The Army's goal for fiscal year 2004 is 2 percent of non-prior Service accessions, or about 1,450 participants. Unique among the Services, the Army is offering NCS program participation in 10 of its 41 recruiting battalions. The RAND Corporation will analyze the NCS program to determine its effects on other enlistment options and the degree to which NCS is a market expander in the high quality recruit market. Through February 20, the Army has enlisted 213 participants.
- The Marine Corps' goal for fiscal year 2004 is 175 NCS participants. The Marine Corps has enlisted 39 NCS participants to date, but expects no difficulty meeting the 175 participant goal.
- The Navy's goal for fiscal year 2004 is 1,000 NCS participants. Due to initial challenges with their recruit reservation system, the Navy did not start enlistments under NCS until January 2004. To date, they have enlisted 55 participants, but see no problem in meeting the 1,000 participant goal.

BASES

9. Senator MCCAIN. Secretary Rumsfeld, I applaud your leadership in reassessing our force structure in Europe and around the globe. Bases in the Central Asian nations of Uzbekistan and Kyrgystan have been invaluable in the Afghan theater. Reports indicate Romania, Poland, and Bulgaria as sites for future bases. Can you comment on this? What other countries are being considered?

Secretary RUMSFELD.

- Global posture is really more than bases and facilities. It encompasses several factors—facilities, activities, relationships, usability of forces, surge and personnel management.
- As part of our process each combatant commander provided proposals for realigning the posture in their respective Area of Responsibility (AOR). A key theme in the realignment effort has been to strengthen and transform existing alliances, as well as build new partnerships.
- We are currently compiling a report on the overall Global Posture effort. It will contain a classified annex that will enumerate countries, by region, where we intend to position forces and capabilities.

10. Senator MCCAIN. Secretary Rumsfeld, I applaud your leadership in determining our future force structure, global basing strategy, and efforts to more fully integrate Active and Reserve Forces. What deadlines have you established to ensure these initiatives are folded into the upcoming BRAC process?

Secretary RUMSFELD.

- We will use the Global Posture Review to inform the BRAC process. The review enables us to provide specific input on overseas changes for the BRAC 2005 process.
- This input will allow domestic implications of the review—with forces and personnel either returning to or moving forward within U.S. territory—to be effectively accounted for within the BRAC decisionmaking process.
- BRAC decisions in will be critical in preparing appropriate domestic infrastructure for those U.S. forces that will be returning to the U.S. and its territories.
- Rather than sub-optimizing through individual moves, BRAC looks at the whole picture, thus yielding more efficient and effective placement of forces.
- BRAC is the best way to determine the placement of forces relocating to the U.S. Both efforts are necessary for a true capabilities-based infrastructure prioritization.

GUANTANAMO

11. Senator MCCAIN. Secretary Rumsfeld, we commend our service members for treating the detainees at Guantanamo humanely and in a manner consistent with

the principles of the Third World Geneva Convention of 1949. That said, many of the detainees in Guantanamo have been in captivity for 2 years. As you are aware, as time elapses, the quality of intelligence you can gather decreases. In December, Senator Lindsey Graham, Senator Cantwell, and I wrote you to inquire about your plans for the detainees in Guantanamo. Since I have not heard a response, can you please update me on your plans for prosecuting the detainees?

Secretary RUMSFELD. I am likewise proud of our service members and the tremendous job they have been doing and continue to do in the operations at Guantanamo.

It is important to note that the intelligence-gathering mission at Guantanamo continues to provide vital intelligence in the current conflict. The individuals being held at Guantanamo are providing us with important information that continues to help us in our efforts to undermine the al Qaeda network and defend the Nation against that network. For example, intelligence gained from Guantanamo has provided U.S. and coalition forces with information for use in planning and executing counterterrorism missions. It has enhanced and continues to expand our understanding of jihadist motivation, selection, and training process.

As I mentioned in my February 18 letter, the President has designated six detainees as eligible for military commissions, and we are working through each case systematically. In February, Guantanamo detainees Ali Hamza Ahmed Sulayman al Bahlul of Yemen and Ibrahim Ahmed Mahmoud al Qosi of Sudan were charged with conspiracy to commit war crimes. Prior to being charged, these detainees were assigned military defense counsel. Their trial dates and commission panel members will be selected at a later time. In addition to the assignment of counsel to and the charging of al Bahlul and al Qosi, military defense counsel have been assigned to Salim Ahmed Hamdan of Yemen and David Hicks of Australia.

In addition to the above progress in the cases of those currently designated as eligible for commissions, we have also finalized a number of decisions that we believe are essential to moving forward and ensuring that the proceedings are full and fair. On December 30, the Department of Defense announced the selection of John D. Altenburg, Jr. to serve as the Appointing Authority. On March 17, 2004, I issued Military Commission Order No. 5 officially delegating the appointing authority responsibility to Mr. Altenburg. Mr. Altenburg brings with him a wealth of legal and military experience that will serve our Nation well in his performance of the Appointing Authority's duties. The progress made in the military commission process requires day-to-day management by an individual, like Mr. Altenburg, who can devote his entire attention to the process.

The Department also announced the selection of Air Force Brigadier General Thomas L. Hemingway as legal advisor to the appointing authority. As legal advisor, Brigadier General Hemingway will aid Mr. Altenburg in the day-to-day management of the process by overseeing Appointing Authority personnel and advising him on legal matters concerning the military commissions.

The Department of Defense also announced four individuals who will be designated to serve on the Military Commission Review Panel established by Military Commission Order No. 1 (Mar. 21, 2002). Those individuals are: Griffin B. Bell, who served as Attorney General under President Carter and as a judge on the U.S. Court of Appeals for the Fifth Circuit; Edward G. Biester, a Pennsylvania state court judge, former Pennsylvania Attorney General and former member of the U.S. House of Representatives; William T. Coleman, an attorney currently in private practice who has served as Secretary of Transportation and as an adviser to several administrations; and Frank Williams, chief justice of the Rhode Island Supreme Court. As you may know, the Review Panel is responsible for hearing appeals from the decisions of the military commission. In that capacity, the panel plays an integral part in ensuring the fullness and fairness of the military commission process.

The General Counsel of the Department of Defense also issued a military commission instruction that provides specific details on the Review Panel's responsibilities and operation. Among other things, this instruction establishes term limits and permits removal of review panel members only for good cause and protects them against undue influence.

As we continue to move forward with the military commission process, it is important to bear in mind that in past conflicts we generally prosecuted war criminals after we had been victorious. In so doing, we greatly diminished the need to protect information. In today's war on terrorism, we are prosecuting our enemies even while the war clearly remains ongoing. In this current conflict, perhaps more so than any other conflict before it, information is the critical weapon for defeating our enemies and the need for the protection of vital information continues.

12. Senator MCCAIN. Secretary Rumsfeld, on December 12, 2003, following a visit to the facilities in Guantanamo, Senator Graham, Senator Cantwell, and I ex-

pressed our serious concern over issues regarding the disposition of the detainees—some of which have been detained for over 2 years. Since we are waiting for your written reply to this matter, when will you make a determination on the final disposition of the detainees' status?

Secretary RUMSFELD. I very much appreciate the time that you and Senators Graham and Cantwell took to see for yourselves the operations at Guantanamo as well as your thoughtful concerns and questions about the detention of enemy combatants at Guantanamo.

As I noted in my February 18, 2004 response, at the time of capture and based on available information, the detaining combatant commanders determined that those detained were part of, or otherwise supporting, forces hostile to the United States. Under the law of war, enemy combatants such as those detained at Guantanamo may be detained until the end of hostilities. Our Nation continues to be in an armed conflict. As with any armed conflict, no one can predict when its end will occur. Regarding detainee disposition and status, there is an interagency process in place to review the status of detainees regularly, to asses their intelligence value, if any, and evaluate whether they remain potential threats. Although a stark departure from U.S. Government practice in past conflicts, we have already released some detainees and are currently engaged with a number of countries to seek arrangements to return detainees to their home countries.

13. Senator MCCAIN. Secretary Rumsfeld, when and how will you begin the process outlined in the Order of the Military Commissions that the President signed in November 2001, and will you have outside observers?

Secretary RUMSFELD. That process is already well underway. In July 2003, the President determined that six individuals were subject to his November 13, 2001 Military Order. In February 2004, Guantanamo detainees Ali Hamza Ahmed Sulayman al Bahlul of Yemen and Ibrahim Ahmed Mahmoud al Qosi of Sudan were charged with conspiracy to commit war crimes. Prior to being charged, al Qosi and al Bahlul were assigned military defense counsel. Their trial dates and commission panel members will be selected at a later time. In addition to the assignment of counsel to and the charging of al Bahlul and al Qosi, military defense counsel have assigned to Salim Ahmed Hamdan of Yemen and David Hicks of Australia.

Approximately 80 members of the media will be permitted to attend and an offer has been extended to the International Committee of the Red Cross to have a representative observe military commission proceedings. We are currently examining whether it is logistically possible for additional groups or individuals to attend.

BUDGET

14. Senator MCCAIN. Secretary Rumsfeld, I notice in the new budget there are large increases in funding for already existing programs. How does this year's budget proposal figure into your long-term transformation plans?

Secretary RUMSFELD. The fiscal year 2005 budget sustains our ongoing transformation plans. Transformation is a large undertaking, but it does not consume the entire acquisition budget. Many ongoing programs remain vital to the short-term and long-term superiority of our military—for example new ships, transport aircraft, trucks, communications gear. These ongoing programs will continue to consume large portions of our acquisition budget.

15. Senator MCCAIN. Secretary Rumsfeld, during your first appearance in front of this committee you questioned the need for three tactical aviation programs. Can we still afford three new tactical aviation programs: F/A–18E/F, F/A–22, and Joint Strike Fighter (JSF)?

Secretary RUMSFELD. The fiscal year 2005 budget continues the multiyear plan we formulated in preparing the fiscal year 2004 request. This plan made adjustments in our tactical aviation programs to ensure that they were realistically funded and executable, i.e. affordable. These and all other major programs will again be subject to new scrutiny as we prepare our fiscal year 2006–fiscal year 2011 multiyear plan.

MISSILE DEFENSE

16. Senator MCCAIN. Secretary Rumsfeld, under the fiscal year 2005 DOD budget, top-line funding for missile defense is going up to $9.2 billion, an increase of $1.5 billion over the previous year. In fiscal year 2005, the Missile Defense Agency (MDA) will start to "initiate technology development and testing of advanced, lightweight space-based interceptor components" with the goal of incorporating them into

its Block 2012 capability. Arguably, these space-based interceptors cross the line from militarizing space to weaponizing space. Yet, this move is being done without any real debate on U.S. security needs. Is the U.S. space policy being updated to include the option to weaponize space?

Secretary RUMSFELD. The MDA continues to study space-based interceptors along with many other technology programs and future capabilities. Building on prior technology assessment studies of space-based missile defenses, MDA will conduct an analytical effort in 2004 to assess the potential benefits of these capabilities to support a layered missile defense system. MDA's current five year budget calls for continuing research and development in this area, with the option of developing a space-based test bed in Block 2012. Ultimately, any future decision to deploy interceptors in space would require additional Department and congressional decisions and funding.

17. Senator MCCAIN. Secretary Rumsfeld, MDA states that the Initial Defensive Operations system will not be considered to have achieved Initial Defensive Capability until after an assessment from the Director of Operational Test and Evaluation (DOT&E). Will this be DOT&E's report on the missile defense system that is expected in summer 2004?

Secretary RUMSFELD. Initial Defensive Capability will be achieved when a militarily useful increment of missile defense capability is available to place on alert. DOT&E will include appropriate comments on the Ballistic Missile Defense System (BMDS) the February 2005 report to Congress.

18. Senator MCCAIN. Secretary Rumsfeld, as you likely know, the DOT&E, Mr. Christie, has publicly expressed serious concern about the lack of operational test data for his office to evaluate. Given these concerns, how much can DOT&E really analyze this system?

Secretary RUMSFELD. DOT&E will have access to all the testing data available on the BMDS deployable test bed. I expect that DOT&E will use the available data to provide the Department its fair and objective assessment of the defensive capabilities of the system.

19. Senator MCCAIN. Secretary Rumsfeld, the designation of a program as undergoing spiral development is crucial because, according to section 803 of the National Defense Authorization Act for Fiscal Year 2003, once a program is designated to be undergoing spiral development, it must show its development strategy, test plans, performance parameters, exit criteria, and operational assessment. Furthermore, from 2003 to 2008, the Secretary of Defense must give an annual report to Congress by September 30 on the status of each program undergoing spiral development.

In the MDA budget request, this phrase is used to explain its development process ("Spiral development enables the execution of an iterative process for developing the BMDS. . . ." p. 2), yet according to the GAO, there are no programs that are officially undergoing spiral development. Is the BMDS ever going to be officially designated a program undergoing spiral development?

Secretary RUMSFELD. The BMDS was identified as undergoing spiral development after September 30, 2003 and, therefore, will be included in the Department status report due by September 30, 2004.

20. Senator MCCAIN. Secretary Rumsfeld, is it still reasonable to believe that the BMDS will be capability operational by the end of 2004? Will the missiles be fully operationally tested by then?

Secretary RUMSFELD. We still expect the BMDS to have operational capability by the end of 2004. As we have stated previously, this will be a limited capability with improvements to follow.

The Ground-based Interceptors (GBIs) that are a part of the Ground-based Midcourse (GMD) element will not be fully operationally tested by the end of 2004; however, they will be proven in developmental tests against threat-representative targets. Operational testing of this initial and evolving capability will proceed as the test bed is complete and continue as part of the development program and as part of our validation and verification effort.

JOINT REQUIREMENTS OVERSIGHT COUNCIL DECISION ON JOINT STANDOFF WEAPON

21. Senator MCCAIN. General Pace, in General Myer's posture statement he states that you are "establishing a more rigorous process for reviewing joint requirements." He also affirms that "in the near term, [you] are focused on improving how [you]

determine our munitions requirements. Over the long-term, [you] plan to field improved munitions systems that build on our already superb precision-delivery capabilities."

It appears to me that the cancellation of the United States Air Force's (USAF) joint participation in the Joint Standoff Weapon (JSOW) program in favor of the USAF's Wind Corrected Munitions Dispenser Extended Range (WCMD–ER) is totally counter to the direction Secretary Rumsfeld is setting for the department.

With respect to requirements, WCMD–ER has half the range, increases the signature for the delivery platform, and offers no plan to accommodate for the unexploded hazard of aging explosives.

With respect to the business case, the decision ignores the sunk costs that have already been spent on integrating the JSOW into five USAF aircraft in favor of future integration of the WCMD–ER into two USAF platforms at the time when the USAF is about to realize their return on investment. How do you explain this decision?

General PACE. The Joint Staff has absolutely increased its rigor in reviewing service as well as joint munitions requirements. We are currently coordinating between combatant commanders (COCOM), individual Services, and the Joint Staff to accurately depict warfighter needs through the Munitions Requirement Process. This effort will enable Services to better define the capability and funding requirements needed to support the combatant commander's operations plan (OPLAN) requirements and threat assessment.

Addressing the USAF decision to terminate the JSOW program in fiscal year 2005, Director, J–8 directed a review of several munitions programs. Over a 3-month period, the Force Application Functional Capabilities Board (FCB) conducted an assessment of standoff weapons capabilities and the impact of the USAF termination initiative on the overall JSOW program. The Joint Staff assessment did not focus on a pure comparison between JSOW–A and WCMD–ER. The tasking sought to identify gaps, seams, and redundancies in comparing JSOW with other joint and Service munitions. The unique attributes of JSOW were recognized and these capabilities weighed against their cost/benefits to the warfighter. JSOW is a standoff outside point defense weapon (SOPD). WCMD–ER is also a SOPD weapon. While it does not have the same range as JSOW, WCMD–ER does have the ability to be launched outside the range of most tactical threat systems. We recognize the issue with the unexploded ordnance hazard, but this is a challenge for our entire inventory of area target munitions. A final theme in the assessment included Strategic Planning Guidance direction to accept risk when existing capabilities sustain our advantage.

The USAF based its decision to end JSOW–A procurement on requirements analysis that concluded JSOW–A provided a capability that would be served by other weapons. The USAF, even considering the funding for JSOW to date, projected a cost savings of $398 million in the FYDP.

The Joint Staff recommended canceling the JSOW program, stating that advancements in precision capability of other current and funded munitions could effectively serve the JSOW target set. Current standoff munitions, together with direct attack munitions delivered by stealthy platforms, provide the necessary capabilities to meet COCOM requirements. The Joint Staff concluded that cancellation of the JSOW program would present limited risk in joint warfighting capabilities and offer substantial offsets for other critical requirements.

The Joint Staff concluded that DOD should accept limited risk and capture substantial offsets for future programs.

AIR FORCE TANKERS

22. Senator MCCAIN. General Pace, regarding tanker aircraft, the National Defense Authorization Act for Fiscal Year 2004 calls for an "Analysis of Alternatives," a long-term maintenance and training requirements study, and a corrosion study to be completed by March, April, and May 2004, respectively. Where are we with regard to each project? Specifically, who is conducting them? When will each be completed?

General PACE. Independent Analysis of Alternatives (AoA) Public Law 108–136 Section 134 directs the Secretary of the Air Force to submit an AoA by a federally-funded research and development center or another independent agency no later than March 1, 2004. The AoA Guidance was approved by the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD(AT&L)) outlining the conduct of an AoA using a federally-funded research and development center or other

entity independent of the DOD. This effort is expected to take 18 months to complete.

Maintenance and Training Public Law 108–136 Section 135 requires the Secretary of Defense to submit a report, no later than April 1, 2004, regarding long-term tanker aircraft maintenance and training requirements. The Air Force, more specifically the KC–767 and Trainer System Program Offices, are preparing the report, with Logistics and Materiel Readiness as the Office of the Secretary of Defense (OSD) lead. The report is expected to be submitted to Congress by USD(AT&L) no later than April 1, 2004.

Aircraft Material Condition Public Law 108–136 Section 345 requires the Secretary of Defense to submit a report, no later than May 1, 2004, on the material condition of the KC–135 fleet. The statement of work has been prepared and the Center for Naval Analysis (CNA) is under contract. CNA is reviewing the available data and beginning their assessment.

23. Senator MCCAIN. General Pace, on December 1, 2003, the Deputy Secretary ordered a "pause" in the execution of the tanker contracts until the Office of the Inspector General (OIG) completes an independent assessment of allegations related to the tanker proposal. As you likely know, the Justice Department is also investigating matters related to the tanker program. It seems to me that the need for a "pause" prompted by the OIG's assessment applies with equal if not greater force to the Justice Department's investigation. In other words, the tanker contracts should not be executed until the Justice Department has completed its investigation. Do you agree? If not, why not?

General PACE. I'm not in a position to comment about ongoing investigations. The Joint Requirements Oversight Council (JROC) approved the Air Refueling Aircraft Program Operational Requirements Document, thus validating the need for air refueling capability. This capability is essential to COCOMs, and we should take every appropriate action to satisfy it as soon as possible.

QUESTIONS SUBMITTED BY SENATOR SAXBY CHAMBLISS

TARGETED PAY INCREASES

24. Senator CHAMBLISS. Secretary Rumsfeld, I am concerned as I know you are about retention and morale among our troops, particularly those who continue to be deployed overseas for long periods of time. Apparently as DOD was putting together its fiscal year 2005 budget recommendation, the OMB took out DOD's proposals for targeted pay raises, primarily for career enlisted members. I realize that resources are tight and that we can't always fund every pay and benefit program on the table. Having said that, I would appreciate your thoughts on how we can continue to retain high quality personnel, most of whom have other options outside the military, and what you believe is the proper mix of pay increases and quality of life enhancements that will ensure we create an environment that will retain the necessary amount of soldiers, sailors, airmen, and marines in our Armed Forces.

Secretary RUMSFELD. We've made great strides in reaching our goal of improving military compensation so that it is equal to or greater than the 70th percentile of private sector incomes for military members with comparable education and years of service. We've closed the gap for officers and will have closed nearly 80 percent of the gap for mid-grade non-commissioned officers (NCOs) with this year's 3.5 percent (Employment Cost Index (ECI) plus ½ percent) across-the-board pay raise. We remain committed to achieving this goal. Our service members have seen this commitment over the past few years in increases to pay and housing allowances. This year's budget provides the resources to eliminate the remaining 3.5 percent out-of-pocket housing expenses for the average member on the first of January.

Further, I am appointing a Defense Advisory Committee on Military Compensation to conduct a comprehensive review of military compensation for Active and Reserve Forces with a view toward simplifying and improving our compensation program to ensure we retain the right mix of soldiers, sailors, airmen, and marines in our Armed Forces.

TEMPORARY INCREASE IN END STRENGTH/GUARD-RESERVE MISSIONS

25. Senator CHAMBLISS. Secretary Rumsfeld, I applaud your recent decision to float up the Army end strength over the next several years in order to better meet the demands being placed on our Armed Forces. As I interact with my constituents who are military members it continues to become clear to me that they are, over-

whelmingly, proud to serve their country and willing to do so when called. At the same time, they want predictability in their lifestyle and a sustainable deployment schedule. The temporary increase you are instituting will help spread mobilizations and deployments over more people, and I believe that will help relieve some of the strain on our military members. Part of your plan for creating a more operational, deployable Army is to move people into skill sets that have high demand from those that are not in high demand. Regarding how this rebalancing may affect the Reserve components, can you explain in more detail which skill sets you are talking about and how this shift in skill sets will affect the way the Guard and Reserve look and how they are used in the future?

Secretary RUMSFELD. Specialties such as Civil Affairs, Security/Police Forces, Intelligence, and Special Operations Forces are examples of the most highly stressed career fields that need rebalancing. Converting skills from lower demand areas such as Field Artillery, Air Defense Artillery, and Combat Heavy Engineers to these higher stressed career fields increases the number of these units. Expanding the rotational base allows the Services to achieve mobilization rates that are both reasonable and sustainable.

GUARD/RESERVE RETENTION

26. Senator CHAMBLISS. Secretary Rumsfeld, our Guard and Reserve members have done a great job over the last several years and have played a major role in military operations overseas and at home. Based on the planned ratio of Reserve to Active Forces in Iraq during OIF 2, they will be playing an even larger role in the future. Indications I get from Guard and Reserve personnel I've talked to are that we have a possible retention crisis brewing. People I've talked to who have been deployed or are currently deployed claim that as many as 70 percent of the people in their units plan to get out when they are demobilized. It's unclear if they actually will, however the fact they say they are going to is troubling. The additional feedback I get that I think is important to mention is that predictability in lifestyle is more important to retaining these people than any kind of pay and benefit. I know you and your staff are working right now to revamp the mobilization process and develop new standards for how Guard and Reserve personnel will be used. But I want you to know that this issue is in the forefront of my concern as well and I look forward to seeing how DOD will address this issue which I believe is absolutely central to the future of our Armed Forces. On that note, I would appreciate any preliminary thoughts you have on the standards the Department intends to put in place for using and retaining our Guard and Reserve Forces.

Secretary RUMSFELD. We are acutely aware that the Reserve components are being called upon now more than they have in the past, and we are concerned about the impact of this increased use on our ability to meet our future human resource requirements. It is unclear at this point what current and long-term effects this increased use may have. While we are currently achieving our strength objectives, we remain vigilant about future enlistment and reenlistment behavior and trends. In our efforts to strengthen Reserve recruiting and retention, the Department is examining proposals for enhanced bonus programs and exploring opportunities to improve the quality of life for our members. We have stepped up our family and employer support programs, and we monitor employer- and family-related issues and concerns for potential serious problems. In addition, we are considering a number of initiatives that are focused on limiting the personal turbulence for our Reserve component members.

To promote judicious and prudent use of the Reserve components and to reduce the strain on Reserve component members, we are focusing much of our effort on developing new standards for their use. We are exploring policies that will provide more predictable periods of mobilization and more advanced planning time for overseas tours. For example, a member could plan for not more than 1 year of mobilization in every 6 years of Reserve service and arrange his personal and family affairs accordingly. We are examining ways to enhance our use of volunteers in an effort to minimize the need for involuntary activation orders. Additionally, our efforts to prepare proposed legislation and revise our policies to support the continuum of service are ongoing. These efforts are focused on removing barriers to optimal use of Reserve component members across the spectrum of military operations in both peacetime and in times of national emergency.

Although there are no immediate indications that the current mobilization has negatively impacted recruiting and retention, we are working to identify early warning indicators that will assist us in targeting enlistment and reenlistment incentives before problems become serious.

The Secretaries of the military departments are individually responsible for determining their strength requirements and skill mix and applying available resources to ensure manning requirements are achieved. We will continue to work with them to ensure that our programs are sufficient to provide a strong force with the requisite numbers and skills.

STRATEGIC AIRLIFT

27. Senator CHAMBLISS. General Pace, strategic airlift has been absolutely central to our success in Afghanistan and Iraq over the past 3 years, and central to the success of the Expeditionary Air Force for much longer than that. You are currently in the process of revising the Mobility Requirements Study to incorporate lessons learned from Operation Enduring Freedom (OEF) and OIF, and I understand that this study will be complete by June 2005. However, I don't think it takes a complex, time-consuming study to determine that we simply don't have enough airlift. We can't build C–17s fast enough and we can't modify C–5s fast enough to produce the amount of airlift capability that we need. One illustration of this which I find a little troubling is that over the last few years DOD has contracted with the Russians to use AN–124 aircraft for strategic airlift because we simply don't have enough of our own. At the same time, DOD and the Air Force in particular are dragging their feet in funding C–5 modernization programs which could help alleviate our need to contract with the Russians. I would appreciate your comments on this situation as well as your comments on how you will fund the C–5 modernization effort in order to increase the United States' strategic airlift capacity.

General PACE. The AN–124 is only used on a limited basis as the last option for airlifting outsized cargo. Our preferred method of cargo shipment is sealift. Only when the material is needed at destination before sealift can get it there, do we resort to airlift. Certain large shipments, known as outsized cargo, can only fit on a C–5 or C–17. The Fly America Act mandates that when the appropriate aircraft are not available, we must first offer a contract to U.S./Civil Reserve Fleet carriers. However, no U.S. carriers have the capability to move outsized cargo. In the past 5 years we have contracted the AN–124 125 times, with the vast majority of those instances being in fiscal year 2002–2003 as we were building up and executing OIF. In fiscal year 2003, the AN–124 flew less than one-half of 1 percent of the total strategic airlift missions flown (79 out of 180,000).

As part of the C–5 modernization effort, we have funded the Avionics Modernization Program (AMP) for 55 aircraft. In fiscal year 2005, $103 million is included in the President's budget request, including funds for procurement of kits for 18 additional aircraft. We have also requested $322 million in the fiscal year 2005 budget for the Reliability Enhancement and Re-Engining Program (RERP). Three test kits (two C–5Bs and one C–5A) were procured in fiscal year 2004 with operational test and evaluation scheduled to be complete in fiscal year 2008. The Air Force has programmed funds for procurement of 12 additional kits through fiscal year 2009, scheduled to begin as the Operational Test and Evaluation ends. Although budgetary constraints have delayed this program, we plan to AMP all remaining C–5s in the fleet and RERP the required amount to meet mobility requirements.

QUESTIONS SUBMITTED BY SENATOR LINDSEY O. GRAHAM

TRICARE FUNDING

28. Senator GRAHAM. Secretary Rumsfeld, last year, Congress appropriated $400 million to the Defense Health Program for an expanded TRICARE benefit for reservists and their families. Recognizing your reluctance to rely on unnamed sources, I have received information that a significant amount of these funds have been expended without program implementation. How much of that $400 million remains, and for what purpose has the money been used?

Secretary RUMSFELD. Thank you for your support of our reservists. I share your respect and appreciation for their contribution to our Nation. Implementing the enhanced access to TRICARE provided to reservists by the Fiscal Year 2004 National Defense Authorization Act (NDAA) presents the Department with both fiscal and administrative challenges.

As no additional funds were appropriated to support the new requirement, a prior approval reprogramming from within the Department's current appropriated funds is required. That reprogramming action is currently being staffed within the Department and should be forwarded to Congress shortly. As an interim measure, costs associated with the benefit are being absorbed within funds appropriated to the De-

fense Health Program appropriation as part of the Fiscal Year 2004 Appropriations Act. Given that the ability to absorb these costs is limited, I request your support expediting congressional approval of the reprogramming request.

The enhanced benefit also introduces a number of administrative challenges. As sections 703 and 704 of the NDAA for Fiscal Year 2004 represent the extension of current periods of eligibility, the benefit became active and the Department began to incur costs on November 6, 2003. At that time, the system capability to capture and report actual program expenditures did not exist. The Department is aggressively pursuing the necessary systems changes and contract modifications to properly administer these benefits, but those efforts are not yet finalized. As such, actual benefit expenditures are currently not available. However, current analysis indicates expenditures through March 2004 will be approximately $244 million. This estimate includes the provision of health care benefits under section 703 and 704, as well as associated system changes and contract modifications.

Section 702 requires regulatory action which is currently under development within the Department. The Department is developing the program to ensure administrative and health care costs do not exceed the $400 million limit specified by Congress in fiscal year 2004.

29. Senator GRAHAM. Secretary Rumsfeld, could you please comment on the status of the implementation of this vital readiness and retention program?

Secretary RUMSFELD. The Emergency Supplemental Appropriations Act and the NDAA for Fiscal Year 2004 temporarily revise statutes governing healthcare services for Reserve component (RC) sponsors and their family members. We are committed to making these changes as quickly as possible to ensure eligible members have access to TRICARE health benefits.

- The Department has begun a series of steps to implement these new temporary benefits such as changing systems and contracts, and developing marketing and educational materials to get information out to the RC members and their families.
- The law limits the fiscal year 2004 outlays to $400 million for authorized benefits. The Department is setting up systems to accurately track and account for all administrative and healthcare costs to stay within this limit.
- Looking to the future, we need to proceed cautiously in considering costly new entitlements for reservists who have not been activated. A key issue would be the effect of a new entitlement on recruitment and retention of both active duty and Reserve component members.

AIR NATIONAL GUARD

30. Senator GRAHAM. Secretary Rumsfeld, since the 1950s, the Air National Guard has followed a policy of maintaining at least one flying mission in every state. This policy is no doubt due to the invaluable contributions that the Guard provides not only to the national defense but also in recognition of the positive role Guard members play in their communities offering most individuals their only exposure to the military. Do you intend to continue that longstanding policy?

Secretary RUMSFELD. I appreciate your long-standing support for our Nation's men and women in uniform as well as your concern for the continued relevance of our citizen airmen of the Air National Guard. The support of Congress will be critical as we transform the DOD to meet the national security requirements of the 21st century.

The Department anticipates an overall reduction in the number of manned aircraft as we transform. This is due not only to constrained resources, but also the capabilities the Nation will require from the Department in the future. Information age warfare requires a different portfolio of capabilities than industrial age warfare, and we are transforming the joint force to meet that challenge. Also, the aircraft the Department is planning on procuring will be vastly more capable than our current legacy systems, which will result in a lower number of aircraft being procured. The Department is also very interested in the potential of unmanned systems.

The USAF is committed to ensuring the Air National Guard is a full and equal partner in the Air Force of the future. I strongly support their efforts to ensure the future relevancy of the Air National Guard in their transformation plans. Our shift to capabilities based planning and the resulting shift in focus away from legacy systems require a commensurate change of focus by the Air National Guard. Lieutenant General James has developed a strong transformation vision, and I am confident that his approach will help to ensure a relevant Air National Guard.

The Air Force and Air National Guard assure me their intent is to maintain a Guard flying unit in every state; however, first and foremost, they are committed to providing a relevant and more capable Air National Guard presence in every state, to provide required capabilities to the joint force. While it has always been a goal, there is no stated policy to keep a flying unit in each State. The Department believes such a policy would not be in the best interests of the Nation. The Air Force and Air National Guard leadership require the flexibility to transform the Air National Guard to ensure it has the required capabilities needed for the future.

REBALANCING FORCES

31. Senator GRAHAM. Secretary Rumsfeld, you mention in your brief prepared for Congress the need to manage/reduce the need for Reserve mobilization but at the same time you want to "restructure" the Reserves to serve in more "high demand" units such as military police. Please comment on your plan to achieve both of these goals.

Secretary RUMSFELD. The rebalancing strategy has as its objectives: to enhance early responsiveness by structuring forces to reduce the need for involuntary mobilization during the early stages of a rapid response operation; to resolve stressed career fields by structuring forces to limit involuntary mobilization to reasonable and sustainable rates; and to employ innovative management practices such as the continuum of service, reachback, enhanced volunteerism, mobilization process improvements, and predictable rotational overseas presence. Through this comprehensive rebalancing strategy the Department will gain added efficiencies from its existing force structure that may preclude any necessity to increase force end strength. For example, the Army's rebalancing plans will convert lower priority, less stressed field artillery force structure to higher priority and higher demand military police. This will increase the number of both active and Reserve component military police units. Expanding the rotational base allows the Services to achieve mobilization rates that are both reasonable and sustainable.

32. Senator GRAHAM. Secretary Rumsfeld, it was mentioned in the budget brief that, contrary to what has been reported, Army end strength numbers are not going to be temporarily increased; instead, active duty personnel are going to be "restructured." Who will replace those active duty positions that are being restructured?

Secretary RUMSFELD. The President has authorized the Army to temporarily increase active component strength by 30,000, using emergency powers provided in statute, for the purpose of resetting the force and creating 10 additional brigade UAs to address demands on the force based on current global war on terrorism emergency operations. The Army will increase its strength by up to 30,000 over the next 4 years and then return to statutory limits provided in the NDAA. It will employ a number of methods to return to the prescribed statutory limits. These methods include restructuring of "Cold War" capabilities deemed unnecessary or excessive for the emerging strategic environment, converting selected military spaces to civilian spaces in the institutional force, and headquarters delayering to provide more soldiers in deployable units. The exact number of spaces to be restructured is still under review. The spaces for "Cold War" capabilities that are no longer needed are being reinvested to create brigade UAs and associated support elements. Spaces in the institutional force that can be converted to civilian positions will be filled through the hiring of general schedule civilians or contractors.

MILITARY RETENTION/RECRUITING

33. Senator GRAHAM. Secretary Rumsfeld, in your opinion, what effect will the lack of targeted pay raises have on military retention in light of an improving economy and the current strain on military forces?

Secretary RUMSFELD. In my opinion, the lack of targeted pay raises will not adversely affect retention. The proposed 3.5 percent pay raise is one-half percent greater than the average pay raise in the private sector. When we also consider that the Basic Allowance for Housing, for some members about one-third of their regular military compensation, increased 6.9 percent and the Basic Allowance for Subsistence rose 4.8 percent, military compensation growth was significantly higher than for the average civilian.

34. Senator GRAHAM. Secretary Rumsfeld, what effect do you believe the current stop losses will have for long term recruiting and retention goals?

Secretary RUMSFELD. I believe the current Stop Loss program will have minimal effect on long-term recruiting goals. The current Stop Loss program is small in scale, impacting approximately 45,000 (as of the end of January 2004) out of the 2,000,000 active and Reserve Service members. As of today, the Army is the only Service currently executing stop loss. Army Stop Loss programs are expected to remain in effect until their unit stabilization system and increased manning initiatives are fully realized in 3 to 4 years. We are closely monitoring retention rates. When we ask the force about their intentions to stay in uniform, the signals remain positive.

STOCKPILE REPORT

35. Senator GRAHAM. Secretary Rumsfeld, over the last several years, the Senate has supported a number of Department of Energy (DOE) programs essential to the Nation's nuclear deterrent force. Many of those programs support DOD as the end "customer." When do you intend to finalize the Stockpile Report?

Secretary RUMSFELD. We are currently conducting a periodic review of our plans for implementing the Nuclear Posture Review. The updated plans will serve, among other things, as the means to change the projection of our specific stockpile requirements. We will make a two-thirds reduction in number of our operationally deployed nuclear weapons that President Bush has announced. The plan must also protect against a number of unknowns in the 2012 timeframe and beyond, including the international environment, the limited progress we have made toward restoring our nuclear infrastructure, and the condition of the aging stockpile. Infrastructure is of particular concern, since the U.S. cannot build complete replacement warheads or build new ones from scratch if it were required to do so. Because of this and other infrastructure shortfalls, we must rely on those warheads we have in secure storage to respond to new threats by incorporating new technology into these existing warheads when required.

Nearly all of the weapons in the stockpile were designed and built during the Cold War. For now, our plan is to retain some, explore modifications of others to give them improved capabilities, and to prudently reduce the overall inventory of warheads. Predicting specific stockpile requirements that will meet our deterrence needs for the next decade and beyond, is a very complex problem. This initial stockpile plan for 2012, now in development, will involve significant reductions. We will continue to refine our requirements in the future taking into account progress made in restoring the nuclear infrastructure and the condition of the stockpile.

QUESTIONS SUBMITTED BY SENATOR ELIZABETH DOLE

TRANSFORMATION

36. Senator DOLE. General Pace, in a recent article in the National Journal, the operational linking of individual Service training ranges at Nellis, the National Training Center, Twentynine Palms, and San Diego was hailed as one of the greatest transformation achievements stemming from operations in Iraq. Where do you see further "transformational" opportunities emerging in joint training and operations?

General PACE. While the Joint National Training Capability (JNTC) has demonstrated initial success in providing a capability to conduct joint training at a collective level, we are also making strides to develop an enhanced capability to provide distance learning and training at an individual level. This capability is referred to as the Joint Knowledge Development and Distribution Capability (JKDDC).

JKDDC will transform the way our joint military forces receive joint individual training. Through this capability we will develop and distribute joint knowledge via a dynamic, global-knowledge network that provides immediate access to joint education and training resources. This capability facilitates a transformed culture by preparing future decisionmakers and leaders (officers, enlisted, and DOD civilians across the joint community) to employ joint operational art, understand joint doctrine, and respond innovatively to adversaries.

REBALANCING THE FORCES

37. Senator DOLE. General Pace, while end strength is certainly an area of concern, I am more concerned about force mix particularly, the total force of active, Reserve and Guard. How are you addressing the short-term issue of manning high demand career fields?

General PACE. The Services are taking a number of actions to reduce stress on high demand career fields beginning in fiscal year 2004–2005. Generally, they will move force structure from high-density, low-demand capabilities (air defense and artillery) into high-demand capabilities (military police and civil affairs).

The Army will begin the restructuring of 40,000 billets in fiscal year 2004–fiscal year 2005. This includes beginning realignment of 30,000 billets in fiscal year 2004—affected career fields include Civil Affairs, Psychological Operations, Chemical Defense, Special Operations Forces, Intelligence, and Military Police. Realignment of the remaining 10,000 billets will begin in fiscal year 2005 affected career fields include Military Police, Transportation, and Quartermaster.

The Navy will complete realignment of over 14,600 billets by fiscal year 2005 in its Antiterrorism/Force Protection, Intelligence, and Medical career fields. Additionally, the predominantly RC Naval Coastal I Warfare capability will gain active component structure: (1) four active component Maritime Security Force Squadrons will be commissioned by end fiscal year 2004; and (2) two of eight RC Naval Coastal Warfare Squadrons transfer to AC in fiscal year 2005.

The Air Force will realign 3,800 billets in fiscal year 2004–fiscal year 2005. This includes 2,700 billets in the highly stressed Special Operations career field and 1,100 across 16 other stressed AC career fields.

The U.S. Marine Corps will realign billets in Air/Naval Gunfire Liaison Companies and examine further rebalancing efforts for Law Enforcement, Civil Affairs, and Intelligence. In fact, three Air/Naval Gunfire Liaison Companies will be established resulting in a 54/46 AC/RC mix of forces in a capability that was previously 100 percent in the RC.

38. Senator DOLE. General Pace, in your proposal to reassign some units (namely air defense and artillery) to units such as military police and civil affairs, are we sacrificing a capability of a core mission in order to meet a short-term requirement?

General PACE. We are not sacrificing a capability of a core mission in order to meet short-term requirements. The rebalancing efforts by the Services are the result of detailed analysis. In general, the Services will move force structure from high-density, low-demand capabilities (air defense and artillery) into high-demand capabilities (military police and civil affairs).

39. Senator DOLE. General Pace, could you discuss in further detail how you plan to rebalance the forces between the active, Guard, and Reserve components?

General PACE. The Services are taking a number of actions, in addition to those already mentioned for the near-term, to rebalance forces between the AC and RC to better match the force structure to the Defense Strategy.

The Army will realign up to an additional 85,000 billets beginning in fiscal year 2006 upon the completion of the Total Army Analysis 06–11. This is in addition to the 40,000 billets that will begin realignment in fiscal year 2004. The primary capabilities affected will be: (1) significant decreases in Field Artillery, Air Defense, Engineers, and Armor; and (2) significant increases in Military Police, Transportation, Petroleum, Oils, and Lubricants/Water Distribution, Civil Affairs, Psychological Operation, and Chemical Defense.

Other actions by the Services that will affect the AC/RC include:

— All Services will increase the use of "reach-back" capabilities, particularly in the Medical and Intelligence career fields, in order to reduce the deployment requirements for high-stressed RC career fields;

— The U.S. Navy (USN) and USMC will integrate AC/RC F/A–18 units to improve overall carrier air wing availability and reduce reliance on one component or the other, exclusively;

— The Air Force will reduce reliance on the RC by 24 percent over the FYDP through AC/RC realignment in the highly stressed career fields of Combat Search and Rescue (CSAR) helicopters and the C–130s that refuel the CSAR helicopters.

MOBILIZATION OF THE NATIONAL GUARD

40. Senator DOLE. General Pace, with this month's deployment of North Carolina's 30th Heavy Enhanced Separate Brigade, I have been made painfully aware of some of the problems faced by our National Guard (NG) units as they mobilize. What are you doing to guarantee that these service members are expediently transitioned to active duty payrolls and that their lodging and subsistence are of the same quality as the active units training on the same bases?

General PACE. For pay and lodging and subsistence, we are doing the following:

Pay. Since the mid-1990s, mobilized Army National Guard (ARNG) soldiers remain on the Defense Joint Military Pay System (DJMPS) and are not rolled over to the active component (AC) pay system. When an ARNG soldier is mobilized, the NG United States Property and Fiscal Officer (USPFO) issues a pay order which establishes entitlements using an AC accounting classification; thereby, transitioning the soldier to active duty.

Problems arise when an ARNG soldier reports to an AC Finance-Office with a pay concern, as the AC is not familiar with the DJMPS–RC system. However, the U.S. Army Finance Command in conjunction with the Defense Finance and Accounting System established RC training teams to conduct training at various AC installations on the DJMPS–RC. In addition, the ARNG has implemented a toll-free number and set up an email address for ARNG soldiers to use when they have questions or concerns regarding their pay. Also, three ARNG Mobilization Pay Teams (MPTs) are being organized to identify and make necessary pay adjustments and corrections. The toll-free number and email address were operational March 1, 2004, and the MPTs should be operational April 1, 2004.

Lodging and Subsistence. The Army has experienced significant challenges in billeting mobilized soldiers. In response, the Installation Management Agency (IMA) has created a standard policy for all installations to use when accommodating mobilized soldiers regardless of component affiliation. This standard is based on the fundamental principle that AC and RC soldiers are on one team and are to be treated equally within the installation's capabilities.

41. Senator DOLE. General Pace, the budget request news release sent out by your office proposes the use of innovative management to improve the mobilization process. Could you go into some specifics about that objective?

General PACE. In order to relieve stress to the RC force, we are evaluating several innovative management practices to improve the flexibility of the total force. We also want to reduce the impact on critical career fields in the RC and the need for involuntary mobilization. Our four approaches include: establish the paradigm of the continuum of service, increase use of reachback, improve predictability of rotational overseas presence, and improve the mobilization process.

The paradigm of the continuum of service is a new practice that provides individual service members greater opportunities to serve in support of the Department's mission. Currently, the RC force is made up of either full-time or traditional reservists. With the new approach, RC individuals will be able to perform military service in a variety of ways, at varying levels of service, moving between full-time and part-time status, as circumstances in their lives and needs of the Department evolve.

Increased use of reachback refers to the ability to connect electronically to information sources and resources at home base or other locations around the world to accomplish essential tasks and missions. By employing reachback, the in-theater force can be smaller and more agile, with corresponding reductions in combat support and physical security requirements. Additionally, by using computer connectivity, RC units and individuals can provide mission support during drill periods as well as short-rotation active duty tours, thus, further lessening the requirements for RC mobilizations.

Improving the predictability of rotational overseas presence allows longer lead-time to plan for overseas deployment. RC members benefit from additional time to prepare their families, employers, and train with their units. Incorporating RC forces into a more predictable rotational overseas presence plan also allows the Department to free up active component units to support rapid-response requirements that may arise, and the Services are able to better manage the operational tempo of the total force.

Improvements to the mobilization process include: establishing standards to ensure judicious and prudent use of the RC, gaining better access to the Individual Ready Reserve pool (for greater source of military manpower and depth of capabilities), and continuing Service refinements to automation systems, thus, enhancing visibility of activated RC members and improving the ability to meet mobilization requirements.

42. Senator DOLE. Secretary Rumsfeld, since September 11, 2001, 21 North Carolina NG units have been mobilized. Of those, only one unit was given anywhere close to a 30-day notice. With the announcement of the OIF 2 rotation, the 30th Heavy Enhanced Separate Brigade received their orders 4 days prior to their mobilization date. While I understand the urgent requirements immediately following September 11, this holding of notice orders for an anticipated rotation is unacceptable,

especially given the additional preparations required for our citizen soldiers. What is being done to address this ongoing problem?

Secretary RUMSFELD. The 30th Enhanced Separate Brigade alert order was released by Headquarters, Department of the Army on July 25, 2003. The 30th Enhanced Separate Brigade mobilization order was released by Headquarters, Department of the Army, on September 27, 2003, with a mobilization date of October 1, 2003. While it is the Army's policy to issue mobilization orders 30 days prior, operational requirements sometime dictate otherwise. While it was unfortunate that it was only 4 days from mobilization order receipt to report for duty, it did allow for the soldiers families to become eligible for the benefits and entitlements that come with activation, such as medical care, dental care, and lower interest rates for loans. It is the Department's policy to ensure the predictable use of Reserve Forces shall be extended to the maximum amount possible by notifying Reserve members early that they are being considered for activation and by issuing orders as soon as it is operationally feasible to do so with the goal of providing them to the activating member at least 30 days prior to the report date.

BRAC/GUARD AND RESERVE TRAINING

43. Senator DOLE. Secretary Rumsfeld, with the proposed 25 percent reduction in domestic facilities with BRAC and movement away from large, forward-operating bases, how are you planning to accommodate Guard and Reserve training, basing, and quality-of-life needs when worldwide operations require a manpower "spike"?

Secretary RUMSFELD. The Department of Defense is committed to meeting the quality-of-life needs of our service members and their families as we transform our military for the 21st century. Just as our forces are dealing with the global war on terrorism, so too, are our military families. We have the honor and the obligation to assist them in meeting the stresses and challenges of military life. Because of the unique challenges of our times, we formed a Joint Family Readiness Working Group in October 2002. The working group is critical in the Department's efforts to monitor deployment and family readiness and serves as an advisor to DOD leadership on emerging policy and operations issues.

Each of the military services has comprehensive deployment support programs. These programs educate families and help them cope with the demands of military life and separations. Outreach efforts include personal contact with families on a regular basis. Through technology (toll-free numbers, Military OneSource, and Web sites), families can access information or link to services virtually around the clock. Personal services include emergency assistance, respite care for children, financial assistance, and help in navigating military systems.

The military family lives with a high level of stress not only because of frequent deployments that place the service member/parent/spouse in harm's way, but also because of frequent moves, disruptions in the military spouse's employment, and the challenges created by children changing schools. The OneSource program is a primary means of support to families dealing with these challenges, especially the two-thirds who live off-base and the 60 percent with family responsibilities. Through the Military OneSource programs, service members and their families can also access prepaid nonmedical family assistance counseling to help them deal with deployment separations, parent-child communication, financial issues, and reunion/reintegration issues.

Our service members have strong family values and high aspirations and expectations for their quality of life. To that end, the Department, in its new social compact, has entered into a written commitment to improve life in the military, underwrite family support programs, and work in partnership with families to accomplish the military mission. Family support is a continuous effort, and there is no finish line for readiness.

As we continue to support our Active and Reserve Forces and their families, we are closely monitoring our programs so that resources are available and accessible to all affected by mobilization and deployment. We are being particularly vigilant and supportive of our family readiness volunteers. They do a superb job and are an incredible group of dedicated and effective volunteers.

44. Senator DOLE. Secretary Rumsfeld, while I understand the temporary nature of many of the facilities now housing our Guard and Reserves units training for deployment, the deplorable state of those facilities is not understandable. How will remedying this situation be factored into the considerations for the 2005 BRAC round?

Secretary RUMSFELD. As the Department rationalizes its base infrastructure with defense strategy through the BRAC process, excess base capacity can be eliminated. This will release scarce resources that would otherwise not be available for other higher-priority requirements, such as modernizing weapons, improving quality of life for military members, and improving the readiness of our forces by upgrading the facilities that support them. To the extent funding can be diverted from unnecessary facilities through BRAC, the facilities you mention could be improved.

TRANSFORMATION AND POSTWAR STABILITY

45. Senator DOLE. Secretary Rumsfeld, while our latest military innovations have been significant in "winning the war," we seem to have a ways to go in "keeping the peace." How does your transformation vision address the need to maintain a postwar stability operation or peacekeeping capability?

Secretary RUMSFELD. Our vision of transformation encompasses developing new concepts for the employment of military force across the range of military operations, from major force-on-force combat to stability operations. To support this vision, the Joint Staff, combatant commands, and the military services are developing future joint concepts that will support our operational goals as laid out in the 2001 Quadrennial Defense Review. For example, the April 2003 Transformation Planning Guidance included specific guidance on developing a joint operating concept (JOC) for stability operations, with particular emphasis on peace enforcement. That JOC is now under development and is expected to be completed soon. To make the concept a reality, the military will conduct experiments and wargames to ensure the force adopts the new concept. Such transformational capabilities are critical to adapting our forces' combat capabilities into useful tools for resolving crisis situations. In addition, we continue to work with our friends and Allies to increase global capacity to conduct stability operations and to develop policies, concepts, and doctrines that ensure we can operate together effectively during stability operations.

WELFARE OF THE MILITARY FAMILY

46. Senator DOLE. Secretary Rumsfeld, the welfare of the military family is undoubtedly a key to the success of our All-Volunteer Force. I would like to take this opportunity to thank the countless volunteers and military family advocacy employees for their dedicated work during OEF and OIF. How is DOD formalizing the family advocacy mission, and how is this mission included in you transformation vision?

Secretary RUMSFELD. The Department of Defense is committed to meeting the quality of life needs of our service members and their families as we transform our military for the 21st century. Just as our forces are dealing with the global war on terror, so too, are our military families. We have the honor and the obligation to assist them in meeting the stresses and challenges of military life. Because of the unique challenges of our times, we formed a Joint Family Readiness Working Group in October 2002. The working group is critical in the Department's efforts to monitor deployment and family readiness and serves as an advisor to DOD leadership on emerging policy and operations issues.

Each of the military services has comprehensive deployment support programs. These programs educate families and help them cope with the demands of military life and separations. Outreach efforts include personal contact with families on a regular basis. Through technology (toll-free numbers, Military OneSource and Web sites), families can access information or link to services virtually around the clock. Personal services include emergency assistance, respite care for children, financial assistance, and help in navigating military systems.

The military family lives with a high level of stress not only because of frequent deployments that place the service member/parent/spouse in harm's way, but also because of frequent moves, disruptions in the military spouse's employment, and the challenges created by children changing schools. The OneSource program is a primary means of support to families dealing with these challenges, especially the two-thirds who live off-base and the 60 percent with family responsibilities. Through the Military OneSource programs, service members and their families can also access pre-paid non-medical family assistance counseling to help them deal with deployment separations, parent-child communication, financial issues and reunion/reintegration issues.

Our service members have strong family values and high aspirations and expectations for their quality of life. To that end, the Department, in its new social compact, has entered into a written commitment to improve life in the military, underwrite family support programs, and work in partnership with families to accomplish the

military mission. Family support is a continuous effort and there is no finish line for readiness.

As we continue to support our Active and Reserve Forces and their families, we are closely monitoring our programs so that resources are available and accessible to all affected by mobilization and deployment. We are being particularly vigilant and supportive of our family readiness volunteers. They do a superb job and are an incredible group of dedicated and effective volunteers.

47. Senator DOLE. Secretary Rumsfeld, given that our current deployments are drawing heavily on Guard and Reserve Forces, what is the Department doing to ensure necessary and appropriate support for all families, especially those from rural communities who live long distances from military installations?

Secretary RUMSFELD. We have been working with the Services and the RCs to create more of a joint service, total force family readiness and support perspective, so that any member or family can go to any installation or family support group and receive the assistance they need, regardless of the Service or component affiliation of the member.

Family readiness is a command function that must start at the battalion/squadron level. The unit commander is in the best possible position to determine what is needed to support his or her unit members and their families. Thanks to the National Guard Bureau, over 400 family assistance centers have been brought online to augment the family support system in America's hometowns in support of mission readiness. These joint centers provide an outreach capability not only to Guard and Reserve families that are not located near an installation, but they also support the large number of active service and family members who reside off the installation. Combined with the active duty family centers, there are over 700 family assistance centers around the world.

Through technology (toll-free numbers, Military OneSource, and Web sites), families can access information or link to services around the clock. We have been extremely pleased with the success of the OneSource program. This program offers service members and their families, from any location in the world, 24 hours a day, 7 days a week, access to a professional counselor via a toll-free telephone line, the Internet, and e-mail. The program offers the service in more than 130 languages. Personal services include emergency assistance, respite care for children, counseling, financial assistance, or help in navigating military systems. In addition, military members and their families can access prepaid family assistance counseling services on issues ranging from parent-child communications to reunion/reintegration of the family following deployments. A licensed provider provides this counseling within 30 minutes of the military family's home.

The military family lives with a high level of stress not only because of frequent deployments that place the service member/parent/spouse in harm's way, but also because of frequent moves, disruptions in the military spouse's employment, and the challenges created by children changing schools. The OneSource program is a primary means of support to families dealing with these challenges, especially the two-thirds who live off-base and the 60 percent with family responsibilities.

Our service members have strong family values and high aspirations and expectations for their quality of life. To that end, the Department, in its new social compact, has entered into a written commitment to improve life in the military, underwrite family support programs, and work in partnership with families to accomplish the military mission. The OneSource program leverages the power of public-private partnerships and technology to deliver services.

48. Senator DOLE. Secretary Rumsfeld, what is the Department doing to facilitate coordinated, targeted support for these troops and their families from local community resources, like schools, churches, and public agencies?

Secretary RUMSFELD. The National Guard Family Assistance Centers, located at over 400 sites in communities throughout the country, work with local agencies to ensure support is made available to military families. Moreover, the Family Centers at the installation have always worked with the local public agencies to ensure military families receive the appropriate support for which they are eligible. A number of veteran service organizations have also stepped up to the plate and are assisting families whose loved ones are deployed with home repairs, cars, lawn mowing, and other tasks that the deployed service member did while at home. The community response to our military families has been and continues to be very inspiring.

The family support systems at the installation level work with the schools to ensure that their staffs are aware of the unique needs of military children and, in particular, students with a parent deployed. Family Center staff and School Liaison Of-

ficers work regularly with the local schools providing training and other resources to help them assist military children.

Military OneSource, our recently implemented toll-free telephonic information and referral service links military families directly to local civilian community services. Military OneSource verifies referrals and frequently conducts a three-way call to introduce the military family to community service providers. In addition, families can access prepaid nonmedical family assistance counseling, provided by local civilian counselors, through the Military OneSource program.

I am pleased to recount a number of initiatives: for example, DOD sponsors www.MilitaryStudent.org, a Web site designed for children and parents of military families on deployment, their teachers, military installation leaders and families of special needs. The Web site is an extensive collection of information, skills, and strategies to help students and their families address deployment challenges as well as information and suggestions for those in support roles.

We help educators become aware of the challenges of the military child. To foster national awareness and highlight best practices for public school and military leaders, the DOD and the Military Impacted Schools Association (MISA) sponsored the National Conference for the Military Child. An outgrowth of the conference was the Promising Practices Program, which promotes worldwide replication of school programs and policies that schools can emulate for the benefit of military children and is located on the DOD Web site, www.MilitaryStudent.org.

The Department has initiated several partnerships. A partnership with the Department of Education's Safe and Drug Free Schools has expanded to include work with the National Child Traumatic Stress Network (sponsored by the University of California, Los Angeles, Duke University, and the Department of Health and Human Services) and world-renowned trauma experts to develop publications such as: "Educator's Guide to the Military Child During Deployment" and "Educator's Guide to the Military Child During Post Deployment: Challenges of Family Reunion." In addition, Parent's Guide to the Military Child in Deployment has been written in collaboration with the same agencies. A partnership with child psychologists and the Child Study Center of New York University School of Medicine has made their outstanding guidebook, Caring for Kids After Trauma and Death: A Guide for Parents and Professionals, available on our www.MilitaryStudent.org Web site where the DOD publications mentioned above also reside.

A partnership with Generations United is allowing the DOD to work with a nonprofit organization to develop a literacy tutoring program for children of deployed military families by training retired military members to offer educational and emotional support on a one-to-one basis. It will be piloted in six heavily impacted public school districts. In addition, the National Child Traumatic Stress Network and DOD are working with Walter Reed Army Medical Center and the Veterans Administration to develop a program to work with children of severely wounded military members returning from Iraq and Afghanistan to help children comprehend the life-altering changes of the military member and the impact on the family.

To give national prominence to military child education issues and to encourage states to work together to solve many of the challenges of military children in transition and deployment, DOD is sponsoring the National Education Consortium of Highly-Impacted States. It will be held in Washington, DC, in 2004 and attended by Chief State Schools Officers of the most heavily impacted military states. The agenda includes discussion regarding reciprocity and legislative initiatives, establishment of partnerships, and future consortium plans.

49. Senator DOLE. Secretary Rumsfeld, does the Department play a direct role in helping these types of organizations help our troops and families, or are we merely assuming that they are all doing their part to support military families? What type of feedback are you receiving?

Secretary RUMSFELD. In October 2002, we established a Joint Service Family Readiness Working Group. This working group has family program representatives from all active and Reserve components, nonprofit organizations such as the Red Cross, the National Military Family Association, and relevant Federal agencies such as, the Department of Veterans Affairs. This group casts a wide net of information gathering from their field programs and offices. Through this we get a great deal of feedback. I am pleased that the feedback indicates a great deal of community support for our military families.

Family support leaders conduct site visits to highly impacted areas. The visits are intended to get a pulse of family and community support operations. During these visits, they meet with families, family readiness group leaders, and family support staff. Leaders come back from these trips impressed with the strength of our family

support infrastructure but also with the incredible amount of community support for our troops and their families.

We work closely with the President's USA Freedom Corps to provide a means of channeling public service to military communities and individuals in need. Industries, not-for-profit organizations, schools, and individuals have rallied to support our troops and their families in countless ways from repairing cars to providing respite care.

The DOD plays an active role in partnerships with many organizations. We are not only the beneficiaries of the efforts of not-for-profit organizations, we are also active participants. With the MISA, for example, we contribute publications, Web site information, and programs that can benefit schools highly impacted by our children of military families. We have hired outstanding educators, researchers and child psychologists to develop an on-line course that educators anywhere in the world can access for free. The course contains cutting edge strategies, research, and teaching and counseling techniques that will help to support our military children.

Military OneSource is a success story for us. We constantly receive feedback from our service members that our 24/7/365 information and referral service for our military families is providing a much needed support function, everything from locating a dentist for their autistic child to providing school district information for family relocation. In addition, military members and their families can access prepaid family assistance counseling services on issues ranging from parent-child communications to reunion/reintegration of the family following deployments. A licensed provider provides this counseling within 30 minutes of the military family's home. Military OneSource tracks the requests from military members and gives us constant feedback regarding concerns and needs of our families. This invaluable information is used to guide our decisions regarding new programs, policies, and procedures necessary to improve military family quality of life.

GUARD AND RESERVE ACTIVATIONS/SEPARATION FROM BUSINESSES

50. Senator DOLE. Secretary Rumsfeld, many of our Guard and Reserve personnel either work for a small business or actually run their own small business. Given the historic magnitude of current Guard and Reserve activations and the substantial economic implications associated with these activations, could you outline for the committee how the Department is preparing these business owners and employees for separations that could last 12 to 18 months, both before they leave and after they return?

Secretary RUMSFELD. Employer support is an important part of an individual's decision to remain in the Reserves under normal conditions and is even more important in a time of mobilization when employees are absent from their employers for more extended periods. Absences by reservist-employees may create work problems and increased costs for civilian employers and may significantly affect the operations of a self-employed reservist's business. Employers of America's NG and Reserve members have become inextricably linked to a strong national defense.

The Department chartered the National Committee for Employer Support of the Guard and Reserve (ESGR), an agency within the Office of the Assistant Secretary of Defense for Reserve Affairs, in 1972 to promote cooperation and understanding between Reserve component members and their civilian employers and to assist in the resolution of conflicts arising from an employee's military commitment. Today, ESGR operates through a network of more than 4,500 volunteers throughout 55 committees located in each State, the District of Columbia, Guam, Puerto Rico, the Virgin Islands, and Europe. The Department tasks ESGR to ". . . promote both public and private understanding of the National Guard and Reserve in order to gain U.S. employer and community support through programs and personnel policies and practices that shall encourage employee and citizen participation in National Guard and Reserve programs."

ESGR uses the military chain of command to promote better understanding of the importance of maintaining positive working relations between employers and their RC employees, in order to sustain NG and Reserve participation. ESGR also solicits the assistance of military agencies, military training schools, and military and civilian associations in educating the Reserve Forces about their rights and responsibilities regarding terms and conditions of civilian employment, as stipulated in the Uniformed Services Employment and Reemployment Rights Act (USERRA).

Congress also provided clear protection for all members of the uniformed services (including noncareer NG and Reserve members, as well as active duty personnel) in October 1994, with passage of the USERRA chapter 43 of title 38, U.S. Code. The Department of Labor is the enforcement authority for USERRA, and it processes all

formal complaints of violations of the law. The Act seeks to ensure that members of the uniformed Services are entitled to return to their civilian employment upon completion of their service. They should be reinstated with the seniority, status, and rate of pay they would have obtained had they remained continuously employed by their civilian employer. The law also protects individuals from discrimination in hiring, promotion, and retention on the basis of present and future membership in the armed services.

There is a difference between the reservist who is self-employed and chooses to also pursue a military career in the Guard or Reserve, and the small business owner who employs a reservist who is called up for an extended period of time. About 15 percent of employed reservists are either small business owners, manage or work in a family owned business, or have their own professional practice. About 18 percent are employed by small businesses (firms with fewer than 100 employees). The Small Business Administration (SBA) advises small business owners, and small businesses with essential employees who are members of the Reserve or NG to have a plan in place to work through any potential disruption that may result from a broad call-up to active duty. The SBA Office of Veterans Business Development has created a new Web site where small business owners or small businesses with key employees who are members of the Reserve or NG can find relevant information. The Web site is part of a comprehensive plan to provide members of the NG and Reserve who own or are an essential employee of a small business with timely information on all SBA programs and services available to them if and when they are called to active duty.

Through a vast array of programs and services, the U.S. SBA provides tools to assemble and enact a plan designed to prevent or reduce the potential disruption caused a business by the sudden absence of a key player. The SBA and its resource partners offer managerial, technical, and financial assistance, counseling, and training to assist small businesses with any conceivable business-related issue, from how to market their products and services, to financial assistance, to what to do if called to active duty.

Additionally, the SBA has implemented the Military Reservist Economic Injury Disaster Loans (MREIDL) program. Small Businesses may qualify for MREIDL, the purpose of which is to provide funds to eligible small businesses to meet its ordinary and necessary operating expenses that it could have met, but are unable to meet, because an essential employee was "called-up" to active duty in their role as a military reservist. These loans are intended only to provide the amount of working capital needed by a small business to pay its necessary obligations as they mature until operations return to normal after the essential employee is released from active military duty. Interest rates are determined by formulas set by law and recalculated quarterly but the maximum interest rate for this program is 4 percent. Loan terms up to a maximum of 30 years are available, and SBA determines the term of each loan in accordance with the borrower's ability to repay. The actual amount of each loan is limited to the actual economic injury as calculated by SBA, not compensated by business interruption insurance or otherwise, and beyond the ability of the business and/or its owners to provide. If a business is a major source of employment, SBA has authority to waive the $1,500,000 statutory loan limit.

Little data is available on the actual or specific employer costs associated with Reserve employees. To address this lack of information, the Department is conducting a study to determine if and when significant problems with employer support of the Guard and Reserve arise due to RC call-ups or other reasons. The Department is also collecting information about the costs that mobilizations impose on employers of RC personnel and to evaluate various approaches of offsetting those costs. Also, last July the Secretaries of Defense and Labor signed a Memorandum of Understanding that provides the framework for a broad range of continuing and new partnership efforts between the two departments to ease reentry into the civilian workforce and ensure military skills are translated into civilian employment.

MILITARY INTELLIGENCE

51. Senator DOLE. Secretary Rumsfeld, in recent interviews, Dr. David Kay, the former head of the ISG, stated that the CIA became far too dependent on spy satellites and intercepted communications. This statement concerns me, especially as we move to "transform" the military aspects of the intelligence community. I was, however, encouraged to see the DOD's initiative to improve human intelligence collection mentioned as part of the budget request. Could you discuss in more detail how you plan on balancing technology-based intelligence data with the necessary elements of human intelligence and data analysis?

Secretary RUMSFELD. Our efforts to balance technology-based intelligence data with human intelligence (HUMINT) reform began in 2003 with a broad-based, 4-month study entitled "Taking Stock of Defense Intelligence" and a simultaneous initiative to reform HUMINT. Based on on-site research and discussion with every COCOM, Service, and Combat Support Agency, the "Taking Stock" study yielded a comprehensive account of intelligence issues and shortfalls, including the need for more and better HUMINT. Concurrently, as we strove to reform our HUMINT activities, we also uncovered numerous unaddressed problems in other areas: analysis, horizontal integration, dissemination, training, and professional development—to name a few. Thus, it became clear to us that broad-based changes are needed in the way we conduct defense intelligence activities. We are now engaged in a comprehensive remodeling effort for all of defense intelligence, which will address many, if not most of these problems, balance HUMINT and technical collection, provide robust support to the warfighter, and serve the greater needs of the DCI and the National Intelligence Community.

RESERVE MOBILIZATION

52. Senator DOLE. Secretary Rumsfeld, one of your proposals to manage demand placed on our military forces is rebalancing the forces to reduce the need for Reserve mobilization. Within the context of today's extended rotations, this appears to be a prudent measure; however, there may be a long-term implication to address. Having a military less reliant on Reserve mobilization places less of a requirement on the executive branch to seek congressional approval when deploying the United States Military. Could you elaborate on how you envision the end state of the military after restructuring the Active and Reserve Forces?

Secretary RUMSFELD. Use of RCs is an integral part of the Department's total force policy in support of our Nation's challenges and interests, and will continue to be so as we meet the emerging challenges of the 21st century and the myriad of requirements associated with the global war on terrorism. Our focus is to have a force with the right amount of capabilities in the right place, able to use them at the right time. Access to the RC without reliance on mobilization, especially in the early phases of rapid response operations, is both prudent and necessary. In the end, our goal is to rebalance the RC to ensure reasonable and sustainable mobilization rates.

53. Senator DOLE. Secretary Rumsfeld, more specifically, will the transformed military still depend on mobilizing the Reserve Forces to execute significant military operations?

Secretary RUMSFELD. The transformed military will still depend on mobilizing the Reserve Forces to execute significant military operations. The forces that will be most readily available in the early stages of a rapid response operation will be those in the AC. At the same time, unique capabilities resident within the RC can still be used through enhanced volunteerism without the need for early mobilization. The Reserves remain a critical part of our total force, and as such will always be essential to major combat operations.

54. Senator DOLE. Secretary Rumsfeld, partial mobilization, by law, authorizes the mobilization of Ready Reserve members, without their consent, for a period not to exceed 24 consecutive months. Yet a policy has been instituted within the Department that requires our Ready Reserve Forces, who have been previously mobilized (but still have not met the 24 month cap), to sign statements declaring that they volunteer to be mobilized for a second tour. In most cases, if the service member refuses to volunteer for a second tour, they will not be mobilized with the rest of their unit. In one specific case in my State, service members were reluctant to volunteer, not for lack of motivation or an unwillingness to deploy, but because they feared long-term consequences, both financially and socially. Service members are concerned that by volunteering (via a signed document retrievable through the Freedom of Information Act (FOIA)) for active duty they may give up protections afforded them under the Servicemembers Civil Relief Act. They fear employers will be less likely to hold their jobs because their return to active duty was voluntary. Additionally, some service members fear societal repercussions; their spouse, for example, may not share the service member's enthusiasm as they consider another year apart. In this situation the service members fear that a signed volunteer form, if made public, may come back to haunt them. Thus, the requirement for a signed volunteer statement has the unintended consequence of forcing mobilized units to

find individual replacements for soldiers electing not to volunteer. I fear this policy may also contribute to more force turbulence in the long run.

Can you explain why a policy has been instituted that seems contrary to the edicts of an executive order directing the partial mobilization of the Ready Reserve? Why does the Department feel this documentation is necessary?

Secretary RUMSFELD. There is no Department-wide policy to that effect. The Department's policy is to encourage and maximize the use of volunteers to reduce the need for involuntary mobilizations. Volunteerism is a cornerstone of the current mobilization, and it has served the Nation well.

It is important to note that whether service is voluntary or involuntary, the service member enjoys and retains the same rights, benefits, and protections under both the service members Civil Relief Act and the Uniformed Services Employment and Reemployment Rights Act.

However, to best employ its total force, the Department of Army established a set of guidelines or priorities regarding how they select units and individuals for deployment, both active duty and Reserve component members. These involve readiness, time at home station, and length and number of times mobilized. One of these guidelines with respect to Guard and Reserve units and individuals is that they will only be mobilized for a second time as a last resort. However, if there are soldiers who wish to volunteer for a second mobilization, the Army has informally asked them to acknowledge that they are volunteering for a second mobilization to insure the guidelines are being followed.

Though the intent of this practice is valid, it may, as you pointed out, be counterproductive. Accordingly, I have initiated a Department-wide review of individual call up documentation to ensure that volunteerism is not hampered, that unintended consequences are not generated, and that we properly account for our service members.

55. Senator DOLE. Secretary Rumsfeld, on a related issue, please provide me the actual numbers of Guard and Reserve members who have been mobilized since 1991, the number mobilized more than once, more than twice, and the number mobilized more than three times. Of those mobilized multiple times, how many signed volunteer statements?

Secretary RUMSFELD. The best available data reflects the number of Reserve component (RC) members mobilized (fiscal year 1991 (1 October 1990)—first quarter fiscal year 2004 (31 December 2003)):

Total Mobilized from fiscal year 1991 (1 October 1990) first quarter fiscal year 2004 (31 December 2003): 575,057 (Desert Shield/Desert Storm; Haiti; Bosnia; SouthWest Asia; Kosovo, Noble Eagle/Enduring Freedom/lraqi Freedom)

Mobilized once (for one contingency only): 517,942

Total mobilized two times: 53,060

(Mobilized two times—for current contingency only): (15,982)

(Mobilized two times—for two contingencies only): (37,078)

Mobilized three times (for three contingencies only): 3,520

Mobilized more than three times (for more than three contingencies): 535

Data includes all members who served in the Reserve components over this time period, including those who are no longer in the force.

The total number of individuals who have served in the Selected Reserve during this time period is about 2,549,855.

Most of the members mobilized were Selected Reserve members.

About 45,000 of those mobilized were Individual Ready Reserve members.

Some of the Army RC members mobilized did volunteer for mobilization under involuntary orders. Army information reveals that the policy of having volunteers sign forms, indicating that they are true volunteers, began in late 2003.

From January 1, 2004 through March 31, 2004, 1,883 Army RC members signed such forms. This is 6.9 percent of the total Army RC members mobilized (27,428) in the first quarter of 2004.

It is important to note that a member's military obligation to serve in the Ready Reserve as part of the All-Volunteer Force is with the understanding that the member is liable for active duty in times of war or national emergency. Therefore, if these members did not volunteer for duty, others, or possibly even these members themselves, would have been called-up.

QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

IRAQ AND WMD

56. Senator LEVIN. Secretary Rumsfeld, on September 26, 2002, you stated "We know they have weapons of mass destruction. We know they have active programs. There isn't any debate about it." On January 7, 2003, you said: "There is no doubt in my mind but that they currently have chemical and biological weapon." What was the basis for your statements that you knew that Iraq possessed WMD, and that there "isn't any debate about it"?

Secretary RUMSFELD. [Deleted.]

57. Senator LEVIN. Secretary Rumsfeld, on March 11, 2003, you said that Saddam Hussein "claims to have no chemical or biological weapons, yet we know he continues to hide biological and chemical weapons, moving them to different locations as often as every 12 to 24 hours, and placing them in residential neighborhoods." What was the basis for your statement that you knew that Iraq continued to hide biological and chemical weapons and move them every 12 to 24 hours?

Secretary RUMSFELD. [Deleted.]

INTELLIGENCE/AL QAEDA AND IRAQ

58. Senator LEVIN. Secretary Rumsfeld, in the summer of 2002, the staff of the Under Secretary of Defense for Policy, Doug Feith, presented a briefing to you on analysis of the intelligence concerning the links between Iraq and al Qaeda. That same briefing was later provided, reportedly at your suggestion, to the DCI, then to Intelligence Community staff, then to the National Security Council (NSC), and then to the Office of the Vice President. What was the purpose of this intelligence analysis product that was prepared outside of the Intelligence Community?

Secretary RUMSFELD. There is no "intelligence analysis product that was prepared outside the intelligence community" as you state. A briefing was prepared, as you note, to point out information obtained from a CIA report published during the Clinton administration. The information in this CIA product led to information contained in several other CIA publications, and this data was immediately brought to the attention of the DIA, the Joint Staff J–2, and the Defense Intelligence Officer (DIO) for the Middle East in April 2002—the Intelligence Community, in other words. This information was subsequently briefed, as you noted, to the DCI, to Intelligence Community staff, and to the NSC—hardly the hallmark of preparing an intelligence product "outside the Intelligence Community."

The purpose of the briefing was to help to clarify the various kinds of support and relationships that existed between terrorist groups and various state sponsors based on existing intelligence.

POSTWAR PLANNING

59. Senator LEVIN. Secretary Rumsfeld, in the current edition of the Atlantic Monthly magazine, James Fallows has an article describing problems with the postwar planning effort for Iraq. One of his recurring points is that the Defense Department, specifically your office, told military personnel they could not participate in the various planning studies and exercises that were being conducted by the CIA, the State Department, the Army War College, and the U.S. Agency for International Development (USAID). Did you or your office ever tell any military personnel not to participate in any such planning effort and, if so, why?

Secretary RUMSFELD. Mr. Fallows' article says Pentagon personnel "were forbidden by OSD to attend" numerous interagency meetings, including a January 2003 National Intelligence Council exercise. This is not the case. As just one example, Dr. Joseph J. Collins, Deputy Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict, certainly an important part of OSD, participated not only in this particular National Intelligence Council meeting, but from early fall of 2002 and through March 2003, also participated in countless interagency meetings and conferences, working hand in glove with our colleagues at the Department of State, USAID, the CIA, and the NSC, acting as the Pentagon's "point man" for postwar planning.

60. Senator LEVIN. Secretary Rumsfeld, according to James Fallows' article in this month's Atlantic Monthly, you called retired General Jay Garner and told him to fire Tom Warrick, the head of the State Department's "Future of Iraq" study team, from General Garner's reconstruction planning staff. According to Fallows, your di-

rection to fire Warrick came from higher authority, believed to be Vice President Cheney. Did you tell General Garner to fire Tom Warrick, and did Vice President Cheney have any involvement in this issue?

Secretary RUMSFELD. This is not true. I did not direct Jay Garner on matters related to junior staff. As I did not call him, questions regarding the Vice President's "direction" in this matter are moot.

61. Senator LEVIN. Secretary Rumsfeld, why did the administration not want Tom Warrick to serve on General Garner's staff, especially given that General Garner reportedly indicated that Tom Warrick was a highly valued member of his team?

Secretary RUMSFELD. State Department officials, including Mr. Warrick, participated in daily interagency planning meetings on post-Saddam Iraq from their beginning in the summer of 2002. When it came time to staff the Office of Reconstruction and Humanitarian Assistance (January 2003), State Department experts were a significant percentage of the interagency team assigned.

IRAQ AND BIOLOGICAL WEAPONS

62. Senator LEVIN. Secretary Rumsfeld, on September 19, 2002, you told this committee of the "need to focus on the immediate threat from biological weapons. . . . Iraq has these weapons. They are much simpler to deliver than nuclear weapons and even more readily transferred to terrorist networks who could allow Iraq to deliver them without Iraq's fingerprints on the attack."

Dr. David Kay testified last Wednesday that the ISG had found no evidence that Iraq had any stockpiles of biological weapons before the war. What was the basis for your comment that Iraq's biological weapons posed an "immediate threat"?

Secretary RUMSFELD. The last NIE of the previous administration had this to say in December 2000:

[Deleted.]

In October 2002, the CIA stated that, "there are compelling reasons to be concerned about BW activity at other sites and in mobile production units and laboratories. Baghdad has pursued a mobile BW research and production capability to better conceal its program." (Emphasis in original: (U) CIA, "Iraq's Weapons of Mass Destruction Programs," p. 17.)

The basis for my comment, then, was (a) intelligence from the experts at the UN, operating in Iraq from 1991 through 1998; (b) contemporary intelligence from the CIA; and (c) the intelligence presented during the previous administration.

63. Senator LEVIN. Secretary Rumsfeld, on September 19, 2002, in testimony to this committee about Saddam Hussein's WMD programs, you said "Many of his WMD capabilities are mobile and can be hidden to evade inspectors."

The administration has said that the two trailers found in Iraq were intended to produce biological warfare (BW) agents. Last week Dr. Kay told this committee "I think the consensus opinion is that when you look at those two trailers . . . their actual intended use was not for the production of biological weapons."

Were you referring to mobile biological trailers in your testimony? If so, what is your current view on whether those trailers were intended to produce biological agents? If not, what were you referring to?

Secretary RUMSFELD. The consensus opinion of the entire Intelligence Community in October 2002, was that there were compelling reasons to be concerned about BW activity in mobile production units and laboratories. "Iraq has now established large-scale, redundant, and concealed BW agent production capabilities based on mobile BW facilities." (U) CIA, "Iraq's Weapons of Mass Destruction Programs," p. 17.

64. Senator LEVIN. General Pace, in the current edition of the Atlantic Monthly magazine, James Fallows wrote a long article about the problems with the planning for the postwar situation in Iraq. He described numerous studies and planning efforts conducted outside of the Defense Department and military, including by the CIA, USAID, State Department, Army War College, and others. His article says that the military and the Defense Department ignored these studies. Is that true? If so, why were they ignored?

General PACE. DOD Deputy Assistant Secretary of Defense (DASD) Joseph J. Collins has already formally provided a rebuttal to that article. The rebuttal was printed in the April 2004 issue of the Atlantic (copy included). I concur with DASD Collins' assessment, that Mr. Fallows' article overemphasized bureaucratic conflict in the executive branch and distorted the nature of the contingency planning.

LETTERS TO THE EDITOR

Blind Into Baghdad

As one of the Department of Defense officials involved in the initial planning for relief and reconstruction in Iraq, I would like to comment on James Fallows's article "Blind Into Baghdad" (January/February *Atlantic*). At every turn in his description of planning for Iraq, the author overemphasized bureaucratic conflict in the executive branch and distorted the nature of contingency planning.

As the Pentagon's "point man" (his term) for postwar plans, I worked continuously and harmoniously with my colleagues at State, USAID, the CIA, and the NSC. I also participated in numerous interagency meetings and conferences, including the January 2003 National Intelligence Council exercise that Fallows says Pentagon personnel were "forbidden by OSD to attend."

The author states that rather than holding a meeting with the Secretary of Defense or the deputy secretary, the nongovernmental organizations were given an audience only with me. In fact I had been meeting with the NGOs frequently on many topics since the start of operations in Afghanistan. I was not a consolation prize for the NGOs but a frequent interlocutor, and I remain so to this day. Our conversations are substantive and have often resulted in policy changes, even though we forgo the photo ops and the press releases that often encumber one-time meetings with the most senior officials.

Missing from Fallows's narrative was any mention of the official interagency planning effort that went on from early fall of 2002 to March of 2003. The planning group met weekly in the Eisenhower Executive Office Building, next to the White House. Chaired by NSC and OMB officials, this group included senior representatives from State, USAID, the CIA, Treasury, and many other agencies. Tom Warrick, the head of State's Future of Iraq Project, was a back-bencher at some of the sessions. The senior interagency planners were all familiar with the interesting work of his eclectic group.

The interagency group formulated first a strategy and then a detailed plan for relief and reconstruction. Representatives from the group coordinated these plans with international organizations and with General Tommy Franks, the combat commander. Secretaries Colin Powell and Donald Rumsfeld were briefed on the final plan, as was the President. The group even briefed the press on its work on February 24.

Although none of this planning was as juicy as the bureaucratic infighting that Fallows dwells on, it is an essential part of the story. Jay Garner—appointed in late January of 2003 to lead the field effort in Iraq—did face a daunting task, but not a blank sheet of paper. Indeed, the basic reconstruction plans discussed at the two-day conference that Garner held in February at the National Defense University were in the main developed—and harmoniously so—by the very interagency group that Fallows overlooked.

Finally, Fallows's judgment that when the past eighteen months are assessed "the Administration will be found wanting for its carelessness" does not pass muster. The four conflicts that I have helped to plan in the Pentagon suggest clearly that war, as Clausewitz told us, remains the province of chance. Military campaigns and their aftermath defy prediction. Intelligence accepted for a decade can be wrong. The same experts who incorrectly predict huge refugee flows may accurately predict civil disturbances. Staffs will fixate on things that do not come to pass and assume away the importance of things that do. No plan—political or military—survives contact with reality. Planners will always make more mistakes than journalists who have the benefit of 20/20 hindsight.

We have not "squandered American prestige, fortune, and lives" in Iraq. Despite high costs and many casualties, the United States and its thirty-four coalition partners have destroyed one of the most heinous and dangerous regimes in the world, captured 80 percent of its criminal senior leadership, liberated the Iraqi people, and started the political and economic reconstruction of a nation that may well bring democracy to that part of the Middle East. Mr. Fallows should resist the temptation to call the game in the third inning.

Joseph J. Collins
Deputy Assistant Secretary of Defense
Alexandria, Va.

James Fallows's lengthy list of expert warnings on Iraq that were ignored by the Bush Administration would have benefited from some reference to the strikingly parallel "splendid little war" that provided the other bookend to the twentieth century. (And both of those conflicts boasted a British troubadour, although Tony Blair's flack Alistair Campbell never quite matched the eloquence that Rudyard Kipling showed in his paean to American benevolence, "The White Man's Burden.") In the Philippines a century ago a walkover victory in the capital was followed by prolonged hostilities in the countryside. A foray by General Frederick Funston and his special forces into hostile territory led to the capture of the enemy leader, General Emilio Aguinaldo. (The two Napoleonic figures—both about five feet four—actually got along quite well after that episode.) Mark Twain suggested a redesign of Old Glory, with "the white stripes painted

All components of the executive branch involved in national security, Defense, State (to include USAID), the CIA, and the NSC, were involved in the contingency planning for postwar Iraq. The fact that different agencies did not completely agree during the planning process is well-known and requires no further explanation, but when the time came for national-level decisions in an NSC meeting, all points of view were vetted and resolved.

Planning by interagency representatives occurred for OIF and its possible contingencies every single day. The level of coordination for the planning for Iraq was unprecedented. Our planners did not work in a vacuum; they participated in the "Fu-

ture of Iraq" project; they went to the war colleges for seminars, and they interacted through the policy and academic communities at periodic events.

Planners do not have a perfect crystal ball. Some of our assumptions were correct; some were incorrect. Regardless, we have adjusted for current circumstances, modified our path where required, and continued to move forward. Not surprisingly, there are disputes. In our open system of government, combined with a free media, these disputes sometimes play themselves out in our newspapers and magazines and television. But that does not mean we are blind about the realities of the situation in Iraq or lacking in energy and thought about crafting a way forward.

The positive results are often overlooked. One of the most heinous dictators of the 20th century is permanently vanquished, and over 25 million people liberated from his tyrannical regime of oppression and death. Over 80 percent of Saddam's senior leadership have been killed or captured, while rebuilding in Iraq proceeds at a pace unknown in other examples of postwar contingencies. Furthermore, Iraq was liberated while protecting most of its infrastructure and natural resources, providing key enablers to allow Iraq to rapidly return to the world's family of peaceful nations, and soon the family of democratic nations as well. The Iraqi Governing Council signed into being Iraq's first ever—in a society many millenniums old—interim constitution establishing the elements of a democratic government with guarantees of basic human rights—another first for the Middle East. This would never have happened under Saddam or his sons.

MISSILE DEFENSE

65. Senator LEVIN. Secretary Rumsfeld, the Department has announced plans to "field" a national missile defense in September, despite the fact that the system has not yet been operationally tested. Your budget request also asks for hundreds of millions of dollars to continue production of missiles for this system, which have yet to be realistically tested.

DOD officials testified last year that the Department had no intent to waive operational testing for missile defense. For example, then-Under Secretary of Defense for Acquisition Pete Aldridge testified that: "the reason we have the [national missile defense] test bed. . . is to enable operational testing." However, in a recent article the Pentagon's chief tester, Tom Christie, said: "I don't know when we're going to run operational tests, to be brutally frank. That's off in the future."

When do you plan to have the Pentagon's chief tester conduct formal operational testing for the National missile defense system, in accordance with the law, so that we will all know whether the system will actually work against a real threat?

Secretary RUMSFELD. At Initial Defensive Operations (IDO) the BMDS will provide a modest operational capability to defend the Nation against a limited ballistic missile attack. The test bed will enable testing to improve system maturity and, through the next year, incorporation of operational testing objectives for developmental testing. These tests will incorporate increasing levels of operational realism using alert-configured hardware and software, operational tactics, techniques and procedures, threat-representative targets, and trained warfighters. They will facilitate assessment by the tri-Service Operational Test Agency team in support of the DOT&E's annual reporting requirements. Title 10 operational testing of the integrated system will be planned and executed as appropriate.

66. Senator LEVIN. General Pace, General Myers' written testimony says that we will achieve "full operational capability" for missile defense this year. According to Defense Department documents, full operational capability means, "the full attainment of the capability to employ effectively a weapon, item of equipment, or system."

Yet, according to a report recently sent to Congress by the Pentagon's chief tester, the national missile defense the Department intends to deploy in September of this year has not yet had end-to-end operational testing. This report also says that "at this point in time, it is not clear what mission capability will be demonstrated prior to [deployment]." Furthermore, Secretary Rumsfeld has said that the missile defense to be deployed this year will only be "rudimentary," and that any "capability" will be with a small "c."

How can you assert that missile defense will be "fully operational", when the Pentagon's chief tester says we have no idea how well the system will work, because we haven't realistically tested it yet?

General PACE. The missile defense capability to be delivered this year is an initial capability intended to provide a rudimentary means to defend against a limited,

long-range ballistic missile attack against the United States. The chairman and I are confident that we are on track to field and operate this capability.

Admiral Ellis at U.S. Strategic Command (USSTRATCOM) is conducting a Military Utility Assessment (MUA) providing the COCOMs assessment of the missile defense operational capabilities and limitations. His initial increment of the assessment is based on data available in the September–December 2003 timeframe. The additional test events, exercises, and war games to be executed in 2004 will allow for a more in-depth assessment, and confidence in the assessed capabilities will grow as more system performance data is collected.

The MUA and the assessment by the DOT&E are closely related. They share a common database of observations derived from testing and simulation at the system, element, component and subcomponent level. The warfighter and Operational Test Agencies are working collaboratively to develop test objectives, quantify system performance, and assess mission execution.

Unlike a traditional operational test and evaluation, the MUA is not assessing performance against a fixed performance level; instead it is determining the extent to which a developmental system contributes to mission accomplishment. The missile defense system to be fielded this year will make us safer than we are now and serve as the foundation for increasingly effective capabilities in the future.

JSF PROGRAM

67. Senator LEVIN. Secretary Rumsfeld, the DOD press release on the budget states that the development cost for the JSF program has increased more than $7 billion from $33.0 billion to $40.5 billion in the last year, and that "schedule delays on this very complex aircraft are prudent and necessary." Is this 22 percent cost growth in the JSF program a reflection of unrealistic cost estimates or poor program management?

Secretary RUMSFELD. The Acting USD(AT&L) directed a restructuring of the program to improve the performance of the aircraft through additional design work. The focus is on reducing the weight of each variant, since weight control is always a challenge for aircraft, and is particularly critical for the short-takeoff-and-vertical-landing (STOVL) variant. This additional work and schedule extension contribute to the increased cost of the System Development and Demonstration (SDD) phase of the JSF program. Developing three JSF variants for the Services is an aggressive undertaking. I view these budget changes as cost and schedule realism, inherent in a program unmatched in scope, complexity, and importance, rather than as the product of unrealistic estimates or poor management.

We are replanning JSF SDD to make sure that we succeed. Specifically, our SDD plan recognizes that: (1) STOVL performance is absolutely vital; (2) we must focus on STOVL performance upfront to ensure the viability of that variant for our warfighters; (3) we must aggressively pursue trade studies to improve performance by reducing weight; (4) we must aggressively pursue propulsion enhancements to improve performance; and (5) fiscal year 2007 is the right time to begin low-rate initial production. We also are reviewing the program, with the assistance of an independent team, to establish that we are doing all we can to succeed.

I want to point out that the development of propulsion, subsystems, avionics, and autonomic logistics has gone well. The extensions in the schedule and increases in cost will allow us to improve the design of the airframe, but do not reflect difficulties in all aspects of development.

68. Senator LEVIN. Secretary Rumsfeld, in your view, is a 1-year, 22 percent cost growth in a major program like this acceptable?

Secretary RUMSFELD. Cost growth in any program is a reason for concern and should be examined to identify its causes. The 22-percent cost increase spans fiscal year 2005 through fiscal year 2013. In the President's budget for 2005, the Department extended the design phase and reprogrammed procurement funds to account for the additional work. The increase in cost also reflects the development of anti-tamper capability, technical risks, and adjustments to the cost estimate to reflect those risks with a greater degree of confidence. The increase in cost, over the full course of development, is reasonable for a program of this magnitude and complexity.

NONPROLIFERATION

69. Senator LEVIN. Secretary Rumsfeld, the President's budget request would reduce funding for the Nunn-Lugar Cooperative Threat Reduction (CTR) program by

$40 million—from $449 million to $409 million. At a time when we are all deeply concerned about the danger that WMD—and especially nuclear weapons—could end up in the wrong hands, why would we want to cut back on the one program that has proven most successful in preventing the proliferation of such weapons?

Secretary RUMSFELD. The decrease you are questioning is largely due to the Chemical Weapons Destruction Facility having completed the capital-intense phase of construction. The question implies that the annual budget request is the single measure of progress and the single indicator of commitment. It is an important metric. But there are three others: actual threat reduction, value for US investments, and increasing recipients' stake in the success of specific projects. Measured against the aggregate of all four metrics, the CTR program continues to be a vital component of the U.S. Government's national security strategy. The President and his administration remain firmly committed to his 2002 pledge of $10 billion over 10 years for nonproliferation and threat reduction programs in the former Soviet Union, including—but not limited to—CTR. Yearly programmatic requirements mean that some annual requests, as for fiscal year 2005, will slightly below the $1 billion average; others will be slightly above.

It is important to acknowledge that, of the 62 CTR program areas Congress has funded since the program's inception, 51 of those areas are now complete. This reflects the large amount of former Soviet nuclear weapons inventory and infrastructure that CTR has helped eliminate or secure. Many of CTR's original array of projects is reaching completion. These include projects that were capital-intense in their early construction phases. CTR's fiscal year 2005 program plan includes only two "infrastructure-heavy" projects: the Shchuch'ye chemical weapons destruction project already under way, and infrastructure supporting Nuclear Weapons Site Security enhancement projects. Newer areas of CTR focus—Biological Weapons Proliferation Prevention and Weapons of Mass Destruction-Proliferation Prevention Initiative—do not require capital-intense construction projects to achieve their threat reduction goals.

DEVELOPMENT OF NUCLEAR WEAPONS

70. Senator LEVIN. Secretary Rumsfeld, the President's budget request would increase the funding for new or modified nuclear weapons and include funds intended to cut in half the time needed to resume nuclear weapons testing. What is the military requirement for new nuclear weapons?

Secretary RUMSFELD. Military requirements stem from a lack of capability to perform a mission. If existing nuclear weapons cannot perform a mission or meet only a portion of our deterrence objectives, we are obligated to pursue ways to correct these deficiencies in order to maintain the U.S. deterrent. Our current situation is that our forces are equipped with nuclear systems whose average age is 20 years and that were designed for a Cold War deterrence posture. We have requested a few programs to examine the potential to adapt existing weapons to give them improved capabilities. We also need to explore new technologies and processes that will keep our scientists and engineers at the forefront of nuclear weapon science.

The main thrust of test readiness is aimed at reducing the amount of time we required in order to address a potentially serious problem in the stockpile using an underground nuclear test. We believe that 36 months is too long; the U.S. needs a more responsive test readiness posture, which is reflected in the President's fiscal year 2005 request.

71. Senator LEVIN. Secretary Rumsfeld, what are the target types for these new nuclear weapons?

Secretary RUMSFELD. First, there are no current programs to produce any new nuclear weapons. We made that point clear in the Nuclear Posture Review, which was submitted to Congress in December 2001. However, the Nuclear Posture Review did identify limitations in capabilities of the existing nuclear arsenal. We are examining both nuclear and non-nuclear options that could correct the existing limitations. For example, hard and deeply-buried targets, which are often associated with adversary weapons of mass destruction facilities, are one area where it would be very useful to improve our current capabilities. We are studying an option to repackage an existing weapon to do so.

72. Senator LEVIN. Secretary Rumsfeld, are these new nuclear weapons intended to be used in a preemptive fashion?

Secretary RUMSFELD. The United States is not developing any new nuclear weapons for any purpose. The President of the United States is the sole authority for

employing nuclear weapons to protect U.S. territory, troops, allies, or friends against aggression. Today, the United States and our friends and allies are threatened by rogue states that possess weapons of mass destruction. As a matter of policy, no President forecloses options that can be used to deter and defeat aggression. It is my job to ensure the President has the flexibility and the options to address the variety of risks that our Nation may face today and in the foreseeable future.

73. Senator LEVIN. Secretary Rumsfeld, will we have to resume nuclear weapons testing to support new and modified nuclear weapons?

Secretary RUMSFELD. The administration is currently observing as matter of policy a test moratorium, although we continue to oppose ratification of the Comprehensive Test Ban Treaty (CTBT). Annually, the Secretary of Energy and I review an assessment of the safety and reliability of the stockpile. At this time, the Secretary of Energy and I have not recommended that the U.S. resume nuclear testing to resolve technical issues affecting the safety and reliability of the nuclear stockpile.

DETAINEES AT GUANTANAMO BAY

74. Senator LEVIN. Secretary Rumsfeld, the President has determined that six detainees being held in Guantanamo are eligible to be tried by military commissions, though the actual decision whether to charge someone will be made by the Appointing Authority, Major General John D. Altenburg, Jr. My understanding is that no date has been set yet to start commission proceedings. In the meantime, five detainees have been assigned defense counsel, and these military attorneys have filed a friend-of-the-court brief to the U.S. Supreme Court. They argue that prisoners convicted by military commissions should have the right to appeal to civilian courts. This is an issue that I raised when we held a hearing in December 2001 on military commissions. In addition, my staff has been told that even if a detainee is tried and acquitted of all charges, the DOD may continue to detain that individual indefinitely. When will you begin military commission proceedings, and how long do you expect it to take for the government to either release or charge and try all 650 or so detainees?

Secretary RUMSFELD. In February, Guantanamo detainees Ali Hamza Ahmed Sulayman al Bahlul of Yemen and Ibrahim Ahmed Mahmoud al Qosi of Sudan were charged with conspiracy to commit war crimes. Prior to being charged, these detainees were assigned military defense counsel. Their trial dates and commission panel members will be selected at a later time. In addition to the assignment of counsel to and the charging of al Bahlul and al Qosi, military defense counsel have been assigned to Salim Ahmed Hamdan of Yemen and David Hicks of Australia.

As you point out, military defense counsel have filed a friend-of-the-court brief to the U.S. Supreme Court. I have no doubt that military defense counsel will mount a vigorous defense for any individual they are assigned to represent and that the efforts of the prosecution will be no less vigorous. Those involved in the military commission proceedings must take the time to do things properly so that every accused receives a full and fair trial. It would be inappropriate and impossible for me to predict a date certain for a conclusion to all of the cases in which charges will be brought.

Moreover, it is important to bear in mind that the war with al Qaeda is real and ongoing. Since the massive attacks of September 11, al Qaeda has continued to launch attacks as well as to attempt attacks. In December 2001, Richard Reid, who has been linked to al Qaeda attempted to bomb a transatlantic commercial flight. In April 2002, al Qaeda firebombed a synagogue in Djera, Tunisia. Last spring, al Qaeda suicide bombers attacked three residential compounds for foreign workers in Riyadh, Saudi Arabia, killing 34 people including 10 U.S. citizens. In August 2003, Jemaah Islamiyah, an al Qaeda affiliated group, set off a car bomb outside the J.W. Marriott Hotel in Jakarta, Indonesia, killing 12 and wounding 150. This past fall, the Taliban stepped up its insurgency in Afghanistan. U.S. troops and coalition forces remain on the ground in Afghanistan. Between August 2003 and January 2004, 11 U.S. soldiers have been killed in Afghanistan. Just recently, several Army Rangers were killed in an ambush in Afghanistan. It is clear that the war is far from over.

Those detained at Guantanamo have been captured in a real war. They include not only rank and file soldiers who took up arms against the coalition in Afghanistan but also senior al Qaeda and Taliban operatives, some who have been linked to potential attacks against the United States, and others who continue to express their commitment to kill Americans if released.

We detain them to prevent them from returning to the conflict—to prevent them from hijacking a plane and using it as a weapon of mass destruction, returning to the battlefields of Afghanistan, or rejoining the armed conflict against the United States elsewhere. We detain these individuals for the security of our citizens and our soldiers. When we believe that these individuals can be either transferred to the control of another government or released without impairing the security of our service men and women as well as our citizens we have done so. To date, 146 detainees have been released or transferred from Guantanamo. We have done so despite the fact that the law of war does not require it. Moreover, we have done so through a multi-layered and interagency process that likewise is not required by the law of war.

We are not limited to either charging or releasing these detainees. The law of war does not require the release of enemy combatants prior to the cessation of hostilities. It does not require it because to do so would be to undermine the very purpose of the law of war itself: minimizing the loss of life and damage inflicted by war. Releasing individuals who would return to the fight could only serve to inflict more damage on U.S. citizens and their sons and daughters who bravely serve this country. This reasoning would also lead to the unacceptable conclusion that the only means to remove the enemy from the battlefield is to kill him. Nor does the law of war require that we charge the detainees held at Guantanamo. Enemy combatants are held at Guantanamo not as punishment but to prevent them from continuing the fight.

During the course of any war, the end of the war remains uncertain. It could have very easily been said during the middle of World War II or Vietnam that prisoners of war captured during those wars were going to be held indefinitely. No one could predict with certainty the end to either of those conflicts. Nor can we predict today with certainty the conclusion of al Qaeda's war against the United States.

In a very real sense, the release of detainees not suspected of violations of the law of war lies in the hands of al Qaeda and its affiliates and supporters. Only al Qaeda and its affiliates and supporters can stop waging war against the United States. Until they stop, we will not rest and we will not increase their strength by permitting their fighters to return to the battlefield anywhere in the world. This war will not last forever. It is a war that I am confident we will win.

NORTH KOREA'S NUCLEAR CAPABILITIES

75. Senator LEVIN. Secretary Rumsfeld, North Korea has taken some alarming actions and made some alarming announcements over the last 2 years. Last October, Pyongyang declared that they had reprocessed all 8,000 plutonium fuel rods that had been canned and frozen for 7 years under the Agreed Framework—from 1994 to 2003. This came after North Korea had expelled the International Atomic Energy Agency (IAEA) inspectors, withdrawn from the Non-Proliferation Treaty (NPT), and stated that it had restarted its five-megawatt nuclear reactor. According to a new report, North Korea may already have as many as seven nuclear weapons. How solid is our intelligence regarding North Korea's nuclear capabilities and intentions, and specifically regarding the reprocessing of the spent plutonium?

Secretary RUMSFELD. As you are aware, North Korea presents an extremely difficult intelligence target. Its extreme isolation and Stalinist society present daunting obstacles to fully understanding and ascertaining events within its borders. Nevertheless, we have concluded, as have North Korea's neighbors (China, Japan, South Korea and Russia), that North Korea does have an ongoing and active nuclear weapons program. We have all come to this conclusion independently, and are actively engaged in the Six Party Talks with North Korea aimed at ending this program and its threat to regional peace and stability.

As reported in the press, a recent, non-official U.S. delegation to North Korea, containing former nuclear weapons experts, was allowed to tour North Korea's primary nuclear facility at Yongbyon. They were shown an empty area where the 8,000 spent fuel rods containing plutonium had been stored and material they adjudged to be reprocessed plutonium from this fuel. It is possible that North Korea has fabricated several nuclear weapons from this plutonium, but we cannot confirm this.

Dr. David Kay states unequivocally in his "Interim Progress Report on the activities of the Iraq Survey Group (ISG)" that there were prohibited weapons programs in Iraq and that Saddam was in violation of the U.N. Security Council resolutions regarding weapons of mass destruction. In addition, by expelling UNSCOM he clearly showed his contempt for the U.N. and international norms. It is also a fact that Saddam's regime sheltered and met with terrorists over the course of the 1990s and into the new century.

As the President has said, he "will not wait on events while dangers gather." The Saddam regime was dangerous, in clear violation of U.N. Security Council Resolutions regarding WMD, and was a state sponsor of terrorism. In light of these facts, there does not seem to be a need to reexamine the decisions that led to the liberation of the people of Iraq.

76. Senator LEVIN. Secretary Rumsfeld, how willing is the rest of the world likely to rely upon this intelligence, in light of concerns that have been raised about the intelligence that we relied upon in Iraq?

Secretary RUMSFELD. China, Japan, South Korea, and Russia, have all independently concluded that North Korea has an ongoing and active nuclear weapons program. In light of the number of disparate intelligence agencies that have all independently come to this conclusion, including three of the most powerful countries on Earth—Russian, China, and Japan—I think it very likely the rest of the world will consider this intelligence to be reliable.

PREEMPTION DOCTRINE

77. Senator LEVIN. Secretary Rumsfeld, press reports have quoted David Kay as saying "If you cannot rely on good, accurate intelligence that is credible to the American people and others abroad, you certainly can't have a policy of preemption." In light of the intelligence failures which clearly undercut the prime rationale for the war in Iraq, do you continue to espouse a doctrine of preemption for the future?

Secretary RUMSFELD. America's future depends on our willingness to lead in the world. One of the important lessons from September 11 is that we must take threats seriously before they fully materialize. The United States has long maintained the option of preemptive actions to counter a sufficient threat to our national security. The greater the threat, the greater is the risk of inaction—and the more compelling the case for taking anticipatory action to defend ourselves, even if uncertainty remains as to the time and place of the enemy's attack. To forestall or prevent such hostile acts by our adversaries, the United States will, if necessary, act preemptively.

QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

OFFICE OF SPECIAL PLANS

78. Senator KENNEDY. Secretary Rumsfeld, it has been suggested that the Pentagon established the Office of Special Plans (OSP) to sift for yourself the information on Iraq. Many believe that by establishing OSP you were signaling your lack of confidence in the Intelligence Community and its assessment of the threat posed by Iraq. What was your goal in establishing OSP? Was it to develop intelligence to contradict that produced by the CIA, as some have suggested?

Secretary RUMSFELD. The Directorate of Special Plans (often referred to as the OSP) was an expansion of that part of the Bureau of Near East and South Asian Affairs (NESA) that dealt with Iraq and Iran. It was renamed "Special Plans" because we did not want to undercut the President's diplomatic efforts in the United Nations and elsewhere with respect to Iraq by attracting attention to the fact that the part of NESA that dealt with Iraq was being expanded.

This directorate was an expansion of the Northern Gulf Directorate within NESA in September 2002. It was established due to the increased workload related to the war on terrorism and to what was then a possible Iraq contingency. It was a policy planning group and was a consumer, rather than a producer, of intelligence. It helped develop policy with respect to subjects such as deployment planning, coalition building, media in a putative postwar Iraq, potential war crimes investigations, possible oil issues in a postwar Iraq, and implementation of the 1998 Iraq Liberation Act (Public Law 105–338, passed unanimously by the Senate).

79. Senator KENNEDY. Secretary Rumsfeld, did it, indeed, reflect a lack of confidence in the analysis you were receiving from the Intelligence Community? If so, what was your principal complaint with the community's analysis?

Secretary RUMSFELD. As stated earlier, the organization that was then known as the Directorate of Special Plans (often referred to as the OSP) did not provide "competitive analysis" of intelligence.

80. Senator KENNEDY. Secretary Rumsfeld, did OSP ever go beyond analysis and collect any intelligence of its own, at any time?

Secretary RUMSFELD. No. It was a policy planning group and was a consumer, rather than a producer, of intelligence.

81. Senator KENNEDY. Secretary Rumsfeld, did OSP ever task the Iraqi National Congress (INC) to collect intelligence? If so, how were tasking priorities established?
Secretary RUMSFELD. No.

82. Senator KENNEDY. Secretary Rumsfeld, what was your assessment of the intelligence the INC collected?
Secretary RUMSFELD. Any assessment of the intelligence the INC collected was provided to me by the professionals of the Intelligence Community, having been processed in accordance with long-established vetting procedures used throughout the Intelligence Community.

83. Senator KENNEDY. Secretary Rumsfeld, was this intelligence subsequently vetted for accuracy?
Secretary RUMSFELD. The professionals of the DIA treated the data obtained in exactly the same way it treated any other intelligence source information, processing it in accordance with long-established vetting procedures used throughout the Intelligence Community.

84. Senator KENNEDY. Secretary Rumsfeld, how accurate was it determined to be at the time? How accurate is it now determined to be?
Secretary RUMSFELD. The professionals of the DIA treated the data obtained in exactly the same way it treated any other intelligence source information, processing it in accordance with long-established vetting procedures used throughout the Intelligence Community.
There are many examples of excellent information provided by the INC Information Collection Program. Here are a few categories:
[Deleted.]

85. Senator KENNEDY. Secretary Rumsfeld, was this information sent directly to the White House, circumventing regular Intelligence Community channels?
Secretary RUMSFELD. No.

86. Senator KENNEDY. Secretary Rumsfeld, was it used in White House speeches and statements?
Secretary RUMSFELD. You'll have to ask the White House how speeches and statements were researched.

QUESTIONABLE SOURCES

87. Senator KENNEDY. Secretary Rumsfeld, according to critics like Ken Pollack, a former analyst and supporter of the war in Iraq, OSP chose to believe reports that trained intelligence officers considered unreliable or downright false. Pollack further states that OSP gave great credence to reports from INC and its administration-backed leader, Ahmed Chalabi, because the INC was telling the administration what it wanted to hear. Do you agree with that assessment? As a long-time and practiced intelligence consumer, isn't one of the cardinal rules of the business to abstain from wishful thinking?
Secretary RUMSFELD. I do not agree with that assessment. The DIA considered the INC's Information Collection Program a reliable source of intelligence. That intelligence went through the normal Intelligence Community review. Another cardinal rule of intelligence is to never rely on a single source of analysis.

88. Senator KENNEDY. Secretary Rumsfeld, did OSP pass raw intelligence to the White House, and, specifically to the Vice President's office, or did OSP pass only finished all-source evaluated intelligence that contained an assessment of the reliability of the sources upon which it was based?
Secretary RUMSFELD. No, to neither. OSP was a consumer, not a provider of intelligence.

89. Senator KENNEDY. Secretary Rumsfeld, did DCI George Tenet, who oversees the Intelligence Community, ever express concern to you, or that you became aware of, regarding OSP's role? If so, what were his concerns?
Secretary RUMSFELD. No.

90. Senator KENNEDY. Secretary Rumsfeld, why did you close OSP last summer?
Secretary RUMSFELD. The office is not closed. It has simply returned to its original name.

The Directorate of Special Plans (often referred to as the OSP) was an expansion of that part of the NESA that dealt with Iraq and Iran. It was called "Special Plans" because we did not want to undercut the President's diplomatic efforts in the United Nations and elsewhere with respect to Iraq by attracting attention to the fact that the part of NESA that dealt with Iraq was being expanded.

This Directorate was an expansion of the Northern Gulf Directorate within NESA in September 2002. It was established due to the increased workload related to the war on terrorism and to what was then a possible Iraq contingency. Once the administration decided to proceed with the liberation of Iraq, it was decided to change the designation of this Directorate back to its previous name of the NESA Northern Gulf Affairs Directorate.

91. Senator KENNEDY. Secretary Rumsfeld, you're a great fan of lessons learned exercises. Given the OSP's controversial role, have you asked that the OSP concept be the subject of a lessons learned exercise? If so, what have you learned? If not, why not?
Secretary RUMSFELD. I do not consider controversy (or the lack thereof) as an indicator of the effectiveness of an office. Such controversies seldom have anything to do with the facts involved in a matter and are not a sufficient reason for in-depth reexamination of every decision.

IRAQI NATIONAL CONGRESS

92. Senator KENNEDY. Secretary Rumsfeld, did the Pentagon oversee the INC's own intelligence collection program?
Secretary RUMSFELD. [Deleted.]

93. Senator KENNEDY. Secretary Rumsfeld, did the U.S. fund INC's collection effort?
Secretary RUMSFELD. [Deleted.]

94. Senator KENNEDY. Secretary Rumsfeld, what did the Pentagon's oversight consist of, and what was the purpose of the INC's collection program?
Secretary RUMSFELD. [Deleted.]

95. Senator KENNEDY. Secretary Rumsfeld, how many Iraqi defectors did the INC produce?
Secretary RUMSFELD. [Deleted.]

96. Senator KENNEDY. Secretary Rumsfeld, who at the Pentagon was in charge of the defectors program and responsible for vetting each defector for reliability?
Secretary RUMSFELD. [Deleted.]

97. Senator KENNEDY. Secretary Rumsfeld, how many INC-produced defectors did you judge to be reliable?
Secretary RUMSFELD. The DIA Defense HUMINT Service made those judgments—as they do with all foreign intelligence programs.

98. Senator KENNEDY. Secretary Rumsfeld, how was reliability determined? For example, did you polygraph them? If so, how many of those polygraphed showed deception?
Secretary RUMSFELD. The reliability of any intelligence data presented to me or to other policy makers is determined by the professionals of Intelligence Community. The DIA treated the data obtained from the INC Information Collection Program in exactly the same way it treated any other intelligence source information, processing it in accordance with long-established vetting procedures used throughout the Intelligence Community.

99. Senator KENNEDY. Secretary Rumsfeld, did the Intelligence Community share your views on INC defector reliability? If not, why not?
Secretary RUMSFELD. Assessing defector reliability is something which the Intelligence Community has decades of extensive experience. The reliability of any intelligence data, of the reliability of what a putative defector's information might be, is presented to me after having been determined by the professionals of the Intel-

ligence Community. The DIA treated the data obtained from the INC Information Collection Program in exactly the same way it treated any other intelligence source information, processing it in accordance with long-established vetting procedures used throughout the Intelligence Community.
[Deleted.]

100. Senator KENNEDY. Secretary Rumsfeld, given the apparent inaccuracy of much of the information the INC-produced defectors provided, have you initiated a lessons learned exercise to determine how this inaccurate intelligence was not detected and how, in some cases, it found its way to policymakers?
Secretary RUMSFELD. Your premise that "much of the information the INC-produced defectors provided" is inaccurate, is itself not correct. [Deleted.]
There are many other examples of good information that the INC Information Collection Program has provided. Here are a few categories:
[Deleted.]

QUESTIONS SUBMITTED BY SENATOR DANIEL K. AKAKA

SERVICE READINESS

101. Senator AKAKA. General Pace, the Army is planning to go to a unit manning system, which will result in a cycle of very ready units for a period of time and will then "stand down" for a period of time before reconstituting themselves with new personnel. The Navy has begun to implement the Fleet Response Plan (FRP) that attempts to raise the average level of readiness over time, but will minimize the readiness "peaks and valleys" of the previous inter deployment training cycle. It seems that the Navy is moving to a system that will produce Army-like readiness cycles at the same time that the Army is moving to a readiness cycle that is more like the Navy's. Also, these proposals seem to be "bottom up" and have come from Service initiatives designed for various purposes. Has the Joint Staff looked at the impact of these changes and whether it is sound to have the Services heading in opposite directions on this issue?
General PACE. Although seemingly divergent, both Services are actually converging on concepts to transform from Cold War paradigms to more continental U.S. (CONUS)-based, highly mobile and rapidly deloyable constructs. This would support anticipated continued high tempo of operations (OPTEMPO), while increasing overall force readiness and reducing unit stress. Already a core capability of the Marine Corps, the Air Force's Air Expeditionary Force concept supports this as well.
Navy forces currently deploy under the Global Naval Force Presence (GNFPP), which is a Secretary of Defense-approved rotational schedule. The Navy's FRP would provided sustained rotational forward deployed forces "on demand," while affording a significant surge response for contingencies (six Carrier Strike Groups within 30 days, plus two additional as follow-on forces). This would enable the Navy to maintain more forces at a higher level of readiness.
The Army has traditionally worked from a "steady-state" concept where it deployed forces when needed for emerging crises/missions, while maintaining a large forward-based presence. The Army concept, still very early in development, would use scheduled unit rotations into and out of forward-based locations, so it would be similar to GNFPP in that regard. The intent of the Army's concept would be to provide a predictable deployment schedule, preserve a ready surge-capability for contingencies, and reduce the overall footprint of permanently forward-based forces.

102. Senator AKAKA. General Pace, what will the impact be on the Services' ability to provide ready units to combatant commanders?
General PACE. Both initiatives are being developed in close coordination with the Joint Staff and Joint Forces Command (JFCOM) with readiness, sustainment, Global Force Management, and, most importantly, warfighting effectiveness issues in the forefront.

103. Senator AKAKA. General Pace, your statement says, "When units return home from combat operations, they must undergo a reconstitution process, which generally means a drop in their readiness. However, this does not necessarily indicate that a unit is either unavailable for, or incapable of, executing part or all of their assigned wartime missions." My understanding of the term "readiness" is that it is generally used as shorthand for "readiness to execute wartime missions." Are you using the term in some other way? If not, how does a drop in readiness not equate to a reduced ability to execute assigned missions, either in whole or in part?

General PACE. A reduction in readiness does mean a unit has a reduced ability to execute its wartime mission, as was stated. But that does not mean the unit is necessarily unavailable for tasking, or that a unit is not capable of executing all or portions of its wartime mission. A unit could be tasked to execute only the portions of its wartime mission for which it is ready. Or it could be augmented with equipment and/or manning, termed "cross-leveling," to quickly increase its readiness status for deployment/employment. Or a unit could simply be tasked to execute its wartime mission at a reduced readiness level, but with a commensurate higher risk to mission accomplishment.

104. Senator AKAKA. General Pace, if drops in readiness do not necessarily mean that units can't perform their missions, what system are you using to evaluate what their true capabilities are?

General PACE. Chairman, Joint Chiefs of Staff Instruction (CJCSI) 3401.02, Global Status of Resources and Training System (GSORTS), governs the readiness system used by DOD. GSORTS provides a monthly assessment of selected unit status indicators (personnel, equipment/supplies, equipment condition, training) and includes a commander's subjective assessment on the unit's ability to execute the mission(s) for which it was organized or designed.

Unit readiness status is reported as C–1 through C–5:

C–1—Unit possesses required resources and is trained to undertake its wartime mission(s).

C–2—Unit can undertake portions of its wartime mission(s), but may have reduced flexibility and could require some compensation for deficiencies.

C–3—Unit can undertake many, but not all, portions of its wartime mission(s), with significantly reduced flexibility and required compensation.

C–4—Unit requires additional resources/training to undertake its wartime mission(s), but may be directed to undertake portions of its wartime mission(s).

C–5—Unit is undergoing Service-directed resource action and is prepared to undertake wartime mission(s).

IMPROVING OVERSEAS TRAINING RANGES

105. Senator AKAKA. Secretary Rumsfeld, I know that the budget request assumes that most of the changes in overseas presence will occur in concert with BRAC, and, therefore, that most of the associated funding will not be required until fiscal year 2006. However, it appears that a decision has been made to make greater use of overseas training ranges, and I understand that many of these ranges are fairly primitive and undeveloped. How much do you anticipate will be required to expand and improve overseas ranges to support the new presence policy?

Secretary RUMSFELD. There have been no decisions yet on any aspect of the proposed global posture changes, so it is premature to speculate where we may use overseas training ranges in the future. We will indeed seek the use of overseas ranges where such use provides us unique training opportunities, supports our security cooperation priorities, and helps with the transformation process of our allies and partners. However, we are still analyzing the advantages and cost implications of combatant commander proposals and therefore cannot speculate on exact requirements for such ranges.

106. Senator AKAKA. Secretary Rumsfeld, are any funds for this purpose included in the fiscal year 2005 budget request, and, if not, when do you expect they will be required?

Secretary RUMSFELD. Any fiscal year 2005 budget proposals related to overseas training ranges are connected to ongoing service initiatives, and separate from the broader Global Posture Review. An example is the Army's Efficient Basing Graffenwoer initiative. Because we are still conducting our posture review, we cannot speculate on when any new funding requests related to future use of overseas training ranges will be forthcoming.

QUESTIONS SUBMITTED BY SENATOR MARK PRYOR

TAX-FREE TREATMENT OF MILITARY PERSONNEL IN COMBAT ZONES

107. Senator PRYOR. Secretary Rumsfeld, I would like to again commend you for addressing family housing in the DOD's fiscal year 2005 budget. This is an issue which I believe is close to the hearts of our military personnel. I want to work with

you to ensure that our military is fairly compensated. I understand that under the tax code, military pay is given tax-free treatment while the soldier, sailor, airman, or marine is serving our Nation in a combat zone. Congress provided this tax-free treatment because of the sacrifice these men and women are making to their country. However, the exclusion of combat pay has penalized some military personnel with families by limiting the benefits of the earned income and child tax credits. In some cases, our military personnel with families lose as much as $4,000 in these tax credits because they are serving our Nation. Do you see this as a problem, and is this something that should be addressed this year?

Secretary RUMSFELD. Yes, the DOD agrees that this is a problem. In the summer of 2003, my staff began working with representatives from the Treasury Department and the Internal Revenue Service on a solution that will prevent service in a combat zone from interfering with a service member's eligibility for tax credits. The solution requires legislation. The DOD would like to see this issue addressed this year and is working with the Treasury Department to alleviate this unintended tax consequence to the Service members serving in combat zones.

HALLIBURTON

108. Senator PRYOR. Secretary Rumsfeld, I have heard from many constituents concerned about defense contracts to Halliburton. Three recent news stories indicate that Halliburton over-billed $28 million for food services at five different food service facilities, that Halliburton overbilled for gasoline, and that Halliburton overbilled $6.3 million for unspecific services. Which, if any, of these contracts were competitively bid?

Secretary RUMSFELD. Two prime contracts are represented here. The first contract is known as the Logistics Civil Augmentation Program (LOGCAP III) contract. It covers the referenced "food services" and "unspecific services." This contract was awarded on the basis of competitive procedures. The second contract is a sole source contract for fuel. It covers the referenced "gasoline." This contract has since been replaced with contracts awarded using competitive procedures. The $6.3 million represents a voluntary disclosure and refund from a subsidiary of Halliburton: Kellogg, Brown, and Root on the original fuel contract. This apparent overbilling and the others are presently being investigated.

109. Senator PRYOR. Secretary Rumsfeld, how many noncompetitive DOD contracts have been awarded to Halliburton in the last 3 years?

Secretary RUMSFELD. In the last 3 years, DOD awarded Halliburton 80 contract actions on a noncompetitive basis and 1,732 contract actions on the basis of competitive procedures.

110. Senator PRYOR. Secretary Rumsfeld, what penalty does Halliburton face for overbilling the DOD?

Secretary RUMSFELD. When an overbilling is identified, the government auditor immediately notifies the contractor, the government's disbursing officer, and the government's contracting officer. The overbilled amount is deducted from subsequent contract payments. Other possible remedies (criminal, civil, contractual, or other) for overbilling will depend upon the reasons for the overbilling, as determined by various investigations.

BUSINESS MANAGEMENT MODERNIZATION PROGRAM

111. Senator PRYOR. Secretary Rumsfeld, you have proposed in your budget an effort to implement the Business Management Modernization Program (BMMP). I understand that the program would overhaul the DOD management processes, consolidate and integrate information systems, and facilitate auditable financial statements. Will BMMP help to prevent the billing problems we have seen with Halliburton in the future?

Secretary RUMSFELD. The BMMP is transforming business processes to implement common processes, data, and controls. BMMP will improve the business of the Department as a whole.

112. Senator PRYOR. Secretary Rumsfeld, do we have to wait for the passage of the fiscal year 2005 bills to implement the BMMP?

Secretary RUMSFELD. The answer to your question is no. We don't have to wait for the fiscal year 2005 bill to implement BMMP.

IRAQI WMD/RECOMMENDATION TO GO TO WAR

113. Senator PRYOR. Secretary Rumsfeld, Secretary of State Colin Powell stated in an interview with The Washington Post that he might have made a different recommendation on war with Iraq, if he had known that Iraq had no prohibited weapons. If you knew Iraq had no, or little, WMD, would you still have recommended military action? If yes, please articulate the threat. If no, please elaborate.

Secretary RUMSFELD. Dr. David Kay states unequivocally in his "Interim Progress Report on the activities of the Iraq Survey Group (ISG)" that there were prohibited weapons programs in Iraq and that Saddam was in violation of the U.N. Security Council resolutions regarding weapons of mass destruction. In addition, by expelling UNSCOM he clearly showed his contempt for the U.N. and international norms. It is also a fact that Saddam's regime sheltered and met with terrorists over the course of the 1990s and into the new century.

As the President has said, he "will not wait on events while dangers gather." The Saddam regime was dangerous, in clear violation of U.N. Security Council Resolutions regarding WMD, and was a state sponsor of terrorism. In light of these facts, there does not seem to be a need to reexamine the decisions that led to the liberation of the people of Iraq.

[Whereupon, at 12:40 p.m., the committee adjourned.]

DEPARTMENT OF DEFENSE AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 2005

TUESDAY, FEBRUARY 10, 2004

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, DC.

SERVICE CHIEFS

The committee met, pursuant to notice, at 9:31 a.m. in room SR–325, Russell Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Allard, Sessions, Collins, Talent, Chambliss, Dole, Levin, Kennedy, Lieberman, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, Clinton, and Pryor.

Committee staff members present: Judith A. Ansley, staff director; and Leah C. Brewer, nominations and hearings clerk.

Majority staff members present: Charles W. Alsup, professional staff member; L. David Cherington, counsel; Regina A. Dubey, research assistant; Brian R. Green, professional staff member; William C. Greenwalt, professional staff member; Ambrose R. Hock, professional staff member; Gregory T. Kiley, professional staff member; Thomas L. MacKenzie, professional staff member; Elaine A. McCusker, professional staff member; Lucian L. Niemeyer, professional staff member; Lynn F. Rusten, professional staff member; Joseph T. Sixeas, professional staff member; Scott W. Stucky, general counsel; Diana G. Tabler, professional staff member; and Richard F. Walsh, counsel.

Minority staff members present: Richard D. DeBobes, Democratic staff director; Daniel J. Cox, Jr., professional staff member; Madelyn R. Creedon, minority counsel; Richard W. Fieldhouse, professional staff member; Creighton Greene, professional staff member; Maren R. Leed, professional staff member; Gerald J. Leeling, minority counsel; and William G.P. Monahan, minority counsel.

Staff assistants present: Sara R. Mareno, Nicholas W. West, and Pendred K. Wilson.

Committee members' assistants present: Cord Sterling, assistant to Senator Warner; Christopher J. Paul and Dan Twining, assistants to Senator McCain; Jayson Roehl, assistant to Senator Allard; Arch Galloway II, assistant to Senator Sessions; Derek J. Maurer, assistant to Senator Collins; Lindsey R. Neas, assistant to Senator Talent; Clyde A. Taylor IV, assistant to Senator Chambliss; Mere-

dith Moseley, assistant to Senator Graham; Christine O. Hill, assistant to Senator Dole; Mieke Y. Eoyang and Jarret A. Wright, assistants to Senator Kennedy; Terrence E. Sauvain, assistant to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; William K. Sutey, assistant to Senator Bill Nelson; Eric Pierce, assistant to Senator Ben Nelson; Andrew Shapiro, assistant to Senator Clinton; and Terri Glaze, assistant to Senator Pryor.

OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. Good morning, everyone.

We start today's hearing by first welcoming back one of the members who has been absent without leave (AWOL), the distinguished Senator from Connecticut. If you would like to take a moment to explain your absence, we would be glad to have your views.

Senator LIEBERMAN. Well, Mr. Chairman, thanks for welcoming me back. It was quite a journey. I feel as if I was actively deployed and now I am returning to my home base. I appreciate very much the opportunity to return.

I do want to say very briefly that along the way in this journey I met a number of families who have service members on active duty in Iraq, and I met some of the service members themselves who had returned. The level of pride and morale is extremely high. Cutting through all the natural debate that goes on about the war, it was very reassuring.

If you will allow me, I carry this around with me because we lost Anthony De Agostino from Waterbury, Connecticut, and I was in touch with his folks and they sent me a mass card after the funeral. The father sent me this note: "Dear Senator Lieberman: Please continue to support all our men and women in uniform. Please keep America the true leader of peace in the world. Tony was our only son, our only legacy. Although this was a great loss to our family, we wish you godspeed in making the world a safer place."

I had the honor to go on my own journey across America, but these are the real heroes. I wanted to say this in front of you and the Service Chiefs, with great honor and admiration. I return to work with you and Senator Levin with a sense of purpose to work on the critically important work of this committee, to make sure that we complete the mission we started with success, and to return our service men and women home as soon as possible in peace, and in what I would describe as victory.

I thank you for your welcome. I promise not to give extended remarks any other time you call on me.

Chairman WARNER. No, that is all right. We are very appreciative of your sentiments. I recall vividly when you first joined this committee and you were one of the principal co-sponsors of the resolution in 1991 to authorize the use of force against Iraq. You were a member of the four of us who were co-sponsors in the recent resolution. You have always been a very strong voice on behalf of the men and women of the Armed Forces, and I appreciate your sentiments that we should complete this mission with a measure of unquestioned success.

Your statement is so powerful that I am thinking about waiving mine, but I think I will go ahead.

We meet today to receive the annual testimony of the Service Chiefs on the posture of each of our military services and on their respective portions of President Bush's defense budget request for fiscal year 2005 and the Future Years Defense Program (FYDP). We have a great team before us today, military men of great distinction and humility, men who have served this Nation well during previous conflicts, in most instances combat conflicts. Equally important, if not of greater importance, today in this global war on terrorism you bring to bear that vast experience that each of you have.

Thank you for what you do every day for our men and women in uniform and their families. It has been a challenging year for our military. You have provided the leadership they need to successfully accomplish their mission and to understand just how important their service is to the security of the United States and indeed to the whole free world.

I start by recognizing the extraordinary professionalism and courage of the men and women of our Armed Forces. In this past year, together with a coalition of nations, they freed Iraq from the tyrannical rule of Saddam Hussein. They are valiantly fighting today in Afghanistan and other far-flung points on the globe.

In Iraq they did this mission quickly, with precision, and with casualties well below the estimates. This is proof of the training, equipment, readiness, and inspiration that you individually and collectively have provided your forces. Their sacrifices and the sacrifices of their families are deeply appreciated by every citizen in this Nation, most particularly the sacrifices of those families who lost their loved ones, and those families who welcomed home those who bear the wounds of war. I ask you to communicate one message to the uniformed service members and their families that you represent: America is proud of you.

We need not let the critics of the moment diminish the importance of what our military has accomplished. In my opinion, there is no doubt that a very dangerous threat has been removed. The United States and indeed the world is a safer place because of the efforts of our military and coalition partners in Iraq.

The Nation will continue, as it should, the debate over whether or not Saddam Hussein had large stockpiles of weapons of mass destruction (WMD), and the debate on other issues relative to the WMD program. However, not all the facts are in on the specific issue of stockpiles and on the other issues. We cannot reach final judgments and conclusions. We have upwards of 1,300 men and women in uniform together with many other civilians still as a part of the Iraq Survey Group (ISG) who are continuing that mission.

What we do know at this point is as follows: We know that Saddam Hussein was indeed a threat. He has used WMD on his neighbors and on his own people, and he was maintaining his capability to quickly produce these weapons. Clearly he had breakout capability on a range of weapons, some of mass destruction.

We know that Dr. Kay testified that Saddam Hussein had restarted Iraq's nuclear weapons program. Although there are no estimates, it was a matter of time until he acquired some measure

of capability with those awesome, ultimate weapons of mass destruction.

We know that Iraq was continuing research and development (R&D) on chemical and biological weapons, and had an active program to use the deadly chemical ricin as a weapon. We know that Iraq was developing and producing ballistic missiles that clearly violated United Nations (U.N.) Security Council mandates that were imposed following the first Gulf War.

As Dr. Kay told this committee 2 weeks ago, and I quote him: "It was reasonable to conclude that Iraq posed an imminent threat. What we learned during the inspection made Iraq a more dangerous place potentially than in fact we thought it was even before the war." Our military men and women in uniform under your leadership, have removed this threat.

There have been allegations that the President and his senior advisers manipulated and exaggerated the prewar intelligence on Iraq. I personally have seen no clear and convincing evidence of this. In fact, many of the basic conclusions reached by President Bush, Vice President Cheney, and others, are entirely consistent with the basic conclusions of officials in the previous administration. I have with me today a whole series of those quotes.

An examination of United States intelligence, intelligence of other nations, and reports in the U.N., combined with Iraq's past history, led 77 members of this body, the United States Senate, to basically reach the same conclusions that two administrations' senior officials had reached: Saddam Hussein represented a great threat that had to be confronted with military force.

Diplomatic efforts were tried repeatedly and failed. The last of 18 U.N. Security Council Resolutions, 1441, passed unanimously by 15 members of the Security Council on November 8, 2002, found Iraq to be "in material breach of its obligations" that the U.N. Security Council had set down. The council then specifically said "the final opportunity to comply with its disarmament obligations is before Iraq" and warned of serious consequences if Saddam Hussein failed to comply. He did not comply.

Before us today are the leaders of our four military Services, three of whom were at their current positions at the start of Operation Iraqi Freedom (OIF). Now, the Goldwater-Nichols Act, which I brought with me today, fundamentally reshaped the duties and responsibilities of the Chiefs and then the body of the Joint Chiefs, including special provisions to ensure that any dissenting opinions from the members of the Joint Chiefs of Staff could reach the President. I direct you to section 151, title 10, subsection D, "Advice and Opinions of Members Other than Chairman."

I think it is appropriate, since this is your first appearance as a group before this committee since the commencement of hostilities, that each of you in your opening statements, with your exception, General Schoomaker, specifically advise this committee. There is a presumption raised by Goldwater-Nichols that you had the opportunity to approach the President and indeed the Chairman of the Joint Chiefs and others if you had any doubts concerning the advisability of the use of force at the time it was used against Iraq, and this is that opportunity today.

I think it is very important for America to understand how their professional military leaders felt about the decision to go to war before the use of force, and also how they feel today in light of revelations about certain portions of our intelligence. This is that opportunity.

Operations continue in Iraq, Afghanistan, and elsewhere in the global war on terrorism. The circumstances of our times demand, however, that we not rest on the laurels of our recent successes. We must prepare now for the future, a future fraught with new challenges and new dangers.

The President's budget request anticipates this uncertain future. The fiscal year 2005 budget request for the Department of Defense (DOD) of $401.7 billion represents a 5-percent increase over the fiscal year 2004 authorized level and the fourth consecutive year of growth in the defense budget.

Much is being asked of each military Service. You have all been looking for better and more efficient ways to use each taxpayer dollar, from developing new capabilities to changing concepts of operations to better integrating the very valuable National Guard and Reserve Forces that we have in this Nation. We look forward to hearing about your initiatives and welcome your insights on the challenges that you face.

Senator Levin.

STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Thank you, Mr. Chairman.

First let me join you in welcoming back our friend Joe Lieberman. He in his own way has been serving the Nation, both in the campaign that he just waged and also in his extraordinarily fine service here in the United States Senate, the civility, the thoughtfulness which he brings to his every task that he undertakes. I just want to join you, Mr. Chairman, I know speaking for every member of this committee, in welcoming Joe home.

As we meet today, America's Armed Forces are heavily engaged in trying to bring stability to Iraq. Additionally, almost 40,000 more stand on the front lines in Korea, within range of North Korean artillery and rockets. Thousands of American troops are risking their lives every day in continued operations in the global war on terrorism in Afghanistan and other hot spots around the world. Of course, many more continue to work to keep the peace and to build a more stable future in the Balkans and elsewhere.

To support these efforts, the President has already called up nearly 190,000 members of the Reserve components to active duty. Given the presence of all of our Service Chiefs, we all want to extend to those men and women serving us and through our Service Chiefs our thanks to both active duty and Reserve Forces for the work that they are doing with bravery and dedication on behalf of all Americans.

I also want to note that they and their families are making sacrifices for all of us and that there are stresses and strains on all of them, and that the military is stretched thin.

Mr. Chairman, you have made reference to the inquiry into intelligence failures prior to the war. It is essential that there be an inquiry into massive intelligence failures relative to the presence of

WMD in Iraq. It was the presence of those weapons which was given as the reason for urgency in proceeding to attacking Iraq. It is essential that there be an inquiry made into the way in which our intelligence was projected and represented by our policymakers, and it is essential that there be an inquiry made into the planning which either existed or did not exist relative to the post-Saddam period as to what we could expect in that period and how we would address it.

Whatever we determine about those issues, let nobody doubt that those who ask those questions, all of us, stand four-square behind our men and women who serve our Nation around the world. We will provide our men and women in uniform with everything that they need to ensure that they succeed in their mission. People who are asking the questions about intelligence so that our future intelligence and decisions are better are just as determined to help us succeed in our mission and to give our men and women in uniform everything they need to achieve that success as persons who are taking different positions relative to those inquiries.

The budget before us represents a peacetime budget. It fails to include funding to pay for the incremental costs of operations in Iraq and Afghanistan. So while the exact costs of those operations in fiscal year 2005 are not presently known, many of the costs can be readily estimated.

I want to just emphasize this so that everyone understands what I have said. The budget before us does not include items that we know have to be paid for, and should be paid for and will be paid for, in terms of supporting our men and women and giving them all the resources that they need. Now, some of those costs, although they are not included in this budget, can be readily estimated and should be estimated at this time.

For instance, we know that forces are going to be rotating into and out of Iraq in the October time frame, just after the beginning of fiscal year 2005. It is my understanding again that these costs are not in the budget. But this, coupled with the announced policy of the administration of not asking for a supplemental appropriation for the DOD this calendar year, is going to result in forcing the Services to plan on supporting deployed operations from within the normal budget, at least for several months.

That puts the Services, it seems to me, in a very difficult position. I would be interested in hearing from our witnesses this morning about the measures that they may have to take if they are to live within these constraints until a supplemental appropriation is requested next January.

The U.S. military is by far the best trained, best equipped, most capable fighting force in the world today. Its readiness can be attributed in large measure to the hard work that the Service Chiefs and their staffs have put forward in support of their responsibilities mandated by title 10, U.S. Code, to organize, train, and equip their respective Services. We are going to do everything we can to ensure that our military remains the best, and it is to that end that we are going to be exploring some critical issues with the witnesses before us today and other witnesses who will be called before this committee.

So, Mr. Chairman, I want to join you in welcoming our witnesses today. I want to thank them for their service, for their leadership. It has made a critical difference during these very difficult times. I want to give a special welcome to General Schoomaker, who is making his first appearance as our Army Chief of Staff before the committee at a posture hearing. Welcome, all of you.

Chairman WARNER. Thank you very much, Senator Levin.

General Schoomaker, as the senior Service, the Army, you may lead off.

STATEMENT OF GEN PETER J. SCHOOMAKER, USA, CHIEF OF STAFF, UNITED STATES ARMY; ACCOMPANIED BY LTG STEVEN BLUM, USA, CHIEF, NATIONAL GUARD BUREAU

General SCHOOMAKER. Thank you very much, Mr. Chairman. Good morning. Mr. Chairman, distinguished members of the committee. It is a pleasure to appear before you today. With your permission, I would like to submit the 2004 Army Posture Statement for the record.

Chairman WARNER. Without objection, it will be admitted to today's record in its entirety, together with the statements of the other members of the panel.

General SCHOOMAKER. Thank you, sir.

I would like to begin by thanking each of you for the tremendous support you continue to show for our men and women in uniform, as witnessed by your statements this morning already.

The fiscal year 2004 defense legislation and supplemental appropriation have provided our soldiers the tools they need to carry on their important, often dangerous work. The fiscal year 2005 President's budget request provides our Army with the resources we need to meet the noncontingency requirements of the national security strategy. It fully funds our statutory end strength of 482,400 soldiers. It supports training requirements in accordance with our joint and combined arms training strategy.

The budget request funds depot maintenance for the 15 critical systems in our recapitalization program. It provides funds to upgrade barracks, family housing, and funds facilities sustainment at 95 percent.

The budget request also provides for future readiness by funding upgrades for Stryker Brigade Combat Team 5 and our continuous investment in the Future Combat System (FCS).

As with any budget, it reflects a balance. We have accepted risk in some lower priority depot maintenance, base operations, and other areas. The budget request does not fund our contingency requirements for OIF and Operation Enduring Freedom (OEF). We do not know with certainty what these requirements will be, but we will need a supplemental to fund them once they are known.

All of this has been carefully weighed and I ask for your support of the fiscal year 2005 budget request.

There is no question that the pace of our Nation at war challenges our Army. It is hard to recall a time in history, with the exception of World War II, when we have been busier, as we deploy and redeploy nearly a quarter of a million soldiers over the next 4 months. We continue to meet these challenges with the seamless commitment of active, Reserve, and National Guard soldiers who

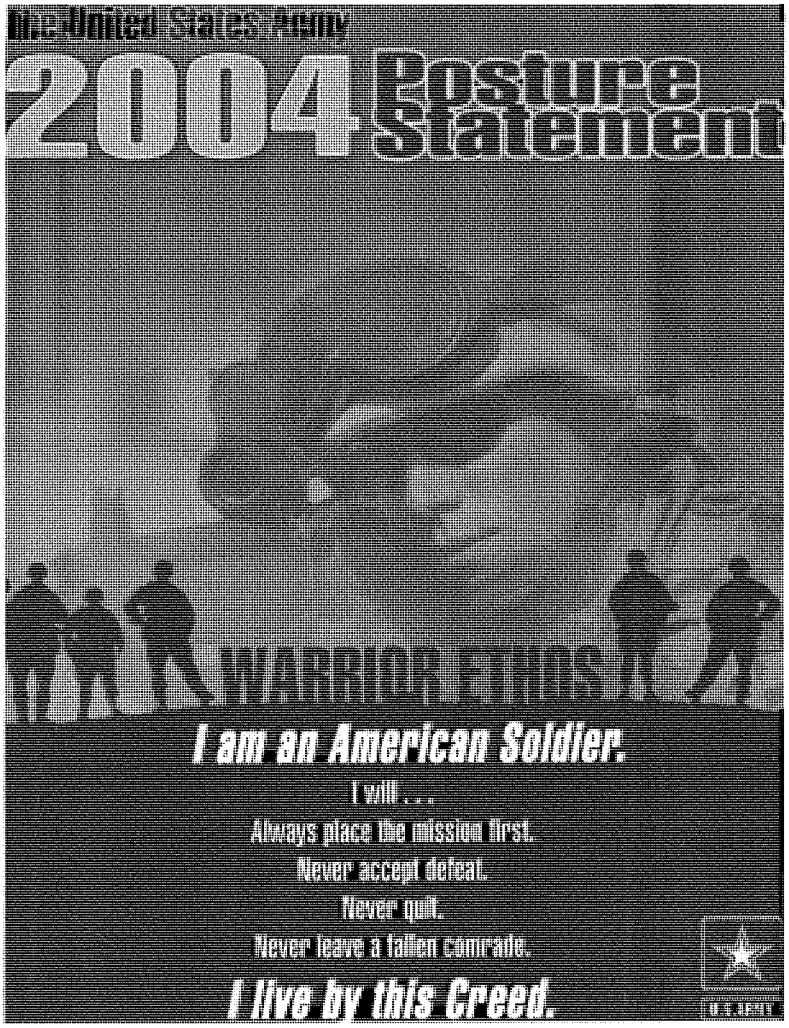
continue to give so selflessly to our great Nation. Accompanying me today are Lieutenant General Steve Blum, the Chief of the National Guard Bureau, and Brigadier General Gary Profit from the Office of the Chief of the Army Reserve. I appreciate their presence here today.

Chairman WARNER. Gentlemen, we welcome you to the hearing. Thank you.

General SCHOOMAKER. This is not easy and we cannot approach it as if it is business as usual. This state of war requires us to challenge old paradigms, to be flexible and adaptable. Using the authority provided by Congress and the flexibility you have built into our law, the Secretary of Defense and the President of the United States supported my request to temporarily grow the Army by up to 30,000 soldiers above its statutory end strength. I asked for your support as well.

I appreciate the concern that many of you have shown over this issue. This temporary end strength increase is the right choice. A permanent increase in statutory end strength before the Army has implemented our ongoing force structure reforms would be inefficient and could jeopardize the future readiness of our Army.

I have asked to temporarily grow the force under the authorities provided in title 10, section 123[a] because the real issue we must address is improving Army capabilities, by tailoring our structure to better meet the requirements of our national security strategy. Capability is the issue, not the number of soldiers. With the flexibility I have requested, we can grow the active component from 33 to 43 combat brigades while increasing the number of National Guard combat brigades that are identical to the Active Force.



In the future we will make a decision on adding an additional five active component combat brigades to further enhance our capability. Combined with other initiatives, such as adjusting the balance between the active component and the Reserve component, increasing the pool of soldiers in high-demand specialties, and the implementation of unit modularity and stabilization, this restructure will provide the Nation and the Joint Forces Commanders with an Army better suited to meet rotational or readiness requirements such as we face today, while remaining ready to meet the challenges of the future.

We must never lose sight of the fact that it is our soldiers who put it all on the line. We will do everything in our power to prepare them for the challenges they face. I could not be more proud of them and the professionalism, courage, and competence that they demonstrate every day. I would include our family members in that who have already been recognized. They pay a tremendous price and they are with us.

In closing, I would like to thank this committee for the opportunity to appear before you today and for your continued support for the men and women in our Army, deployed in Iraq, Afghanistan, and throughout the world.

I look forward to answering your questions. Thank you, sir.

[The 2004 Army Posture Statement follows:]

The United States Army
2004 Posture Statement
WARRIOR ETHOS
I am an American Soldier.
I will . . .
Always place the mission first.
Never accept defeat.
Never quit.
Never leave a fallen comrade.
I live by this Creed.

A statement on the
Posture of the United States Army 2004

By

The Honorable R.L. Brownlee
And
General Peter J. Schoomaker

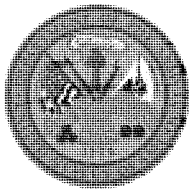
Presented to
The Committees and Subcommittees
Of the

UNITED STATES SENATE

And the

HOUSE OF REPRESENTATIVES

SECOND SESSION, 108th CONGRESS



The annual Army Posture Statement is an unclassified summary of Army roles, missions, accomplishments, plans, and programs.

Designed to reinforce the Secretary of the Army and Chief of Staff, Army posture and budget testimony before Congress, The Army Posture Statement serves a broad audience as a basic reference on the state of the Army.

This document is available on The Army Homepage at www.army.mil

It is a product of the Office of the Chief of Staff, U.S. Army, Special Actions Branch (DACS-ZDV-SAB)

Email: David.Dodd@us.army.mil

February 5, 2004

Our Nation is at war. The security of our homeland, the Global War on Terror, and sustained engagement around the world define today's complex and uncertain strategic environment. The future will be no less ambiguous.

We must prepare now to meet the challenges of tomorrow. Rather than focusing on a single, well-defined threat or a geographic region, we must develop a range of complementary and interdependent capabilities that will enable future joint force commanders to dominate any adversary or situation. A capabilities-based approach to concept and force development, as articulated in the 2001 Quadrennial Defense Review, is the major focus of defense transformation.

Over the past year our Army has met the demands of the Global War on Terror, with more than 325,000 troops deployed around the world in over 120 countries. The Army was instrumental in the defeat of Saddam Hussein and the Taliban and the subsequent liberation of more than 46 million people from oppression and despair. The Army remains a central and critical participant in Operation Iraqi Freedom and Operation Enduring Freedom. Although these and other operations have stressed the force, our Soldiers have responded magnificently.

Our Army's commitment to the Nation remains absolute. While we execute the Global War on Terror, our Army simultaneously continues its organizational and intellectual transformation to meet the challenges of the 21st Century. In support of the National Security Strategy and the National Military Strategy we are improving our warfighting readiness and ability to win decisively. We also remain dedicated to the well-being of our Soldiers, their families and our civilian workforce.

The United States Army is the most powerful land force on earth. With this power comes a great responsibility. American Soldiers show by their daily actions that they understand this, and are fully worthy of the trust the American people have placed in them.

For 228 years the Army has never failed the Nation, and it never will.

Peter J. Schoomaker
General, US Army
Chief of Staff

R. L. Brownlee
Acting Secretary of the Army

PURPOSE OF THE POSTURE STATEMENT

The Army Posture Statement provides an overview of today's Army. Focusing on the Soldier, the centerpiece of the force, it explains the current and future strategic environments that provide our mandate for transformation. Our core competencies and how we intend to meet our current demands and future challenges are outlined. It describes what we must become in order to provide more ready and relevant forces and capabilities to the Joint Team.

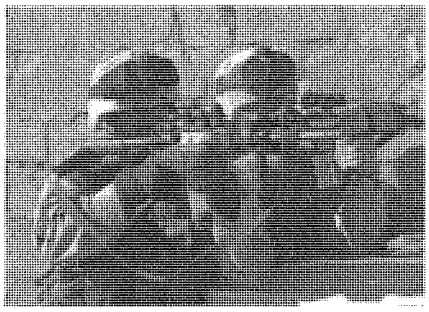
2004 ARMY POSTURE STATEMENT EXECUTIVE SUMMARY

OUR NATION AT WAR



Our Nation, and our Army, are at war. It is a different kind of war, fought against a global terrorist network and not likely to end in the foreseeable future. In the days following the attacks on September 11, 2001, President Bush spoke candidly to the Nation. "These terrorists kill not merely to end lives, but to disrupt and end a way of life." He added: "The only way to defeat terrorism as a threat to our way of life is to stop it, eliminate it and destroy it where it grows."

Our Army exists to fight and win our Nation's wars. We are an integral member of the Joint Team committed to winning in fulfillment of our responsibilities to national security. We are fighting to preserve the American way of life and to safeguard the many freedoms our citizens enjoy. Our Soldiers and their families have not forgotten the events of September 11, which launched us to action in Afghanistan and Iraq. They are reminded daily of the ongoing conflict through separation, concern for forward-deployed loved ones and, most regrettably, news of casualties. Our Army continues the mission and remains committed to defeating our enemy.

OUR ARMY'S CORE COMPETENCIES

As our Army fights the current war and remains dedicated to transforming, we are focused on our two core competencies: **(1) Training and equipping Soldiers and growing leaders; (2) Providing relevant and ready land power to Combatant Commanders as part of the Joint Force.**

Our Army must be an agile and capable force with a Joint and Expeditionary Mindset. This mindset is the lens through which we view our service. We must be mobile, strategically deployable and prepared for decisive operations wherever and whenever required. We must be lethal and fully interoperable with other components and our allies, as well as flexible, informed, proactive, responsive and totally

integrated into the joint, interagency and multinational context. Our management and support processes must reflect and support these same characteristics.

STRATEGIC ENVIRONMENT – OUR MANDATE FOR TRANSFORMATION

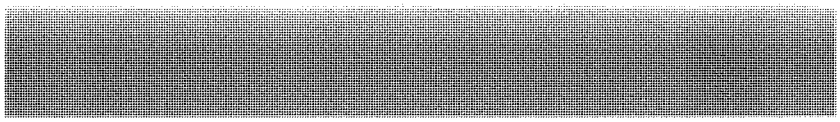
At the end of the Cold War, the United States had no peer competitor. Our Army was much larger and was built around heavy, mechanized and armored formations. Because America stood as the lone superpower during this time of global realignment, we were able to downsize our force structure. Today, the future is uncertain and presents many challenges. The emerging challenges manifest themselves as new adaptive threats, employing a mix of new and old technologies that necessitate changes to the ways in which the elements of our national power are applied.

The 21st century security environment is marked by new actors and a noteworthy proliferation of dangerous weapons, technologies and military capabilities. While threats from

potentially hostile regional powers remain, increasingly non-state actors, operating autonomously or with state-sponsorship, also are able to endanger regional and global security. These forces — insurgents, paramilitaries, terrorists, narco-traffickers and organized crime -- are a growing concern. They often are networked and enabled by the same tools and information systems used by state actors. Our adversaries will rely more frequently on indirect and asymmetric methods, such as anti-access and area-denial strategies, unrestricted warfare and terrorism, to mitigate their relative disadvantage. The most dangerous of these threats are the development and proliferation of weapons of mass destruction (WMD) – including biological or chemical agents, or radiological "dirty bombs" – to attack the United States. This security environment requires that the Army have the capability to dominate throughout the spectrum of conflict and to plan for multiple future contingencies.

As a result of this adaptive enemy and our worldwide commitments, current organizations, systems and facilities are and will continue to be stressed. We now rely on our Reserve Component to support our operations to a degree not seen since World War II. As of January 14, 2004, there were more than 164,000 Reserve Component Soldiers mobilized with over 139,000 of them serving overseas. The institutional Army is being asked to do more, applying lessons learned from current operations. These lessons are critical to our organizations and individual Soldiers as they prepare for worldwide missions. Therefore, the current and future strategic environments require the Army to have the capability to dominate throughout the spectrum of conflict and to plan for multiple contingencies. These new security challenges, coupled with the current war on terrorism, require a different approach.

ARMY FOCUS AREAS



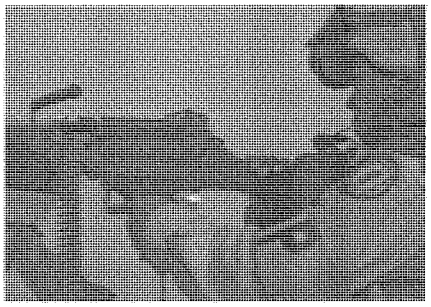
Last summer, Army leaders identified immediate focus areas instrumental to adapting Army organizations and processes that will help us to better meet the Nation's security requirements. All of our focus areas should be viewed in the context of our ongoing efforts to retain the campaign qualities of our Army while simultaneously developing a Joint and Expeditionary Mindset. Of these focus areas, a critical enabler is the redesign of our resource processes to be more flexible, responsive, and timely. Our goal is to be a better Army every day -- better able to execute our core competencies as members of the Joint Team.

ADAPTING RESOURCE AND ACQUISITION PROCESSES

The resource process is at the core of our Army's mission success. Our Nation faces a cunning and adaptive enemy, predictable only in his zeal and intent. We are just as cunning and our Soldiers are constantly changing tactics and techniques in order to disrupt the enemy's plans. In the same way, our resource and acquisition processes must become more flexible, responsive and timely in order to take immediate advantage of technological improvements and to sustain the quality of the force over time.

RESETTING OUR FORCE

Quickly resetting our forces upon their redeployment from current operations is a strategic imperative. The reset program incorporates lessons learned from Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF), retrains essential tasks, adjusts pre-positioned stocks of equipment and ammunition, and brings unit equipment readiness back to standard. Units must recover quickly in order to provide the Combatant Commanders with landpower capabilities for future requirements. We will face challenges as we rotate troops from



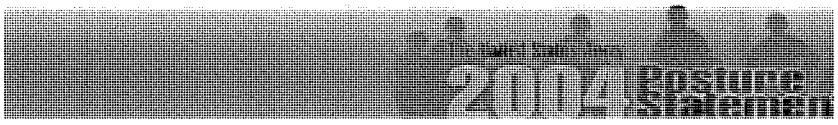
deployment to home station, while simultaneously maintaining vigilance and readiness.

Continued congressional support and adequate resources are needed to accomplish our reset tasks and to mitigate the risk we have incurred to our Current and Future Forces. The FY04 defense legislation and supplemental appropriation delivered substantial assistance toward covering the cost of current operations and initiating the reset process. We fully appreciate the exceptional support Members and their staffs have provided this year. But, the job is not complete. In fact, it has only just begun.

MITIGATING STRATEGIC RISK THROUGH INCREASED LAND POWER CAPABILITY

Today our Army is executing operations in defense of the homeland (Operation Noble Eagle); stability and support operations in the Balkans (Stabilization Force/Kosovo Force); peacekeeping in the Sinai as part of the Multinational Force and Observers (MFO) and combat operations in Iraq and Afghanistan (Operation Enduring Freedom/ Operation Iraqi Freedom). We are also forward stationed in Korea and elsewhere. Approximately two-thirds of our active and reserve combat formations were deployed in FY03 and will be deployed in FY04.

These deployments, coupled with planned future rotation of units into OIF and OEF, the largest movement of Army troops since World War II, have highlighted already existing stress to our force. To mitigate risk, the Army is embarking on a series of initiatives. The first initiative is **resetting forces** returning from OIF and OEF to a standard higher than before their deployment. A second establishes **force stabilization** measures to reduce turbulence amongst Soldiers, units and their families. Thirdly, the Army is internally **rebalancing Active and Reserve Component forces** to better posture our existing force structure to meet global commitments. And lastly, we are beginning



to **increase the number of available combat brigades** through improved force management and **modular reorganization**. This increase allows the Army to improve strategic flexibility, sustain a predictable rotation cycle, and permits the Reserve Component to reset.

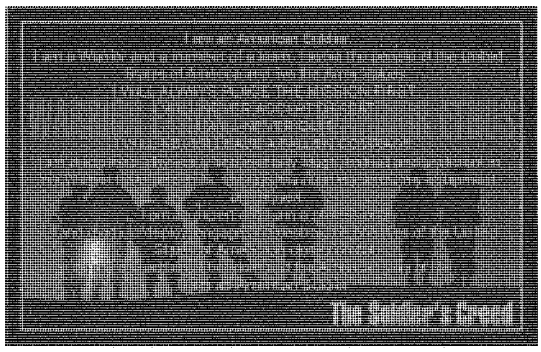
To facilitate this end state, the Army will seek to maintain, or even to increase temporarily, its current level of manning. These measures, when resourced, will mitigate risk and ultimately provide increased capability to Combatant Commanders.

CONCLUSION

Our Nation is at war and our Army is at war; we remain ever relevant and ready to meet today's challenges. Yet there is much more to do. We are prioritizing wartime requirements, incorporating next-generation capabilities into current systems where appropriate, and preserving essential investments in the Future Force. We also are becoming more joint and expeditionary. We do not move forward alone, but as part of the Joint Team. We need the support of the American people and the U.S. Congress. With this backing, we will continue to carry the fight to our enemies to provide security here at home.

CORE COMPETENCIES

Our Army has two core competencies, supported by a set of essential and enduring capabilities. **These core competencies are: (1) training and equipping Soldiers and growing leaders; and (2) providing relevant and ready land-power capability to the Combatant Commanders as part of the Joint Force.** Additionally, our Army's senior leadership has established immediate focus areas and issued specific guidance for planning, preparation and execution of actions aimed at rapidly effecting necessary transformation in support of these core competencies. See Addendum I (available at www.Army.mil) for more information on the Army's focus areas.



TRAIN AND EQUIP SOLDIERS AND GROW LEADERS

Our Army prepares every Soldier to be a warrior. Our training replicates the stark realities of the battlefield in order to condition Soldiers to react instinctively in combat. Such training is essential to building Soldiers' confidence in themselves, their equipment, their leaders, and their fellow Soldiers. Constant training in weaponry and field craft, and a continuous immersion in the warrior culture, give Soldiers the skills they need to succeed on the battlefield. Mental and physical toughness are paramount to the development of the warrior ethos and apply to all Soldiers from private to general. Every Soldier is called upon to be a leader.

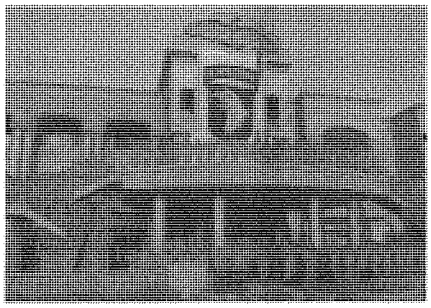
THE SOLDIER

The American Soldier remains the centerpiece of our combat systems and formations and is indispensable to the Joint Team. Adaptive, confident and competent Soldiers, infused with the Army's values and warrior culture, fight wars and win the peace. As a warrior, every Soldier must be prepared to engage the enemy in close combat; the modern battlefield has no safe areas. Our Army trains our Soldiers to that standard, without regard to their specialty or unit. The Soldier -- fierce, disciplined, well-trained, well-led and well-equipped -- ultimately represents and enables the capabilities our Army provides to the Joint Force and the Nation.

Our Soldiers are bright, honest, dedicated and totally committed to the mission. All share common values, a creed and a warrior ethos.

Our Army defines selfless service as putting the welfare of our Nation, Army and subordi-

nates before your own. Soldiers join the Army to serve. Most Americans do not fully realize the personal sacrifices these Soldiers and their families endure. However, our Soldiers know that they have done their part to secure our Nation's freedoms and to maintain the American way of life.



Our Soldiers' Creed captures the warrior ethos and outlines the professional attitudes and beliefs that characterize our American Soldier. The warrior ethos is about the refusal to accept failure and the conviction that military service is much more than just another job. It defines who Soldiers are and what Soldiers do. It is linked to our long-standing Army Values, and determination to do what is right and do it with pride.

Recruiting and Retaining a High-Quality Volunteer Force

All of our Soldiers are warriors whose actions have strategic impact. Because we are at war and will be for the foreseeable future, we must recruit Soldiers who have the warrior ethos already ingrained in their character, who seek to serve our Nation, and who will have the endurance and commitment to stay the course of the conflict. We must recruit and retain Soldiers who are confident, adaptive and competent to handle the full complexity of 21st century warfare.

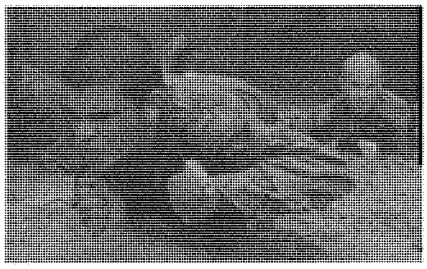
We will continue to bring the highest quality Soldier into the force. All newly enlisted Soldiers are high school graduates (diploma or equivalent) and 24 percent have some college. These young Americans, who believe service to our Nation is paramount, make our success possible. They display a willingness to stand up and make a difference.

Our recruiting and retention efforts continue to be successful. The active Army met its recruiting and retention goals in fiscal year 2003 (FY03). The Army National Guard exceeded its retention goals for FY03 and simultaneously

met its end strength objectives. The Army Reserve met its recruiting goals and all but one retention target in FY03. Most importantly, all components sustained their end-strength requirements.

We do not know yet the effect the high operational pace of recent months will have on our recruiting and retention in FY04 and future years. We must carefully monitor recruiting and retention trends and adequately resource our successful recruiting and retention initiatives. Incentives such as the Enlistment Bonus Program, The Army College Fund and the Loan Repayment Program, have successfully enabled the Army to execute precision recruiting in FY03. Our Special Forces Candidate "Off the Street" initiative continues to attract highly motivated and qualified warriors. Significantly, Selective Reenlistment Bonuses, such as the Present Duty Assignment Bonus and the Theater Selective Reenlistment Bonus, which are intended to enhance unit stability, have helped us realize our retention successes. For more information on recruiting, see Addendum C.

Civilian Component Enhances Our Capabilities

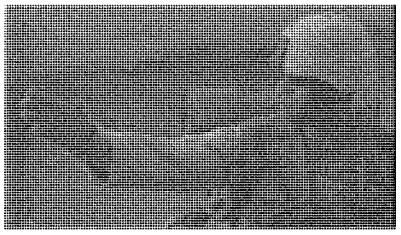


Army civilians are an integral and vital part of our Army team. They are essential to the readiness of our Army at war and our ability

to sustain operations. Our civilian employees share our Army values. They are smart, resourceful and totally committed to supporting our Soldiers and our Army to do whatever it takes to meet the challenges that come our way. These dedicated civilians perform critical, mission-essential duties in support of every functional facet of combat support and combat service support, both at home and abroad. Army civilians serve alongside Soldiers to provide the critical skills necessary to sustain combat systems and weaponry. They work in 54 countries in more than 550 different occupations. **In FY03, nearly 2,000 Army civilians deployed to Southwest Asia in support of Operation Iraqi Freedom, Operation Enduring Freedom, and the Global War on Terrorism (GWOT).** They have the education, skills and experience to accomplish the mission while ensuring continuity of operations for all commanders.

Realistic Training – Essential to Mission Success

Tough, realistic training ensures that our Soldiers and units maintain readiness and relevance as critical members of the Joint Force. Our



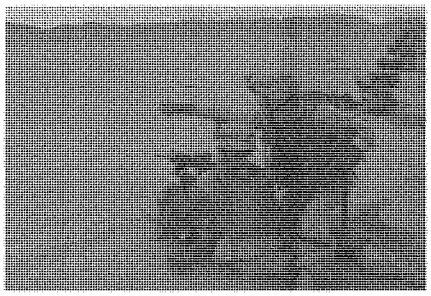
Army's combined-arms training strategy, including an appropriate mix of live, virtual, and constructive training, determines the resource requirements to maintain the combat readiness of our troops. We revised our training ammunition standards to allow Combat Support and Combat Service Support units to conduct live fire exercises under conditions similar to those they might encounter in combat.

The Army's OPTEMPO budget is among its top priorities. Our leadership is committed to fully executing the Active and Reserve Component ground and air OPTEMPO training strategies, which include actual miles driven and hours flown, as well as virtual miles associated with using simulators. The flying hour program is funded to achieve a historic execution level of live flying hours per aircrew per month. If units exceed the historic execution level, our Army will increase their funding. Thus far this year, OPTEMPO execution reports show units exceeding their programmed miles driven and hours flown. These are the units that are aggressively preparing for deployments to OIF and OEF, as well as the units who recently have returned and are preparing for future operations. Our combined arms training strategy is working and sustaining our warfighting readiness. We see the results every day in Afghanistan and Iraq.

Joint and Expeditionary

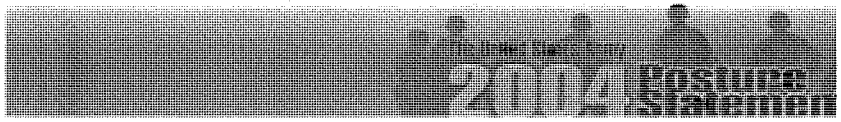
Our Army is the dominant ground component of the Joint Team and provides the Joint Force Commander a campaign quality force with unique and complementary capabilities. We are vital and indispensable members of the Joint Team first and are a Service second. We must remain aware that our Army always conducts operations — offensive, defensive, stability and support — in a joint and expeditionary context. Acting in concert with air and naval power, decisive land power creates a synergy that produces a Joint Force with abilities far exceeding the sum of the individual service components. Our Army can: support civil authorities at home and abroad; provide expeditionary forces at the right time and the right place; reassure our allies and multinational partners; deter ad-

versaries and, should deterrence fail, decisively defeat the enemy; and win the peace through post-conflict operations, in concert with interagency and multinational efforts. Our Army must continually examine the capabilities resident in and required by the Joint Force. We will concentrate our energies and resources on those attributes which our Army is best suited to provide to the Joint Force. Our Army will arrive on the battlefield as a campaign-quality force fulfilling the requirements of the Joint Force Commander — lethal, agile, mobile, strategically responsive, and fully interoperable with other components within the interagency and multinational context.



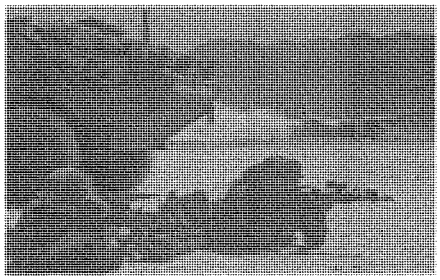
Train and Educate Army Members of the Joint Force

Our Army is taking action across a broad front to make jointness an integral part of our culture by including this concept in our education and training programs. We have always produced leaders with the right mix of unit experience, training, and education. As we look to the future, we know that, to meet our current and future leadership requirements and those of the Joint Force, we must redesign aspects of our Army's training and leader development programs to include lessons learned from current operations. Our objectives are to increase our ability to think and act jointly and to provide our Soldiers with the latest and most relevant techniques, procedures and equipment that will make them successful on the battlefield. Additionally, the changes acknowledge the current and projected pace of operations and deployments. As a result, we will be better prepared for the current and future strategic environments.



Maintaining a ready Current Force today and achieving a transformed Future Force tomorrow requires a shift in the way units train for joint operations. Our Army's Training Transformation Initiative (TTI), which supports the June 2003 Defense Department Training Transformation Implementation Plan, provides dynamic, capabilities-based training and mission rehearsal in a joint context.

Leader Development — Train for Certainty, Educate for Uncertainty

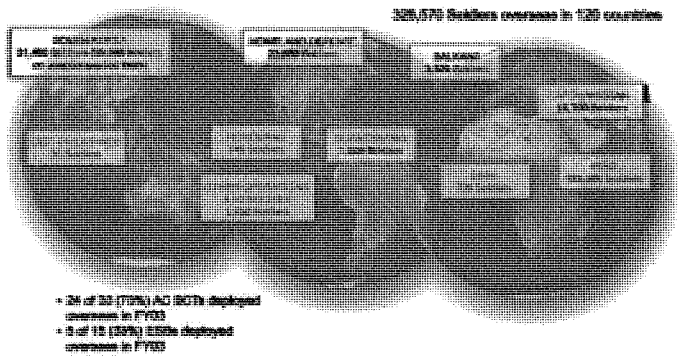


Leader development is an essential part of our Army's core competencies and the lifeblood of our profession. It is the deliberate, progressive

and continuous process that develops our Soldiers and civilians into competent, confident, self-aware, adaptive and decisive leaders. They emerge prepared for the challenges of 21st century combined arms, joint, multinational and interagency operations.

Army leaders at all levels bear responsibility for America's Soldiers and accomplishing the mission, whatever it may be. The range of missions and their complexity continue to grow, presenting our leaders with even greater challenges than previously experienced. The evolving strategic environment, the gravity of our strategic responsibilities, and the broad range of tasks that the Army performs require us to review, and periodically to refocus, the way we educate, train and grow professional warfighters.

We have a training and leader development system that is unrivaled in the world. Our professional military education prepared our officers and noncommissioned officers to fight and win in Iraq and Afghanistan. We will continue to develop our leaders with the right mix of operational assignments and training and education opportunities that meet the current and future requirements of the Army and Joint Force. Our leader training focuses on *how to think, not what to think.* We will maintain our investment in the future by sustaining the highest quality leader training and education for our Army.



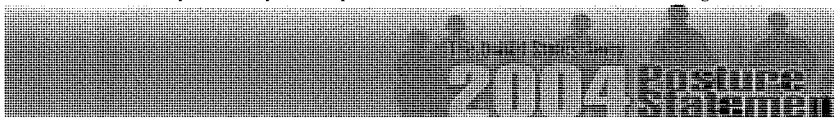
COMBAT TRAINING CENTERS (CTC)/ BATTLE COMMAND TRAINING PROGRAM (BCTP)

The CTC program is a primary culture driver for our Army. Additionally, our CTCs are a primary enabler of, and full participant in, the Joint National Training Capability. The CTCs develop self-aware and adaptive leaders and Soldiers and ready units for full spectrum, joint, interagency and multinational operations. CTCs continuously integrate operational lessons learned into the training. Our Army enhances the training experience offered by our CTCs (National Training Center in California, Joint Readiness Training Center in Louisiana, Combat Maneuver Training Center in Germany and Battle Command Training Program based in Kansas) by increasing the focus on development of capabilities essential to joint operations. Leader training and development during CTC exercises hone the Joint and Expeditionary Mindset and promote our Army's warrior culture.

PROVIDE RELEVANT AND READY LAND POWER CAPABILITIES TO THE COMBATANT COMMANDER AND THE JOINT TEAM

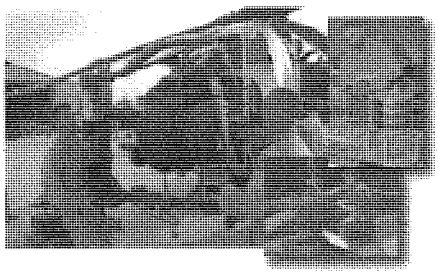
To meet global commitments across the full spectrum of military operations, our Army has mobilized more than 164,000 Reserve Component Soldiers. More than 325,000 American Soldiers are serving overseas and more than 23,000 Soldiers are supporting operations within the United States. This high operating tempo is no longer an exception. Sustained operations and deployments will be the norm for our Army forces supporting multiple and simultaneous shaping and stability operations around the globe. At the same time, we will continue to contribute to Joint Force execution of major combat operations, homeland security missions and strategic deterrence.

ARMY GLOBAL COMMITMENTS



ARMY GLOBAL COMMITMENTS

Our Army is engaged in more than 120 countries throughout the world. To highlight our Army's commitment, a review of the major warfighting formations of the Active and Reserve Component serves as a measurable benchmark. Over 24 of the Army's 33 Active Component Brigade Combat Teams (BCTs), and five of our 15 Reserve Component Enhanced Separate Brigades (ESB) were deployed in FY03. This trend will continue in FY04, with 26 of 33 Active Component BCTs and six of our 15 Reserve Component ESB brigades projected for deployment.



The majority of these combat formations are deployed in the **U.S. Central Command** area of responsibility (AOR), effectively executing stability and support operations. More than 153,000 Soldiers are supporting CENTCOM operations in Iraq, Afghanistan, Kuwait and the Horn of Africa. We are currently in the middle of the largest movement of troops since WWII, as we rotate more than eight-and-a-half divisions and two ESBs to or from the theater. The approximate ratio of Active to Reserve Component forces today is currently 63 to 37 percent, respectively. Once our current rotation is complete, the ratio will change to approximately 54 to 46 percent, Active to Reserve Component. Since September 11, we have mobilized almost half of the Reserve Component. They are trained, professional, and ready to execute any task.

Army support to other Combatant Commanders remains high. **U.S. Northern Command's** Army component, U.S. Army Forces Command, provides more than 23,000 Active and Reserve Component Soldiers for duty in the defense of our homeland. These troops are available for missions including Military Assistance to Civil Authorites (MACA), emergency preparedness, and anti-terrorist operations. The Army Reserve provides to NORTHCOM significant voice and data connectivity necessary to execute real-time operations. U.S. **European Command** provides forces, such as V U.S. Corps, to CENTCOM; and to Stability Force (SFOR) and Kosovo Force (KFOR) in the Balkans. **U.S. Pacific Command** supports ongoing operations in the Philippines, as part of the Global War on Terrorism, in addition to maintaining more

than 31,000 Soldiers on the Korean Peninsula. **U.S. Southern Command** is fully engaged as the headquarters for 1,500 Soldiers executing detainee operations at Guantanamo Bay, Cuba; has deployed 740 Soldiers to Joint Task Force – Bravo at Soto Cano Airbase, Honduras; and is assisting the government of Colombia in its war on narco-terrorism. **U.S. Special Operations Command's** Army component provides professional, dedicated, and specially trained Soldiers to each Combatant Commander. These Soldiers, working closely with conventional forces, have been instrumental to our success in the Global War on Terrorism.

In addition to federal missions, our Army National Guard (ARNG) plays an important domestic role, routinely responding to state emergencies. In FY03, there were 280 requests for emergency support, ranging from basic human needs to engineering support during natural disasters. Our ARNG has fielded 32 Weapons of Mass Destruction (WMD) Civil Support Teams (CST), which assist first responders in the event of an incident. Another 12 CSTs are due to be activated within 18 months. To date, these teams have responded to 74 different requests for support. Also, more than 8,000

ARNG Soldiers have executed critical force protection duties at 148 Air Force installations in CONUS.

10

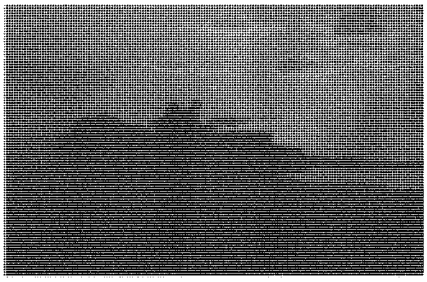
RESETTING THE FORCE

The extraordinary demands major combat and stability operations in Afghanistan and Iraq are placing on our equipment and personnel require that our Army quickly reset returning units for future national security needs. The reset program will incorporate lessons learned from OIF and OEF, retrain essential tasks, adjust pre-positioned stocks of equipment and ammunition, and bring unit equipment readiness back to standard. The objective is to ensure our Army forces are ready to respond to near-term emerging threats and contingencies. However, reset cannot be viewed as a one-time event. Reset will continue to be key to our future readiness as our military executes our National Security missions.

Through reset, all returning active duty and Army Reserve units will achieve a sufficient level of combat readiness within six to eight months of their arrival at home station. The Army National Guard will take longer to achieve the desired level of readiness. The goal for these units is to reestablish pre-deployment readiness within one year. Our Army also will take advantage of reset as an opportunity to reorganize units into modular designs that are more responsive to regional Combatant Commanders' needs; that better employ joint capabilities; that reduce deployment time; and that fight as self-contained units in non-linear, non-contiguous battlespaces. This effort began with the 3rd Infantry Division and will soon be expanded to include the 101st Airborne Division (Air Assault).

In addition to investing in new equipment to replace items that were destroyed or worn out during combat and stability operations, the reset program will repair major items used in OIF and OEF. Repair requirements have been determined for all OIF1 units and the workload for this comprehensive effort is immense: about 1,000 aviation systems; 124,400 communications and electronics systems;

5,700 combat/tracked vehicles; 45,700 wheeled vehicles; 1,400 missile systems; nine Patriot battalions; and approximately 232,200 items from various other systems. This effort represents a significant expansion of normal maintenance activities, requiring the increased use of CONUS and OCONUS based depot, installation and commercial repair facilities.



Reconfiguring existing Army pre-positioned stocks for global coverage of potential missions is a major component of the reset process. The intent is for each stock to have sufficient combat power to meet the immediate threat, as well as enough materials to render relief in other contingencies.

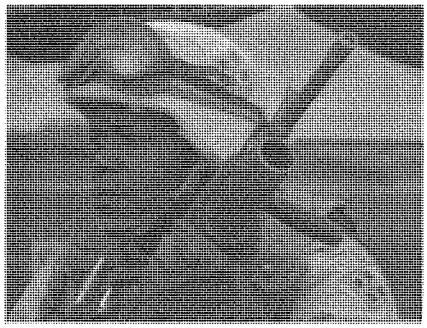
Congressional support, in the form of supplemental appropriations, has been invaluable in beginning the reset effort. Our readiness depends directly on the successful execution of the reset program, and it will remain an ongoing priority for the foreseeable future. Continued resourcing will be needed to ensure that our Army can fight the current war and posture itself for future missions.

Transformation: Moving From the Current to the Future Force

The goals of Army Transformation are to provide relevant and ready forces that are organized, trained and equipped for full-spectrum joint, interagency and multi-national operations and to support Future Force development. Army Transformation occurs within the larger context of changes to the entire U.S. military. To support our Army staff in the execution of transformation, the Army leadership directed the establishment of an Army Training and Doctrine Command (TRADOC) Futures Center, operational as of October 2003.

Our Current Force is organized, trained and equipped to conduct operations as part of the Joint Force. It provides the requisite decisive land power capabilities that the Joint Force commander needs across the range of military

operations: support to civil authorities at home and abroad; expeditionary forces; the ability to reassure friends, allies and multinational partners; dissuading and deterring adversaries; decisively defeating adversaries should deterrence fail; and winning the peace as part of an integrated, inter-agency, post-conflict effort.



Our Future Force is the operational force the Army continuously seeks to become. Informed by National Security and Department of Defense guidance, it is a strategically responsive, networked, precision capabilities-based maneuver force that is dominant across the range of military operations envisioned for the future global security environment.

As our Army develops the Future Force, it simultaneously is accelerating select future doctrine, organization, training, materiel, leadership, personnel, and facilities (DOTMLPF) capabilities into our Current Force. This process will be fundamental to our success in enhancing the relevance and readiness of our Army and prosecuting the Global War on Terrorism. Similarly, the operational experience of our Current Force directly informs the pursuit of Future Force capabilities.

Balancing Current and Future Readiness

Balancing risk between current and future readiness remains a critical part of our Army's

transformation process and one that requires continual assessment to ensure that plans and programs are aligned with overall requirements. Without question, the issue of current operational readiness is our Army's highest priority. During the past several years, our Army made a conscious decision to accept a reasonable degree of risk to the readiness of our Current Force in order to permit investment in capabilities for our Future Force. This risk came in the form of reductions in and limitations to modernization and recapitalization programs. As part of the past four budget submissions, our Army made difficult choices to cancel and restructure programs, shifting resources to the development of transformational capabilities. Some of these investments have already produced results: for example, the new Stryker Brigade Combat Team formations now being fielded, the first of which is currently deployed on the battlefield in Iraq. Others are helping to develop emerging technologies and capabilities that will be applied to our force throughout the coming decade.

Besides the ongoing efforts related to equipping the Current Force, our Army also has begun other major initiatives that will improve our readiness and relevance in the future. These include an effort to realign Active and Reserve Component units and capabilities, in order to make our Army more readily deployable and available to Joint Force Commanders; homebasing and Unit Focused Stability, which will improve readiness and reduce personnel turbulence; and the reorganization of Army units into more modular and capability-based organizations.

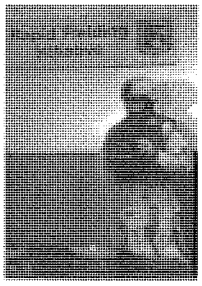
While the previous decisions to accept reasonable risk in our Current Force were considered prudent at the time, the strategic and operational environment has significantly changed in light of the large-scale engagement of Army forces in Operation Iraqi Freedom and other expeditionary operations. Ever-changing demands on our force, coupled with our commitment to mitigating risk to our Soldiers, have necessitated re-examination and transformation of our Army's resource process and business practices (see Addendum H at www.Army.mil).

MAKING THE RESOURCE PROCESS MORE RESPONSIVE

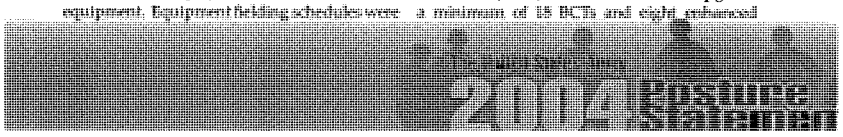
The resource process is our Army's center of gravity. Without the right people, the proper equipment, top-notch installations and adequate dollars to support all appropriately, our Army would not be able to fulfill its duty to our Nation.

In order to to maintain our premier warfighting capability, Army resource processes must be flexible, dynamic, transparent and responsive to both our requirements and those of the Joint Force. This is especially true in today's environment. We are at war against conventional and unconventional enemies, and simultaneously pursuing transformation. Our resource process must be transformed to allow us to keep pace with changes brought on by the enemy. Though we anticipate the battle against terrorism will last for years, possibly decades, we cannot program and budget in advance for that war. Our Army obviously cannot ignore our country's current security needs, yet it would be equally imprudent to deviate from the de-

velopment and fielding of our Future Force. Balancing these requirements will be one of our toughest tasks.



The GWOT requires a host of radical paradigm shifts in the way we view the face and nature of our global operating environment, as well as in the way that we conduct operations. Responsible yet creative stewardship of our resources will remain absolutely necessary. Internal controls must be tightened and waste eliminated; outsourcing non-core functions is still an important option. Risk will continue to be a factor and our resourcing decisions must take this into account.



We must transform our resource processes and adjust our priorities to meet the challenge of the current strategic environment. Because we cannot mass-produce a volunteer Army, the retention of the right volunteer force is an imperative. This force is essential to the combat effectiveness of an increasingly complex and technologically sophisticated Army. We must refine and streamline the resource, acquisition, and fielding processes for equipment and supplies as we cannot make up for lost time in a crisis.

ACCELERATED ACQUISITION AND FIELDING

We have adapted and continue to improve our acquisition and fielding processes. In 2002, as Soldiers reported equipment shortages in Afghanistan and elsewhere, we implemented the Rapid Fielding Initiative (RFI) to ensure that all of our troops deploy with the latest available equipment. Equipment fielding schedules were revised to support unit rotation plans, and procurement and fielding cycles were radically compressed.

In coordination with field commanders and our Soldiers, a list of more than 40 mission-essential items, including the Advanced Combat Helmet, close-combat optics, Global Positioning System receivers, Soldier intercoms and hydration systems, was identified for rapid fielding. Laying the foundation for acquisition transformation, RFI already has equipped nine brigade combat teams (BCTs). In FY04, RFI will upgrade a minimum of 15 BCTs and eight enhanced

Separate Brigades, serving in OIF and OEF. Additionally, we are accelerating fielding of select future capabilities to our Current Force. These items include thermal weapon sights, enhanced night vision goggles, improved body armor, the Future Combat Rifle, and a new sniper rifle. Congressional support for regular budget and supplemental spending requests enables our Army to put this improved equipment in the hands of our Soldiers.

With this support, our Army also has instituted a Rapid Equipping Force (REF) that works directly with operational commanders to find solutions to operational requirements. These solutions may be off-the-shelf or near-term developmental items that can be made quickly available. For example, the REF established a coordinated effort to supply U.S. Forces with immediate solutions to counter improvised explosive device (IED) threats. Currently, IED teams are on location providing expertise and material solutions, to safeguard our Soldiers. We are acting aggressively to improve the armor protection of our armored and light-skinned vehicles. Other recent examples of REF products are the Well-Cam and PackBots. The Well-Cam is a camera, attached to an Ethernet cable and a laptop, that enabled Soldiers in Afghanistan to search wells for weapons caches. PackBots are operational robots used to clear caves, buildings, and compounds so Soldiers are not unnecessarily put in harm's way.

RFI and REF provide timely support to our relevant and ready forces and to the Combatant Commanders, and facilitate Army Transformation.

BALANCING OUR ACTIVE AND RESERVE COMPONENT FORCE STRUCTURE

Currently, neither our Active nor Reserve Component is optimized for today's rapid deployability requirements. We will continue ongoing efforts to restructure our forces in order to mitigate stress; to align better with the current and projected security environments; and to offer campaign-quality land power capabilities to the Combatant Commanders. By doing so, we will ensure that our Army provides the responsiveness and depth required to achieve strategic and operational objectives, while simultaneously defending our homeland.

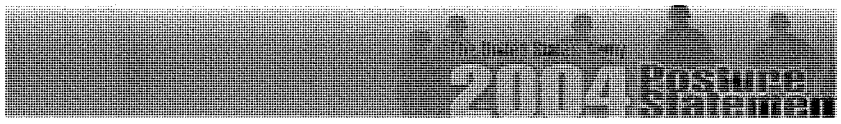
Our Army is restructuring and rebalancing more than 100,000 positions in our Active and Reserve Component force structure. These conversions increase the Active Component capabilities available to support the first 30 days of a rapid response operation. In response to Secretary of Defense guidance, we have already completed approximately 10,000 positions. For example, the Army National Guard provisionally organized 18 additional military police (MP) companies. Between FY04 and FY09, our Army will divest approximately 19,500 positions of less frequently used Active and Reserve Component force structure to further resource critical high demand units such as military police, civil affairs, and special operations forces. We project that future rebalancing efforts will convert an additional 80,000 positions of lower-priority force structure. Despite these changes, our Army will remain stressed to meet antici-

pated requirements. To ensure that our Army can fulfill its commitment to our Nation, we should have the force capability level required to facilitate rebalancing, resetting, restructuring, and transforming of the Army.

Military-to-civilian conversions are another way to improve manpower efficiency. More military personnel will fill the operational force if they are moved out of positions that can be prudently performed by civilians. To improve the Army's ability to better support worldwide commitments, it is essential to start this process now.

Our Reserve Component relies heavily on Full-Time-Support (FTS) personnel to sustain support of current contingencies while restructuring the force. FTS personnel perform the vital, day-to-day organizational, administrative, training and maintenance activities that ensure the highest level of Soldier and unit readiness. To guarantee that our Army's Reserve Component will continue to fulfill ever-increasing demands with trained and ready units, our Army plans to raise FTS authorizations by 15 percent, from the current level of 71,928 to 85,840, by FY12. In 2003, the Army Reserve began implementation of the Federal Reserve Restructuring Initiative. The goal is to better meet contingency requirements and to improve unit readiness.

ACHIEVING GREATER COMBAT CAPABILITY WITH MODULAR, CAPABILITIES-BASED UNIT DESIGNS

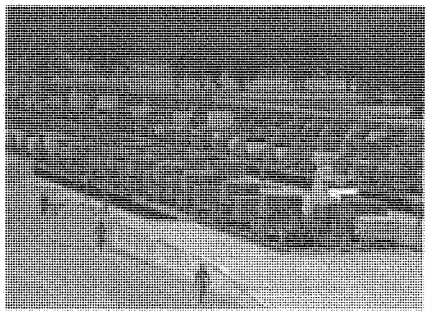


Modular units are interchangeable, scalable, and tailorable formations, which provide the Joint Force Commander with a strategically responsive force that greatly increases his ability to defeat any adversary. Modularity enables us to tailor our capabilities to the requirements of the situation and delivered at the right time and the right place. Modularity permits the Combatant Commander to optimize his warfighting tool set.

Moving toward independent, echelon-above-brigade headquarters will enhance modularity. In accordance with our Unit of Employment (UE) construct, a UE will provide the command-and-control structure into which modular, capabilities-based Units of Action (UA) are organized to meet Combatant Commander requirements. These UAs will incorporate essential maintenance, intelligence, and communications functions previously provided by higher level organizations. Our UE headquarters, while able to accept joint capabilities such as a Standing Joint Force Headquarters element, will have an organic capability, depending on the contingency, to function as a Joint Task Force or Joint Force Land Component Command headquarters like we have already done in Afghanistan and Iraq.

FORCE STABILIZATION

The great demands placed on our Army have forced us to re-examine many of our long-standing personnel and basing practices. As a result, our Army is transitioning to an improved manning system, designed to augment unit readiness by increasing stability and predictability for commanders, Soldiers and families. Force Stabilization will allow Reserve Component Soldiers to plan for their deployments while supporting their civilian jobs and their



community commitments. It places greater emphasis on building and sustaining cohesive, deployable, combat-ready forces for Combatant Commanders.

The home-basing initiative keeps our Soldiers in their assignments at specific installations longer, thus reducing unit turbulence and increasing unit cohesion. Unit Focused Stability synchronizes our Soldiers' assignments to their units' operational cycle, providing a more capable, deployable and prepared unit.

Installations as Our Flagships

Our installations are an essential component in maintaining the premier Army in the world. For the warfighter, installations are the platforms from which we project military power. Our installations perform the following key missions: 1) provide effective training facilities; 2) rapidly

mobilize and deploy the force; 3) provide reach-back capabilities; 4) sustain and reconstitute the force; and 5) care for our families. As power projection platforms, our installations must be equipped with a robust information infrastructure that gives the deployed commander quick and efficient reach-back capabilities. All of these missions help to maintain our Army's deployability and fighting edge.

Historically, we have accepted risk in our infrastructure and installation services in order to maintain our current readiness. The cumulative effect on our installations is that commanders rate more than 50 percent of our facilities as "adversely affecting mission and training requirements." We have adjusted our management processes to be more effective stewards of our resources. In 2002, we established the Installation Management Agency (IMA) to create a corporate-focused structure that provides efficient installation management worldwide. The IMA uses creative management programs to sustain quality installations and maintain the well-being of the entire Army family.

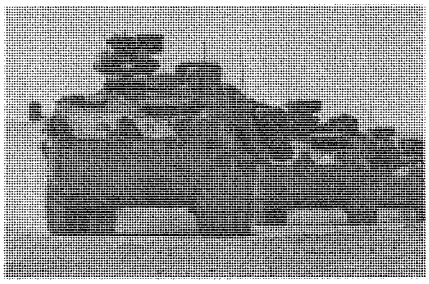
The Installation Information Infrastructure Modernization Program (I3MP) enhances the installation's role in power projection and provides the architecture to address the essential reach-back requirement. Additionally, our Installation Sustainability Plan addresses ways to fulfill environmental requirements without impacting current or future training. Other important progress include modernization of barracks and housing; a Residential Communities Initiative; and divestiture of redundant facilities infrastructure and non-core utility systems through privatization.

In the past few years, the administration and Congress have helped us to begin addressing our infrastructure challenges. We received 94 percent of funding required for installations in FY04. We have made progress in improving our installations by adjusting existing programs and developing new management strategies. However, there is much still left to do in order to upgrade our installations to better support the mission, Soldiers, and our families.

Army Families and Well Being

People are the heart and soul of the Army – Soldiers, civilians, family members, and retirees. Our readiness is inextricably linked to the well being of our people. The Army Family, for both the Active and Reserve Component, is a

force multiplier and provides the foundation to sustain our warrior culture. We have placed significant emphasis on our Reserve Component this year in recognition of their contributions to the Global War on Terrorism. With the help of the administration and Congress, many improvements have been made including the retention and increase of Imminent Danger Pay, Family Separation Allowance, and a sizable pay raise. Other key well-being initiatives include the Spousal Employment Partnership, new TRICARE policies for the reserve components, and improvements in barracks and family housing. For more information on other Army well-being initiatives, see Addendum D (available at www.Army.mil)



Introducing New Capabilities into Current Force

While at war, the urgency to accelerate the development and fielding of new and enhanced capabilities to our fighting forces in the field has never been greater. Our Army is making significant strides in this regard with the employment of a new brigade combat team organization, equipped with the latest available technology, to provide the Combatant Commander with enhanced warfighting capabilities. The rapid fielding of the Stryker vehicle demonstrates our Army's ability to use the acquisition and resource processes to meet a Combatant Commander's urgent needs.

Stryker Brigade Combat Team (SBCT)

In 2003, our Army deployed our first SBCT, the 3rd Brigade, 2nd Infantry Division, to Operation Iraqi Freedom, delivering its enhanced capability to the Joint Force in record time: four years from broad concept to deployment. Exceptional support from Congress and the Office of the Secretary of Defense, along with close collaboration between the Army and industry, made this achievement possible.

Stryker brigades are our Army's first truly network-centric force, filling the capability gap between light- and heavy-force units with an infantry-rich, mobile force that is strategically responsive, tactically agile, and more lethal. Improved battlespace awareness and battle-command technologies embedded in

our SBCTs enhance combat effectiveness and survivability by integrating data from manned and unmanned air and ground-based sensors and providing real-time, continuous situational understanding. Planned enhancements will incorporate still-developing technologies. Significantly, our SBCTs will improve our Army's understanding of Future Force processes, helping us to formulate an advanced warfighting doctrine that will serve as an important bridge

to the development of our Unit of Action, the structural foundation of our Future Force.

This spring, our second SBCT at Fort Lewis, Washington, will become operational. Our third SBCT, in Alaska, will be available in 2005. Continued OSD and congressional support will ensure that subsequent brigades in Hawaii, Louisiana, and Pennsylvania, are fielded between 2004 and 2008.

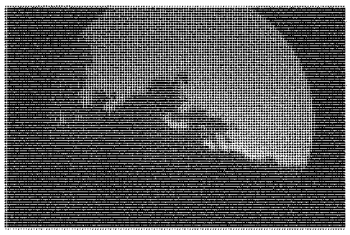
FUTURE CAPABILITIES

Our Army plans to field a number of systems this decade that will provide a foundation for informing the transformation of our Current Force capabilities into those needed by our Future Force. Once fielded, these systems will perform as interdependent systems of systems and will greatly enhance joint warfighting capabilities. Our future capabilities programs are designed to enhance the campaign-quality land-power capabilities that we provide to the Combatant Commanders. Our programs undergo continuous reviews to ensure they meet the capability requirements of the Joint Force. When required, we restructure programs, revise requirements and reprogram resources. The following are just a few of the key transformational systems our Army will begin to field during the next six years:

The Network. Our Future Force situational dominance will depend upon a comprehensive, ubiquitous, and joint-interoperable Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) architecture (the Network) that enables the Joint Force Commander to conduct fully interdependent and network-centric warfare. The Network will provide the backbone of our Future Force and the future Joint Force, enabling the maneuver commander to effectively coordinate battlefield effects. Some of the more important systems within our Network include:

- **Warfighter Information Network - Tactical (WIN-T).** WIN-T will be the communications network of our Future Force, optimized for

offensive and joint operations, while providing the Combatant Commander the capability to perform multiple missions simultaneously.



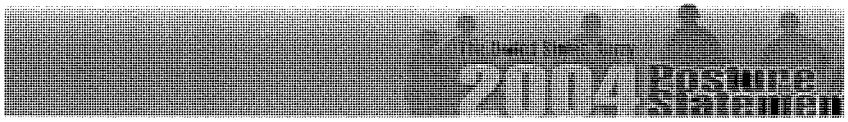
- **Joint Tactical Radio System (JTRS).** JTRS is a family of common, software-defined, programmable radios that will become our Army's primary tactical radio for mobile communications.
- **Distributed Common Ground System – Army (DCGS-A).** DCGS-A is a single, integrated, ground-based, ISR processing system composed of joint, common hardware and software components and is part of the DOD DCGS family of systems.
- **Aerial Common Sensor (ACS).** This ISR system and platform will use robust sensor-to-shooter and reach links, (such as DCGS-A ground stations), to provide commanders at every echelon the tailored, multi-sensor intelligence required for joint operations.

Future Combat Systems (FCS). By extending the network capabilities into the Unit of Action, the FCS provide a system of systems capability

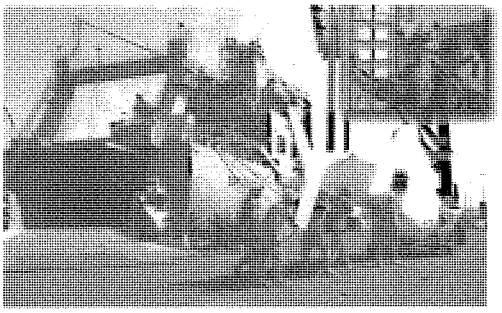
that was not previously available to Soldiers and commanders in joint operations. The core of our Future Force's maneuver Unit of Action is the Future Combat Systems, comprised of 18 manned and unmanned platforms that are centered around the Soldier and integrated within a C4ISR network. FCS will provide our Soldiers greatly enhanced situational awareness, enabling them to see first, understand first, act first and finish decisively. Our FCS platforms will offer the Joint Force networked, lethal direct fire; indirect fire; air defense; complementary non-lethal fires and effects; and troop transport capability. In May 2003, FCS moved, on schedule, into the System Development and Demonstration phase. Our Army is aggressively managing our FCS development effort and intends to achieve initial operational capability by the end of the decade.

Army Science and Technology

The Army Science and Technology (S&T) Program provides our Army superiority in both human and materiel systems arenas—preventing technological surprise. The Army S&T program retains a dynamic portfolio of investments that are responsive to warfighter needs



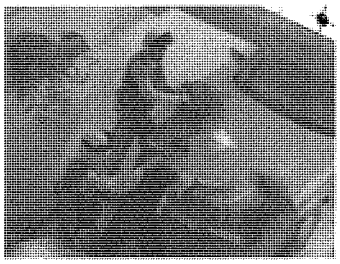
today and into the future. The priority for Army S&T is to pursue paradigm-shifting technologies that can alter the nature of the military competition to our advantage in the future and, where feasible, to exploit opportunities to accelerate the transition of proven technologies to our Current Force.



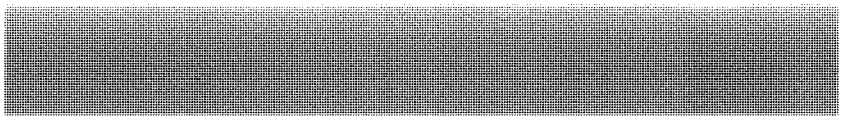
The Army S&T program exploits technology developments from the other services, defense agencies and commercial industry as well as international communities. The S&T program focuses on technology relevant to our Army and joint capabilities. It synchronizes operational concepts development and acquisition programs through transformational business practices that speed technology fielding to the Soldier. The Army's S&T program is balanced to satisfy the high payoff needs of the future force while seeking rapid transitions for critical capabilities to our Current Force.

Joint Operational Concepts (JOpsC)

The Joint Force has transitioned from independent, de-conflicted operations to sustained interoperability. It must now shift rapidly to joint interdependence. To that end, we are reviewing training requirements, traditional relationships and developmental and institutional programs. This process includes ensuring that our operational concepts are nested inside those employed by the Joint Force. The con-



cepts and initiatives listed below discuss particular Army emphasis areas; these areas are not all-inclusive. Functional concepts and other Army initiatives that support the JOpsC are discussed in detail in Addendum K (available at www.Army.mil).



ACTIONABLE INTELLIGENCE

Our Army also is focused on attaining actionable intelligence — intelligence that provides situational understanding to commanders and Soldiers with the speed, accuracy and confidence necessary to influence favorably current and future operations. Actionable intelligence achieves its intended purpose of empowering greater individual initiative and self-synchronization among tactical units by fusing information across organizations and echelons -- accelerating the speed of decision-making and the agility of operations.

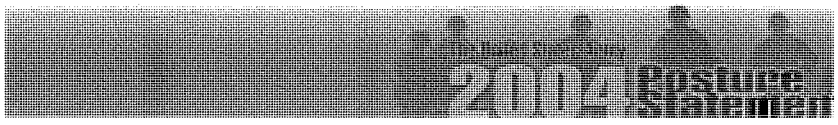
FOCUSED LOGISTICS

Our Army's current actions around the world in support of the Global War on Terrorism present a view of future military operations and provide valuable insights as we transform our logistics systems from the Current to the Future Force. The successes enjoyed during OIF were the result of the integrated logistics team of Soldiers, civilians and contractors, all of whom developed innovative solutions to a range of challenges caused by four major capability gaps in the current logistics system. To sustain combat power, our Army must have the ability to "see the requirements" on-demand through a logistics data network. We require a responsive distribution system, enabled by in-transit and total-asset visibility and managed by a single owner who has positive end-to-end control in the theater. Our Army needs a robust, modular, force-reception capability — a dedicated and trained organization able to quickly open a theater and support continuous sustainment throughout the joint operations area. Lastly, we need an integrated supply chain that has a single proponent, who can reach across the breadth and depth of resources in a joint, interagency and multinational theater. As we move from the Current Force to the Future Force, we will build confidence in the minds of the Combatant Commanders by delivering sustainment on time, every time.

A COMMITMENT TO OUR NATION

Our Nation and our Army are engaged in a Global War on Terrorism -- a war of survival against an insidious and cruel enemy that threatens our civilization and our way of life. This enemy is actively targeting the interests of America and our allies, both within our own country and abroad.

Defeating this enemy requires the continued, strong support of our Nation. The steadfastness of our Nation in this effort is readily apparent. Ordinary Americans are doing their part and will continue to do so. Congressional support for our troops has been critical to our success. The industrial base also has responded, accelerating production of items essential to our Soldiers' protection and warfighting ability.

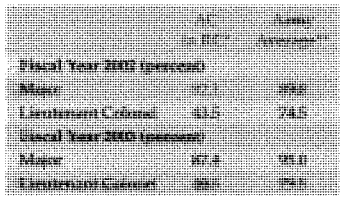


Our Army, too, remains committed to its heritage of preserving freedom. American Soldiers display unrelenting tenacity, steadfast purpose, quiet confidence and selfless heroism. For America to survive and flourish throughout the 21st Century, our Army must defeat decisively the threats that challenge us today. To accomplish this essential task, we must recognize some important truths.

- The fight against terror will be a long one
- Our Army must simultaneously deter aggression, defeat the forces of international terrorism, and maintain our campaign capabilities
- We must continue to modernize to meet the challenges of new enemies
- Our operational tempo is high and will remain so
- Sustained operations and deployments will be the norm for our Soldiers -- NOT the exception
- Old rules and operational methods may no longer apply; we will not achieve victory with a business-as-usual approach

Congressional backing for reset, our continued transformation to the Future Force, our rebalancing and restructuring of the Active and Reserve Component, and improvements to our installation infrastructure is essential to continued mission readiness. We fully appreciate the exceptional support Members and their staffs provided this past year. The support of the American people and their elected representatives in the United States Congress is essential.

Our Army's commitment to the future is certain. We will continue to provide our Nation, the President, the Secretary of Defense and the Combatant Commanders a unique set of core competencies and capabilities. We remain dedicated to training and equipping our Soldiers and growing leaders. We will continue to deliver relevant and ready land power to the Combatant Commanders and the Joint Force. We will protect our country and our way of life as we have for 231 years. It is our privilege, our duty, our honor.



ADDENDUM

(DATA REQUIRED BY NDAA 1994)

Sections 517 and 521 of the National Defense Authorization Act (NDAA) for FY1994 require the information in this addendum. Section 517 requires a report relating to the implementation of the Pilot Program for Active Component Support of the Reserves, which was started under Section 414 of the NDAA for Fiscal Years 1992 and 1993. Section 521 requires a detailed presentation concerning the Army National Guard, including information relating to the implementation of the Army National Guard Combat Readiness Reform Act of 1992 (title XI of Public Law 102-484, and referred in the addendum as 'ANGCRRA'). Section 521 reporting was later amended by Section 704, FY 1996 NDAA. U.S. Army Reserve information is also presented using Section 521 reporting criteria.

Section 517 (b)(2)(A). The promotion rate for officers considered for promotion from within the promotion zone who are serving as active-component advisors to units of the Selected Reserve of the Ready Reserve (in accordance with that program); compared to the promotion rate for other officers considered for promotion from within the promotion zone in the same pay grade and the same competitive category, shown for all officers of the Army.

	AC	Army Average**
Fiscal Year 2002 (percent)		
Major	97.1	95.6
Lieutenant Colonel	83.5	74.5
Fiscal Year 2003 (percent)		
Major	97.4	95.0
Lieutenant Colonel	88.1	75.5

*Active component officers serving in reserve component assignments at time of consideration.

**Active component officers not serving in reserve component assignments at the time of consideration.

Section 517 (b)(2)(B). The promotion rate for officers considered for promotion from below the promotion zone who are serving as active-component advisors to units of the Selected Reserve of the Ready Reserve (in accordance with that program) compared in the same manner as specified in subparagraph (A) (the paragraph above).

	AC	Army Average****
Fiscal Year 2002 (percent)		
Major	3.0	2.1
Lieutenant Colonel	0	0.0
Fiscal Year 2003 (percent)		
Major	3.0	2.1
Lieutenant Colonel	0	0.0

*** Below-the-zone, active-component officers serving in reserve component assignments at time of consideration.

***** Below-the-zone, active-component officers not serving in reserve component assignments at the time of consideration.

Section 521(b).

1. The number and percentage of officers with at least two years of active-duty before becoming a member of the Army National

Guard or U.S. Army Reserve Selected Reserve units.

a. Army National Guard (ARNG) officers: 21,042 or 57.1 percent.

b. U.S. Army Reserve (USAR) officers: 9,986 or 24.78 percent.

2. The number and percentage of enlisted personnel with at least two years of active duty before becoming a member of the Army National Guard or U.S. Army Reserve Selected Reserve units.

a. ARNG enlisted: 137,428 or 43.7 percent.

b. USAR enlisted: 35,261 or 20.55 percent.

3. The number of officers who are graduates of one of the service academies and were released from active duty before completion of their active-duty service obligation. Of those officers:

a. The number who are serving the remaining period of their active-duty service obligation as a member of the Selected Reserve pursuant to section 1112(a)(1) of ANGCRRA:

- In FY03, no officers were released to the Selected Reserve to complete their obligation.

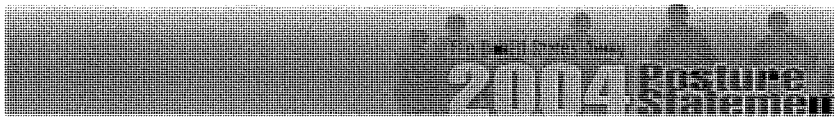
b. The number for whom waivers were granted by the Secretary under section 1112(a)(2) of ANGCRRA, together with the reason for each waiver:

- In FY03, no waivers were granted by the Secretary of the Army.

4. The number of officers who were commissioned as distinguished Reserve Officers' Training Corps graduates and were released from active duty before the completion of their active-duty service obligation:

- In FY03, no distinguished ROTC graduates were released before completing their active-duty service obligation.

a. The number who are serving the remaining period of their active-duty service obligation as a member of the Selected Reserve pursuant to section 1112(a)(1) of ANGCRRA:



- In FY03, no waivers for distinguished ROTC graduates were granted.

b. The number for whom waivers were granted by the Secretary under section 1112(a)(2) of ANGCRRA, together with the reason for each waiver:

- In FY03, no waivers were granted by the Secretary of the Army.

5. The number of officers who are graduates of the Reserve Officers' Training Corps program and who are performing their minimum period of obligated service in accordance with section 1112(b) of ANGCRRA by a combination of (A) two years of active duty, and (B) such additional period of service as is necessary to complete the remainder of such obligation served in the National Guard and, of those officers, the number for whom permission to perform their minimum period of obligated service in accordance with that section was granted during the preceding fiscal year; (and the number of officers who are graduates of the Reserve Officers' Training Corps program and who are performing their minimum period of obligated service in accordance with section 1112(b) of ANGCRRA by a combination of (A) two years of active duty, and (B) such additional period of service as is necessary to complete the remainder of such obligation served in the U.S. Army Reserve and, of those officers, the number for whom permission to perform their minimum period of obligated service in accordance with that section was granted during the preceding fiscal year).

- In FY03, a total of four ROTC graduates were released early from their active-duty obligation. Of this number, three are completing the remainder of their obligation through service in the Army

National Guard, and one officer through service in the U.S. Army Reserve.

6. The number of officers for whom recommendations were made during the preceding fiscal year for a unit vacancy promotion to a grade above first lieutenant and, of those recommendations, the number and percentage that were concurred in by an active duty officer under section 1113(a) of ANGCRRA, shown separately for each of the three categories of officers set forth in section 1113(b) of ANGCRRA (with U.S. Army Reserve data also reported).

   a. 96 USAR officers from units were recommended for unit vacancy promotion; 59 were favorably considered.

   b. 1,797 ARNG officers from units were recommended for unit vacancy promotion and promoted.

7. The number of waivers during the preceding fiscal year under section 1114(a) of ANGCRRA of any standard prescribed by the Secretary establishing a military education requirement for noncommissioned officers and the reason for each such waiver.

   - In FY03, no waivers were granted by the Secretary of the Army.

8. The number and distribution by grade, shown for each state, of personnel in the initial entry training and the non-deployable personnel accounting category established under section 1115 of ANGCRRA for members of the Army National Guard who have not completed the minimum training required for deployment or who are otherwise not available for deployment. (A narrative summary of information pertaining to the U.S. Army Reserve is also provided.)

   a. In FY03, the number of ARNG non-deployable personnel was: 42,276. The National Guard Bureau (NGB) maintains the detailed information.

   b. In FY03, the total number of personnel in the Initial Entry Training (IET) and non-deployable category for the Army Reserve who have not completed the minimum training required for deployment was 16,446 (15,489 enlisted and 957 officers). This number includes 957 officers who had not completed the Officer Basic Course; 11,600 enlisted personnel who had not completed Advance Individual Training (AIT); and 3,889 enlisted who had a reservation and were scheduled to ship (grade was not a category in ship database). The Army Reserve makes a substantial investment in training, time, equipment and related expenses when people enter military service. Separation before completion of an obligated period of service is wasteful because it results in loss of this investment and generates a requirement for increased accessions. Consequently, attrition is an issue of significant concern at all levels of responsibility within the Army Reserve. The Army Reserve identifies Soldiers exhibiting the propensity for early separation and provides counseling, retraining and rehabilitation in an attempt to retain a qualified and trained force. Non Prior Service (NPS) enlistees in Army Reserve units normally are ordered to Initial Active Duty Training (IADT) within 270 days of enlistment. Non Prior Service direct enlistees in the Individual Ready Reserve (IRR) must enter IADT within 180 days of their enlistment date. Non Prior Service enlistees may be authorized an additional period of delay to reporting for duty as provided in AR 601-25, paragraph 3-4. In accordance with DA Pam 611-21, Army Reserve unit commanders determine alternate MOSs for qualified enlisted Soldiers incapable of completing initial training. An enlisted soldier who cannot satisfactorily complete the MOS

training for which he was selected will be required to accept training to qualify for an alternate MOS as determined by the Army Reserve unit commander (DA Pam 611-21).

(The tracking of new Soldiers who have not completed training is done by the use of the training-pay category codes. All Soldiers who are awaiting shipment to their Initial Active Duty for Training (IADT) are listed as Pay Category P. Those Soldiers who have completed IADT, returned and are waiting to attend Advanced Individual Training are coded as Pay Category Q. Those Soldiers attending training are carried in Pay Category F while at school. Those Soldiers who are not deployable for reasons other than lack of IET are listed on the personnel databases with a code indicating the reasons for their non-deployable status.)

9. The number of members of the Army National Guard, shown for each state, that were discharged during the previous fiscal year pursuant to section 1115(c)(1) of ANGCRRA for not completing the minimum training required for deployment within 24 months after entering the National Guard. (A narrative summarizing procedures followed for discharging members of the USAR who have not completed the minimum training required for deployment within 24 months of entering the USAR also is provided.)

   a. The number of ARNG Soldiers discharged during the previous fiscal year pursuant to section 11115(c)(1) of ARNGCRRA for not completing the minimum training required for deployment within 24 months after entering the ARNG is 32 Officers and 9,444 enlisted, which includes all 54 states and territories. The breakdown by each state is maintained by NGB.

   b. Those soldiers who have not completed the required Initial Entry Training (IET) within the first 24 months are discharged from the Army Reserve under AR 135-178, Separation of Enlisted Personnel. Before discharge, every means available is used to ensure the Soldier has had the opportunity to be trained. In some cases, the Soldier was unable to attend the required scheduled training through no fault of his own, and therefore would be given another opportunity to complete his training (e.g., temporary medical condition, death of an immediate family member, failure to complete high school and requiring an additional semester of summer school). In FY04, the Army Reserve will begin implementation of a Delayed Entry Program (DEP). The purpose of the DEP is to allow the U.S. Army Recruiting Command (USAREC) to have complete ownership of new enlistees until they report to the Military Entrance Processing Station (MEPS) for their Initial Active Duty for Training (IADT). This has changed USAREC's mission from solely a contract mission to a contract and ship mission. DEP enlistees do not become members of Troop Program Units, nor are they counted within Army Reserve end strength, until they report to the MEPS to ship for their IADT. If the DEP enlistee is discharged at any time within the DEP, the recruiter is required to recruit a new enlistee to replace the one discharged.

10. The number of waivers, shown for each state, that were granted by the Secretary during the previous fiscal year under section 1115(c)(2) of ANGCRRA of the requirement in section 1115(c)(1) of ANGCRRA described in paragraph (9), together with the reason for each waiver.

    - In FY03, no waivers were granted by the Secretary of the Army.

11. The number of Army National Guard members, shown for each state, (and the number of U.S Army Reserve members), who were screened during the preceding fiscal year

to determine whether they meet minimum physical profile standards required for deployment and, of those members: (A) the number and percentage who did not meet minimum physical profile standards required for deployment; and (B) the number and percentage who were transferred pursuant to section 1116 of ANGCRRA to the personnel accounting category described in paragraph (8).

a. Screened during the preceding fiscal year to determine whether they meet minimum physical profile standards required for deployment:

- In FY03, approximately 78,791 ARNG Soldiers underwent a physical. Of these personnel, 3,076, or 3.9 percent, did not meet the minimum physical profile standards required for deployment.
- In FY03, approximately 33,145 USAR Soldiers underwent a retention physical. Of these, 7,405 were identified for review due to a profile-limiting condition or failure to meet retention standards.

b. The number and percentage that were transferred pursuant to section 1116 of ANGCRRA to the personnel accounting category described in paragraph (8).

- In FY03, 823 members of the ARNG were transferred from a deployable to a non-deployable status.

12. The number of members, and the percentage of the total membership, of the Army National Guard, shown for each state, who underwent a medical screening during the previous fiscal year as provided in section 1117 of ANGCRRA.

- Public Law 104-106 (NDAA 1996), Div A, Title VII, Section 704 (b), Feb 10, 1996, repealed Section 1117 of ANGCRRA.

13. The number of members, and the percentage of the total membership, of the Army National Guard, shown for each state, who underwent a dental screening during the previous fiscal year as provided in section 1117 of ANGCRRA.

- Public Law 104-106 (NDAA 1996), Div A, Title VII, Section 704 (b), Feb 10, 1996, repealed Section 1117 of ANGCRRA.

14. The number of members, and the percentage of the total membership, of the Army National Guard, shown for each state, over the age of 40 who underwent a full physical examination during the previous fiscal year for purposes of section 1117 of ANGCRRA.

- Public Law 104-106 (NDAA 1996), Div A, Title VII, Section 704 (b), Feb 10, 1996, repealed Section 1117 of ANGCRRA.

15. The number of units of the Army National Guard that are scheduled for early deployment in the event of a mobilization and, of those units, the number that are dentally ready for deployment in accordance with section 1118 of ANGCRRA.

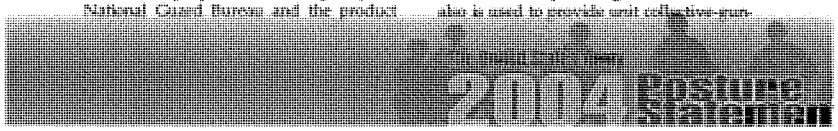
- Public Law 104-106 (NDAA 1996), Div A, Title VII, Section 704 (b), Feb 10, 1996, repealed Section 1118 of ANGCRRA.

16. The estimated post-mobilization training time for each Army National Guard combat unit (and U.S. Army Reserve FSP unit), and a description, displayed in broad categories and by state, of what training would need to be accomplished for Army National Guard combat units (and U.S. Army Reserve FSP units) in a post-mobilization period for purposes of section 1119 of ANGCRRA.

a. Estimated time for post-mobilization training is reported through the Unit Status Report, is classified, and is maintained by the Department of the Army, G-3, Force Readiness Division.

b. Information on the type of training required by units during post- mobilization is maintained by the Continental United States Armies (CONUSAs).

c. Post-mobilization training for enhanced Separate Brigades (eSB) can be categorized as maneuver, attack, defend, command and control, gunnery, NBC defense and sustainment.



d. Post-mobilization training for FSP units is principally common-task testing, NBC defense, force protection, sustainment, command and control, weapons qualification and tactical communications training. Virtually all units also require branch-specific technical training to meet deployment standards. Five additional days are required to conduct convoy lane training (includes live-fire and immediate-action drill training).

17. A description of the measures taken during the preceding fiscal year to comply with the requirement in section 1120 of ANGCRRA to expand the use of simulations, simulators, and advanced training devices and technologies for members and units of the Army National Guard (and the U.S. Army Reserve).

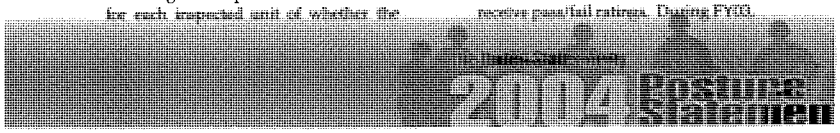
The Army National Guard (ARNG) made significant progress in the use of Training Aids, Devices, Simulators and Simulations (TADSS) during the preceding fiscal year. ARNG teamed with the Training and Doctrine Command's Systems Manager Combined Arms Tactical Trainer in developing a Maneuver Gated Training Strategy that incorporates the use of maneuver simulators into training plans, increasing unit proficiency.

Currently, ARNG is fielding the Abrams Full-Crew Interactive Simulator Trainer (A-FIST XXI) to M1A1 Abrams units. The A-FIST XXI program is co-managed by the National Guard Bureau and the product manager (PM), Ground Combat Tactical Trainers within the Program Executive Office-Simulations, Training and Instrumentation (PEO-STRI). The system was approved by the Commanding General, United States Armor Center in March 2003 as a precision-gunnery trainer for the ARNG. A-FIST XXI allows Soldiers to train on their assigned combat vehicles at home station, virtually replicating the demanding doctrinal Tank Table Standards of a live range. The Advanced Bradley Full-Crew Interactive Simulation Trainer (AB-FIST) will complement the Abrams trainers. Following a rigorous Limited User Test by the Infantry School and the Army Research Institute, AB-FIST was approved in October 2003 by the Commanding General, United States Infantry School as a mobile training device that can be used for Bradley crew training, in addition to the Unit Conduct of Fire Trainer, to meet established live-fire prerequisites as outlined in DA PAM 350-38. In addition, ARNG is rehosting legacy Simulations Network (SIMNET) assets. The SIMNET Upgrades Program will augment SIMNET M1A1 and M2A2 modules with a new, PC-based visual system and host computer, a sound system,and input/output linkages. These modules will be collocated in tank and mechanized infantry platoon sets with upgraded after action review stations.

Janus Battle Staff Trainers are being updated to the Army's approved software solution. Hardware procurement that will support One Semi-Automated Forces (One-SAF) Future Combat System (FCS) fielding in a seamless manner is being planned and executed. The Engagement Skills Trainer (EST 2000) is the Army's approved collective marksmanship training device in FY04. It primarily is used to train and evaluate individual marksmanship for initial-entry Soldiers at the Army training centers. EST 2000 also is used to provide unit collective-gun-

nery and tactical training for dismounted infantry, special operations forces, scouts, engineers, military police squads, and combat support and combat service support elements. These systems also support units conducting the vital homeland-defense and airport-security missions assigned to the ARNG.

In addition to the EST 2000 collective marksmanship trainer, the ARNG developed and fielded the Laser Marksmanship Training System (LMTS) with the Beamhit Corporation. ARNG began fielding the LMTS in 2000. We currently have more than 700 systems fielded, down to the company level. LMTS is a laser-based training device that replicates the firing of the Soldier's weapon without live ammunition. Optimally, it is used to reduce the number of live rounds used during initial, remedial and sustainment training. LMTS is utilized for developing and sustaining marksmanship skills, diagnosing and correcting marksmanship problems, and assessing basic and advanced skills. In August 2003, the Vice Chief of Staff of the Army approved LMTS as an Army training device to be used by units as a component of their basic, rifle-marksmanship training program.



ARNG also has formed a unique partnership with PEO-STRI in the development, verification, validation and accreditation of systems and system upgrades. Through the ARNG Distributed Battle Simulation Program, civilian infrastructure commanders receive assistance from "graybeard" mentors, TADSS facilitators, and Janus Technical Team Exercise Support in the planning, preparation and execution of simulations-based training that augments the support provided by Training Support XXI Soldiers and greatly enhances unit proficiency and readiness.

A-7 The U.S. Army Reserve continues to focus on integrating simulators, simulators and TADSS into training plans. Army Reserve units participate in Corps Warfighter and Battle Command Staff Training exercises to enhance training readiness. The Reserve remains an active member of the Army's simulation community by contributing to the Live, Virtual, Constructive (LVC) Training Environment Periodic Review and the LVC Integration Concept Team. The Army Reserve continues to press PEO-STRI and the National Simulation Center regarding the development of combat support and combat service support functionality within the Army Constructive Training Federation to ensure training capabilities for the entire spectrum. The Army Reserve has also identified the need for greater digital equipment fielding for the reserve components. Current and Future forces need digital capability to train effectively in the contemporary operating environment (COE) and the Joint National Training Capability (JNTC) environment of Army capabilities. The Army Reserve continues to improve training capabilities with the Laser Marksmanship Training System (LMTS) to enhance Army Reserve Soldiers' ability to achieve and maintain marksmanship skills; the Reserve has directly supported the Infantry, Military Police and Transportation schools in the development of devices and simulator-based training, ranging from basic combat to advanced tactical marksmanship involving firing from moving vehicles. The Army Reserve has begun fielding the LMTS as well as the Engagement Skills Trainer 2000. The Army Reserve continues to investigate alternative training mechanisms to simulate urban terrain and potential terrorist activities, including the Virtual Emergency Response Training System (VERTS), which replicates the Fort Dix installation, an Army power projection platform. The Army Reserve continues to develop the Simulations Operations functional area assessment to

ensure that capabilities exist to support the DOD Training Transformation goal of integrated live, virtual and constructive training in a joint environment.

18. Summary tables of unit readiness, shown for each state, (and for the U.S. Army Reserve), and drawn from the unit readiness rating system as required by section 1121 of ANGCRRA, including the personnel readiness rating information and the equipment readiness assessment information required by that section, together with:
    a. Explanations of the information. Readiness tables are classified. This information is maintained by the Department of the Army, G-3.
    b. Based on the information shown in the tables, the Secretary's overall assessment of the deployability of units of the Army National Guard (and U.S. Army Reserve), including a discussion of personnel deficiencies and equipment shortfalls in accordance with such section 1121:
        - Summary tables and overall assessments are classified. Department of the Army, G-3, maintains this information.
19. Summary tables, shown for each state (and the U.S. Army Reserve), of the results of inspections of units of the Army National Guard (and Army Reserve) by inspectors general or other commissioned officers of the Regular Army under the provisions of section 105 of title 32, together with explanations of the information shown in the tables, and including display of:
    a. The number of such inspections;
    b. Identification of the entity conducting each inspection;
    c. The number of units inspected; and
    d. The overall results of such inspections, including the inspector's determination for each inspected unit of whether the unit met deployability standards and, for those units not meeting deployability standards, the reasons for such failure and the status of corrective actions. (For purposes of this report, data for Operational Readiness Evaluations will be provided on eSB and FSP units of the ARNG and for FSP units of the USAR. Training Assessment Model data will be provided to meet this reporting requirement for all other units of the ARNG and USAR. Data on ARNG units will be reported by State and on USAR units by RRC/DRU.)
        - During FY03, ARNG state inspectors general conducted approximately 586 extensive inspections throughout the United States, visiting 970 separate units. Because IG inspections focus on findings and recommendations, the units involved in these inspections were not provided with a pass/fail rating. Results of inspections conducted by inspectors general may be requested for release through The Inspector General of the Army. Operational Readiness Evaluation Data for FSP and eSBs is unavailable because these inspections were eliminated as requirements in 1997. Data available under the Training Assessment Model (TAM) relates to readiness levels and is generally not available in an unclassified format. TAM data is maintained at the state level and is available upon request from state training readiness officials.
        - In accordance with AR 1-201, the United States Army Reserve Command (USARC) conducts inspections of RRCs/DSUs within the USARC Organizational Inspection Program (OIP). USARC maintains the results of all OIPs. The OIP focuses on findings and recommendations and the units do not receive pass/fail ratings. During FY03,

six OIPs were scheduled, but only two were actually conducted. The four units not inspected were not available due to mobilizations. U.S. Army Forces Command (FORSCOM) maintains the results of the CONUSA inspections and Training Assessment Models (TAMs), and holds the data for reserve component FSP unit inspections.

- Summary tables depicting CONUSA inspection numbers by state for the ARNG and by Regional Readiness Command for USAR units are available from DCSOPS, FORSCOM.

20. A listing, for each Army National Guard combat unit (and U.S. Army Reserve FSP units) of the active-duty combat units (and other units) associated with that Army National Guard (and U.S. Army Reserve) unit in accordance with section 1131(a) of ANGCRRA, shown by State, for each such Army National Guard unit (and for the U.S. Army Reserve) by: (A) the assessment of the commander of that associated active-duty unit of the manpower, equipment, and training resource requirements of that National Guard (and Army Reserve) unit in accordance with section 1131(b)(3) of the ANGCRRA; and (B) the results of the validation by the commander of that associated active-duty unit of the compatibility of that National Guard (or U.S. Army Reserve) unit with active duty forces in accordance with section 1131(b)(4) of ANGCRRA.

The listing is contained in FORSCOM Regulation 350-4.

a. Detailed assessments of specific RC units are maintained at the two numbered Armies in the continental United States (CONUSA) and three CONUS-based corps.

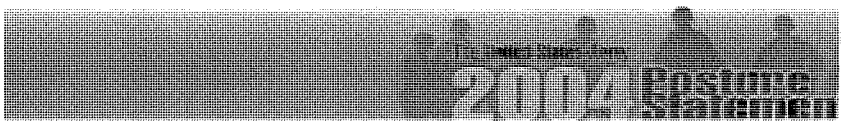
For Army National Guard divisions and eSBs:

- Manpower. Several eSBs have shortages in enlisted personnel and junior officers. Duty Military Occupational Specialty Qualification (DMOSQ) is a training challenge because military occupational specialties (MOS) require extensive training, during a limited training window, in different schools that are often taught simultaneously. Within the eSBs, Full Time Support (FTS) continues to be a challenge, currently filled at approximately 55 percent of requirement. In ARNG divisions, recent force-structure authorization increases have caused near-term shortfalls in fill percentages.
- Equipment. Lack of modernized equipment continues to hamper the eSBs. Shortages in chemical defense equipment and night vision devices limit the full range of capabilities for training of the eSBs. The eSBs continue to receive the bulk of any new equipment fielded to the ARNG.
- Training. Adequate training resources in FY03 enabled eSBs to sustain platoon, pre-mobilization training proficiency. Distances to crew-served weapons ranges and the availability of adequate maneuver areas continue to challenge most units. Current simulations do not provide a theater-level simulation system, compatible with current simulation suites that replicate a major-theater-of-war scenario.

For ARNG (and Army Reserve) Force Support Package (FSP) Units:

- Manpower. Shortfalls in FTS manning limit operations and training management. DMOSQ is impacted by limited school spaces for low-density MOSs. Some MOSs require extensive training (11B, 19K, 13B, 13F, 31 and 63H) and sequential schools demand a Soldier's

absence from his civilian employment for extended periods.



- Equipment. Reserve component units do not have the same level of modernization as their active component counterparts in all cases. This can limit interoperability of combat, combat support and combat service support forces and create command-and-control problems, especially during training. Several FSP units will require that shortfalls in force modernization equipment be addressed at the mobilization station. The following are examples of current and projected modernization efforts in the RC: SINCGARS radios, HMMWVs, generators, FMTVs, Javelin and night vision devices.
- Training. Some Equipment Readiness Code-A (ERC-A) equipment shortages inhibit effective training. Additionally, significant shortages of ERC-B and ERC-C equipment hamper collective training. Army Reserve and National Guard units often have significantly older equipment on which to train. Units will require additional training time after mobilization to achieve proficiency on collective tasks, especially if modernized equipment is provided after mobilization. Limited funds and/or limited days available for training generally preclude some Soldiers from attending either Annual Training or DMOSQ schools. Distance to training areas and facilities further erodes available training time.

b. The results of the validations by the commander are maintained by the Department of the Army, G-3.

For ARNG divisions, eSBs and ARNG (and Army Reserve) FSP Units:

- Modernized equipment is the foremost compatibility issue. As Modified Tables of Organization and Equipment in units are updated and unit reorganization continues, the compatibility issue will improve. Additionally, the truck fleet remains a major disparity, because the Army Reserve has been substituting 1980's vintage 5 Ton trucks for 1960 series 2-1/2 Ton Cargo trucks, which the AC has already replaced with the Light and Medium Family of Tactical Vehicles (LMTV and FMTV).
- Lack of force modernization equipment in the Army Reserve and National Guard affects compatibility the most. Nonstandard software systems in these units impact both the Standard Installation Division Personnel System and the Unit Level Logistics System. System compatibility between components is often a challenge. Until reserve component units are modernized and supported at the same level as AC units, most FSP units will not be fully compatible with the active component until after mobilization. Decreased mobilization-to-deployment and/or employment timelines make it imperative that reserve component units be modernized and equipped at the same level as the active component. The National Guard/Reserve Equipment Appropriation (NGREA) funding allows the Army Reserve to procure modernization equipment that the Army does not provide. This will reduce the disparity in AC/RC compatibility, but is not sufficient to bring the components to full compatibility.

21. A specification of the active-duty personnel assigned to units of the Selected Reserve pursuant to section 414(c) of the National

Defense Authorization Act for Fiscal Years 1992 and 1993 (10 USC. 261 note), shown (A) by State for the Army National Guard (and for the U.S. Army Reserve), (B) by rank of officers, warrant officers, and enlisted members assigned, and (C) by unit or other organizational entity of assignment.

As of 30 Sep 2003, the Army had 4,750 active component Soldiers assigned to Title XI positions. The Army goal is to fill 100 percent of the 5,000 personnel authorized for the AC/RC Program. Although constrained by ongoing support to the Global War on Terror, the active Army is maintaining AC/RC program strength and plans to achieve 100 percent fill by the end of FY04. U.S. Army Human Resources Command carefully tracks fill of Title XI positions in both the Officer Distribution Division and Enlisted Distribution Division.

Title XI FY(03) Authorizations

GLOSSARY

AC	Active Component
ACS	Aerial Common Sensor
ACS	Army Community Service
A-FIST	Abrams Full Crew Interactive Simulator Trainer
AIT	Advanced Individual Training
ANGCRRA	Army National Guard Combat Readiness Reform Act
AOR	Area of Responsibility
ARNG	Army National Guard
BCT	Brigade Combat Team
BCTP	Battle Command Training Program
C4	Command, Control, Communications and Computers
C4ISR	Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance
CONUS	Continental United States
CONUSA	Continental United States Armies
DA	Department of the Army
DCGS-A	Distributed Common Ground System–Army
DEP	Delayed Entry Program
DoD	Department of Defense
DOTMLPF	Doctrine, Organizations, Training, Materiel, Leadership, Personnel and Facilities
DRU	Direct Reporting Unit
eArmyU	Army University Access Online
eSB	enhanced Separate Brigade
FCS	Future Combat System
FM	Field Manual
FORSCOM	Forces Command
FRRI	Federal Reserve Restructuring Initiative
FSP	Forward Support Package
GFR	Ground Forces Readiness
IADT	Initial Active Duty for Training
IMA	Installation Management Agency
IRR	Individual Ready Reserve
ISR	Intelligence, Surveillance and Reconnaissance
JFC	Joint Force Commander
JNTC	Joint National Training Capability

JRTC	Joint Readiness Training Center
LMTS	Laser Marksmanship Training System
LVS	Live, Virtual, Constructive
MACA	Military Assistance to Civil Authorities
MACOM	Major Command
MEADS	Medium Extended Air Defense System
MILES	Multiple Integrated Laser Engagement System
MOS	Military Occupational Specialty
NCOES	Noncommissioned Officer Education System
NDAA	National Defense Authorization Act
NETCOM	Network Enterprise Technology Command
NPS	Non Prior Service
NTC	National Training Center
OCONUS	Outside Continental United States
OPTEMPO	Operations Tempo
OSD	Office of the Secretary of Defense
PAC-3	Patriot Advanced Capability-3
PEO	Program Executive Office
PM	Project Manager
RC	Reserve Component
RRC	Regional Readiness Command
SBCT	Stryker Brigade Combat Team
SETS	Secondary Education Transition Study
SIMNET	Simulation Network
SOF	Special Operations Forces
SRS	Strategic Readiness System
S&T	Science & Technology
TADSS	Training Aids, Devices, Simulators and Simulations
TAM	Training Assessment Model
TRADOC	Training and Doctrine Command
TPU	Troop Program Unit
TSV	Theater Support Vessel
UA	Unit of Action
UAV	Unmanned Aerial Vehicle
USAR	United States Army Reserve
USARC	United States Army Reserve Command
VERTS	Virtual Emergency Response Training System
WMD	Weapons of Mass Destruction

The Soldier's Creed
I WILL ALWAYS PLACE THE MISSION FIRST.
I WILL NEVER ACCEPT DEFEAT.
I WILL NEVER QUIT.
I WILL NEVER LEAVE A FALLEN COMRADE.

Chairman WARNER. Thank you very much, General.
Admiral Clark.

STATEMENT OF ADM VERNON E. CLARK, USN, CHIEF OF NAVAL OPERATIONS

Admiral CLARK. Thank you.

Chairman Warner and Senator Levin, distinguished members of the committee: Good morning to each of you. I very much appreciate the opportunity to be here this morning and to talk to you about your great Navy, the Nation's great Navy.

It is also my privilege, like my friend General Schoomaker, to thank you, on behalf of the men and women of the United States Navy—the uniformed members, the civilian members, active and Reserve—for the support provided by Congress to make our Navy ready to respond to the issues that face us in the world today, and for helping us create the Navy of the future.

The support of Congress in the face of difficult choices, choices that each of you must make each year, has made a difference to our people and to our Nation's defense. All of us in the Navy are very grateful for what you do.

Of course, your Navy is just one part of an unparalleled joint warfighting team. I am also very grateful for these great partners that I am sitting here with today at this table. It has been my privilege to serve with these great professionals and I consider them the best of the best. We spend quite a bit of time together, oftentimes just the Joint Chiefs and sometimes with the Secretary. But I can tell you that this group of individuals is dedicated and committed to delivering the kind of joint operating concepts and transformational capabilities that this Nation needs for the future.

We recognize that it will take all of us working together to bring the kind of joint capabilities that the Nation needs now and in the future.

I have outlined, Mr. Chairman, in some detail our Navy's accomplishments over the last year in my written statement. So, in the interest of time, I will not dwell on them here, except to say that this has been an incredible year for our Navy. Your Navy was built to take credible, persistent, combat power to the far corners of the Earth, anywhere, any time the Nation needs us to take it there. Our operations this past year have proved again the value of being truly ready to meet combat and ready to perform combat operations.

At the height of OIF, 7 of our carriers were deployed, 7 of our 10 air wings, and 75 percent of our amphibious structure. In total, 55 percent of our fleet was deployed overseas.

This last year proved again the importance and the need to exploit the vast maneuver space provided to us and the independence to operate from the seas. Most importantly, it proved once again that our Navy's actions this year highlighted the asymmetric advantages that we possess in this country. That is the ability to deploy unparalleled technology and the genius of our people. The things that you have said about our young men and women are greatly appreciated.

With this year's budget request, we seek to accelerate our advantages into the future, to deliver the right readiness for this Nation

at the right cost, to respond to the Nation's warfighting needs, to shape the 21st century workforce, to deepen our investment in the growth and development of our people, our number one asset, to accelerate our investment in our Seapower 21 vision, to recapitalize and transform our Navy, and to improve its ability to operate as part of the joint warfighting team.

As General Schoomaker pointed out, this is not an easy task. Our budget request this year assesses the capabilities we need for today and tomorrow, and it balances the investment, and the key word here is "balance." It balances the investments that we need so that we can take on the challenges and deal with acceptable risks.

As I indicated to this committee last year, we seek to make improvements in our investments for the future. This year we are requesting procurement dollars for 9 new ships and 104 aircraft. As a point of reference, that's 30 percent more than we projected in last year's budget. The key thing that I have spoken with this committee a number of times about is investment streams and the requirement to get the shipbuilding investment stream to the level that it needs to be.

As a point of reference, the year I arrived in this post the account for the Navy shipbuilding and conversion (SCN) was $4.7 billion. We invest this year a little over $11 billion in new construction and in modernization of our force. I am proud of those improvements.

Our investment in aircraft programs is significantly higher than it was 4 years ago as well. We have invested nearly $6 billion in our 2005 budget request and this is almost double our investment in 2001. This does not include the investment of over $6.3 billion in aviation R&D. This number is triple what it was 3 years ago.

We have focused these investments on important new capabilities. The heart of our future family of ships is the DD(X), the 21st century destroyer, a ship that will absolutely revolutionize naval fire support and almost everything that we know about shipbuilding. The DD(X) has a new, stealthy hull form; integrated electric drive and power generation system; modularity and enhanced human systems engineering will reduce manning, and it is estimated that that alone will save the taxpayers over $18 billion in the life of this program; leveraging the platform for future growth and spiral development. It will change the way we develop and construct ships and it will change the way we fight for the next half century. DD(X) starts this year.

The EA–18G was brand new in the budget last year. This year's budget will greatly accelerate the recapitalization of the just plain old EA–6B, the Nation's only joint electronic attack capability. OIF and congressional action last year accelerated the aging process on this airplane. With your support this year means that relief is on the way, and it cannot happen too soon.

We will commission the first *Virginia* class submarine later this year. *Virginia* will incorporate unmanned vehicles and the ability to plug into joint networks like no other submarine ever has in history. Congress' authorization for multi-year procurement of five of these submarines in last year's budget has helped make these important, complex platforms more affordable for the future.

Of course there are others, like the Littoral Combatant Ship (LCS). We will award it with this year's budget. Our first new aircraft carrier in 3 decades, CVN–21, continues to be funded as well as a sea-based missile defense and a nuclear-powered cruise missile attack submarine (SSGN) and F–18E and Joint Strike Fighter (JSF), and the Advanced Hawkeye program. We accelerate our request for the LPD–17 class.

We have other initiatives in this budget, like our Fleet Response Plan (FRP), mentioned the other day in front of this committee, that will deliver the right readiness and the ability to surge 50 percent more combat power than we have ever been able to do routinely in the past.

General Pace described to you this transformational approach. It is a change in the way we organize, train, and equip our force. It means that we can surge this morning, if the President needs us, to six carrier strike groups anywhere we need to in the world.

It is all about maximizing the investment that the taxpayers make in the Nation's defense. The bottom line is that we have framed in this budget the right current readiness at the right cost to the Nation, and for that I seek your support.

Of course, at the heart of everything good that is happening in the Navy today is this: We are winning the battle for people. The momentum here is fantastic. The Navy has seen higher quality recruits, and the best retention that I have ever seen in my life. In fact, for the third straight year, it is the highest retention in the history of the United States Navy. This was made possible with innovative incentive pay pilot programs. We have experienced dramatically reduced attrition, competitive reenlistments in detailing and outstanding deckplate leadership. In short, this is the highest quality Navy this Nation has ever seen, and it is all about the people.

The authorities you have granted us in this regard are incredibly important and in my view, have made the difference. I ask you to continue to give us the tools to be successful. These tools have been critical in our ability to attract, retain, and shape the kind of workforce we need for the future.

I will say this, as I said last year: Manpower is never free. So in this budget I am suggesting and requesting that we reduce our end strength by some 7,900 people from the 2004 levels. Our strategy for doing this is simple. We are capturing the work on our ships and stations, improving our training processes, leveraging technology advances, decommissioning our older, most manpower-intensive platforms where the risks allow us to do so, and rebalancing our Reserve and Active Forces in a way that delivers the right skills when we need them and reduces the personnel strain.

I am committed, Mr. Chairman and members of this committee, to building a Navy that can maximize the capability of our people and minimize the total number on the payroll. We will continue to invest in our sailors' growth and development, and our ability to provide them meaningful and challenging careers that lets them make a difference. This is part of our covenant with them.

As our Navy delivers the more high-tech systems that I mentioned, it is my intent for us to also develop a smaller yet smarter workforce. We will spend whatever it takes to equip and enable our

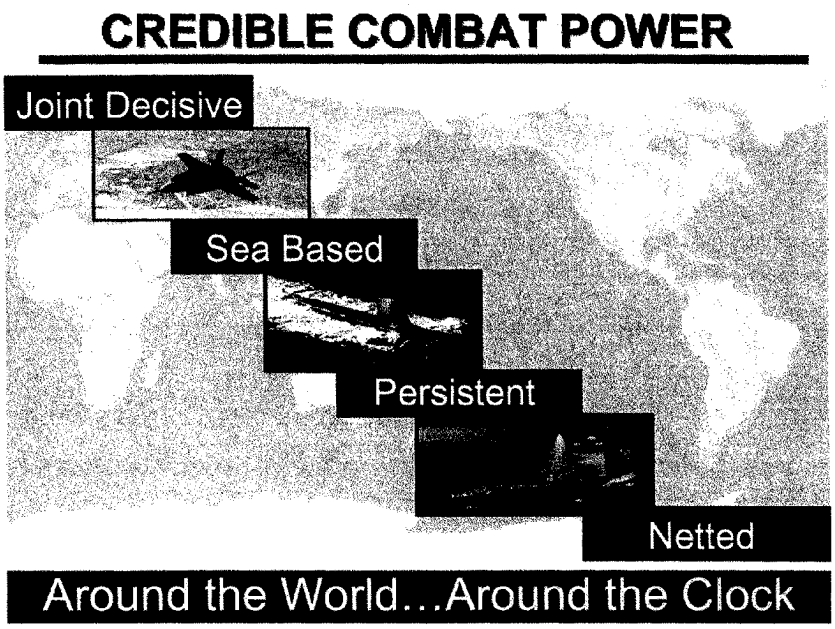
sailors. We do not want to spend one extra penny for manpower that we do not need.

There is a lot more to talk about, and we will in the closed hearing that follows.

Mr. Chairman, in response to your question about my position and understanding and beliefs prior to OIF, I say this: As I watched the hearing the other day with the Secretary and General Pace, I watched the kind of questions that you were asking, and I thought about where we were at that point in time in our history. I asked the Secretary of Defense if I could read just part of a private correspondence that I sent to him on the morning we commenced combat operations.

It is a private correspondence, I will not read the whole thing, but this part he said would be appropriate for me to share with you, and this was at my request. I started by telling him that we were ready. I said that the leadership in the fleet was confident. I said that our readiness was higher than I had ever seen it.

Then I said this: "For some this is about weapons of mass destruction, for others it is about al Qaeda. For us it is about all of that and more. Iraq has been shooting at our aircraft for over 5 years." I went on to say to him that it was my belief that this cause was just and our people believed in it. Mr. Chairman, that was my position then and that is what I believe today.



I look forward to your questions and I thank you again for the opportunity to be here.

[The prepared statement of Admiral Clark follows:]

PREPARED STATEMENT BY ADM VERNON E. CLARK, USN

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before you. I want to express my gratitude for the substantial investment you have made in making this Navy the best Navy the Nation has ever seen.

Your Navy is built to take credible combat power to the far corners of this Earth, taking the sovereignty of the United States of America anywhere we need to take it and at anytime we choose to do so. It is capable of delivering the options this Nation needs to meet the challenges of today and it is committed to the future capabilities the joint force will need to win throughout the 21st century.

It is a wonderful time to be a part of this Navy and a great privilege to be associated with so many men and women—active and Reserve, uniformed and civilian—committed to the service and defense of this Nation. I speak for all of our men and women in thanking you for your exceptional and continuous support.

I: YOUR NAVY TODAY—PROJECTING DECISIVE JOINT POWER ACROSS THE GLOBE

Your Navy's performance in Operations Enduring Freedom (OEF) and Iraqi Freedom (OIF) last year proved—more than anything else—the value of the combat readiness in which you have invested. It demonstrated the importance of the latest technology in surveillance, command and control, and persistent attack. It highlighted our ability to exploit the vast maneuver space provided by the sea. Most importantly, it reaffirmed the single greatest advantage we hold over every potential adversary: the genius of young Americans contributing their utmost in their service to this Nation.

This past year, the fleet produced the best readiness levels I have seen in my career. We have invested billions of dollars to training, maintenance, spare parts, ordnance, flying hours and steaming days accounts these last few years, and that investment resulted in the combat ready response of more than half the Navy to operations worldwide.

Seven aircraft carriers and 9 big deck amphibious ships were among the 164 U.S. Navy ships forward deployed last spring in support of OEF and OIF and contingencies worldwide. The Military Sealift Command sailed and chartered more than 210 ships and moved 94 percent of the Nation's joint and combined capability to the fight. We also deployed 3 fleet hospitals, a hospital ship, 22 P–3 aircraft, 25 naval coastal warfare detachments and we mobilized more than 12,000 reservists.

OIF and OEF were the most joint operations in our history and they have provided the best possible opportunity to dissect, study, and analyze some of the limiting factors and effects of how we fight. Beyond the mere numbers, these operations confirmed that we should continue to pursue the capabilities that enhance our power projection, our defensive protection and the operational independence afforded by the sea.

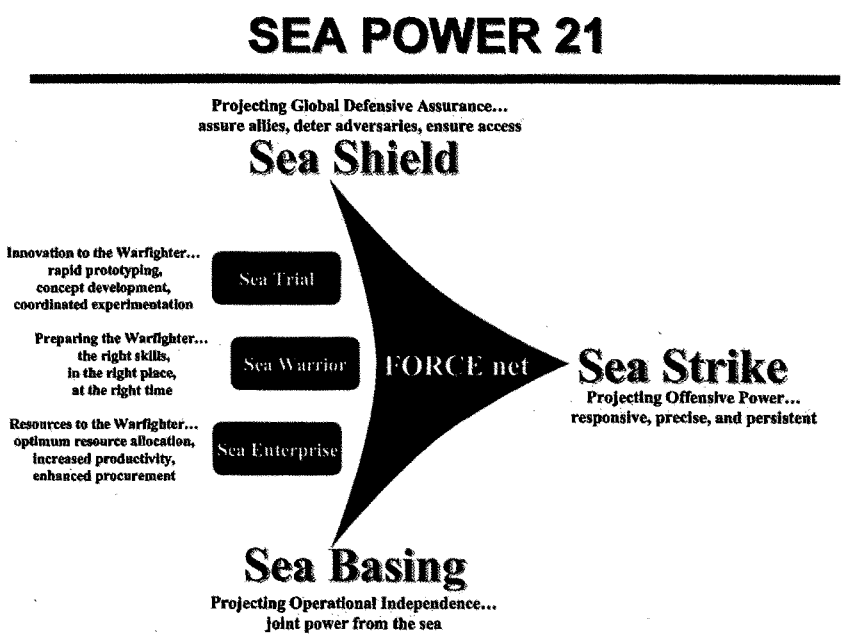
While we recognize that we must continue to challenge all of our assumptions in a variety of scenarios, our lessons learned indicate that the capabilities-based investment strategies, new warfighting concepts and enabling technologies we are pursuing in our Sea Power 21 vision are on the right vector. Let me give you some examples.

• The reach, precision, and persistence of our Sea Strike capability added lethality to ground combat engagements in Afghanistan and Iraq. The joint surveillance and attack technologies and processes that we have already put in place forced enemy combat formations to either disband and desert or be destroyed in place by precision weapons. Navy aviation generated more than 7,000 combat sorties in support of OIF, sometimes flying joint missions with land-based Air Force tankers more than 900 miles from their carriers. Surface combatants and submarines struck targets throughout Iraq with more than 800 Tomahawk missiles. The initial deployments of new F/A–18E/F Super Hornet squadrons greatly extended our range, payload, and refueling options. We will realize more of these capabilities in the future through the conversion of the first of four Trident nuclear-powered ballistic missile submarines (SSBNs) into the nuclear-powered cruise missile attack submarine (SSGN) conventional strike and Special Operations Forces (SOF) platform.

• U.S.S. *Higgins* (DDG 76) provided early warning and tracking to joint forces in Kuwait and southern Iraq to help warn forces and defend against the threat of theater ballistic missiles. This tracking-only capability demonstrated the initial potential of extending Sea Shield defenses to the joint force. In a sign of things to come, we advanced our missile defense capability with another successful flight test of our developmental sea-based defense against short-to-medium range ballistic missiles. U.S.S. *Lake Erie* (CG 70) and U.S.S. *Russell* (DDG 59) combined to acquire, track, and hit a ballistic test target in space with an SM–3 missile in support of the ballistic missile defense program. This was the fifth success in six tests.

Our OIF mine warfare efforts cleared 913 nautical miles of water in the Khor Abd Allah and Umm Qasr waterways, opening 21 berths in the Umm Qasr port and clearing the way for operations in the littoral areas of the Northern Persian Gulf and for humanitarian aid shipments into Iraq. These operations included the use of the High Speed Vessel X1 (Joint Venture), Navy patrol craft and six unmanned, autonomous underwater vehicles (AUVs) directly from our science and technology (S&T) program in the littoral for special operations and mine clearance operations, and gave us important insights into our vision for both future littoral and mine warfare concepts and capabilities.

• We projected joint combat forces across the globe with greater speed and agility than we have ever done in the past. Along with our number one joint partner, the United States Marine Corps, we put more than 60,000 combat-ready marines ashore in Kuwait in 30 days. The Navy's Military Sealift Command delivered more than 32 million square feet of combat cargo and more than 1 billion gallons of fuel to the Nation's warfighters in OEF and OIF. We were able to sustain the strategic and operational flexibility afforded by Sea Basing to generate a three-axis attack on Iraq from our dispersed aircraft carriers, surface combatants, and submarines in the Red Sea, the Mediterranean Sea, and the Persian Gulf.



We forged ahead in our shipbuilding investments. We awarded three preliminary design contracts for the Littoral Combat Ship (LCS), leading to the construction of the first LCS in fiscal year 2005. We selected the baseline design for the DD(X) 21st century multi-mission destroyer, launched *San Antonio* (LPD 17), christened *Virginia* (SSN 774) and began fabrication of *Makin Island* (LHD 8) and *Lewis and Clark* (T–AKE 1).

• In OIF, we were able to know more, decide faster, and act more decisively than ever before. Our three-axis, multi-platform attack from the Persian Gulf, Red Sea, and Mediterranean Sea—as well as the geometric increases in striking power, defensive protection and speed of maneuver generated by our joint forces—is made possible by the power of joint command, control, communications, computers, intelligence, surveillance, and reconnaissance (C^4ISR). Fully 80 percent of targets struck with precision ordnance were unknown at aircraft launch. We developed and installed CENTRIX and COWAN networks to enhance joint and coalition interoperability on all of our deploying ships, and we also promulgated the FORCEnet campaign plan, defining the architecture and standards that will help us further integrate warriors, sensors, weapons, and platforms.

These accomplishments this past year have taught us more about who we are and where we are headed. We know that the combat power of the truly joint force is much more than the sum of the Services' contributions. We understand the value of readiness and the importance we must place on improving the fleet's ability to respond and surge with decisive combat power. We relearned the lesson that over flight and basing is not guaranteed; our dominance of the maritime domain and our consequent ability to quickly deliver an agile combat force is a priceless advantage for our Nation. We reaffirmed that our people are now, and always will be, the root of our success.

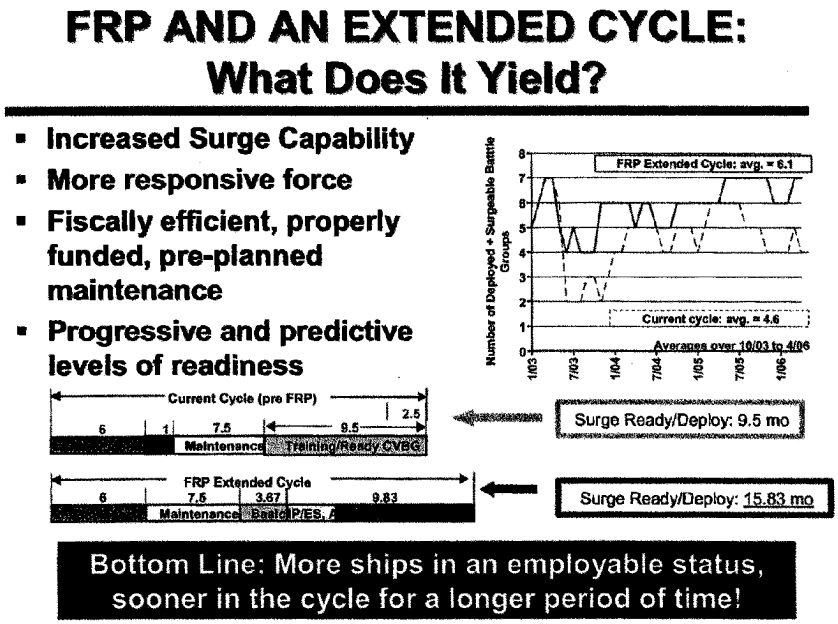
Readiness, advanced technology, dominance of the maritime domain, and the genius of our people—these are our asymmetric advantages. They are the core of our Sea Power 21 Navy and we intend to accelerate these advantages over the coming year. We are in a position to continue to build upon and recapitalize these strengths, to innovate and experiment, and to push the envelope of operational art and technological progress. Our ability to project persistent, sovereign combat power to the far corners of the Earth now and in the future depends on it.

In last year's statement, I discussed principally the advantages brought by advanced technology and the vast maneuver area of the sea in our Sea Power 21 vision.

This year, I would like to spend a few moments on the efforts we have taken to improve our other advantages: our readiness to respond to the Nation's defense needs and the tools we will need to ensure the right people for our Sea Power 21 Navy.

Today's naval forces and personnel are superbly trained and well provisioned with ordnance, repair parts and supplies. They are ready earlier—for a longer period of time—and they are deploying at a higher state of readiness than ever before. In short, the Navy this Nation has paid for is truly ready to accomplish its missions and it is more ready to do so than I have ever seen it in my career.

I mentioned the results; in OIF, we surged more than half the fleet to fight half a world away. The combined power of our forward presence forces and those that we were able to surge overseas helped keep our enemies on the run. This conflict and our analysis of future campaign scenarios make it apparent that the readiness of both our forward forces and the forces that must surge forward will be critically important to our future. It is no longer good enough to be able to surge just once every 10 years or so.



The war on terrorism and the unpredictability of the global security environment make this an immediate imperative. The Nation needs a Navy that can provide homeland defense and be both forward and ready to surge forward to deliver overmatching and decisive combat power whenever and wherever needed. We are committed to do so.

With this in mind, we launched the Fleet Response Plan (FRP) this past year. The FRP resets the force in a way that will allow us to surge about 50 percent more

combat power on short notice and at the same time, potentially reduce some of the personnel strain of forward rotations.

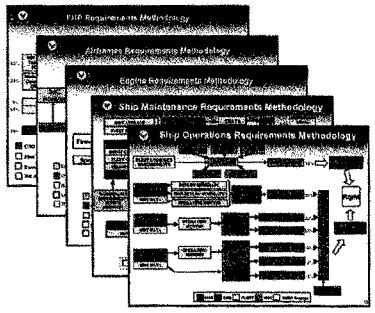
In simplest terms, rather than having only two or three Carrier Strike Groups (CSGs) forward-deployed and properly equipped at any one time—and an ability to surge only a maximum of two more—the FRP enables us to now consistently deliver six forward deployed or ready to surge CSGs almost immediately, plus two additional CSGs in the basic training phase in 90 days or less. This FRP capability is commonly known as six plus two.

To do this, we have fundamentally reconfigured our employment policy, fleet maintenance, deployment preparations and fleet manning policies to expand the operational availability of non-deployed fleet units. We have shifted the readiness cycle from one centered solely on the next-scheduled-deployment to one focused on returning ships to the right level of readiness for both surge and deployed operations. The net result is a fleet that is more ready, with more combat power—more quickly—than was possible in the past.

Our forward rotations remain critically important to our security, to strengthening alliances and coalitions, and to the global war on terrorism. But it is clear we must make these rotations with purpose, not just to fill the calendar.

For example, implementing the new Proliferation Security Initiative to counter weapons of mass destruction (WMD) as a tool for terrorists and their sponsors is likely to involve the use of forward naval forces in maritime interdiction. Additionally, we plan to be ready to establish initial missile defense operations using forward-deployed *Arleigh Burke* class guided missile destroyers and their Aegis systems in Long-Range Tracking and Surveillance roles. Of course, we will continue to provide combatant commanders with the combat-credible, rapidly employable forward forces required for the Nation's defense.

But at the same time, we recognize that our ability to rapidly surge significant additional combat power and provide a range of joint employment options is critically important to the swift and decisive combat operations that must be our future. The FRP allows us to do just that.



We have an obligation to accurately assess the readiness needs and create the resources necessary to support this FRP capability. This has also been a major focus this past year.

Readiness is a complex process. It is much more than a count of our end strength, our ordnance and spares, and the number of hours and days spent training. It is the product of our ability to deliver the required effects needed to accomplish the

mission. We know too that readiness at any cost is unacceptable; as leaders we must achieve and deliver the right readiness at the right cost.

The Integrated Readiness Capability Assessment (IRCA) was developed for the fiscal year 2005 budget to more carefully examine our readiness processes. Starting with our new FRP operating construct, we took a hard look at everything that we needed to have on hand and what we needed to do to deliver the required combat readiness for the Nation's needs.

INTEGRATED READINESS CAPABILITY ASSESSMENT

- **Process**
  - **Map modeling process**
  - **Identify opportunities for mitigation**
  - **Assess level of risk**
    - **Process Change**
    - **Management Initiatives**
    - **Transformational**

FRP capability used as the yardstick for all assessments

The IRCA assessment helped us understand the collective contributions of all the components of readiness, accurately define the requirements, align the proper funding, and provide a balanced investment to the right accounts. It improved our visibility into the true requirements and it gave us a methodology to assess and understand both acceptable and unacceptable risks to our current readiness investments.

The end result is this: we have carefully defined the readiness requirement. We have identified areas where we can streamline or cease activities that do not add to readiness. We have requested the funds our commanders need to create the right readiness for fiscal year 2005. I ask for your support of this year's current readiness request as we've redefined these processes and already taken acceptable risks. We will deliver the right readiness at the right cost to the Nation.

These improvements to our operational availability of forces and the associated readiness elements will not be made on the backs of our people.

We have a smart, talented cadre of professionals who have chosen a lifestyle of service. Our ability to challenge them with meaningful, satisfying work that lets them make a difference is part of our covenant with them as leaders.

A new operating concept like the FRP could not be made if we still had the kind of manpower-intensive mindset to problem solving we had even 5 years ago. But today, thanks to your sustained investment in S&T among others, we have already realized some of the advancements in information technology, simulators, human system integration, enterprise resource planning, Web-enabled technical assistance and ship and aircraft maintenance practices that can reduce the amount of labor intensive functions, the training, and the technical work required to ensure our readiness.

These advances speak to our larger vision for our Sea Power 21 Navy and its Sea Warrior initiative. Our people are today's capital assets. Without them, all the advanced weaponry in the world would sit dormant. But at the same time, it is the

effects they deliver that are the true measure of their contribution to readiness and capability.

We have long had a force stove-piped into active and Reserves, uniformed and civilian, sea and shore, and enlisted and officer components, all with work driven largely by the limits of industrial age military capabilities, personnel practices, technology, and the organizational models of the day.

In today's era, when we have whole corporations bought or sold just to capture the intellectual capital of an organization, we recognize that our human resource strategy must capture the talents and efforts of our capital as well. Our vision for the future is a more truly integrated workforce wholly committed to mission accomplishment. This must include a total force approach that can functionally assess missions, manpower, technology, and training and produce an enterprise-wide resource strategy.

The principles of this strategy are clear. We will capture the work that contributes to mission accomplishment. We will define enterprise-wide standards. We will leverage technology to both enhance and capitalize on the growth and development of our people. We will streamline organizational layers. We will instill competition. We will incentivize the talents and behaviors needed to accomplish the mission.

There is still much to study and discuss as we develop our total force approach in the months and years ahead, but we can already see that the application of these principles will help us more accurately define our manpower requirement and lead us to a smaller workforce in the future.

The benefits are enormous. Our people will be powerfully motivated and better educated and more experienced in the coming years. They will be properly equipped to maintain, operate and manage the higher technology equipments that are our future. Our combat capabilities will continue to grow.

We must be committed to building a Navy that maximizes the capability of its people while minimizing the total number in the manpower account. Manpower is never free; in fact, manpower we do not truly need limits both the true potential of our people and the investments needed to transform our combat capability for the future.

Our developing human resource strategy will likely require changes in the way we recruit, assess, train and manage the workforce. Sea Warrior of course, is crucial here. Last year's authorization of the National Security Personnel System (NSPS) is very important to such an effort as well. The NSPS Act authorized a more flexible civilian personnel management system that allows the Department of Defense (DOD) to be a more competitive and progressive employer at a time when our national security demands a highly responsive system of civilian personnel management. The legislation also ensures that merit systems principles govern changes in personnel management, whistleblowers are protected, discrimination and nepotism remain illegal, and veterans' preference is protected. This will facilitate the kind of competition and performance we need for the future. The Navy has volunteered to be in the first wave of conversions to NSPS in 2004.

Most importantly, I believe we will also need these kinds of flexible authorities and incentive tools to shape the career paths and our skills mix in a way that lets us compete for the right talent in uniform, not just within the Navy, but with all the Nation's employers as well.

In the months ahead, I will continue to discuss with you our developing human resource strategy and the kinds of authorities we'll need to deliver on it.

We are beginning to realize the powerful warfighting capabilities of Sea Power 21. Our culture of readiness and our commitment to developing a 21st century workforce will help us employ those transformational capabilities to achieve unprecedented maritime power.

III. OUR FISCAL YEAR 2005 BUDGET REQUEST

This past year our Navy's budget request continued our effort to sustain our current readiness gains, deepen the growth and development of our people and invest in our transformational Sea Power 21 vision while harvesting the efficiencies needed to fund and support these three critical priorities.

This year we intend to:

- Deliver the right readiness at the right cost to support the war on terror and the Nation's warfighting needs,
- Shape the 21st century workforce and deepen the growth and development of our people, and
- Accelerate our investment in Sea Power 21 to recapitalize and transform our force and improve its ability to operate as an effective component of our joint warfighting team.

At the same time, we will continue to pursue the Sea Enterprise improvements that make us a more effective Navy in both fiscal year 2005 and beyond. Our Navy budget request for fiscal year 2005 and the future supports this intent and includes:

• Nine new construction ships in fiscal year 2005, including construction of the first transformational destroyer (DD(X)) and the LCS, the acceleration of a *San Antonio* Class Amphibious Transport Dock Class ship from fiscal year 2006 to fiscal year 2005, and one SSBN conversion and refueling. Our request this year includes the following ships:

- Three *Arleigh Burke* Class Guided Missile Destroyers (DDG)
- One *Virginia* class submarine (SSN)
- One *San Antonio* Class Amphibious Transport Dock (LPD)
- Two Lewis and Clark Class Dry Cargo and Ammunition ships (T–AKE)
- One 21st century Destroyer (DD(X))
- One LCS, and
- One SSBN conversion/refueling

The investment plan across the Future Year's Defense Plan (FYDP) also includes three Maritime Prepositioned Force (Future) (MPF (F)) ships and advanced procurement for an MPF (F) aviation variant. While our build rate dips to six ships in fiscal year 2006, this is a reflection of a shift in focus to the next generation surface combatants and sea basing capabilities. We have also assessed the risks and divested several assets that have high operating costs and limited technological growth capacity for our transformational future; this includes decommissioning two coastal mine hunter ships, and the accelerated decommissioning of the remaining *Spruance*-class destroyers, *Sacramento* Class Fast Combat Store Ships and the first five *Ticonderoga*-class guided missile cruisers in the FYDP.

• Procurement of 104 new aircraft in fiscal year 2005, including the F/A–18 E/F Super Hornet, the MH–60 R/S Seahawk and Knighthawk Multi-mission Combat Helicopter, the T–45 Goshawk training aircraft, and the Marine Corps MV–22 Osprey among others. We continue to maximize the return on procurement dollars through the use of multi-year procurement (MYP) contracts for established aircraft programs like the Super Hornet and we have increased our research and development investment this year in the Joint Strike Fighter (JSF), the EA–18G Airborne Electronic Attack (AEA) aircraft and the broad area anti-submarine, anti-surface, maritime and littoral intelligence, surveillance, and reconnaissance (ISR) capable Multi-mission Maritime Aircraft (MMA).

• Investment in transformational unmanned underwater vehicles (UUVs) like the Long-Term Mine Reconnaissance System, and unmanned aerial vehicles (UAVs) such as the Broad Area Maritime Surveillance UAV and the Joint-Unmanned Combat Air System. The budget also requests funding for experimental hull forms like the X-Craft, and other advanced technologies including the Joint Aerial Common Sensor (JACS).

• A 3.5 percent basic pay raise, and a reduction in average out-of-pocket housing costs from 3.5 percent to 0, allowing sailors and their families more of an opportunity to own their own homes and have more of a stake in their communities;

• Investment in housing and public-private ventures that will help eliminate inadequate barracks and family housing by fiscal year 2007 and enable us to house shipboard sailors ashore when their vessel is in homeport by fiscal year 2008;

• Readiness investment that supports the FRP, including sustained funding for ship and aircraft operations, aviation depot maintenance, and precision-guided munitions. This includes improvements in ship maintenance and training scheduling to maximize surge capabilities.

A. Delivering the Right Readiness at the Right Cost

To me, the "right readiness" is the return on your investment in the Navy. Readiness is the catalyst that brings combat power to bear whenever it is needed. Achieving readiness at any cost however is not good for the Nation. This year's request accurately defines our readiness needs, assesses the risks to our investment and—as requested—will deliver the resources necessary for leaders in the Navy to create the required readiness.

• Ship Operations and Flying Hours requests funds for ship operations operational tempo (OPTEMPO) of 51.0 days per quarter for our deployed forces and 24 days per quarter for our non-deployed forces. We have properly funded the flying hour account to support the appropriate levels of readiness and longer employability requirements of the FRP. This level of steaming and flying hours will enable our ships and air wings to achieve the required readiness over the longer periods defined by the FRP, and as a result, it will improve our ability to surge in crisis and sustain readiness during deployment.

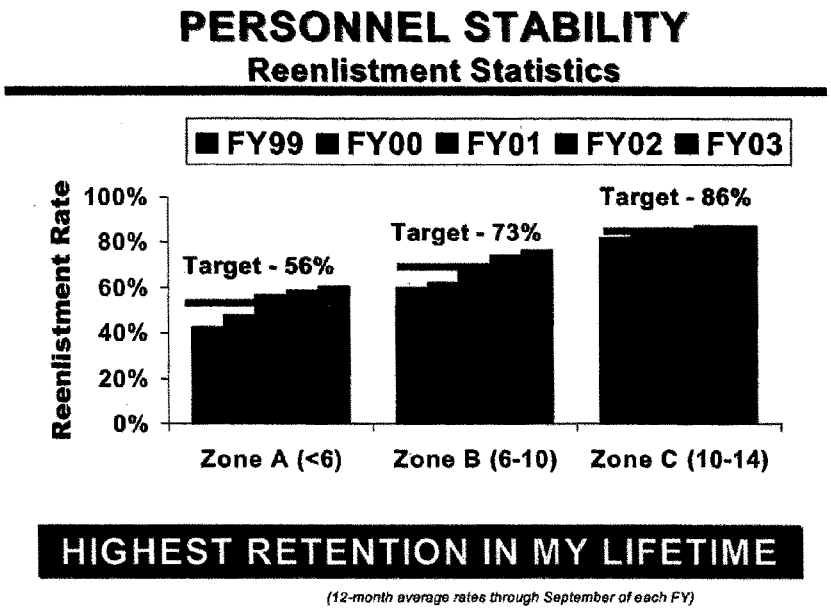
• Ship and Aviation Maintenance. We have made significant improvements these last few years by reducing major ship depot maintenance backlogs and aircraft depot-level repair back orders; improving aircraft engine spares; adding ship depot availabilities; ramping up ordnance and spare parts production; maintaining steady "mission capable" rates in deployed aircraft; fully funding aviation initial outfitting; and investing in reliability improvements.

Our fiscal year 2005 request continues to improve the availability of non-deployed aircraft and meets our 100 percent deployed airframe goals. Our ship maintenance request continues to "buy-down" the annual deferred maintenance backlog and sustains our overall ship maintenance requirement. We are making great strides in improving the visibility and cost effectiveness of our ship depot maintenance program, reducing the number of changes in work package planning and using our continuous maintenance practices when changes must be made.

• Shore Installations. Our Facilities Sustainment, Restoration, and Modernization (SRM) program remains focused on improving readiness and quality of service for our sailors. While our fiscal year 2005 Military Construction and Sustainment program reflects difficult but necessary trade-offs between shore infrastructure and fleet recapitalization, the majority of the SRM trends are very good. Facilities sustainment has increased in fiscal year 2005. Our budget request keeps us on a course to achieve the DOD goal of a 67-year recapitalization rate by fiscal year 2008, achieve Navy goals to eliminate inadequate family and bachelor housing by fiscal year 2007 and provides Homeport Ashore Bachelor Housing by fiscal year 2008. We are exploring innovative solutions to provide safe, efficient installations for our service members, including design-build improvements, and base realignment and closure (BRAC) land sales via the General Services Administration (GSA) Internet. Additionally, with the establishment of Navy Installations Command, we have improved our capability to manage our dispersed facility operations, conserve valuable resources, establish enterprise-wide standards and continue to improve our facility infrastructure.

• Precision-guided munitions receive continued investment in our fiscal year 2005 request with emphasis on increasing the Joint Stand-Off Weapon (JSOW) baseline variant, Joint Direct Attack Munition (JDAM), Tactical Tomahawk (TACTOM), and Laser-Guided Bomb (LGB) inventory levels, while the JSOW penetrator variant enters full-rate production. We have also entered into a common missile program with the U.S. Army to replace the aging inventory of TOW, Maverick, and Hellfire missiles. Joint partnerships with the Air Force and Army in several of our munitions programs continue to help us optimize both our inventories and precious research and development investments and will remain a focus for us in the future.

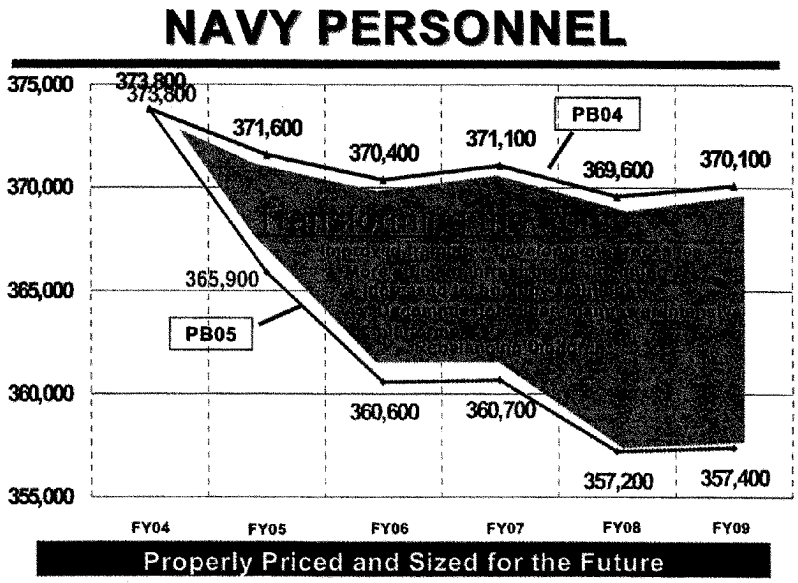
• Training Readiness. We continue to make significant strides in this critical area. In fiscal year 2004, Congress supported two important programs to advance our training readiness. First, you endorsed the Training Resource Strategy (TRS), to provide more complex threat scenarios and to improve the overall realism and value of our training. Additionally, you funded the Tactical Training Theater Assessment and Planning Program to provide for a comprehensive training range sustainment plan. Our fiscal year 2005 budget continues this work. We are working to make the Joint National Training Capability a reality. We have established a single office to direct policy and management oversight for all Navy ranges as well as serve as the resource sponsor for all training ranges, target development and procurement, and the Navy portion of the Major Range Test Facility Base (MRTFB).



• Environmental Readiness. In the last 2 years, Congress has provided significant legislative relief from encroachment and environmental requirements by amending the Endangered Species Act, the Migratory Bird Treaty Act, and the Marine Mammal Protection Act. These amendments help to balance environmental stewardships and realistic military training. We will continue to focus the use of our ranges on military training, and remain committed to our environmental obligations through integrated natural resource management plans. We will make every effort to protect marine mammals while ensuring our sailors are properly trained and our transformational systems are properly tested. We look forward to demonstrating our ongoing commitment to environmental stewardship.

B. Shaping the 21st Century Workforce

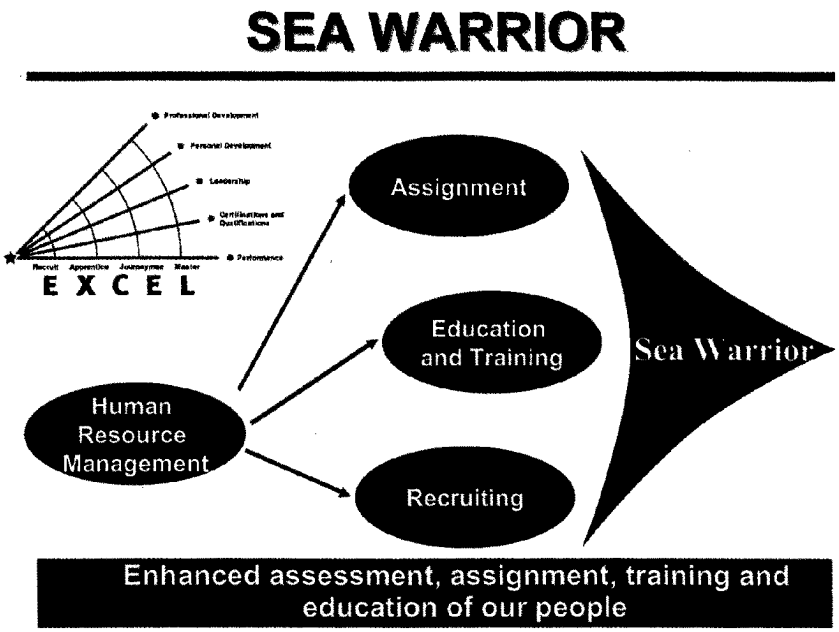
At the heart of everything good in our Navy today is this: We are winning the battle for people. Higher quality recruits, historic retention rates, innovative incentive pay pilots, reduced attrition, competitive reenlistments and detailing, and outstanding leadership in the ranks has made this the highest quality workforce the Navy has ever seen.



In 2003 specifically, we exceeded all of our aggregate retention goals for the third straight year; our recruiters reached their quotas for the 28th consecutive month;

we reduced attrition another 10 percent from fiscal year 2002 levels; and, through decommissioning older, manpower-intensive platforms, improving training and employment processes, and more efficient infrastructure organization, we have reduced gaps at sea to less than 1,000, down from 18,000 gaps just 6 years ago.

These accomplishments will help us develop the 21st century workforce we will need for our Sea Power 21 Navy. As our Navy becomes more high tech, so must our workforce. Our people will be a more educated and experienced group of professionals in the coming years, and we must properly employ their talents. We will spend whatever it takes to equip and enable these outstanding Americans, but we do not want to spend one extra penny for manpower we do not need.



As part of that effort, we continue to pursue the kind of new technologies and competitive personnel policies that will streamline both combat and non-combat personnel positions, improve the two-way integration of active and Reserve missions, and reduce the Navy's total manpower structure. To that end, we are proposing a fiscal year 2005 Navy end strength reduction of 7,900 personnel.

We will use existing authorities and our Perform To Serve (PTS) program to preserve the specialties, skill sets and expertise needed to continue the proper balancing of the force.

We intend to build on the growth and development momentum of the last 3 recordbreaking years. We are fully committed to ensuring every sailor has the opportunity and resources to successfully compete. Our goal remains attracting, developing, and retaining the most highly skilled and educated workforce of warriors we have ever had, to lead the 21st century Navy.

As I testified last year, Sea Warrior is designed to enhance the assessment, assignment, training, and education of our sailors.

Our fiscal year 2005 budget request includes the following tools we need to enhance mission accomplishment and professional growth:

• Innovative personnel employment practices are being implemented throughout the fleet. Optimal manning experiments in U.S.S. *Boxer* (LHD–4), U.S.S. *Milius* (DDG 69) and U.S.S. *Mobile Bay* (CG 53) produced revolutionary shipboard watch standing practices, while reducing overall manning requirements and allowing sailors to focus on their core responsibilities. The fleet is implementing best practices from these experiments to change Ship Manning Documents in their respective classes. Optimal manning means optimal employment for our sailors.

We have our fourth crew aboard U.S.S. *Fletcher* (DD 992) and our third crew aboard U.S.S. *Higgins* (DDG 76) in our ongoing Sea Swap initiative. This has saved millions of dollars in transit fuel costs and increased our forward presence without lengthening deployment times for our sailors. *Fletcher* and *Higgins* will return to San Diego this year after a period of forward deployed operations of 22 months and 17 months respectively. We will continue to assess their condition and deep maintenance needs to develop and apply lessons learned to future Sea Swap initiatives.

• Selective Reenlistment Bonus (SRB). Targeted bonuses such as SRB are critical to our ability to compete for our highly trained and talented workforce both within the Navy and with employers across the Nation as well. Proper funding, adequate room for growth, and the flexible authorities needed to target the right skills against the right market forces are important to the shape of the workforce. This program specifically targets retention bonuses against the most critical skills we need for our future. We ask for your continued support and full funding of this program.

• Perform to Serve. Last year, we introduced PTS to align our Navy personnel inventory and skill sets through a centrally managed reenlistment program and instill competition in the retention process. The pilot program has proven so successful in steering sailors in overmanned ratings into skill areas where they are most needed that the program has been expanded. More than 2,400 sailors have been steered to undermanned ratings and approved for reenlistment since the program began last February and we will continue this effort in 2005.

• Assignment Incentive Pay (AIP) is a financial incentive designed to attract qualified sailors to a select group of difficult to fill duty stations. AIP allows sailors to bid for additional monetary compensation in return for service in these locations. An integral part of our Sea Warrior effort, AIP will enhance combat readiness by

permitting market forces to efficiently distribute sailors where they are most needed. Since the pilot program began last June, more than 1,100 AIP bids have been processed resulting in 238 sailors receiving bonuses for duty in these demanding billets. We ask for continued support of this initiative.

• Professional Military Education (PME). We are taking a more comprehensive approach to the education of our people than we have done in the past. We are in the process of developing a PME continuum that integrates general education, traditional Navy-specific PME, and Joint PME (JPME) curricula. This will allow us to develop a program that fully incorporates all aspects of our professional and personal growth and development training needs. Improvements so far include establishing networks with civilian educational institutions, developing new degree programs, and establishing partnerships with other services' institutions. We are also expanding opportunity through distance learning and the Internet. We are committed to broadening the professional and intellectual horizons of both our officers and our enlisted men and women to prepare them to operate tomorrow's fleet and assume key naval and joint leadership roles.

• The Human Performance Center (HPC) has been established to apply Human Performance and Human System Integration principles in the research, development and acquisition processes. In short, the HPS will help us understand the science of learning. They will ensure training is driven by fleet requirements and they will focus requirements on the performance needed to carry out our missions. This will eliminate potential performance and training deficiencies, save money and help us improve our readiness.

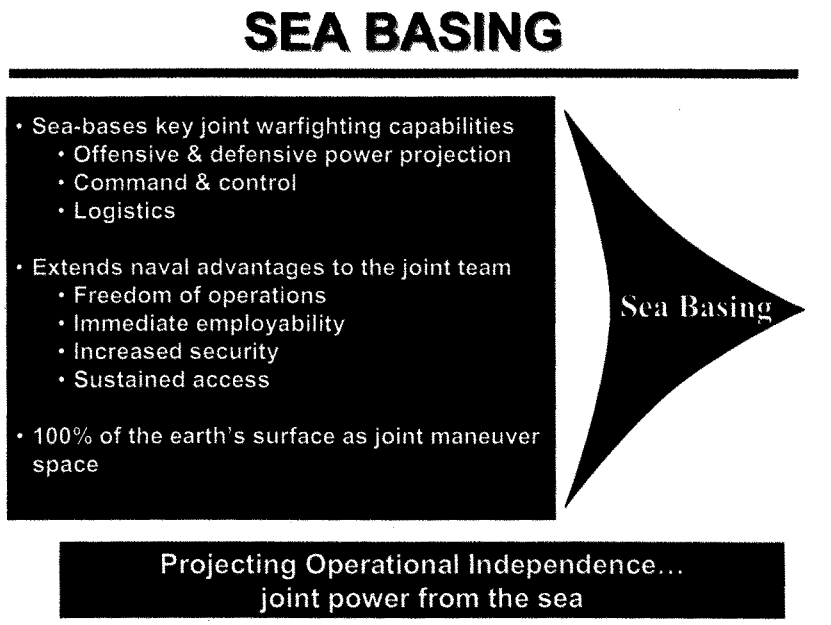
• The Integrated Learning Environment (ILE) is the heart of our revolution in training. ILE is a family of systems that, when linked, will provide our sailors with the ability to develop their own learning plans, diagnose their strengths and weaknesses, and tailor their education to support both personal and professional growth. They will manage their career requirements, training and education records. It will match content to career requirements so training is delivered at the right time. Most importantly, these services will be provided anytime, anywhere via the Internet and the Navy-Marine Corps Intranet (NMCI).

We are taking advantage of every opportunity to accelerate the tools we need to develop our 21st century workforce. The improvements and pilots that Congress has supported—including bonuses, pay table adjustments, retirement reforms, better medical benefits, and our Sea Warrior initiatives—are having the desired impact.

Your support of our fiscal year 2005 request for a 3.5 percent basic pay raise, for our efforts to transform our manpower structure in some fundamental ways, and for a reduction in average out-of-pocket housing costs from 3.5 percent to 0 will have a direct effect on our ability to properly size and shape the 21st century workforce that is our future.

C. Accelerate Our Investment in Sea Power 21

As I testified last year, Sea Power 21 defines the capabilities and processes that the 21st century Navy will deliver. We now have an opportunity to accelerate the advantages that our vision for a joint, netted, and sea-based force provides this Nation, thanks to the tremendous investments that you have made in our battle for people, in the quality of service for each of our sailors, and in readiness.



This year, we will pursue distributed and networked solutions that could revolutionize our capability. We will focus on the power of sea basing and our complementary capability and alignment with our number one joint partner, the U.S. Marine Corps. We will sustain a robust science and technology program, and we will exploit investments made in joint research and development (R&D) wherever possible.

For example, we are urgently pursuing technical advances to support our sailors, soldiers, airmen, and marines in Iraq. The Naval Sea Systems Command and the Office of Naval Research are working closely with all Services, government agencies, industry, and academic and government laboratories to identify, test, and deploy promising technologies that can counter improvised explosive devices (IEDs), snipers, suicide bombers, and other force protection threats. We are also pursuing other quick-reaction technology initiatives such as persistent wide-area surveillance using small UAVs, blue force tracking technology, body armor, and extremity protection. We are committed to ensuring that the joint force on the ground is as equipped as they possibly can be to accomplish their mission.

Our highest priority programs within each of the core capability sets that define our Sea Power 21 vision.

Sea basing is the projection of operational independence. Our future investments will exploit the largest maneuver areas on the face of the Earth: the sea. Sea basing serves as the foundation from which offensive and defensive fires are projected—

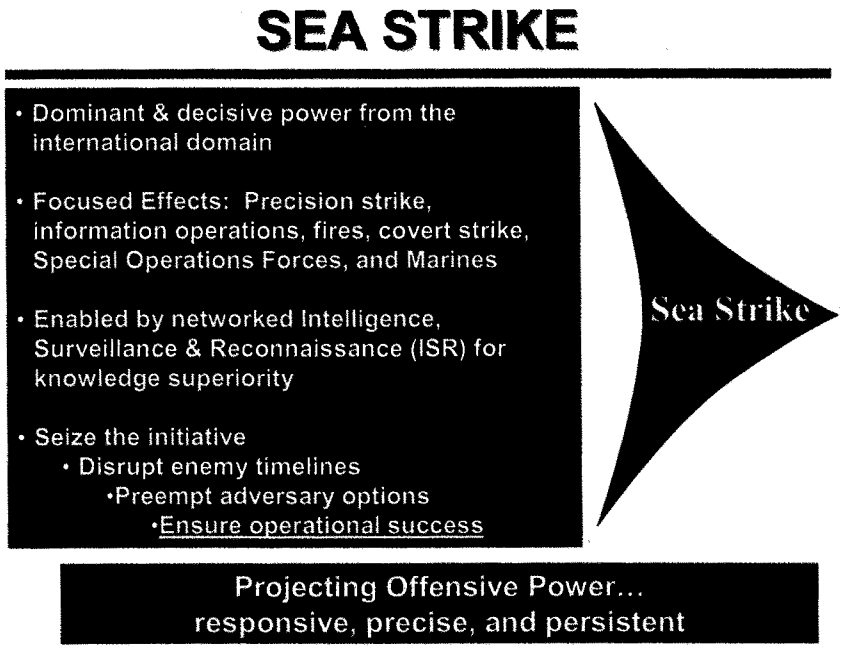
making Sea Strike and Sea Shield a reality. Sea basing capabilities include, Joint Command and Control, Afloat Power Projection and Integrated Joint Logistics.

Our intent is to maximize our sea basing capability and minimize as much as possible our reliance on shore-based support nodes. To do this, we will make doctrinal, organizational and operational changes mandated by this concept and by the underlying technology that makes it possible. We have an opportunity here, along with the U.S. Marine Corps and the U.S. Army, to reexamine some of the fundamentals of not only how we move and stage ground forces, but how we fight ashore as well. Our highest priority sea basing investments include:

• Surface Combatant Family of Ships. As I have already testified, the power of joint forces in OIF was in the synergy of individual Service strengths. The same concept holds true within the Navy itself. We seek the synergy of networks, sensors, weapons, and platforms that will make the joint force greater in combat power than the sum of the individual parts. Development of the next generation of surface combatants as "sea frames"—analogous to "air frames"—that are part of a modular system is just such an endeavor.

The surface combatant family of ships allows us to dramatically expand the growth potential of our surface combatants with less technical and fiscal risk. To bring these concepts to life and to take them—and the fight—to the enemy, we have decided upon three entirely new ship classes. The first to premier will be the LCS in 2007. The DD(X) will follow in about 2011. Just a few years after the first DD(X), the keel will be laid on the first CG(X), the next class of cruiser designed from the keel up for theater air and ballistic missile defense.

Our R&D efforts and experimentation with high speed and theater support vessels like *Swift*, and the X-Craft later this year, are helping us reduce our technical risk and apply important lessons in hull design and mission modularity to the development of the surface combatant family of ships. DD(X)is the heart of the family and will spiral promising technologies to both CG(X) and LCS in the future. I will discuss each one of these ships in more detail below.



• CVN 21 is the centerpiece of the Navy CSG of the future. It will bring transformational capabilities to the fleet, including a new electrical generation and distribution system, the electromagnetic aircraft launching system (EMALS), a new/enlarged flight deck, weapons and material handling improvements, and a crew reduction of at least 800 personnel. It will be able to generate higher daily and sustained sortie rates than our *Nimitz*-class aircraft carriers. Our fiscal year 2005 request of

$979 million in R&D and procurement funding continues the development of CVN 21 and several critical technologies in the lead ship, including the EMALS prototype and testing already ongoing in Lakehurst, New Jersey. Construction of the CVN 21 remains on track to start in fiscal year 2007.

• CVN 70 RCOH. The fiscal year 2005 budget provides advanced procurement funds for the U.S.S. *Carl Vinson* (CVN 70) RCOH, now scheduled to begin in fiscal year 2006. CVN 70 has sufficient reactor fuel for one additional deployment. This action makes the best possible use of *Carl Vinson*'s remaining fuel capacity and improves shipyard work loading.

• MPF(F). These future Maritime Prepositioning Ships will serve a broader operational function than current prepositioned ships, creating greatly expanded operational flexibility and effectiveness. We envision a force that will enhance the responsiveness of the joint team by the at-sea assembly of a Marine Expeditionary Brigade that arrives by high-speed airlift or sealift from the United States or forward operating locations or bases. These ships will off-load forces, weapons and supplies selectively while remaining far over the horizon, and they will reconstitute ground maneuver forces aboard ship after completing assaults deep inland. They will sustain in-theater logistics, communications and medical capabilities for the joint force for extended periods as well. Our fiscal year 2005 request accelerates the lead MPF(F) from fiscal year 2008 to fiscal year 2007 to reflect our emphasis on Sea Basing capabilities.

Sea Strike is the projection of precise and persistent offensive power. The core capabilities include Time Sensitive Strike; ISR; Ship to Objective Maneuver; and Electronic Warfare and Information Operations.

We are already investing in impressive programs that will provide the capabilities necessary to support Sea Strike; these include the following fiscal year 2005 priorities:

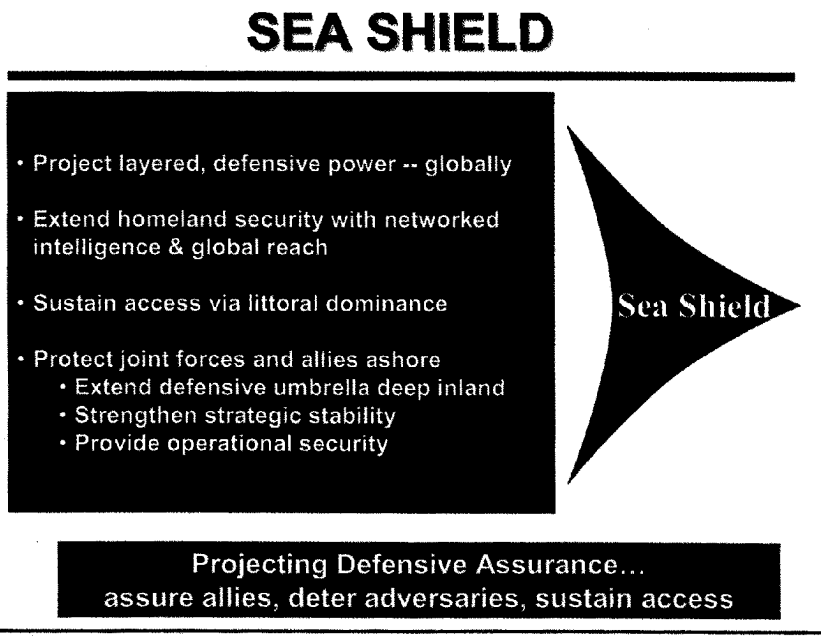
• DD(X). The technology engine for the fleet, DD(X) is the centerpiece of a surface combatant family of ships and will deliver a broad range of capabilities. This advanced multi-mission destroyer will bring revolutionary improvements to precise, time-critical strike and joint fires and our Expeditionary Strike Groups of the future.

Transformational and leap ahead technologies include an electric drive and integrated power system; an advanced gun system (AGS) with the high rate of fire and precision to reach almost 8 times farther and command more than 110 times the area of our current five inch capability; the new Multi-Function Radar/Volume Search Radar suite; optimal manning through advanced system automation, stealth through reduced acoustic, magnetic, infrared, and radar cross-section signature; and enhanced survivability through automated damage control and fire protection systems. DD(X) is an enabler both technically and operationally. This seaframe will also reduce our seagoing manpower requirements and will lower total ownership costs.

This program will provide a baseline for spiral development of technology and engineering to support a range of future seaframes such as CG(X). It will also enable the transformation of our operations ashore. Imagine an Army or Marine rifleman on the ground and Navy petty officer at sea looking at the same real-time picture of enemy troops encamped at a municipal airport. With the push of a button, the rifleman sends targeting coordinates to the petty officer in a DD(X) more than 50 miles offshore. Within a few minutes, rounds from the AGS start falling on the airport with incredible accuracy. That kind of on-demand, persistent time-critical strike will revolutionize our joint fire support and ground maneuver concepts of operation and it will free our strike fighter aircraft for more difficult targets at much greater ranges.

DD(X)'s all-electric drive, called the Integrated Power System (IPS), will not only drive the ship through the water, but will also generate the kind of power capacity that will enable eventual replacement of the AGS. When combined with the physical capacity and volume of the hull form, DD(X) could lead us to revolutionary technologies from the naval research enterprise like the electromagnetic rail gun and directed energy weapons. The fact that rail guns do not require any explosives will free up magazine space for other mission areas. This capability is projected to be a reality in the 2015 to 2018 timeframe. DD(X) will be in service for decades after that; having the kind of growth potential to install those kinds of technologies dramatically lowers our future development costs.

The funding profile for DD(X) supports the 14,000-ton design and the S-Band Volume Search Radar (VSR). Lead ship detail design and construction are planned to start in fiscal year 2005.



• JSF. The JSF will enhance our Navy precision with unprecedented stealth and range as part of the family of tri-Service, next-generation strike aircraft. It will maximize commonality and technological superiority while minimizing life cycle cost. The JSF has just completed the second year of a 10–11 year development program, and is experiencing a variety of typical challenges that affect System Development and Demonstration (SDD) program schedule and cost. Additional design work is required to address technical issues, primarily weight projections. The budget therefore realigns $5 billion from procurement appropriations in fiscal year 2005 through fiscal year 2009, and Low Rate Initial Production (LRIP) was deferred 1 year to fiscal year 2007. The JSF remains vital to our future. It will give us the range, persistence and survivability needed to keep our strike fighters viable for years to come.

• SSGN. Funding is included in fiscal year 2005 to continue the SSGN conversion program. Our future SSGN capability will provide covert conventional strike platforms capable of carrying 150 Tomahawk missiles. The SSGN will also have the capacity and capability to support SOF for an extended period, providing clandestine insertion and retrieval by lockout chamber, dry deck shelters or the Advanced Seal Delivery System (ASDS), and they will be arrayed with a variety of unmanned vehicles to enhance the Joint Forces Commander's knowledge of the battlespace. The inherently large capacity of these hulls will enable us to leverage future payloads and sensors for years to come. We still expect our first SSGN to be operational in 2007.

• EA–18G. Last year, you initiated funding at our request to replace the aging EA–6B Prowler with the EA–18G AEA aircraft. Increased EA–6B usage in 2003 has resulted in wing center section or outer wing panel fatigue for some 43 EA–6B aircraft, making your support last year critical to our ability to dramatically accelerate the recapitalization of the Nation's only joint electronic attack capability. Using the demonstrated growth capacity of the F/A–18E/F, the EA–18G will quickly recapitalize our electronic attack capability at lower procurement cost, with significant savings in operating and support costs; all while providing the growth potential for fu-

ture electronic warfare system improvements. It will use the Improved Capability Three (ICAP III) receiver suite and provide selective reactive jamming capability to the warfighter. This will both improve the lethality of the air wing and enhance the commonality of aircraft on the carrier deck. We begin purchasing airframes in fiscal year 2006 and will achieve initial operating capability in 2009.

Sea Shield is the projection of layered, global defensive power.

Sea Shield will enhance deterrence and warfighting power by way of real-time integration with joint and coalition forces, high speed littoral attack platforms setting and exploiting widely distributed sensors, and the direct projection of defensive power in the littoral and deep inland. Sea Shield capabilities include: homeland defense, sea and littoral control, and theater air and missile defense. Our highest priority Sea Shield programs this year include:

• Mine Warfare Programs. We intend to field a set of unmanned, modular mine countermeasure (MCM) systems employable from a variety of host platforms or shore sites to minimize our risk from mines and sustain our national economic and military access to every corner of the globe. Our future MCM capability will be faster, more precise and organic to both Expeditionary and Carrier Strike Groups and will ultimately remove both the man and our mammals from the minefield. Within the FYDP, we expect to reduce the time that it takes to render sea mining ineffective by at least half of the time that it takes us today.

Our fiscal year 2005 budget request includes funding to realize organic mine warfare capabilities in one Strike Group this year, while maintaining the funding necessary for a potent and dedicated MCM force. We have also requested an increase of $167 million across the FYDP for mine warfare programs, to include unmanned vehicles such as the Long-Term Mine Reconnaissance System (LMRS) to provide a clandestine mine reconnaissance capability from our *Los Angeles*-class submarines, and the Remote Minehunting System on *Arleigh Burke*-class destroyers (DDGs 91–96). Both of these programs are scheduled to reach initial operating capability (IOC) milestones this year. Future introduction of the LCS with mine warfare mission modules will improve the ability of Strike Groups to neutralize mine threats in parallel with—not in sequence before—other operations.

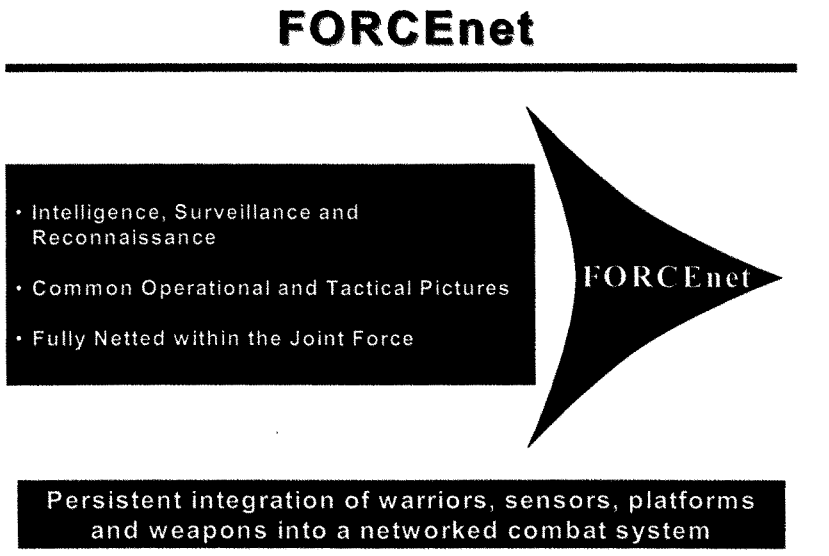
• Littoral Combat Ship. The role of LCS is to provide access to joint forces in the littorals; a capability gap we identified as a result of the 2001 Quadrennial Defense Review. During the past year and a half, considerable campaign analysis and fleet battle experiments have demonstrated that naval forces need better ways to fight

mines; small, fast, highly armed boats; and quiet diesel and advanced air-independent propulsion submarines operating in shallow waters. The performance of U.S. Navy Patrol Craft and the experimental HSV–X1 Joint Venture in the Iraqi littoral was critical to the early detection and destruction of the Iraqi mine threat. The same kind of capability needs to be delivered in a fast, maneuverable, shallow-draft platform that has the survivability to operate independently. LCS will have these characteristics, along with self-defense, navigation, and command-and-control systems.

LCS will be built from the keel up to be a part of a netted and distributed force, and will be the first ship designed with FORCEnet as a requirement. The main battery of LCS will be its off-board systems: manned helicopters and unmanned aerial, surface and underwater vehicles. It is the off-board vehicles—with both sensors and weapons—that will enter the highest threat areas. Its modular design, built to open-systems architecture standards, provides flexibility and a means to rapidly reconfigure mission modules and payloads. As technology matures, the Navy will not have to buy a new LCS platform, but will upgrade the mission modules or the unmanned systems.

LCS also will have an advanced hull design and be significantly different from any warship that has been built for the U.S. Navy. Detail design and construction of the first LCS Flight 0 ship is planned in fiscal year 2005. The LCS requirements process is tailored to support the rapid delivery of two flights (Flight 0 and 1) of ships, using an evolutionary, "spiral" acquisition approach. The spiral development process allows time-phased capability improvement for ship and mission systems. This incremental development and delivery strategy supports the ship's accelerated acquisition schedule, diverse threat and capability requirements, and dynamic levels of technology push/pull. The ship's modular, open design will also enable lifecycle adaptability and affordability. Four LCSs have been added since last year's budget plan was submitted.

• Missile Defense. Our Navy is poised to contribute significantly in fielding initial sea based missile defense capabilities to meet the near-term ballistic missile threat to our homeland, our deployed forces, and our friends and allies. We are working closely under the authority of the Missile Defense Agency (MDA) to deliver this much-needed capability to the Nation's combatant commanders. Our sea-based missile defense programs experienced tremendous success on the test range this year, scoring two of three intercepts. Continued development and testing will support initial defensive operations beginning in the fall of 2004, with select *Arleigh Burke*-class destroyers providing long range surveillance and tracking to the Nation's capability late this year.



• MMA—Broad Area Maritime Surveillance (BAMS). We significantly increased this year's R&D funding for the MMA to recapitalize our 1950s-era Lockheed "Electra" based P–3 force. Our acquisition plan was further refined this past year with the integration of the BAMS–UAV program into the overarching Maritime Patrol and Armed Reconnaissance requirement. This lethal combination of manned and unmanned reconnaissance aircraft will recapitalize our maritime patrol anti-submarine warfare, anti-surface warfare and armed ISR capability. We also developed a robust sustainment plan for the current P–3 fleet that includes special structural inspections (SSI) and kits that extend P–3 service lives by a minimum of 5,000 hours. This SSI program will replace, correct or modify our current P–3 force to ensure that they do not prematurely reach the end of their fatigue life before we achieve IOC of the MMA in 2013.

• *Virginia*-class submarine (SSN–774). The first ship of this class was christened this year and will commission in 2004. This class will replace *Los Angeles*-class (SSN–688) attack submarines and will incorporate new capabilities, including unmanned vehicles, and the ability to support SOF. It will be an integral part of the joint, networked, dispersed 21st century fleet. Our fiscal year 2004 budget funded the first of five submarines under the MYP contract authorized by Congress last year. The second submarine of the MYP contract is funded in fiscal year 2005. Approximately $240 million in economic order quantity advance procurement is funded in fiscal year 2005 in support of this contract.

• CG Modernization. Funding for the *Ticonderoga*-class cruiser modernization continues in fiscal year 2005. The Cruiser Modernization Program is a mid-life upgrade for our existing Aegis cruisers that will ensure modern, relevant combat capability well into this century and against evolving threats. These warships will provide enhanced area air defense to the Joint Forces Commander. These modifications include installations of the Cooperative Engagement Capability, which enhances and leverages the air defense capability of these ships, and an antisubmarine warfare (ASW) improvement package. These converted cruisers could also be available

for integration into ballistic missile defense missions when that capability matures. Our first cruiser modernization begins in fiscal year 2006.

FORCEnet is the operational construct and architectural framework for naval warfare in the joint, information age. It will allow systems, functions, and missions to be aligned in a way that will transform our situational awareness, accelerate speed of decisions and allow naval forces to greatly distribute its combat power in a unified, joint battlespace. FORCEnet provides the world-class information and technology (IT) tools that we need to continue to be the world-class Navy.

Programs that will enable the future force to be more networked, highly adaptive, human-centric, integrated, and enhance speed of command include:

• Navy Marine Corps Intranet. NMCI is operational and providing commercial IT services for more than 300,000 Navy employees and two combatant commanders. This initiative, as part of our FORCEnet strategy, is providing a single, secure shore-based network and will link with our tactical networks to provide end-to-end collaboration within the Navy and across the joint community. fiscal year 2005 funding of $1.6 billion provides for NMCI operations and, at the same time, continues transition of the remaining legacy IT networks to NMCI enterprise network services. This past year, with the help of the authorizing language you provided, the NMCI program finalized a full partnership agreement with the Defense Information Systems Agency (DISA) for operations and provisioning.

• Mobile User Objective System (MUOS). The new MUOS Satellite Communications (SATCOM) program will increase DOD narrowband ultra-high frequency (UHF) SATCOM capacity by roughly 1,300 percent over current capabilities. MUOS is a $6.4 billion joint interest program, and it supports a particularly important "Comms-on-the-Move" capability for handheld terminals, aircraft, missiles, and UAVs in urban and heavily wooded terrain. We plan to reach the initial operational capability (IOC) milestone in 2009, with full operational capability in 2013.

• Joint Aerial Common Sensor (JACS). We have partnered with the Army in the JACS development program in our pursuit of a replacement for the aging EP–3 airborne information warfare and tactical signals intelligence (SIGINT) aircraft. JACS will provide multi-intelligence strike targeting data and Signals Intelligence capabilities, and will include a Synthetic Aperture Radar, Ground Moving Target Indicator, electro-optical and infrared sights, and measurements and signature capabilities. These will be coupled with automatic/manual data fusion. Our fiscal year 2005 request includes $25 million for this program.

• Joint Tactical Radio System (JTRS). JTRS will be the wireless "last tactical mile" component of the Global Information Grid (GIG) and will transform Navy's tactical communications systems by incorporating Internet Protocol (IP) communica-

tions over multi-spectral radio frequency (RF) media. JTRS is a software programmable, multi-band, multi-mode family of net-workable radios, capable of simultaneous voice, data, video communications and mobile ad hoc networking. Our fiscal year 2005 request includes $56 million for JTRS.

• Deployable Joint Command Control System (DJC2). DJC2 is the priority command and control (C2) transformation initiative. DJC2 will provide a standing, fully deployable, scaleable, and standardized C2 capability to the regional combatant commanders (RCC) and Joint Force Commanders. DJC2 responds to the need for joint, deployable C2 capability, with first RCC delivery to Pacific Command (PACOM) in fiscal year 2005. DJC2 is an enabler for the Standing Joint Force Headquarters concept being developed by Joint Forces Command (JFCOM). The Navy is lead component for the acquisition program, and we ask your support for the $81 million we've requested in fiscal year 2005.

D. Improving Effectiveness

As I have testified, your Navy today is the most capable and most ready Navy in our history, thanks in large part to the support of Congress and of the American people. But, I believe that we can do better—that, in fact, we must do better—as stewards of the public trust in determining not just how much we should spend on programs, but how those defense dollars are spent. This is especially true today because of the strategic challenges posed by the ongoing global war on terrorism, because of our need to recapitalize aging, Cold War-era infrastructure and capability, and because of the burgeoning technological and operational changes that will dramatically alter the way we fight. Revolutionizing the way in which our defense dollars are spent presents opportunities to increase our effectiveness, both now and in the future.

Sea Enterprise is focusing headquarters leadership on outputs and execution, and is creating ideas that will improve our productivity and reduce our overhead costs. Its key objectives are to:

- Leverage technology to improve performance and minimize manpower costs;
- Promote competition and reward innovation and efficiency;
- Challenge institutional encumbrances that impede creativity and boldness in innovation;
- Aggressively divest non-core, underperforming or unnecessary products, services and production capacity;
- Merge redundant efforts;
- Minimize acquisition and life-cycle costs;
- Maximize in-service capital equipment utilization; and
- Challenge every assumption, cost, and requirement.

Department of the Navy senior leadership is actively engaged in tracking the execution of ongoing Sea Enterprise initiatives totaling approximately $40 billion, and identifying $12.4 billion in cost savings and requirements mitigation across the FYDP. We are committed to efficiency and productivity improvements that will generate the savings necessary to augment our investment stream and implement our Sea Power 21 vision—delivering the right force, with the right readiness, at the right cost. Specific highlights of these fiscal transformation initiatives include:

• Right Readiness. Along with the FRP, we have also initiated processes ashore that will generate a more effective force. As just one example, we have established a single shore installation management organization, Commander, Navy Installations (CNI), to globally manage all shore installations, promote "best practices" development, and provide economies of scale, increased efficiency, standardization of polices, and improved budgeting and funding execution. This initiative is anticipated to save approximately $1.2 billion across the FYDP.

• Right Cost. We have taken a hard look at our "level of effort" programs to maximize return on taxpayer investment. This year's effort generated $2 billion in future savings in programs not supported by specific performance metrics in force structure, readiness or cost benefit. In addition, we focused on streamlining our organizations and processes as a means to harvest efficiencies and control costs. Innovative programs like Shipmain and the Naval Aviation Readiness Integrated Improvement Program are aiding in developing and sharing best practices, streamlining maintenance planning and improving performance goals in shipyards, aviation depots, and intermediate maintenance activities. We also reorganized the Navy Supply Systems Command, including the establishment of the Naval Operational Logistics Support Center to consolidate transportation, ammunition and petroleum management. We will continue to look for additional opportunities in this area while leveraging the gains already made.

• Right Force. We believe transformation to our future force must include improving our buying power. To improve upon our force structure, we are divesting non-core, redundant, underperforming, and outdated products and services. We are using multi-year procurement contracts and focusing where possible on economic order quantity purchase practices to optimize our investments. An excellent example lies in the F/A–18E/F multi-year procurement contract that anticipates procurement of 210 aircraft while saving us in excess of $1.1 billion across the FYDP. We also recognize the need to transform our single greatest asymmetric advantage, our people. The upcoming year will focus on ensuring we not only have the right number, but the right mix of military, civilian, and contractor personnel to accomplish the mission at the lowest possible cost. You have given us a tremendous tool to enhance our flexibility in this area, the NSPS, and we plan to take full advantage of it.

Building on prior efforts, I am dedicating a significant amount of personal time to conducting execution reviews with leadership at the major commands across the Navy because, as I see it, leadership engagement in execution is an essential step to achieving our Sea Enterprise objectives. These reviews have provided me the opportunity to focus on the intricate details of the organizations while ensuring commanders are aligned with the vision and direction in which we are steaming. We focus on ways to swiftly move from strategy to implementation, as well as innovative ways to reduce costs and return resources to the enterprise for reinvestment.

In 2005, the Navy will continue to pursue product and process efficiencies and the opportunities to be more effective while improving our warfighting capability. Harvesting the savings for recapitalization is a vital part of that effort, and we will continue to balance the benefits of new productivity initiatives against operational risks. Our intent is to foster a culture of continuous process improvement, reduce overhead, and deliver the right force structure both now and in the future.

IV. CONCLUSION

For us, winning the global war on terrorism remains our number one objective—and victory is the only acceptable outcome. To achieve this, we are accelerating the advantages we bring to the Nation.

The FRP will improve upon the operational availability of fleet units, providing forward deployed forces for enhanced regional deterrence and contingency response, while at the same time, retaining the ability to rapidly surge in times of crisis.

We are investing in enhanced warfighting capability for the joint force, using the extended reach of naval weapons and sensors to reach farther and more precisely with striking power, and deliver broader defensive protection for joint forces ashore and fully leverage our command of the sea.

We are creating a personnel environment that attracts, retains, and relies upon creative, effective, and competitive people. We are investing in the tools, the information technology, and the training that delivers more meaningful job content to them because it is they who offer us our greatest advantage.

The support of Congress is vital to our readiness today and to building the Navy of tomorrow—I thank you for your dedicated efforts and support.

Chairman WARNER. Thank you very much, Admiral. I felt it important to pose that question at this particular time because we are very proud in this Nation of civilian control of the military. Nevertheless, those in the ranks look up and they see you as Chief of Naval Operations (CNO) and they repose in you and the other chiefs a very special trust and confidence. That statement that you just made will resonate throughout the Armed Forces of the United States.

Thank you.

General Hagee.

STATEMENT OF GEN. MICHAEL W. HAGEE, USMC, COMMANDANT OF THE MARINE CORPS

General HAGEE. Thank you. Mr. Chairman, Senator Levin, distinguished members of the committee: It is my privilege to report to you that your marines, active and Reserve, are well trained, well equipped, highly motivated, and they are ready. As Senator

Lieberman so beautifully articulated, their families are behind them.

Your support, and that of the American people, is critical and deeply appreciated. Your sustained commitment to improving our Nation's Armed Forces to meet the challenges of today as well as those of the future is vital to our Nation's security.

Mr. Chairman, in answer to your question, I was in sort of a unique position over the last couple of years, two positions actually. Before becoming Commandant of the Marine Corps, I was the Commanding General of the First Marine Expeditionary Force (MEF). That, of course, was the force that fought up on the right flank in Iraq. In that role I was very involved in the planning of that particular operation. I can tell you, sir, that based on the intelligence that I had received from throughout the Intelligence Community and the analysis of our own internal intelligence individuals, I was absolutely convinced that Saddam Hussein had chemical weapons, if not biological weapons, and that he would use them when we crossed the line of departure.

We prepared those marines for that contingency. We went to great lengths to secure the Saratoga suits. We went to great lengths to ensure they all had protective masks and the appropriate number of filters. We had both chemical and biological detection devices, devices that we did not normally have in the Marine Corps, brought in for that contingency.

I took over as Commandant of the Marine Corps on January 13 of last year. The intelligence that I saw once I came back here to Washington convinced me that I was correct in my analysis. When we crossed the line of departure last March, I was still convinced that he was going to use chemical weapons on our marines and our soldiers. In that particular stance, I am happy that I was wrong on that.

But looking back on the intelligence that we had at that particular time, there is nothing different that I would do, even having perfect vision looking back.

Sir, the Marine Corps' first priority is and will continue to be warfighting readiness and excellence in support of our Nation. In the near term, the Marine Corps is focused on readiness to provide expeditionary forces that meet our Nation's demanding needs. For the long term, the Marine Corps and the Navy are committed to developing a sea basing capability that will provide a critical joint competency for assuring access and projecting power from the sea worldwide.

During this past year, your marines, both active and Reserve, were engaged in operations in support of the global war on terrorism from Afghanistan to the Horn of Africa to Liberia. Highlighting the value of our expeditionary capability, in OIF we deployed a combat-ready sustainable force of almost 70,000 marines and sailors in less than 60 days.

We are now preparing to deploy forces to relieve Army units in western Iraq in support of OIF 2. Beginning this month, we will deploy approximately 25,000 marines into Iraq. In our preparations we are working closely with Army forces in and outside concerning equipment, tactics, techniques, and procedures. We are also draw-

ing on analysis of our experiences last year in southern Iraq, the tactics of the British, and our own extensive small wars experience.

Before we deploy, we are conducting rigorous urban operations training and language and cultural education. We are paying particular attention to individual and vehicle protective equipment enhancements and procedures. We are also continuing to improve our warfighting capabilities by leveraging advancements in technology, developing innovative organizations, and improving our joint training. Currently the First Expeditionary Strike Group, which combines the capabilities of essentially a surface action group, submarine and maritime patrol aircraft, with those of an amphibious ready group and a Marine expeditionary unit, special operations capable, is returning from its deployment to the U.S. Central Command (CENTCOM) area of responsibility (AOR).

We are combining our analysis of OEF and OIF with the lessons from this initial deployment in order to enhance our adaptability, flexibility, and lethality. In addition, naval tactical air (TACAIR) integration continues to be implemented and we are aggressively improving our interoperability with special operations forces.

Our top ground and aviation programs are adequately funded. The introduction of new systems such as the MV–22 Osprey, the Expeditionary Fighting Vehicle, the JSF, the Lightweight 155 Howitzer, the Four-Bladed Cobra and Huey Upgrade Helicopters, and the High Mobility Artillery Rocket System into our force structure will significantly increase our speed, flexibility, and our overall expeditionary and amphibious warfighting capabilities.

In planning for the future uncertainties, the Secretary of the Navy, the CNO, and I are committed to developing a sea basing capability that will provide a critical joint competency for assuring access and projecting power that will greatly improve the Nation's security. Sea basing in the future will assure joint access by capitalizing on the dilemma created by the operational maneuver of forces from the sea. The replacement ships for the amphibious assault ships (LHA) class are an essential part of our concept of joint sea basing.

Mr. Chairman, lastly I would like to emphasize the magnificent performance of your individual marines, the most agile and lethal weapon system we possess.

On behalf of all marines, I thank this committee for your steadfast support and I look forward to your questions.

[The prepared statement of General Hagee follows:]

PREPARED STATEMENT BY GEN. MICHAEL W. HAGEE, USMC

Chairman Warner, Senator Levin, distinguished members of the committee; it is my honor to report to you on the state of readiness of your United States Marine Corps. Your marines are firmly committed to warfighting excellence, and the support of Congress and the American people has been indispensable to our success in the global war on terrorism. Your sustained commitment to improving our Nation's Armed Forces to meet the challenges of today as well as those of the future is vital to the security of our Nation. On behalf of all marines and their families, I thank this committee for your continued support.

I. INTRODUCTION

In the near-term, the Marine Corps' top priorities are to maintain our high state of readiness and to provide capable forces that meet the demanding needs of the unified combatant commanders in order to prosecute the global war on terrorism in

support of the Nation. For the long-term, the Marine Corps and Navy are committed to developing a sea basing capability that will provide a critical joint competency for assuring access and projecting power that will greatly improve the security of the United States. The marked increase in our warfighting capability will be apparent as we introduce new systems such as the MV–22 Osprey, the Expeditionary Fighting Vehicle (EFV), the Joint Strike Fighter (JSF), and the Lightweight 155mm Howitzer into our force structure, using them to enhance the already potent combat power of our Marine Air-Ground Task Forces (MAGTFs) as integral elements of our Nation's joint force.

The Navy-Marine Corps team continues to play a critical role in the global war on terrorism and in the establishment of stability and security throughout the world. During this past year, the Marine Corps, both active and Reserve, was engaged in operations from Afghanistan to the Arabian Gulf, the Horn of Africa, Liberia, the Georgian Republic, Colombia, Guantanamo Bay, and the Philippines. Most prominent in highlighting the value and power of the Nation's naval expeditionary capability was the Marine Corps' participation in Operation Iraqi Freedom (OIF). Success in this operation underscored the unique contributions of our multi-dimensional naval dominance, our expeditionary nature, our flexibility to deal with complex situations and challenges, and the adaptability of our forces and individuals in order to defeat the challenges posed by adaptive, asymmetric enemies, and long-term threats.

Early last year, the I Marine Expeditionary Force (MEF) deployed a combat ready force of almost 70,000 marines and sailors in less than 60 days using the full array of our complementary power projection capabilities. Forward deployed Marine Expeditionary Units (MEUs) (Special Operations Capable) again demonstrated their proven value for immediate response. Eleven strategically located Maritime Prepositioned Force ships were unloaded in 16 days to provide the equipment and sustainment for two Marine Expeditionary Brigades. A 7 ship amphibious force from each coast embarked a total of 11,500 marines, sailors, and their equipment and within 30 days these 14 ships began to arrive and offload in Kuwait. Strategic sea and air lift was also vital to our success in this effort. Exploiting the operational speed, reach, and inherent flexibility of seapower, the Navy-Marine Corps team achieved a rapid buildup of sustained warfighting power that was combat ready to support U.S. Central Command (CENTCOM) on March 1, 2003.

Closely integrated with our joint and coalition partners, as well as Special Operations Forces (SOF), the I MEF provided the combatant commander with a potent combined arms force comprising a balance of ground, aviation, and combat service support elements all coordinated by a dynamic command element. This teamwork—the product of demanding and realistic Service and joint training—presented a multi-dimensional dilemma for the Iraqi regime's forces and loyalists. It also greatly increased the range of options available to our leadership as they addressed each unique and complex situation. The integration of the 1st United Kingdom Division within the I MEF provides outstanding lessons for achieving merged coalition capabilities and consistent goals in the future.

The combat power of I MEF generated an operational tempo that our enemy could not match. With short notice that operations would commence early, the marines and their joint and coalition partners rapidly secured key strategic objectives. The I MEF then engaged in 26 days of sustained combat operations. Using the tenets of maneuver warfare, they executed four major river crossings, fought 10 major engagements, and destroyed 8 Iraqi divisions before stopping in Tikrit—almost 500 miles inland. In support of Joint Special Operations Forces Northern Iraq, the 26th MEU inserted a MAGTF from the Eastern Mediterranean into Northern Iraq—almost 1,200 miles distance. The sustained resources of the Marine Force, which were derived primarily from our seaborne logistics, provided us unrivaled advantages. While our logistics were stretched by the operational commanders, our combat service support units demonstrated flexibility and resourcefulness.

Highlighting the expeditionary mindset of marines, our combined arms force successfully operated in desert, urban, swamp, and rural environments while effectively conducting combat, peacekeeping, and humanitarian operations—at times simultaneously. Marines also demonstrated the ability to re-task and reorganize to conduct unanticipated missions like the taking of the city of Tikrit. Following major combat operations, I MEF assumed responsibility for security and stability in five Central Iraq provinces until they were relieved of the last province by coalition forces this past September. Flexibility and adaptability are key characteristics of an expeditionary force, and they are critical advantages that we must seek to optimize for the future, particularly in this era of global uncertainty.

Recent operations also emphasize the increased importance of access to key regions for projecting our Nation's power. With global interests, the United States

must retain the capability to secure access as needed. Power projection from the sea greatly increases the range of options available to avert or resolve conflicts. A credible naval forcible-entry capability is critical to ensure that we are never barred from a vital national objective or limited to suboptimal alternatives.

Since the end of major combat operations, the Marine Corps has been setting the force in order to enhance warfighting readiness for future contingencies. We are reloading combat equipment and materiel on the ships of the Maritime Prepositioned Squadrons while also ensuring that the requirements for OIF 2 are fulfilled. We are using provided funding to repair, refurbish, and where necessary, replace equipment. During this period, marines have continued to forward deploy. Marine Corps units are supporting Operation Enduring Freedom (OEF) in Afghanistan, operations in the Horn of Africa, exercises critical to supporting the Combatant Commanders' Theater Security Cooperation Plans, and counterdrug operations in support of joint and joint-interagency task forces. In addition, we have conducted a major program to identify and analyze lessons learned from the Iraqi campaign. We have also begun to assimilate these lessons and determine where and how our force should be rebalanced.

As the last few years have demonstrated, the Marine Corps Reserve is a full partner in our total force. Reserve units participated in all aspects of the war in Iraq, providing air, ground, and combat service support as well as a large number of individual augmentees to marine and joint staffs. Mobilized Marine Reserve infantry battalions have also served as ready reaction forces, "on call" to support the Federal Emergency Management Agency's (FEMA) role in homeland security.

II. BUILDING ON SUCCESS FOR IMMEDIATE OPERATIONS

We continue to execute global operations and exercises with our joint and coalition partners. The Marine Corps is preparing to deploy forces to relieve the 3d Armored Cavalry Regiment and the 82d Airborne Division in Western Iraq in support of OIF 2. These forces will be deployed in two rotations of 7 months each. This rotation policy will result in the least disruption for the long-term health of the Marine Corps, precluding stop-loss/stop-move and unnecessary interruptions in recruit training, career progression and development, professional military education, and other deployment requirements. The first rotation, from March until September 2004, will include 25,000 marines and their equipment and includes almost 3,000 Reserve component marines. A second rotation—of like size and composition—will overlap the first and ensure a smooth and stable transition.

In preparation for OIF 2, I MEF has analyzed lessons learned from their experiences in conducting security and stability operations from March to September 2003, and recent Army lessons learned. As they did last year, I MEF is working closely with the Army Forces in Iraq; they have conducted a number of liaison visits with the Army units they will relieve. They have drawn from procedures used by the Los Angeles Police Department for neighborhood patrolling in gang dominated areas, the tactics of the British in Iraq—which reflect years of experience in low intensity conflicts and peacekeeping operations, as well as the Marine Corps' own extensive "Small Wars" experience. We have assimilated these lessons through a comprehensive training package that includes tactics, techniques, procedures for stability and counter-insurgency operations. We have conducted rigorous urban operations training and exercises. Over 400 marines are receiving Arabic language immersion training, and all deploying marines and sailors are receiving extensive cultural education. Our supporting establishment is focused on the equipment, logistics, and training requirements of this force—paying particular attention to individual protective equipment, enhanced vehicle and aircraft hardening, and aviation survival equipment and procedures. This training and support are critically important as we send marines back to war in a volatile, dangerous, and changing situation.

During this next year MEUs will still deploy as part of Naval Expeditionary Strike Groups in support of combatant commander requirements. Units will continue to rotate to Okinawa and Iwakuni Japan, and some of those forces will further deploy in support of OIF 2. While the operational tempo (OPTEMPO) remains high, recruiting and retention continue to exceed our goals. We are monitoring the health of our Service, and we are focused on ensuring that the Marine Corps remains ready for all current and future responsibilities.

III. TAKING CARE OF OUR OWN

Events of the past year continue to highlight the value of the individual marine over all other weapon "systems." While we always strive to provide our marines with the best equipment and weapons, we never forget that people and leadership are the foundations of the Marine Corps' readiness and warfighting capabilities. OIF

demonstrated that the Marine Corps' recruiting, training, and education of the force are extremely successful in maintaining the high standards of military readiness our Nation requires. The Marine Corps remains committed to taking care of our marines, their families, and our civilian marines.

Marines

End Strength

The Marine Corps is assimilating the congressionally authorized increase in Marine Corps end strength to 175,000. The increase of 2,400 marines previously authorized by Congress addressed an urgent need to train and maintain enough marines for the long-term requirements associated with the global war on terrorism. It has been particularly important in enabling us to provide the Nation with a robust, scalable force option specifically dedicated to antiterrorism—the 4th Marine Expeditionary Brigade (Antiterrorism).

The Marine Corps is expeditionary by nature and therefore accustomed to deploying in support of contingency and forward presence missions. We are structured in such a way as to satisfy our enduring requirements and meet operational contingencies as long as the contingencies are temporary in nature. While the force is stretched, we are meeting our current challenging operational commitments. Our high operational and personnel tempos have not negatively impacted accessions or retention efforts; however, we continue to monitor both very closely.

Recruiting

Sustaining our ranks with the highest quality young men and women is the mission of the Marine Corps Recruiting Command. Recruiting Command has consistently accomplished this mission for more than 8 years for enlisted recruiting and 13 years for officer recruiting. This past year the Marine Corps recruited over 100 percent of its goal with over 97 percent Tier I High School graduates. In order to continue attracting America's finest youth, Recruiting Command provides its recruiters the best tools available to accomplish their mission.

The Marine Corps Reserve achieved its fiscal year 2003 recruiting goals with the accession of 6,174 non-prior service marines and 2,663 prior service marines. With regard to our Reserve component, officer recruiting and retention to fill out the requirements of our Selected Marine Corps Reserve (SMCR) units remains our most challenging concern. This is primarily due to the fact that we recruit Reserve officers almost exclusively from the ranks of those who have first served a tour as an active duty marine officer and currently the Corps is experiencing a low attrition rate for company grade officers in our Active Force. We are attempting to alleviate this challenge. Two successful methods include increasing awareness of the benefits of service in the Reserves to the company grade officers who are leaving the active ranks and Reserve officer programs for qualified enlisted marines.

Retention

Retaining the best and the brightest marines is a constant goal; history has proven that superb leadership in the staff noncommissioned officer ranks is a major contributor to the Corps' combat effectiveness. The ranks of this elite group of leaders can only be filled by retaining our best enlisted marines. The Marine Corps has two retention measures and both clearly indicate healthy service continuation rates. Our First Term Alignment Plan (first tour) has consistently achieved its reenlistment requirements over the past 9 years. With just over one-third of the current fiscal year completed, we have achieved 76 percent of our first-term retention goal. Furthermore, our Subsequent Term Alignment Plan (second tour and beyond) reveals that we have already retained 47 percent of our goal for this fiscal year.

Current officer retention is at a 19-year high, continuing a 4-year trend of increasing retention. Despite the increased retention overall, certain military occupational specialties perennially suffer high attrition. We are attempting to overcome this challenge by offering continuation pay for those marines with military occupational specialties that include special qualifications and skills. Military compensation that is competitive with the private sector provides the flexibility required to meet the challenge of maintaining stability in manpower planning.

Marine Corps Reserve

In 2003, the Marine Corps Reserve rapidly mobilized combat ready marines to augment and reinforce the active component. Marine Corps Reserve activations in support of OIF began in January 2003, and peaked at 21,316 Reserve marines on active duty in May 2003. This represented 52 percent of the SMCR. Of the approximately 6,000 reservists currently on active duty, over 1,300 individual mobilization augmentees, individual ready reserves, and retirees fill critical joint and internal

billets. As of January 2004, the Marine Corps Reserve began activating approximately 7,000 SMCR marines in support of OIF 2. Judicious employment of Reserve marines remains a top priority of the Marine Corps to ensure the Marine Corps Reserve maintains the capability to augment and reinforce the active component. Marine Corps Reserve units and individuals are combat ready and have rapidly integrated into Active Forces commands demonstrating the effectiveness of the Total Force Marine Corps.

A strong inspector-instructor system and a demanding Mobilization and Operational Readiness Deployment Test program ensured Marine Corps Reserve units achieved a high level of premobilization readiness. Marine Reserve Units continuously train to a C1/C2 readiness standard, eliminating the need for post-mobilization certification. Ninety-eight percent of SMCR marines called up for duty reported for mobilization and less than 1 percent requested a deferment, delay, or exemption. The Marine Corps Reserve executed a rapid and efficient mobilization with units averaging 6 days from notification to being deployment-ready, and 32 days after receiving a deployment order they arrived in theater. Many activated Marine Reserve units were ready to deploy faster than strategic lift could be provided.

Building on the important lessons of the last year, the Marine Corps is pursuing several transformational initiatives to enhance the Reserves' capabilities as a ready and able partner with our active component. These pending initiatives include: increasing the number of Military Police (MP) units in the Reserve component; establishing a Reserve Intelligence Support Battalion to include placing Reserve Marine Intelligence Detachments at the Joint Reserve Intelligence Centers; returning some of our civil affairs structure to the active component to provide enhanced planning capabilities to the operational and Service headquarters; and, introducing an improved Individual Augmentee Management Program to meet the growing joint and internal requirements.

When called, the Marine Corps Reserve is ready to augment and reinforce. Our Reserve marines are a vital and critical element of our total force. The training, leadership, and quality of life of our Reserve component remain significant Marine Corps priorities.

Marine For Life

The commitment to take care of our own includes a marine's transition from active service back to civilian life. The Marine For Life Program's mission is to provide sponsorship for our more than 27,000 marines who honorably leave active service each year. The program was created to nurture and sustain the positive, mutually beneficial relationships inherent in our ethos, "Once a Marine, Always a Marine." In cities across the United States, Reserve marines help transitioning marines and their families get settled in their new communities. Sponsorship includes assistance with employment, education, housing, childcare, veterans' benefits, and other support services needed to make a smooth transition. To provide this support, Marine For Life taps into the network of former marines and marine-friendly businesses, organizations, and individuals willing to lend a hand to a marine who has served honorably.

Initiated in fiscal year 2002, the program will reach full operational capability in fiscal year 2004. In addition to 110 Reserve marines serving as "Hometown Links," an enhanced web-based electronic network, easily accessed by marines worldwide, will support the program. The end state of the Marine For Life Program is a nationwide marine and marine-friendly network available to all marines honorably leaving active service, that will improve their transition to civilian life.

Civilian Marines

Civilian Workforce Campaign Plan

Recognizing that our civilian marines are integral to the success of military operations, General James L. Jones, the 32nd Commandant of the Marine Corps, charged our senior Marine Corps officials with the development and implementation of a strategic 5-year plan for the recruitment, development, and retention of our civilian marines. The Civilian Workforce Campaign Plan (CWCP) consists of six strategic goals: (1) nurture, build, and grow civilian marines; (2) provide flexible career opportunities; (3) create leaders at all levels; (4) improve the performance evaluation system; (5) strengthen workforce management expertise; and (6) establish an integrated total force management approach. As commandant, I have provided the following additional implementing guidance.

Our vision is to make the Marine Corps the employer of choice for a select group of civilians imbued with the Marine Corps values of honor, courage, and commitment. Through implementation of the CWCP, we will not only define what the Marine Corps will offer its civilian marines, but what the Corps expects from them.

We will attract, nurture, build, and grow civilian marines by providing innovative recruitment, development, retention, reward, and acculturation programs throughout the work-life cycle.

National Security Personnel System

We want to take this occasion to thank again the committee and Congress for enacting the National Security Personnel System (NSPS) in the National Defense Authorization Act for Fiscal Year 2004. The act authorized a more flexible civilian personnel management system for the Department of Defense (DOD) that allowed DOD to be a more competitive and progressive employer at a time when our national security demands a highly responsive system of civilian personnel management. The legislation ensures that merit system principles govern any changes in personnel management, whistleblowers are protected, discrimination remains illegal, and veterans' preference is protected. The Department will collaborate with employee representatives, invest time to try and work out our differences, and notify Congress of any differences before implementation. In January, DOD officials met with union representatives to begin the development of a new system of labor-management relations. Later this year, following an intensive training program for supervisors, managers, human resources specialists, employees, as well as commanders and senior management, the DOD plans to begin implementing NSPS. The Marine Corps, along with the entire Department of the Navy, expects to be in the first wave of implementation.

Military-Civilian Conversions

The Marine Corps will continue to actively pursue a review of all functional areas within the Marine Corps in an effort to return more marines to the operating forces. Through fiscal year 2003, we have returned over 2,000 manned structure spaces to the operating forces, and we will return approximately 650 more marines in fiscal year 2004. The fiscal year 2005 President's budget converts roughly an additional 1,400 more billets from marines to civilian marines, which will provide us more options to increase manning in the operating forces.

Education

Amid today's uncertain, volatile security environment, our most effective weapon remains the individual marine who out-learns, out-thinks, and out-fights any adversary. Such warfighting competence is secured only through intellectual development. Recent events demonstrated how quality education instills confidence in marines. Our educational standards and programs produce innovative leaders who take initiative and excel during challenging situations involving uncertainty and risk. These high educational standards are inculcated by the Marine Corps University and are designed to target every rank in both our Active and Reserve Forces. Each year the Marine Corps University student population includes members of the other Services, various government agencies as well as dozens of international military officers from over 30 different countries.

The Marine Corps endeavors to provide its marines with 'lifelong learning' opportunities through a variety of educational programs, college courses, and library services on our bases and stations. Furthermore, distance learning programs through the Marine Corps University make continuing education available to marines regardless of their location. In addition, the Marine Corps will continue to fully fund the Tuition Assistance Program in accordance with DOD guideline—funding for 100 percent of tuition cost up to $250 per semester hour with a maximum of $4,500 per year. In fiscal year 2003, there were 25,662 marines enrolled in almost 80,000 courses with the help of the Tuition Assistance Program.

Joint Initiatives

The Marine Corps synchronizes its educational objectives with those of the other armed services in order to provide regional combatant commanders with the most capable joint force. We support the proposal for a Joint Advanced Warfighting School (JAWS) and for broadening Joint Professional Military Education (JPME) opportunities for the Total Force. By working closely with Joint Forces Staff College and our sister services, JAWS has the potential to empower future combatant commanders with talented officers who are experienced in campaign planning. Intent on broadening our joint experience base, the Marine Corps is pursuing an accredited advanced joint curriculum (JPME Phase II) at the Marine Corps War College and will continue to work to provide JPME opportunities for both active and Reserve components.

Senior Leader Development Program

The Senior Leader Development Program was developed last year to address General Officer and Senior Executive Service career development and to link education opportunities to career progression. A study was commissioned to identify the competencies required in each of our general officer billets in an effort to link core and complimentary curriculum with the assignment process. Within the core curriculum, senior leaders will attend the Joint Warfare series of courses as prerequisites by rank and billet while they study innovation, business transformation, and resource management through complementary courses.

Quality of Life/Quality of Service

The Marine Corps works to improve the quality of life for marines and their families in order to continue the success of the all volunteer force. We provide excellent quality of life programs and services, while also helping new marines to better understand what to expect in the military lifestyle. We continuously assess, through a variety of means, the attitudes and concerns of marines and their families regarding their quality of life expectations. With 67 percent of our marines deployed away from their home installations at the height of OIF, we carefully captured lessons learned to ensure quality of life programs meet the needs of deployed marines and families who remain at home. Community and family assistance centers were established at Camp Lejeune, Camp Pendleton, Marine Corps Air Station Miramar, and Marine Corps Base Twentynine Palms to provide marine family members and loved ones access to relevant information and referral services.

To further help marines and their families before, during, and after deployments, the Marine Corps implemented Marine Corps Community Services (MCCS) One Source, a Marine Corps-conducted, DOD funded pilot program providing around-the-clock information and referral services. MCCS One Source is especially useful to our activated Marine Reserves and their families as they negotiate the requirements and procedures associated with utilization of military programs such as TRICARE and other benefit services. In recognition of the importance of the transition home after deployments for both marines and their families, the Marine Corps developed a standardized return and reunion program consisting of a mandatory warrior transition brief for returning marines, a return and reunion guidebook for marines and family members, a caregiver brief, and briefs designed for spouses.

We greatly appreciate the supplemental appropriations bills during 2003, that contained additional help for deployed marines and their families. In 2004, quality of life efforts will continue to focus on issues related to supporting deployed forces and their families.

Safety

Safety programs are vital to force protection and operational readiness. Marine leaders understand the importance of leadership, persistence, and accountability in the effort to reduce mishaps and accidents. The fiscal year 2003 off-duty and operational mishap rates were driven upward by the mishaps that occurred during and post OIF, while the aviation mishap rate decreased. To meet the Secretary of Defense's challenge to all Services to reduce mishaps by 50 percent in 2 years, the Marine Corps is focusing on initiatives that deal particularly with the development of strategies and specific interventions to reduce all mishaps. Our leadership at every level understand the challenge, and we are actively involved in the effort to safeguard our most precious assets—marines and sailors.

IV. BUILDING ON SUCCESS FOR THE FUTURE

The Marine Corps, in partnership with our Navy brethren, provides our Nation with unrivaled maritime power to help secure peace and promote our national interests. The President's fiscal year 2005 budget, together with your support, will provide a strong foundation for our continued success. The fiscal year 2005 budget—predicated on a peacetime OPTEMPO—sustains a high level of readiness and ensures our ability to rapidly respond to emerging situations. It also allows us to assimilate new technologies and explore new concepts that will help realize the full potential of our people and their equipment. We will continue to seek improved means to increase the efficiency of our investments and increase the combat effectiveness of our forces.

Technology and Experimentation

The Marine Corps has a long history of innovation and adaptation. Experimentation is our principle means to explore new ideas and technologies in order to develop new capabilities to overcome emerging challenges. The Marine Corps Combat Development Command has realigned its experimentation program around the Sea

Viking campaign. This campaign will explore both concept and prototype technology development pathways leading to the sea-based expeditionary capabilities envisioned for the future, to include forcible entry from the sea. The Sea Viking campaign is complementary to the joint concept development and experimentation campaign of Joint Forces Command (JFCOM) and the Navy's Sea Trial experimentation process. As an integral part of this effort, the Marine Corps is refining the expeditionary combat capabilities best suited to participate in future Expeditionary Strike Group (ESG) and Expeditionary Strike Force operations. It is also exploring the potential for an expanded Seabasing capability in support of future joint operations.

The Marine Corps Warfighting Laboratory has experimented with several new pieces of equipment to enhance individual and small unit effectiveness. Based on successful experimentation, limited numbers of the M16A4 Modular Weapons System, Rifle Combat Optic, and the Integrated Intra Squad Radio were fielded for use during OIF. The Marine Corps continues to seek enhanced capabilities for the future as we continue to improve and transform the force. In addition, we have procured sufficient quantities of the Outer Tactical Vest and its Small Arms Protective Insert plates to ensure all marines participating in OIF 2 are equipped with enhanced ballistic protection.

New Concepts and Organizations

The Expeditionary Force Development System implemented this past year is a methodological process that is designed to facilitate the development and realization of military operational concepts. It is a streamlined and integrated system that covers all phases of concept development to the acquisition of necessary equipment and weapons systems. The Expeditionary Force Development System proved to be of great value to our forces engaged in combat operations and is proving to be a helpful means of ensuring that the Marine Corps quickly profits from recent operational experiences. The system is compatible with and supports naval and joint transformation efforts as it integrates transformational, modernization, and legacy capabilities and processes. Several emerging concepts and organizational structures are maturing that will benefit the Marine Corps and ensure we can meet the future demanding requirements of the combatant commanders.

The Sea Basing Concept

Sea basing, envisioned as a national capability, is our overarching transformational operating concept for projecting and sustaining multi-dimensional naval power and selected joint forces at sea. As stated by the Defense Science Board in its August 2003 Task Force report: "Sea basing represents a critical future joint military capability for the United States." It assures joint access by leveraging the operational maneuver of forces globally from the sea, and reduces joint force operational dependence upon fixed and vulnerable land bases. Sea basing unites our capabilities for projecting offensive power, defensive power, command and control, mobility and sustainment around the world. This will provide our regional combatant commanders with unprecedented versatility to generate operational maneuver. Sea basing will allow Marine Forces to strike, commence sustainable operations, enable the flow of follow-on forces into theater, and expedite the reconstitution and redeployment of Marine Forces for follow-on missions. As the core of naval transformation, sea basing will provide the operational and logistical foundation to enable the other pillars of naval transformation (Sea Strike, Sea Shield, Sea Base, and FORCEnet).

This year, the Marine Corps has continued to refine plans for the Marine Expeditionary Brigade of 2015, in concert with our concept for sea-based operations. Similarly, the analysis of alternatives for our Maritime Prepositioning Force (Future) (MPF(F)), a critical component of Seabasing, will provide valid choices for achieving Seabasing capabilities. These initiatives will complement, rather than replace, the amphibious lift and forcible entry capacity of the LHA(R), LPD–17, and LHD, and will provide the Nation a deployment and employment capability unmatched in the modern world.

Expeditionary Strike Groups

The Marine Corps and Navy continue the series of experiments that will refine the ESG concept. This concept will combine the capabilities of surface action groups, submarines, and maritime patrol aircraft with those of Amphibious Ready Groups and enhanced MEUs (Special Operations Capable) to provide greater combat capabilities to regional combatant commanders. Navy combatants are incorporated within the existing training and deployment cycle of the Amphibious Ready Group. Further experimentation will also allow us to test command-and-control arrangements for the ESG. We will soon complete the pilot deployment in this series, ESG–1, composed of West Coast Navy and Marine Forces. The ESG–2, composed of East Coast

Navy and Marine Forces, will deploy later this year. Currently, the Marine Corps Combat Development Command is working with Navy and Marine operating forces to capture critical information from these experimental deployments to ensure that the ESG capability thoroughly integrates doctrine, organization, training, materiel, leadership, education, personnel, and facilities. Also, the Marine Corps Combat Development Command is working with the Navy to develop the concept for the employment of the additional capabilities that the ESG provides regional combatant commanders. Finally, the Center for Naval Analyses is evaluating the series of experiments through embedded analysts deployed with both ESGs and will submit their consolidated reports to the Navy and Marine Corps in October 2004.

Marine Corps—U.S. Special Operations Command Initiatives

The Marine Corps continues to aggressively improve interoperability with SOF. The U.S. Special Operations Command-Marine Corps Board has developed over 30 initiatives to support our interoperability goals. The Marine Corps and U.S. Special Operations Command (SOCOM) are working to leverage existing pre-deployment and deployment training as a means to "operationalize" our relationship. Our deploying MEUs (Special Operations Capable) exchange liaison officers with the Theater Special Operations Commands as the MEUs deploy within the various theaters. On June 20, 2003, a Marine Corps "proof of concept" detachment that is task organized to complement SOCOM mission areas in Direct Action, Special Reconnaissance, Coalition Support and Foreign Internal Defense formally stood up at Camp Pendleton, California. The Detachment transferred to the operational control of SOCOM last December, to facilitate joint pre-deployment training and is scheduled to deploy in April 2004, with a Naval Special Warfare Squadron supporting CENTCOM. Finally, we are conducting joint training with SOCOM in the areas of fixed and rotary wing air support of special operation missions.

Reestablishment of Air-Naval Gunfire Liaison Companies

During this past summer the Marine Corps reestablished an Air-Naval Gunfire Liaison Company in I MEF and another in the II MEF. These companies provide teams that specialize in all aspects of fire support—from terminal control to support of division fire support coordination centers. They greatly enhance the MAGTF Commanders' liaison capability—with foreign area expertise—to plan, coordinate, employ, and conduct terminal control of fires in support of joint, allied, and coalition forces. Each company will be fully stood up by this summer, and a separate platoon will be stood up in III MEF in October 2004.

Tactical Aircraft Integration

Naval Tactical Aircraft (TACAIR) Integration makes all naval strike-fighter aircraft available to meet both Services' warfighting and training requirements. As part of the TACAIR Integration plan, a Marine fighter-attack squadron will eventually be attached to each of the 10 active carrier air wings and will deploy aboard aircraft carriers. In addition, three Navy strike-fighter squadrons will be assigned into the Marine Corps' Unit Deployment Program for land-based deployments. Force structure reductions associated with this plan should result in a total cost savings and cost avoidance of over $30 billion. The integration of the fifth marine squadron into a Carrier Air Wing and the first Navy squadron into the Unit Deployment Program are scheduled for later this year.

TACAIR Integration retains our warfighting potential and brings the naval services a step closer to the flexible sea based force we envision for the future. A leaner, more efficient naval strike-fighter force is possible because of three underlying factors. The first factor is "Global Sourcing"—the ability to task any non-deployed Department of Navy squadron to either Service's missions, allowing for a reduction in force structure. Second, 'Level Readiness'—applying the proper resources to training, maintenance, and modernization, will ensure the smaller force is always capable of responding to the Services' and Nation's needs. Third, the development of an operational concept that will efficiently manage the employment of this integrated strike-fighter force within the naval and joint context. Support of readiness accounts, modernization programs, and our replacement of the F/A–18 and AV–8B with the short takeoff and vertical landing (STOVL) JSF will ensure the potential promised by this integration.

Better Business Practices

The Secretary of Defense and Secretary of the Navy have emphasized, and the Marine Corps is committed to, business transformation in order to optimize resource allocation. The Marine Corps is employing a variety of business transformation initiatives including: competitive sourcing of over 3,500 commercial billets to save $57 million annually; outsourcing garrison food service in our mess halls in the con-

tinental United States in to free up 594 marines for other duties; using public-private ventures to fund new family housing and to increase the quantity of safe, comfortable, and affordable homes; consolidation of equipment maintenance from five to three echelons in order to improve maintenance effectiveness and efficiency; and, regionalizing garrison mobile equipment to realign marines and dollars with higher priorities. The Marine Corps continues to develop its activity based costing capability in order to support fact based decision making.

In March 2003, the Marine Corps began participation in the Navy Marine Corps Intranet (NMCI)—a network outsourcing initiative that will provide a common end-to-end Department of the Navy information system capability for voice, video, and data communications. By outsourcing information technology services not considered to be core competencies, the Marine Corps has been able to return 355 supporting establishment personnel structure spaces to the operating forces. As a result of this improved business practice, the NMCI operating environment will promote greater naval interoperability. The Marine Corps will continue to refine our business practices and increase the effectiveness of warfighting potential.

V. OUR MAIN EFFORT—EXCELLENCE IN WARFIGHTING

Training

Training at Eglin Air Force Base

In anticipation of the cessation of naval expeditionary forces training in Vieques, Puerto Rico, efforts began in September 2002 to establish a new training capability at Eglin Air Force Base (AFB). Training at Eglin AFB is envisioned to provide a near-term pre-deployment training capability for East Coast Navy Amphibious Ready Groups/ESGs and MEUs (Special Operations Capable), with the potential to be part of the long-term solution. The training concept was designed for up to two 10-day training periods per year. The long-term objective is that during each 10-day event, the ESGs will be able to conduct the full spectrum of training required. The Marine Corps has invested approximately $4.2 million in environmental assessment/mitigation and infrastructure development required to establish an initial training capability at Eglin AFB.

In December 2003, the Marine Corps completed its first 10-day training period at Eglin AFB, at an additional cost of approximately $1 million. The Marine Corps is assessing the quality the training offered at Eglin AFB while continuing to explore and develop other options, both within the United States and abroad. While Eglin AFB has the potential for enhanced live fire and maneuver training, developing this capability will require a significant investment by the Department of the Navy and DOD to upgrade existing facilities.

Joint National Training Capability

As described by the Deputy Secretary of Defense: "The centerpiece of our Training Transformation effort will be a Joint National Training Capability." The Joint National Training Capability is one of the three pillars of Training Transformation, and will improve joint interoperability by adding certified 'joint context' to existing Service training events. The Joint National Training Capability is a cooperative collection of interoperable training sites, nodes, and events that synthesizes combatant commander and Service training requirements with the appropriate level of joint context.

The first in a series of pre-Initial Operational Capability (IOC) Joint National Training Capability exercises was held in January 2004, linking a Marine Corps Combined Arms Exercise with live close air support sorties, a Navy Stand-off Land Attack Missile Exercise, an Army rotation at the National Training Center, and an Air Force Air Warrior Exercise. The Marine Corps will be actively involved in future Joint National Training Capability exercises including Combined Arms Exercises and Marine Aviation Weapons and Tactics Squadron-1 evolutions scheduled for fiscal year 2005. The Marine Corps is fully engaged in the Joint National Training Capability program development, and is on track to enhance Service core-competency training with the appropriate level of joint context. In concert with the other Services, the Marine Corps is working with JFCOM to refine the phrase "joint context," certify ranges, and accredit exercises to ensure the force is training properly.

Infrastructure

Blount Island Facility

The acquisition of the Blount Island facility in Jacksonville, Florida, is critical to our Nation and to our Corps' warfighting capabilities. Blount Island's peacetime mission is to support the Maritime Prepositioning Force. Its wartime capability and capacity to support massive logistics sustainment from the continental United

States gives it strategic significance. The Blount Island facility has a vital role in the National Military Strategy as the site for maintenance operations of the Maritime Prepositioning Force. The Marine Corps thanks Congress for your role in supporting this acquisition project. Phase II, funded by the $115.7 million appropriated in the Defense Authorization Act of 2004, gives the Marine Corps ownership of the leased maintenance area and supporting dredge disposal site consisting of 1,089 acres.

Encroachment

We are grateful to Congress for providing a tool to facilitate the management of incompatible developments adjacent to or in close proximity to military lands. We are working with state and local governments and with non-governmental organizations such as the Trust for Public Lands, The Nature Conservancy, the Sierra Club, and the Endangered Species Coalition to acquire lands buffering or near our bases including Camp Lejeune, Marine Corps Air Station Beaufort, and Camp Pendleton. In return for our investment, the Marine Corps is receiving restrictive easements that ensure lands acquired remain undeveloped and serve as buffer zones against future encroachment on our bases.

We are also grateful to Congress for codifying legislation that gives us the opportunity to partner with the U.S. Fish and Wildlife Service and State fish and game agencies in order to manage endangered species present on military lands. Management via our Integrated Natural Resources Management Plans, which we prepare in partnerships with these agencies, allows us to protect and enhance populations of these species on our lands while allowing marines to train. Finally, we support the Secretary of Defense's efforts to provide flexibility under the Clean Air Act and to clarify the governing authorities under which the DOD would manage operational ranges. The Marine Corps strives to be a good environmental steward and the growing number of endangered species on our lands and their increasing populations are examples of our successes. We remain committed to protecting the resources entrusted to us by the American people.

Base Realignment and Closures

A successful Base Realignment and Closure (BRAC) process, resulting in recommendations in 2005, is critically important to the Nation, the DOD, and the Department of Navy. By eliminating excesses and improving efficiencies, the armed services will achieve a transformation of our infrastructure in the same way we are achieving a transformation of our forces. Recommendations will be developed only after a thorough and in-depth review.

Command and Control

Naval expeditionary warfare will depend heavily on the ability of the forces to share linked and fused information from a common source which will, in turn, ensure command and control of widely dispersed forces. Exploiting the use of space, ground and aerial platforms requires a networked, protected, and assured global grid of information. Leveraging command and control technology to improve our interoperability continues to be our focus of effort.

Advances in technology and a need to leverage existing infrastructure requires us to establish a new information technology (IT) framework—one that is more reliable, efficient, secure, and responsive. This new IT framework must provide enhanced information access and improved information services to the operating forces. By streamlining the deployment of IT tools and realigning our IT resources, the Marine Corps Enterprise IT Services will shift the burden away from the operating forces by establishing a new IT environment. This IT environment will fuse and integrate Department wide, net-centric enterprise services to provide a common set of sharable IT services to the entire Marine Corps. By eliminating individual organizations providing duplicative and redundant services, we will reduce the IT burden on the operating forces through enterprise provided IT services, and improve our ability to process information and enhance the speed of decisionmaking.

Intelligence

Our fiscal year 1996 through fiscal year 2004 enhancements to Marine Corps intelligence improved the intelligence capability within Marine Corps units and established a "reach-back" intelligence production capability between forward deployed units and our Marine Corps Intelligence Activity in Quantico, Virginia. These improvements are proving to be remarkably beneficial to our efforts in OIF and OEF. Marine intelligence is concurrently supporting ongoing operations, preparing for near term operations, and transforming our intelligence systems to meet future warfighting requirements. Marine Intelligence Specialists have provided significant contributions to ongoing operations in Iraq, Afghanistan, and Djibouti and will play

a crucial intelligence role as Marine Forces return to Iraq in larger numbers this year. Before again deploying to Iraq, we will train over 400 marines in basic Arabic to aid in our efforts to work with the Iraqis at the patrol level, and we will provide enhanced language training for some of our Arabic heritage speakers and others trained linguists to increase our operational influence and effectiveness. Meanwhile, we prepare for future conflicts by ensuring that our intelligence training and systems funded in the fiscal year 2005–2009 program incorporate the latest technological advances and become more capable of seamless interoperability with the systems used by other Services and national agencies.

Mobility

As preliminary assessments of operations in Iraq highlight, operational and tactical mobility are essential to overcome the current range of threats. The ability to rapidly respond and then flexibly adapt to a changing situation is critical to address future challenges. Increasing the speed, range, and flexibility of maneuver units that are enhanced by logistical power generated from the sea, will increase naval power projection. The following initiatives are vital to achieve greater operational mobility:

MV–22 Osprey

The MV–22 remains the Marine Corps' number one aviation acquisition priority. While fulfilling the critical Marine Corps medium lift requirement, the MV–22's increased range, speed, payload, and survivability will generate truly transformational tactical and operational capabilities. With the Osprey, Marine Forces operating from a sea base will be able to take the best of long-range maneuver and strategic surprise, and join it with the best of the sustainable forcible-entry capability. Ospreys will replace our aging fleets of CH–46E Sea Knight and CH–53D Sea Stallion helicopters.

KC–130J

Continued replacement of our aging KC–130 fleet with KC–130J aircraft is necessary to ensure the viability and deployability of Marine Corps Tactical Air and Assault Support well into the 21st century. Acquisition of the KC–130J represents a significant increase in operational efficiency and enhanced refueling and assault support capabilities for the Marine Corps. The KC–130J provides the aerial refueling and assault support airlift resources needed to support the Osprey, the JSF, and the MAGTF and Joint Force Commanders.

Expeditionary Fighting Vehicle

The EFV, formerly known as the Advanced Amphibious Assault Vehicle (AAAV), will provide Marine Corp surface assault elements the requisite operational and tactical mobility to exploit fleeting opportunities in the fluid operational environment of the future. Designed to be launched from naval amphibious shipping from over the horizon, the EFV will be capable of carrying a reinforced Marine Corp rifle squad at speeds in excess of 20 nautical miles per hour in sea state three. This capability will reduce the vulnerability of our naval forces to enemy threats by keeping them well out to sea while providing our surface assault forces mounted in EFVs the mobility to react to and exploit gaps in enemy defenses ashore. Once ashore, EFV will provide Marine Corp maneuver units with an armored personnel carrier designed to meet the threats of the future. EFV will replace the aging Assault Amphibious Vehicle (AAV). With its high speed land and water maneuverability, highly lethal day/night fighting ability, and advanced armor and Nuclear, Biological, and Chemical (NBC) protection, the EFV will significantly enhance the lethality and survivability of Marine Corp maneuver units and provide the MAGTF and ESG with increased operational tempo across the spectrum of operations.

Power Projection Platforms

Combined with embarked marines, amphibious warships provide our Nation with both a forward presence and a flexible crisis response force. These power projection platforms give decisionmakers immediately responsive combat options. As the sea basing concept matures, enhanced naval expeditionary forces will be optimized to provide a full spectrum of capabilities.

Inherent in the Sea Strike pillar of the sea basing concept is the ability to both strike with fires from the sea base and from units maneuvering within the littoral region. The dilemma that these two offensive capabilities impose on an enemy and the multitude of options they create for our leadership increase our ability to achieve success effectively and efficiently. The built-in flexibility and survivability of amphibious ships coupled with their combat sustainment capability ensure the rapid achievement of a full range of offensive operations that either allow us to ac-

complish operational objectives directly or enable us to set the conditions for major joint operations. The ability to defeat an anti-access strategy—before it is completed or even once it is developed—is vital to our national security objectives.

The LPD 17 class amphibious ships, currently planned or under construction, represent the Department of the Navy's commitment to a modern expeditionary power projection fleet. These ships will assist our naval forces in meeting the fiscally-constrained programming goal of lifting 2.5 Marine Expeditionary Brigade Assault Echelons (AEs). The lead ship detail design has been completed and the construction process is over 80 percent, complete with a successful launch in July 2003. Production effort is focused on meeting test milestones for a November 2004 delivery. Construction of LPD 23 has been accelerated from fiscal year 2006 to fiscal year 2005, leveraging Fiscal Year 2004 Advance Procurement resources provided by Congress. LPD 17 replaces four classes of older ships—the LKA, LST, LSD, and the LPD—and is being built with a 40-year expected service life.

LHAs 1–5 reach their 35-year service life at a rate of one per year in 2011–2015. LHD–8 will replace one LHA when it delivers in fiscal year 2007. In order to meet future warfighting requirements, the Navy and Marine Corps leadership is evaluating LHA (Replacement)—LHA(R)—requirements in the larger context of joint sea basing, power projection, the global war on terrorism, and lessons learned from OEF and OIF. The resulting platform will provide a transformational capability that is interoperable with future amphibious and Maritime Preposition Force ships, high-speed connectors, advanced rotorcraft like the MV–22, JSF, and EFVs.

Maritime Prepositioning Force

The leases on the current Maritime Prepositioning Ships begin to expire in 2009. The MPF(F) will be a key enabler to sea-based operations. It will allow us to better exploit the maneuver space provided by the sea to conduct joint operations at a time and place of our choosing. When the MPF(F) becomes operational, the maritime prepositioning role will expand far beyond its current capability to provide the combat equipment for a fly-in force. MPF(F) will serve four functions that the current MPF cannot: (1) at-sea arrival and assembly of units; (2) direct support of the assault echelon of the Amphibious Task Force; (3) long-term, sea-based sustainment of the landing force; and (4) at-sea reconstitution and redeployment of the force. The enhanced capabilities of these ships will significantly increase the capability of the Sea Base—in the sea basing concept—to provide unimpeded mobility and persistent sustainment. This enhanced sea base will minimize limitations imposed by reliance on overseas shore-based support, maximize the ability of the naval elements of the joint force to conduct combat operations from the maritime domain, and enable the transformed joint force to exploit our Nation's asymmetric advantage of our seapower dominance. The ability to rapidly generate maneuver forces from this sea base will augment our forward presence and forcible entry forces, increasing the overall power and effect of the joint campaign. Acceleration of the lead MPF(F) from fiscal year 2008 to fiscal year 2007 in the fiscal year 2005 budget reflects an emphasis on sea basing capabilities. The fiscal years 2005–2009 plan procures three MPF(F) ships and advanced construction for an MPF(F) aviation variant.

High Speed Connectors

High Speed Connectors (HSCs) possess characteristics that make them uniquely suited to support the sea base and sea-based operations. HSCs are unique in combining shallow draft, high speed, and large lift capacity into a single platform. HSCs will help create an enhanced operational capability by providing commanders with a flexible platform to deliver tailored, scalable forces in response to a wide range of mission requirements. The range and payload capacity of HSCs, combined with their ability to interface with current and future MPF shipping and access austere ports greatly enhances the operational reach, tactical mobility, and flexibility of sea-based forces.

Mine Countermeasure Capabilities

There is a great need to continue the development of our mine countermeasure capabilities. A major challenge for the Navy-Marine Corps team is ensuring the effective delivery of ground forces ashore when mines and other anti-access measures are employed in the surf zone or ashore beyond the high water mark. We are currently exploring with the Navy how the technology of Joint Direct Attack Munitions (JDAM) promises a short-term solution and may lead to a better long-term solution to the challenge of mines in the surf zone. Using unitary bombs, fuses, and JDAM tail kits, we have designed a mine countermeasure known as the JDAM Assault Breaching System (JABS). Preliminary test results are showing promise as an interim solution for breaching surface laid minefields and light obstacles in the beach

zones. Further testing and characterization of the JABS system is proceeding throughout fiscal year 2004 with tests against Surf Zone Mines and obstacles.

Some aspects of JABS development may lead to a long-term solution to the mine threat. One possible solution that is envisioned includes developing bomb-delivered darts that physically destroy buried mines in the Beach Zone and Surf Zone region. In addition, the Navy has adopted the Marine Corp Coastal Battlefield Reconnaissance and Analysis (COBRA) mine sensor system for the beach zone with a planned product improvement enhancement for COBRA called the Rapid Overt Airborne Reconnaissance (ROAR) that extends detection to the very shallow water and the surf zone regions by 2015. In addition, the Marine Corps seeks to improve breaching capability beyond the high water mark by developing both deliberate and in-stride breaching systems. These include the Advanced Mine Detector program and the Assault Breacher Vehicle program.

Fires and Effects

As events over the past year have demonstrated—and suggest for the future—the increased range and speed of expeditionary forces and the depth of their influence landward has and will continue to increase. To fully realize these capabilities the Nation requires a range of complementary, expeditionary lethal and non-lethal fire support capabilities. During OIF, 60 AV–8B Harrier aircraft were based at-sea aboard amphibious shipping—minimizing the challenge of airfield shortages ashore. This prelude to future sea-based operations was extremely successful with over 2,200 sorties generated—mostly in support of I MEF ground units. A key factor to this success was the employment of forward operating bases close to the ground forces which allowed the AV–8B to refuel and rearm multiple times before returning to their ships. In addition, the complementary capabilities of surface and air delivered fires were highlighted in this campaign. Further, the importance of both precision and volume fires was critical to success. Precision fires assisted in reducing both collateral damage and the demands on tactical logistics. I MEF also validated the requirement for volume fires in support of maneuver warfare tactics. These fires allow maneuver forces to take advantage of maneuver warfare opportunities before precision intelligence can be developed and precision fires can be employed against fleeting targets or rapidly developing enemy defensive postures.

Short Take Off Vertical Landing Joint Strike Fighter

The STOVL JSF will be a single engine, stealth, supersonic, strike-fighter capable of short take-offs and vertical landings. The aircraft is designed to replace the AV–8B and FA–18 aircraft in the Marine Corps inventory. The operational reliability, stealth, and payload capability designed into the STOVL JSF represents a great improvement in combat capability over existing legacy platforms. The aircraft is in the second year of a 10–12 year development program. The STOVL JSF force is integral to our future warfighting capabilities. Its design and capabilities will fulfill all Marine Corps strike-fighter requirements and better support the combined arms requirements in expeditionary operations. Continued support of the STOVL JSF is vital to the Marine Corps.

Indirect Fires Support

In response to identified gaps in our indirect fires capability, the Marine Corps undertook an effort to replace the aging M198 155mm towed howitzers and provide a full spectrum all-weather system of systems fires capability. Operations in Iraq confirmed this requirement and the direction that the Marine Corps has undertaken. This system of systems will be capable of employing both precision and volume munitions.

The Lightweight 155mm Howitzer (LW 155) is optimized for versatility, pro-active counter fire and offensive operations in support of light and medium forces. It supports Operational Maneuver from the Sea and replaces all M198s in the Marine Corps, as well as the M198s in Army Airborne, Light Units, and Stryker Brigade Combat Teams. Compared to the current system, the LW 155 is more mobile, capable of more rapid deployment, more survivable, and more accurate. IOC is expected during fiscal year 2005, and a full operational capability will be reached 3 years later.

The High Mobility Artillery Rocket System (HIMARS) fulfills a critical range and volume gap in Marine Corps fire support assets by providing 24 hour, all weather, ground-based, responsive, General Support, General Support-Reinforcing, and Reinforcing indirect fires throughout all phases of combat operations ashore. HIMARS will be fielded in one artillery battalion of the active component and one battalion of the Reserve component. An IOC is planned for fiscal year 2007 with a full capability expected during fiscal year 2008. An interim capability of one battery during fiscal years 2005–2006 is also currently planned.

The Expeditionary Fire Support System (EFSS) is the third element of the triad of ground firing systems, and it will be the principal indirect fire support system for the vertical assault element. EFSS-equipped units will be especially well suited for missions requiring speed, tactical agility, and vertical transportability. The estimated Approved Acquisition Objective is 88 systems. Initially, this provides eleven batteries to support our MEUs (Special Operations Capable). IOC is planned for fiscal year 2006 and full operational capability is planned for fiscal year 2008.

Naval Surface Fire Support

An important element of our fires and effects capability will continue to be surface ships that provide direct delivery of fires from the sea base. Critical deficiencies currently exist in the capability of the Navy to provide all-weather, accurate, lethal and responsive fire support throughout the depth of the littoral in support of expeditionary operations. In the critical period of the early phases of the forcible entry operations when organic Marine Corps ground indirect fires are not yet or just beginning to be established, the landing force will be even more dependent on the complementary capability required of naval surface fire support assets. To date, no systems have been introduced or are being developed which meet near- or mid-term Naval Surface Fire Support requirements. The DD(X) destroyer—armed with two 155mm Advanced Gun Systems—continues to be the best long-term solution to satisfy the Marine Corps' Naval Surface Fire Support requirements. Our Nation's forcible entry, expeditionary forces will remain at considerable risk for want of suitable sea-based fire support until DD(X) joins the fleet in considerable numbers in 2020. Currently, the lead ship of this class will not be operational until fiscal year 2013. In addition, the Marine Corps is closely monitoring research into the development of electromagnetic gun technology to support future range and velocity requirements. Electromagnetic guns could potentially provide naval surface fire support at ranges on the order of 220 nautical miles, and could eventually be incorporated into ground mobile weapon systems like the future EFVs as size, weight, and power technology hurdles are overcome.

H–1 (UH–1Y/AH–1Z)

The current fleet of UH–1N utility helicopters and AH–1W attack helicopters is reaching the end of their planned service life and face a number of deficiencies in crew and passenger survivability, payload, power availability, endurance, range, airspeed, maneuverability, and supportability. The Department of the Navy has determined that the H–1 Upgrade Program is the most cost effective alternative that meets the Marine Corps' attack and utility helicopter requirements until the introduction of a new technology advanced rotorcraft aircraft. The H–1 Upgrade Program is a key modernization effort designed to resolve existing safety deficiencies, enhance operational effectiveness of both the UH–1N and the AH–1W, and extend the service life of both aircraft. Additionally, the commonality gained between the UH–1Y and AH–1Z (projected to be 84 percent) will significantly reduce life-cycle costs and logistical footprint, while increasing the maintainability and deployability of both aircraft. On October 22, 2003, the program to enter Low-Rate Initial Production (LRIP), and on December 29, 2003, the LRIP Lot 1 aircraft contract was awarded to Bell Helicopter.

Information Operations

The Marine Corps is exploring ways to ensure marines will be capable of conducting full spectrum information operations, pursuing the development of information capabilities through initiatives in policy and doctrine, career force, structure, training and education, and programs and resources. Marine Forces will use information operations to deny, degrade, disrupt, destroy or influence an adversary commander's methods, means or ability to command and control his forces.

New Weapons Technologies

The Marine Corps is particularly interested in adapting truly transformational weapon technologies. We have forged partnerships throughout DOD, other agencies, and with industry over the past several years in an effort to develop and adapt the most hopeful areas of science and technology. Several notable programs with promising technologies include: (1) Advanced Tactical Lasers to potentially support a tactical gunship high energy laser weapon, (2) Active Denial System—a high-power millimeter-wave, non-lethal weapon, (3) Free Electron Lasers for multi-mission shipboard weapons application, and (4) various promising Counter Improvised Explosive Device technologies.

Logistics and Combat Service Support

Logistics Modernization

Since 1999, the Marine Corps has undertaken several logistics modernization efforts to improve the overall effectiveness of our MAGTFs as agile, expeditionary forces in readiness. Some of these initiatives have reached full operational capability or are on track for complete implementation. Applying the lessons learned from OIF resulted in new initiatives concerning naval logistics integration, naval distribution, and the integration of the Combat Service Support Element with Marine Corps Bases.

The Marine Corps' number one logistics priority is the re-engineering of logistics information technology and the retirement of our legacy systems, which is described in the next section. The Marine Corps is working to enhance the integration of its distribution processes across the tactical through strategic levels of warfare, providing the warfighter a "snap shot" view of his needed supplies in the distribution chain to instantly locate specific items that are en route. This capability, described in the following section, will result in increased confidence in the distribution chain and will reduce both the quantity of reorders and the amount of inventory carried to support the warfighter.

Logistics Command and Control

The Global Combat Support System-Marine Corps is the Marine Corps' portion of the overarching Global Combat Support System Family of Systems as designated by the Joint Requirements Oversight Council (JROC) and the Global Combat Support System General Officer Steering Committee. It is a Marine Corps acquisition program with the responsibility to acquire and integrate commercial off the shelf software in order to satisfy the information requirements of commanders, as well as support the Marine Corps Logistics Operational Architecture. The Global Combat Support System—Marine Corps program will provide modern, deployable information technology tools for all elements of the MAGTF. Existing Logistics Information Systems used today in direct support of our MAGTFs are either not deployable (mainframe based) or are deployable with such limited capability (tethered client server) that our commanders lack in-transit and asset visibility. Global Combat Support System-Marine Corps requirements include a single point of entry, Web-based portal capability to generate simple requests for products and services, logistics command and control capability to support the MAGTF, and back office tools to assist in the management of the logistics chain. These capabilities will improve warfighting excellence by providing commanders with the logistics information they need to make timely command and control decisions. The key to improving the accuracy and visibility of materiel in the logistics chain is to establish a shared data environment.

End-to-End Distribution

The Marine Corps is aggressively pursuing standardization of the materiel distribution within the Marine Corps to include interfacing with commercial and operational-level DOD distribution organizations. Furthermore, distribution processes and resources used in a deployed theater of operations need to be the same as those used in garrison. We strongly support United States Transportation Command's designation as the DOD's Distribution Process Owner. In this capacity, United States Transportation Command can more easily integrate distribution processes and systems at the strategic and operational levels and provide the DOD a standard, joint solution for distribution management. Materiel End-To-End Distribution provides Marine Corp commanders the means to seamlessly execute inbound and outbound movements for all classes of supply while maintaining Total Asset and In-transit Visibility throughout the distribution pipeline.

VI. CONCLUSION

The Marine Corps remains focused on organizing, training, and equipping our forces to best support combatant commanders throughout the spectrum of combat. Incorporating recent experiences, increasing our forces' integration with joint capabilities, exploiting the flexibility and rapid response capabilities of our units, and preserving the adaptability of our marines, will collectively lead to more options for the combatant commanders. The Marine Corps' commitment to warfighting excellence and the steadfast support we receive from this committee will lead to success in the global war on terrorism while helping to ensure America's security and prosperity.

Chairman WARNER. We thank you for your service, General, and I thank you for your very clear and forthright statement, which again will be listened to very carefully by your forces and their families for your actions and judgment concerning the conflict in Iraq. I share your view, as we all do. WMD were not there readily available to be used.

General Jumper.

STATEMENT OF GEN. JOHN P. JUMPER, USAF, CHIEF OF STAFF, UNITED STATES AIR FORCE

General JUMPER. Mr. Chairman, Senator Levin, members of the committee: It is a pleasure for me to be here today and to represent more than 700,000 active duty, Air National Guard, Air Force Reserve, and Air Force civilians who serve in our United States Air Force.

I would like to thank this committee for their continued support of all that we do around the world to deal with this global war on terrorism and the other contingencies that we support globally. Senator Lieberman, I am particularly taken by your acknowledgment of our families that are out there, that we hear from every single day. I am encouraged every day at the courage and the bravery of those families, and I would also include in that the commitment of the employers who support our mobilized Air National Guard and Air Force Reserve members that have served throughout this crisis.

I would also like to take this time, Mr. Chairman, to make the point that during Operation Desert Shield and Operation Desert Storm in 1990 and 1991 I was put in charge of preparing for biological and chemical warfare defense by then Chairman of the Joint Chiefs of Staff Colin Powell when I worked for him on the Joint Staff. The evidence then was compelling, and continued to be throughout the years of our no-fly zone operations, of stored chemical and biological weapons, even weaponizing on warheads. We did not know the disposition of their Scud missiles, but we knew that there were missiles left over after the Operation Desert Storm and Operation Desert Shield crisis.

We watched for years as the Iraqis made attempts to evade the inspectors that were on the ground finding these weapons, and then we watched, as was pointed out earlier, the attempts to shoot at our airplanes that were patrolling the no-fly zones. I was, as Admiral Clark said, convinced then and I was convinced as we went into the war that they were there, and I stand by my position at that time.

Chairman WARNER. Thank you, General.

General JUMPER. Sir, as Admiral Clark pointed out, the group at this table spend a lot of time together, and we talk about our capabilities jointly and the ability to go to war jointly. We have decided among ourselves that we will never be going alone to any confrontation that this Nation undertakes. We have embarked on a series of joint concepts of operations so that we can be together when we do deploy at the Nation's bidding.

As the Army undertakes its new concept of operations (CONOP) for a brigade combat team and as the sea basing CONOP unfolds, we are configuring our Air Force to be able to maintain the superi-

ority in air and space and to join in on these concepts of operations as required to make them successful. We are also undertaking dedicated efforts to improve our close air support for the United States Army. You will see in this budget efforts that will assure that we have dedicated and improved close air support on into the future.

We in the United States Air Force have completed our configuration to the Air Expeditionary Force, an effort that has taken us since 1994 and in a more dedicated way since 1997 to complete this configuration into 10 equally capable expeditionary force packages. Today I can report to you that 75 percent of our people in the Air Force are on tap to be mobilized if required.

OIF required us to deploy 8 of our 10 Air Expeditionary Forces. We pulled them forward. We deployed into 32 bases and locations around the world. I can tell you that at the height of OIF I do not think we had one tent left in the United States Air Force. We continue today with 14 bases open throughout the AOR to conduct operations.

Like the Army, the Air Force helped us with our security needs. They provided us with their National Guard security forces when we experienced increased threat conditions after September 11. We now have almost 100 percent of our combat engineers deployed to help the transition in and out between the United States Army and the United States Marine Corps.

We have invested, and will continue to invest, a great deal in the technology of air and space. We will see continued development of the space-based radar (SBR), and of the transformational communications system. We will see the F/A–22 in the budget as it continues to go through its operational testing. This is a system that will be able to deal with the surface-to-air missiles that we see being developed and deployed right now around the world, and will also be able to deal with anything that comes up to challenge us in the air.

We are developing a new series of joint weapons, to include standoff munitions. We are developing a 250-pound small diameter bomb that will be able to glide with internal wings out many miles, allowing it to deal with targets far away. When we are able to incorporate this on an F/A–22 we will be able to support the brigade combat team concept deep behind enemy lines to support people on the ground.

As for mobility, you will see that we continue to acquire additional C–17s, airplanes that have been renownedly successful. We saw in OIF the drop of over 1,000 members of the 173rd Brigade in northern Iraq, which proved to be a very successful operation. Jumping with the Army were 22 airmen who got to the ground and made sure that the air field was able to be used to land aircraft as quickly as possible.

In concert with the United States Navy, we continue to develop unmanned aerial vehicles (UAVs) and to put these UAVs out there in the hands of the people who need them: the Predator unmanned vehicle, the Global Hawk, and the Predator B. These are armed Predators: The two versions of the Predator are both armed and can deal with targets, as we saw them do in Iraq when we took out a satellite TV station being used by Baghdad Bob that was

parked right near the Grand Mosque. We were able to do that with great precision, with only a very small warhead used from the Predator UAV.

We continue to ask that we be able to recapitalize our tanker force in a way that is appropriate and is approved by this committee and by Members of Congress.

We ask for continued improvement of our bomber force, to include standoff capability on our B–1s. We ask that we may develop a bomb rack from which we can drop 80 individually guided, Global Positioning System (GPS)-guided munitions from a single B–2. This has been tested and proven to be successful.

Of course, as the other Service Chiefs have testified, none of this is made possible without absolutely magnificent people. More than 20 percent of each of our Air Expeditionary Force packages are made up of members of the Air National Guard and the Air Force Reserve. We cannot go to war without them. They volunteer in normal times to go on these rotations, and then we have innovative concepts that are working. Take, for example, the blended unit in Senator Chambliss' State of Georgia that has the Air National Guard and the Active-Duty Force in the same unit. In this case, it is commanded by a guardsman, but the command can transfer back and forth, and it provides us a terrific way to have ready forces that Air National Guard members can fall in on in times of surge. We are going to look at this concept also in the future with our fighter forces, to include the F/A–22.

We are happy to report, as are the other Services, great progress and success in retention and in recruiting. Before this fiscal year started, we had 43 percent of this year's recruiting already in the bank and ready to go. Retention again for several years in a row now is at 100 percent in all categories. We expected some drop after stop-loss was dropped last summer. We saw no dropoff in retention. I am proud to report, sir, that in my travels overseas where I have visited with soldiers, sailors, airmen, and marines in the AOR, the highest morale I have ever seen and a pride that I can tell you I have never felt before.

Sir, it is a pleasure to be here today and I look forward to your questions.

[The prepared statement of General Jumper follows:]

PREPARED STATEMENT BY GEN. JOHN P. JUMPER, USAF

Mr. Chairman, Senator Levin, and distinguished members of the committee, the Air Force has an unlimited horizon for air and space capabilities. Our Service was borne of innovation, and we remain focused on identifying and developing the concepts of operations (CONOPs), advanced technologies, and integrated operations required to provide the joint force with unprecedented capabilities and to remain the world's dominant air and space force.

Throughout our distinguished history, America's Air Force has remained the world's premier air and space power because of our professional airmen, our investment in warfighting technology, and our ability to integrate our people and systems together to produce decisive effects. These Air Force competencies are the foundation that will ensure we are prepared for the unknown threats of an uncertain future. They will ensure that our combatant commanders have the tools they need to maintain a broad and sustained advantage over any emerging adversaries.

In this strategic environment of the 21st century, and along with our sister Services, our Air Force will continue to fulfill our obligation to protect America, deter aggression, assure our allies, and defeat our enemies. As we adapt the Air Force to the demands of this era, we remain committed to fulfilling our global commitments as part of the joint warfighting team. In partnership, and with the continuing

assistance of Congress, we will shape the force to meet the needs of this century, fight the global war on terrorism, and defend our Nation.

The 2004 Posture Statement is our vision for the upcoming year and is the blueprint we will follow to sustain our air and space dominance in the future. We are America's Air Force—disciplined airmen, dominant in warfighting, decisive in conflict.

INTRODUCTION

In 2003, U.S. and coalition military operations produced unprecedented mission successes—across the spectrum of conflict and around the globe. The joint warfighting team demonstrated combat capability never previously witnessed in the history of conflict. Integrating capabilities from air, land, sea, and space, the U.S. and coalition allies achieved considerable progress in the ongoing global war on terrorism. In our most recent engagements, our Armed Forces fulfilled our immediate obligations to defend America, deter aggression, assure our allies, and defeat our enemies.

The foundation of these achievements can be found in the Department of Defense's (DOD) commitment to teamwork and excellence. Operation Iraqi Freedom (OIF) was a joint and coalition warfighting effort from planning to execution. Air, ground, maritime, and space forces worked together at the same time for the same objectives, not merely staying out of each other's way, but orchestrated to achieve wartime objectives. Our air and space forces achieved dominance throughout the entire theater, enabling maritime and ground forces to operate without fear of enemy air attack. Our airmen demonstrated the flexibility, speed, precision, and compelling effects of air and space power, successfully engaging the full range of enemy targets, from the regime's leadership to fielded forces. When our ground and maritime components engaged the enemy, they were confident our airmen would be there—either in advance of their attacks, or in support of their operations. America's Air Force was there, disciplined, dominant, and decisive.

These operational accomplishments illustrate the growing maturation of air and space power. Leveraging the expertise of our airmen, the technologies present in our 21st century force, and the strategies, CONOPs, and organizations in use today, the U.S. Air Force continues to adapt to meet the demands of this new era, while pursuing the war on terrorism and defending the homeland.

On September 11, 2001, the dangers of the 21st century became apparent to the world. Today, the U.S. faces an array of asymmetric threats from terrorists and rogue states, including a threat that poses the gravest danger to our Nation, the growing nexus of radicalism and technology. As we continue our work in Afghanistan and Iraq, we stand ready to respond to flashpoints around the world, prepared to counter the proliferation of weapons of mass destruction (WMD) to unfriendly states and non-state entities.

We are adapting to new and enduring challenges. As we do, we are exploiting the inherent sources of strength that give us the advantages we enjoy today. It is a strategy predicated on the idea that, if we accurately assess our own advantages and strengths, we can invest in them to yield high rates of military return. This approach helps us create a portfolio of advantages allowing us to produce and continue to exploit our capabilities. Our goal is to create a capability mix consistent with CONOPs and effects-driven methodology, relevant to the joint character and increasingly asymmetric conduct of warfare.

Since 1945, when General Henry "Hap" Arnold and Dr. Theodore von Karman published Toward New Horizons, the Air Force has evolved to meet the changing needs of the Nation—with the sole objective of improving our ability to generate overwhelming and strategically compelling effects from air and now, space. It is our heritage to adapt and we will continue to do so. During this comparatively short history, we became the best air and space force in the world through our focus on the development of professional airmen, our investment in warfighting technology, and our ability to integrate people and systems to produce decisive joint warfighting effects.

The Air Force is making a conscious investment in education, training, and leader development to foster critical thinking, innovation, and encourage risk taking. We deliberately prepare our airmen—officer, enlisted, and civilian—with experience, assignments, and broadening that will allow them to succeed. When our airmen act in the combined or joint arena, whether as an Air Liaison Officer to a ground maneuver element, or as the space advisor to the Joint Force Commander (JFC), this focused professional development will guide their success.

We are also investing in technologies that will enable us to create a fully integrated force of intelligence capabilities, manned, unmanned and space assets that

communicate at the machine-to-machine level, and real-time global command and control (C2) of joint, allied, and coalition forces. Collectively, these assets will enable compression of the targeting cycle and near-instantaneous global precision-strike.

As we cultivate new concepts of global engagement, we will move from analog to digital processes and adopt more agile, non-linear ways of integrating to achieve mission success. This change in thinking leads to capabilities including: networked communications; multi-mission platforms which fuse multi-spectral sensors; integrated global intelligence, surveillance, and reconnaissance (ISR); robust, all-weather weapons delivery with increased standoff; small smart weapons; remotely-piloted and unattended aircraft systems; advanced air operations centers; more secure position, navigation, and timing; and a new generation of satellites with more operationally responsive launch systems.

Investment in our core competencies is the foundation of our preparation for future threats. They ensure we have the tools we need to maintain strategic deterrence as well as a sustained advantage over our potential adversaries. Ultimately, they ensure we can deliver the dominant warfighting capability our Nation needs.

Potential adversaries, however, continue to pursue capabilities that threaten the dominance we enjoy today. Double-digit surface-to-air missile systems (SAMs) are proliferating. China has purchased significant numbers of these advanced SAMs, and there is a risk of wider future proliferation to potential threat nations. Fifth-generation advanced aircraft with capabilities superior to our present fleet of frontline fighter/attack aircraft are in production. China has also purchased, and is developing, advanced fighter aircraft that are broadly comparable to the best of our current frontline fighters. Advanced cruise missile technology is expanding, and information technology is spreading. Access to satellite communications, imagery, and use of the Global Positioning System (GPS) signal for navigation are now available for anyone willing to purchase the necessary equipment or services. With this relentless technological progress and the potential parity of foreign nations, as well as their potential application in future threats, the mere maintenance of our aging aircraft and space systems will not suffice. Simply stated, our current fleet of legacy systems cannot always ensure air and space dominance in future engagements.

To counter these trends, we are pursuing a range of strategies that will guide our modernization and recapitalization efforts. We are using a capabilities-based planning and budgeting process, an integrated and systematic risk assessment system, a commitment to shorter acquisition cycle times, and improved program oversight. Our goal is to integrate our combat, information warfare, and support systems to create a portfolio of air and space advantages for the joint warfighter and the Nation. Thus, we continue to advocate for program stability in our modernization and investment accounts.

The principal mechanisms that facilitate this process are our Air Force CONOPs. Through the CONOPs, we analyze problems we will be asked to solve for the JFCs, identify the capabilities our expeditionary forces need to accomplish their missions, and define the operational effects we expect to produce. Through this approach, we can make smarter decisions about future investment, articulate the link between systems and employment concepts, and identify our capability gaps and risks.

The priorities that emerge from the CONOPs will guide a reformed acquisition process that includes more active, continuous, and creative partnerships among the requirement, development, operational test, and industry communities who work side-by-side at the program level. In our science and technology (S&T) planning, we are also working to demonstrate and integrate promising technologies quickly by providing an operational "pull" that conveys a clear vision of the capabilities we need for the future.

We are applying this approach to our space systems as well. As the DOD's executive agent for space, we are producing innovative solutions for the most challenging national security problems. We have defined a series of priorities essential to delivering space-based capabilities to the joint warfighter and the Intelligence Community. Achieving mission success—in operations and acquisition—is our principal priority. This requires us to concentrate on designing and building quality into our systems. To achieve these exacting standards, we will concentrate on the technical aspects of our space programs early on—relying on strong systems engineering design, discipline, and robust test programs. We also have many areas that require a sustained investment. We need to replace aging satellites, improve outmoded ground control stations, achieve space control capabilities to ensure freedom of action, sustain operationally responsive assured access to space, address bandwidth limitations, and focus space S&T investment programs. This effort will require reinvigorating the space industrial base and funding smaller technology incubators to generate creative "over the horizon" ideas.

As we address the problem of aging systems through renewed investment, we will continue to find innovative means to keep current systems operationally effective. In OIF, the spirit of innovation flourished. We achieved a number of air and space power firsts: employment of the B–1 bomber's synthetic aperture radar and ground moving target indicator for ISR; incorporation of the Litening II targeting pod on the F–15, F–16, A–10, and the B–52; and use of a Global Hawk for strike coordination and reconnaissance while flown as a remotely piloted aircraft. With these integrated air and space capabilities, we were able to precisely find, fix, track, target, and rapidly engage our adversaries. These examples illustrate how we are approaching adaptation in the U.S. Air Force.

Ultimately, the success of our Air Force in accomplishing our mission and adapting to the exigencies of combat stems from the more than 700,000 active, Guard, Reserve, and civilian professionals who proudly call themselves "airmen." In the past 5 years, they have displayed their competence and bravery in three major conflicts: the Balkans, Afghanistan, and Iraq. They are a formidable warfighting force, imbued with an expeditionary culture, and ready for the challenges of a dangerous world.

Poised to defend America's interests, we continue to satisfy an unprecedented demand for air and space warfighting capabilities—projecting American power globally while providing effective homeland defense. This is the U.S. Air Force in 2004—we foster ingenuity in the world's most professional airmen, thrive on transitioning new technologies into joint warfighting systems, and drive relentlessly toward integration to realize the potential of our air and space capabilities. We are America's airmen—confident in our capability to provide our Nation with dominance in air and space.

AIR AND SPACE DOMINANCE IN A NEW ENVIRONMENT

The U.S. Air Force ensures a flexible, responsive, and dominant force by providing a spectrum of operational capabilities that integrate with joint and coalition forces. To sustain and improve upon the dominance we enjoy today, the Air Force will remain engaged with the other Services, our coalition partners, interagency teams, and the aerospace industry. As we do, we will incorporate the lessons learned from rigorous evaluation of past operations, detailed analyses of ongoing combat operations, and thoughtful prediction of the capabilities required of a future force.

The pace of operations over the past year enabled us to validate the function and structure of our Air and Space Expeditionary Forces (AEFs). Operations in 2003 demanded more capability from our AEFs than at any time since their inception in 1998. However, for the first time we relied exclusively on our AEFs to present the full range of our capabilities to the combatant commanders. Through our 10 AEFs, our AEF prime capabilities (space, national ISR, long range strike, nuclear, and other assets), and our AEF mobility assets, we demonstrated our ability to package forces, selecting the most appropriate combat ready forces from our Total Force, built and presented expeditionary units, and flowed them to the theaters of operation in a timely and logical sequence. We rapidly delivered them to the warfighters, while preserving a highly capable residual force to satisfy our global commitments.

More than three-fourths of our 359,300 active duty airmen are eligible to deploy and are assigned to an AEF. Through much of the past year, Total Force capabilities from 8 of the 10 AEFs were engaged simultaneously in worldwide operations. The remaining elements were returning from operations, training, or preparing to relieve those currently engaged. By the end of 2003, more than 26,000 airmen were deployed, supporting operations around the world.

In 2004, we will continue to use the AEFs to meet our global requirements while concurrently reconstituting the force. Our number one reconstitution priority is returning our forces to a sustainable AEF battle rhythm while conducting combat operations. Attaining this goal is about revitalizing capabilities. For most airmen, that will include a renewed emphasis on joint composite force training and preparation for rotations in the AEF. Through the AEF, the Air Force presents right-sized, highly trained expeditionary units to JFCs for employment across the spectrum of conflict.

Global War on Terrorism

The year 2003 marked another historic milestone for the U.S. and the Air Force in the global war on terrorism. Since September 11, 2001, air and space power has proven indispensable to securing American skies, defeating the Taliban, denying sanctuary to al Qaeda and other terrorist organizations, and most recently, removing a brutal and oppressive dictator in Iraq. This global war on terrorism imposes on airmen a new steady state of accelerated operations and personnel tempo (PERSTEMPO), as well as a demand for unprecedented speed, agility, and innova-

tion in defeating unconventional and unexpected threats, all while bringing stability and freedom to Afghanistan and Iraq. The Air Force and its airmen will meet these demands.

Operation Noble Eagle

High above our Nation, airmen protect our skies and cities through air defense operations known as Operation Noble Eagle (ONE). The Total Force team, comprised of active duty, Air National Guard, and Air Force Reserve airmen, conducts airborne early warning, air refueling, and combat air patrol operations in order to protect sensitive sites, metropolitan areas, and critical infrastructure.

This constant "top cover" demands significant Air Force assets, thus raising the baseline of requirements above the pre-September 11 tempo. Since 2001, this baseline has meant over 34,000 fighter, tanker, and airborne early warning sorties were added to Air Force requirements.

This year the Air Force scrambled nearly 1,000 aircraft, responding to 800 incidents. Eight active duty, 8 Air Force Reserve, and 18 Air National Guard units provided 1,300 tanker sorties offloading more than 32 million pounds of fuel for these missions. Last year, over 2,400 airmen stood vigilant at air defense sector operations centers and other radar sites. Additionally, in 2003, we continued to institutionalize changes to our homeland defense mission through joint, combined, and interagency training and planning. Participating in the initial validation exercise Determined Promise–03, the Air Force illustrated how its air defense, air mobility, and command and control capabilities work seamlessly with other agencies supporting U.S. Northern Command (NORTHCOM) and Department of Homeland Security (DHS) objectives. The integration and readiness that comes from careful planning and rigorous training will ensure the continued security of America's skies.

Operation Enduring Freedom—Afghanistan

Operation Enduring Freedom—Afghanistan (OEF) is ongoing. Remnants of Taliban forces continue to attack U.S., North Atlantic Treaty Organization (NATO), coalition troops, humanitarian aid workers, and others involved in the reconstruction of Afghanistan. To defeat this threat, aid coalition stability, and support operations, the Air Force has maintained a presence of nearly 24,000 airmen in and around the region. Having already flown more than 90,000 sorties (over 72 percent of all OEF missions flown), the Air Force team of active, Guard, and Reserve airmen continue to perform ISR, close air support (CAS), aerial refueling, and tactical and strategic airlift.

While fully engaged in ONE and OIF, the men and women of the Air Force provided full spectrum air and space support, orchestrating assets from every Service and 10 different nations. Of these, Air Force strike aircraft flying from nine bases flew more than two-thirds of the combat missions, dropped more than 66,000 munitions (9,650 tons) and damaged or destroyed approximately three-quarters of planned targets. In 2003 alone, Air Force assets provided more than 3,000 sorties of on-call CAS, responding to calls from joint and/or coalition forces on the ground.

Last year, the Air Force brought personnel and materiel into this distant, landlocked nation via 7,410 sorties. Over 4,100 passengers and 487 tons of cargo were moved by airmen operating at various Tanker Airlift Control Elements in and around Afghanistan. To support these airlift and combat sorties and the numerous air assets of the coalition with aerial refueling, the Air Force deployed over 50 tankers. In their primary role, these late 1950s-era and early 1960s-era KC–135 tankers flew more than 3,900 refueling missions. In their secondary airlift role, they delivered 3,620 passengers and 405 tons of cargo. Without versatile tankers, our Armed Forces would need greater access to foreign bases, more aircraft to accomplish the same mission, more airlift assets, and generate more sorties to maintain the required duration on-station.

Operations in Afghanistan also highlight U.S. and coalition reliance on U.S. space capabilities. This spanned accurate global weather, precise navigation, communications, as well as persistent worldwide missile warning and surveillance. For example, OEF relied on precision navigation provided by the Air Force's GPS constellation, over-the-horizon satellite communications (SATCOM), and timely observations of weather, geodesy, and enemy activity. To accomplish this, space professionals performed thousands of precise satellite contacts and hundreds of station keeping adjustments to provide transparent space capability to the warfighter. These vital space capabilities and joint enablers directly leveraged our ability to pursue U.S. objectives in OEF.

Operations Northern Watch and Southern Watch

During the past 12 years, the Air Force flew over 391,000 sorties enforcing the northern and southern no-fly zones over Iraq. With the preponderance of forces, the

Air Force, along with the Navy and Marine Corps, worked alongside the Royal Air Force in Operations Northern Watch (ONW) and Southern Watch (OSW). Manning radar outposts and established C2 centers, conducting ISR along Iraq's borders, responding to almost daily acts of Iraqi aggression, and maintaining the required airlift and air refueling missions taxed Air Force assets since the end of Operation Desert Storm. Yet, these successful air operations had three main effects: they halted air attacks on the ethnic minority populations under the no-fly zones; they deterred a repeat of Iraqi aggression against its neighbors; and they leveraged enforcement of United Nations (U.N.) Security Council Resolutions. Throughout this period, our airmen honed their warfighting skills, gained familiarity with the region, and were able to establish favorable conditions for OIF. For more than a decade, American airmen rose to one of our Nation's most important challenges, containing Saddam Hussein.

Operation Iraqi Freedom

On March 19, 2003, our airmen, alongside fellow soldiers, sailors, marines, and coalition teammates, were called upon to remove the dangerous and oppressive Iraqi regime—this date marked the end of ONW/OSW and the beginning of OIF. OIF crystallized the meaning of jointness and the synergies of combined arms and persistent battlefield awareness.

In the first minutes of OIF, airmen of our Combat Air Forces (USAF, USN, USMC, and coalition) were flying over Baghdad. As major land forces crossed the line of departure, Air Force assets pounded Iraqi C^2 facilities and key leadership targets, decapitating the decisionmakers from their fielded forces. Remaining Iraqi leaders operated with outdated information about ground forces that had already moved miles beyond their reach. As the land component raced toward Baghdad, coalition strike aircraft were simultaneously attacking Iraqi fielded forces, communications and command and control centers, surface-to-surface missile launch sites, and were supporting Special Operations Forces, and ensuring complete air and space dominance in the skies over Iraq. Due to these actions and those during the previous 12 years, none of the 19 Iraqi missile launches were successful in disrupting coalition operations, and not a single Iraqi combat sortie flew during this conflict. Twenty-one days after major combat operations began, the first U.S. land forces reached Baghdad. Five days later, the last major city in Iraq capitulated.

The Air Force provided over 7,000 CAS sorties to aid land forces in the quickest ground force movement in history. Lieutenant General William S. Wallace, Commander of the U.S. Army V Corps said, "none of my commanders complained about the availability, responsiveness, or effectiveness of CAS—it was unprecedented!" As Iraqi forces attempted to stand against the integrated air and ground offensive, they found a joint and coalition team that was better equipped, better trained, and better led than ever brought to the field of battle.

Training, leadership, and innovation coupled with the Air Force's recent investment in air mobility allowed U.S. forces to open a second major front in the Iraqi campaign. Constrained from access by land, Air Force C–17s airdropped over 1,000 paratroopers from the 173rd Airborne Brigade into northern Iraq. This successful mission opened Bashur airfield and ensured U.S. forces could be resupplied.

Before 2003, the Air Force invested heavily in the lessons learned from OEF. Shortening the "kill chain," or the time it took to find, fix, track, target, engage, and assess was one of our top priorities. This investment was worthwhile, as 156 time-sensitive targets were engaged within minutes, most with precision weapons. The flexibility of centralized control and decentralized execution of air and space power enabled direct support to JFC objectives throughout Iraq. Coalition and joint airpower shaped the battlefield ahead of ground forces, provided intelligence and security to the flanks and rear of the rapidly advancing coalition, and served as a force multiplier for Special Operations Forces (SOF). This synergy between SOF and the Air Force allowed small specialized teams to have a major effect throughout the northern and western portions of Iraq by magnifying their inherent lethality, guaranteeing rapid tactical mobility, reducing their footprint through aerial resupply, and providing them the advantage of "knowing what was over the next hill" through air and space-borne ISR.

The Air Force's C^2ISR assets enabled the joint force in Afghanistan as well. This invaluable fleet includes the RC–135 Rivet Joint, E–8 JSTARS, and the E–3 Airborne Warning and Control System (AWACS). This "Iron Triad" of intelligence sensors and C^2 capabilities illustrates the Air Force vision of horizontal integration in terms of persistent battlefield awareness. Combined with the Global Hawk unmanned aerial vehicle (UAV) and Predator remotely piloted aircraft, spaced-based systems, U–2, and Compass Call, these invaluable system provided all-weather,

multi-source intelligence to commanders from all services throughout the area of responsibility.

OIF was the Predator's first "networked" operation. Four simultaneous Predator orbits were flown over Iraq and an additional orbit operated over Afghanistan, with three of those orbits controlled via remote operations in the U.S. This combined reachback enabled dynamic support to numerous OIF missions. Predator also contributed to our operational flexibility, accomplishing hunter-killer missions, tactical ballistic missile search, force protection, focused intelligence collection, air strike control, and special operations support. A Hellfire equipped Predator also conducted numerous precision strikes against Iraqi targets, and flew armed escort missions with U.S. Army helicopters.

Space power provided precise, all-weather navigation, global communications, missile warning, and surveillance. The ability to adapt to adverse weather conditions, including sandstorms, allowed air, land, and maritime forces to confound the Iraqi military and denied safe haven anywhere in their own country. As the Iraqis attempted to use ground-based GPS jammers, Air Force strike assets destroyed them, in some cases, using the very munitions the jammers attempted to defeat. As Defense Secretary Donald Rumsfeld noted, this new era was illustrated by the coalition's "unprecedented combination of power, precision, speed, and flexibility."

During the height of OIF, the Air Force deployed 54,955 airmen. Ambassador Paul Bremer, Chief of the Coalition Provisional Authority (CPA), pronounced, "In roughly 3 weeks [we] liberated a country larger than Germany and Italy combined, and [we] did so with forces smaller than the Army of the Potomac." Led by the finest officers and non-commissioned officers, our airmen flew more than 79,000 sorties since March 2003. Ten thousand strike sorties dropped 37,065 munitions. The coalition flew over 55,000 airlift sorties moved 469,093 passengers and more than 165,060 tons of cargo. In addition, over 10,000 aerial refueling missions supported aircraft from all services, and 1,600 ISR missions provided battlespace awareness regardless of uniform, Service, or coalition nationality. This was a blistering campaign that demanded a joint and combined effort to maximize effects in the battlespace.

Today, Air Force airmen continue to contribute to the joint and coalition team engaged in Iraq. At the end of the year, 6,723 airmen from the active duty, Reserve, and Air National Guard conducted a wide range of missions from locations overseas, flying approximately 150 sorties per day including CAS for ground forces tracking down regime loyalists, foreign fighters, and terrorists. On a daily basis, U–2 and RC–135 aircraft flew ISR sorties monitoring the porous borders of Iraq and providing situational awareness and route planning for Army patrols in stability and support operations. Providing everything from base security for 27 new bases opened by the coalition to the lifeline of supplies that air mobility and air refueling assets bring to all joint forces, Air Force airmen are committed to the successful accomplishment of the U.S. mission in Iraq.

Other Contingency Operations

In 2003, the Air Force remained engaged in America's war on drugs and provided support to NATO ground forces in the Balkans. Since December 1989, Air Force airmen have been an irreplaceable part of the interagency fight against illegal drug and narcotics trafficking. Deployed along the southern U.S., in the Caribbean, and Central and South America, airmen perform this round-the-clock mission, manning nine ground-based radar sites, operating 10 aerostats, and flying counter drug surveillance missions. The Air Force detected, monitored, and provided intercepts on over 275 targets attempting to infiltrate our airspace without clearance. Along with our interagency partners, these operations resulted in 221 arrests and stopped hundreds of tons of contraband from being smuggled into our country.

In the Balkans, airmen are fully committed to completing the mission that they started in the 1990s. Today, Air Force airmen have flown over 26,000 sorties supporting Operations Joint Guardian and Joint Forge. These NATO-led operations combine joint and allied forces to implement the Dayton Peace Accords in Bosnia-Herzegovina and enforce the Military Technical Agreement in Kosovo. At the end of 2003, approximately 800 airmen were supporting NATO's goal of achieving a secure environment and promoting stability in the region.

Additionally, the Air Force engaged in deterrence and humanitarian relief in other regions. While the world's attention was focused on the Middle East in the spring of 2003, our Nation remained vigilant against potential adversaries in Asia. The Air Force deployed a bomber wing—24 B–52s and B–1s—to the American territory of Guam to deter North Korea. At the height of OIF, our Air Force demonstrated our country's resolve and ability to defend the Republic of Korea and Japan by surging bomber operations to over 100 sorties in less than 3 days. This

deterrent operation complemented our permanent engagement in Northeast Asia. The 8,300 airmen who are stationed alongside the soldiers, sailors, marines, and our Korean allies maintained the U.N. armistice, marking 50 years of peace on the peninsula.

Our strength in deterring aggression was matched by our strength in humanitarian action. In response to President Bush's directive to help stop the worsening crisis in Liberia, we deployed a non-combat medical and logistics force to create a lifeline to the American Embassy and provide hope to the Liberian people. An AEF of airmen provided airlift support, aeromedical evacuation, force protection, and theater of communications support. Flying more than 200 sorties, we transported and evacuated civilians and members of the Joint Task Force (JTF) from bases in Sierra Leone and Senegal. The 300 airmen deployed in support of JTF-Liberia reopened the main airport in Monrovia, and ensured the security for U.S. military and civilian aircraft providing relief aid.

Strategic Deterrence

The ability of U.S. conventional forces to operate and project decisive force is built on the foundation of our strategic deterrent force; one that consists of our nuclear-capable aircraft and intercontinental ballistic missile (ICBM) forces, working with the U.S. Navy's Fleet Ballistic Missile Submarines. In 2003, these forces as well as, persistent overhead missile warning sensors and supporting ground-based radars, provided uninterrupted global vigilance deterring a nuclear missile strike against the U.S. or our allies. The dedicated airmen who operate these systems provide the force capability that yields our deterrent umbrella. Should that deterrence fail, they stand ready to provide a prompt, scalable response.

Exercises

The Air Force's success can be attributed to the training, education, and equipment of our airmen. Future readiness of our operations, maintenance, mission support, and medical units will depend on rigorous and innovative joint and coalition training and exercising. This year we are planning 140 exercises with other Services and agencies and we anticipate being involved with 103 allied nations. We will conduct these exercises in as many as 45 foreign countries. Participation ranges from the joint/combined command post exercise Ulchi Focus Lens with our South Korean partners to the tailored international participation in our FLAG exercises and Mission Employment Phases of USAF Weapons School. From joint search-and-rescue forces in Arctic Sarex to Partnership for Peace (PFP) initiatives, our airmen must continue to take advantage of all opportunities that help us train the way we intend to fight.

In addition to previously designed exercises, recent operations highlighted the need for combat support training. During OEF and OIF, the Air Force opened or improved 38 bases used by joint or coalition forces during combat. Our Expeditionary Combat Support teams established secure, operable airfields in Kyrgyzstan, Uzbekistan, Pakistan, and in Iraq. They also built housing, established communications, and erected dining facilities that are still used by other Services and follow-on forces today. To prepare our airmen for these missions, we have created Eagle Flag, an Expeditionary Combat Support Field Training Exercise. During this exercise, combat support personnel apply the integrated skills needed to organize and create an operating location ready to receive fully mission capable forces within 72 hours. From security forces and civil engineers to air traffic controllers and logisticians, each airman required to open a new base or improve an austere location will eventually participate in this valuable exercise.

Our ranges and air space are critical joint enablers and vital national assets that allow the Air Force to develop and test new weapons, train forces, and conduct joint exercises. The ability of the Air Force to effectively operate requires a finite set of natural and fabricated resources. Encroachment of surrounding communities onto Air Force resources results in our limited or denied access to, or use of, these resources. We have made it a priority to define and quantify the resources needed to support mission requirements, and to measure and communicate the effects of encroachment on our installations, radio frequency spectrum, ranges, and air space. We will continue to work with outside agencies and the public to address these issues. The Air Force strongly endorses the Readiness Range and Preservation Initiative. It would make focused legislative changes, protecting the Air Force's operational resources while continuing to preserve our Nation's environment.

Lessons for the Future

As we continue combat operations and prepare for an uncertain future, we are examining lessons from our recent experiences. Although we are currently engaged with each of the other Services to refine the lessons from OIF, many of the priorities

listed in the fiscal year 2005 Presidential budget submission reflect our preliminary conclusions. The Air Force has established a team committed to turning validated lessons into new equipment, new operating concepts, and possibly new organizational structures. Working closely with our joint and coalition partners, we intend to continue our momentum toward an even more effective fighting force.

One of the most important lessons we can draw was envisioned by the authors of the Goldwater-Nichols Act. ONE, OEF, and OIF all validated jointness as the only acceptable method of fighting and winning this Nation's wars. In OIF, the mature relationship between the Combined Forces Land Component Commander (CFLCC) and the Combined Forces Air Component Commander (CFACC) led to unprecedented synergies. The CFACC capitalized on these opportunities by establishing coordination entities led by an Air Force general officer in the supported land component headquarters and by maintaining internal Army, Navy, Marine Corps, and coalition officers in his own headquarters. Both of these organizational innovations enabled commanders to maximize the advantages of mass, lethality, and flexibility of airpower in the area of responsibility.

Another lesson is the Air Force's dependence on the Total Force concept. As stated above, September 11 brought with it a new tempo of operations, one that required both the active duty and Air Reserve component (ARC) to work in concert to achieve our national security objectives. The synergy of our fully integrated active duty, Air National Guard, and Air Force Reserve team provides warfighters with capabilities that these components could not provide alone.

Our Reserve component accounts for over one-third of our strike fighters, more than 72 percent of our tactical airlift, 42 percent of our strategic airlift, and 52 percent of our air refueling capability. The ARC also makes significant contributions to our rescue and support missions, and has an increasing presence in space, intelligence, and information operations. In all, the ARC provides a ready force requiring minimum preparation for mobilization. Whether that mobilization is supporting flight or alert missions for ONE, commanding expeditionary wings in combat, or orchestrating the Air Force Special Operations roles in the western Iraqi desert, the ARC will remain critical to achieving the full potential of our air and space power.

A third lesson was validation of the need for air and space superiority. Through recent combat operations, the Air Force maintained its almost 50-year-old record of "no U.S. ground troops killed by enemy air attack." Without having to defend against Iraqi airpower, coalition commanders could focus their combat power more effectively. In addition, air and space superiority allowed airmen to dedicate more sorties in support of the ground scheme of maneuver, substantially reducing enemy capability in advance of the land component.

We also need to continue to advance integration and planning—integration of Service capabilities to achieve JFC objectives, interagency integration to fight the war on terrorism, and information integration. Integration of manned, unmanned, and space sensors, advanced command and control, and the ability to disseminate and act on this information in near-real time will drive our combat effectiveness in the future. Shared through interoperable machine-to-machine interfaces, this data can paint a picture of the battlespace where the sum of the wisdom of all sensors will end up with a cursor over the target for the operator who can save the target, study the target, or destroy the target.

Finally, there are three general areas for improvement we consider imperative: battle damage assessment, fratricide prevention/combat identification, and equipping our battlefield airmen. First, battle damage assessment shapes the commander's ability for efficient employment of military power. Restriking targets that have already been destroyed, damaged, or made irrelevant by rapid ground force advances wastes sorties that could be devoted to other coalition and joint force objectives. Advances in delivery capabilities of our modern fighter/attack aircraft and bombers mean that ISR assets must assess more targets per strike than ever before. Precision engagement requires precision location, identification, and precision assessment. Although assets like the Global Hawk, Predator, U–2, Senior Scout, and Rivet Joint are equipped with the latest collection technology, the Air Force, joint team, and Intelligence Community must work to ensure that combat assessments produce timely, accurate, and relevant products for the warfighters.

We are also improving operational procedures and technology to minimize incidents of fratricide or "friendly fire." In OIF, major steps toward this goal resulted from technological solutions. Blue Force Tracker and other combat identification systems on many ground force vehicles allowed commanders situational awareness of their forces and enemy forces via a common operational picture. Still, not all joint or coalition forces are equipped with these technological advances. We are pursuing Fire Support Coordination Measures that capitalize on the speed and situational

awareness digital communications offer rather than analog voice communications and grease pencils.

A third area we are actively improving is the effectiveness of the airmen who are embedded with conventional land forces or SOF. With assured access to Air Force datalinks and satellites, these "Battlefield Airmen" can put data directly into air-land-sea weapon systems and enable joint force command and control. We have made great progress in producing a Battlefield Air Operations Kit that is 70 percent lighter, with leading-edge power sources; one that will increase the combat capability of our controllers. This battle management system will reduce engagement times, increase lethality and accuracy, and reduce the risk of fratricide. This capability is based upon the good ideas of our airmen who have been in combat and understand how much a single individual on the battlefield can contribute with the right kit.

Summary

The airmen of America's Air Force have demonstrated their expertise and the value of their contributions to the joint and coalition fight. These combat operations are made possible by Air Force investments in realistic training and education, superior organization, advanced technology, and innovative tactics, techniques, and procedures. In the future, our professional airmen will continue to focus advances in these and other areas guided by the Air Force CONOPs. Their charter is to determine the appropriate capabilities required for joint warfighting and to provide maximum effects from, through, and in air and space. This structure and associated capabilities-based planning will help airmen on their transformational journey, ensuring continued operational successes such as those demonstrated in 2003.

ENSURING AMERICA'S FUTURE AIR AND SPACE DOMINANCE

Air Force lethality, mobility, speed, precision, and the ability to project U.S. military power around the globe provide combatant commanders the capabilities required to meet the Nation's military requirements and dominate our enemies. Consistent with the DOD's focus on Joint Operating Concepts, we will continue to transform our force—meeting the challenges of this era, adapting our forces and people to them, and operating our service efficiently. We will adopt service concepts and capabilities that support the joint construct and capitalize on our core competencies. To sustain our dominance, we develop professional airmen, invest in warfighting technology, and integrate our people and systems together to produce decisive joint warfighting capabilities.

DEVELOPING AIRMEN—RIGHT PEOPLE, RIGHT PLACE, RIGHT TIME

At the heart of our combat capability are the professional airmen who voluntarily serve the Air Force and our Nation. Our airmen turn ideas, tools, tactics, techniques, and procedures into global mobility, power projection, and battlespace effects. Our focus for the ongoing management and development of Air Force personnel will be to: define, renew, develop, and sustain the force.

Defining our Requirements

To meet current and future requirements, we need the right people in the right specialties. The post-September 11 environment has taxed our equipment and our people, particularly those associated with force protection, ISR, and the buildup and sustainment of expeditionary operations. Our analysis shows that we need to shift manpower to stressed career fields to meet the demands of this new steady state, and we are in the process of doing this. We have realigned personnel into our most stressed specialties and hired additional civilians and contractors to free military members to focus on military specific duties. We have also made multi-million dollar investments in technology to reduce certain manpower requirements. We have redirected our training and accession systems and have cross-trained personnel from specialties where we are over strength to alleviate stressed career fields, supporting the Secretary of Defense's vision of moving forces "from the bureaucracy to the battlefield."

Since 2001, we have exceeded our congressionally mandated end strength by more than 16,000 personnel. In light of the global war on terrorism and OIF, DOD allowed this overage, but now we need to get back to our mandated end strength. We are addressing this issue in two ways: first, by reducing personnel overages in most skills; and second, by shaping the remaining force to meet mission requirements. To reduce personnel, we will employ a number of voluntary tools to restructure manning levels in Air Force specialties, while adjusting our Active Force size to the end strength requirement. As we progress, we will evaluate the need to implement additional force shaping steps.

We are also reviewing our ARC manpower to minimize involuntary mobilization of ARC forces for day-to-day, steady state operations while ensuring they are prepared to respond in times of crisis. Since September 11, 2001, we have mobilized more than 62,000 people in over 100 units, and many more individual mobilization augmentees. Today, 20 percent of our AEF packages are comprised of citizen airmen, and members of the Guard or Reserve conduct 89 percent of ONE missions. We recognize this is a challenge and are taking steps to relieve the pressure on the Guard and Reserve.

In fiscal year 2005, we plan to redistribute forces in a number of mission areas among the Reserve and active components to balance the burden on the Reserves. These missions include our Air and Space Operations Centers, remotely piloted aircraft systems, Combat Search and Rescue, Security Forces, and a number of high demand global mobility systems. We are working to increase ARC volunteerism by addressing equity of benefits and tour-length flexibility, while addressing civilian employer issues. We are also looking at creating more full-time positions to reduce our dependency on involuntary mobilization.

We are entering the second year of our agreement to employ Army National Guard soldiers for force protection at Air Force installations, temporarily mitigating our 8,000 personnel shortfall in security forces. As we do this, we are executing an aggressive plan to rapidly burn down the need for Army augmentation and working to redesign manpower requirements. Our reduction plan maximizes the use of Army volunteers in the second year, and allows for demobilization of about one third of the soldiers employed in the first year.

Future Total Force

Just as in combat overseas, we are continuing to pursue seamless ARC and active duty integration at home, leveraging the capabilities and characteristics of each component, while allowing each to retain their cultural identity. We continue to explore a variety of organizational initiatives to integrate our Active, Guard, and Reserve Forces. These efforts are intended to expand mission flexibility, create efficiencies in our Total Force, and prepare for the future. Today's Future Total Force team includes a number of blended or associate units that are programmed or are in use. The creation of the "blended" unit, the 116th Air Control Wing at Robins Air Force Base, Georgia, elevated integration to the next level. With an initial deployment of over 730 personnel, and significant operational achievements in OIF, we are now examining opportunities to integrate active, Guard, and Reserve units elsewhere in order to produce even more measurable benefits, savings, and efficiencies.

The reasons for this type of integration are compelling. We can maximize our warfighting capabilities by integrating Active, Guard, and Reserve Forces to optimize the contributions of each component. Reservists and guardsmen bring with them capabilities they have acquired in civilian jobs, leveraging the experience of ARC personnel. Integration relieves PERSTEMPO on the Active-Duty Force. Because ARC members do not move as often, they provide corporate knowledge, stability, and continuity. Finally, integration enhances the retention of airmen who decide to leave active service. Because the Guard and Reserve are involved in many Air Force missions, we recapture the investment we've made by retaining separating active duty members as members of the ARC.

Renewing the Force

To renew our force, we target our recruitment to ensure a diverse force with the talent and drive to be the best airmen in the world's greatest Air Force. We will recruit those with the skills most critical for our continued success. In fiscal year 2003, our goal was 5,226 officers and 37,000 enlisted; we exceeded our goal in both categories, accessing 5,419 officers and 37,144 enlisted. For fiscal year 2004, we plan to access 5,795 officers and 37,000 enlisted.

In the Air Force, the capabilities we derive from diversity are vital to mission excellence and at the core of our strategy to maximize our combat capabilities. In this new era, successful military operations demand much greater agility, adaptability, and versatility to achieve and sustain success. This requires a force comprised of the best our Nation has to offer, from every segment of society, trained and ready to go. Our focus is building a force that consists of men and women who possess keener international insight, foreign language proficiency, and wide-ranging cultural acumen. Diversity of life experiences, education, culture, and background are essential to help us achieve the asymmetric advantage we need to defend America's interests wherever threatened. Our strength comes from the collective application of our diverse talents, and is a critical component of the air and space dominance we enjoy today. We must enthusiastically reach out to all segments of society to ensure the

Air Force offers a welcoming career to the best and brightest of American society, regardless of their background. By doing so, we attract people from all segments of society and tap into the limitless talents resident in our diverse population.

In addition to a diverse force, we also need the correct talent mix. We remain concerned about recruiting health care professionals and individuals with technical degrees. To meet our needs, we continue to focus our efforts to ensure we attract and retain the right people. We will also closely monitor ARC recruitment. Historically, the Air National Guard and Air Force Reserve Command access close to 25 percent of eligible, separating active duty Air Force members with no break in service between their active duty and ARC service.

Developing the Force

Over the past year, we implemented a new force development construct in order to get the right people in the right job at the right time with the right skills, knowledge, and experience. Force development combines focused assignments and education and training opportunities to prepare our people to meet the mission needs of our Air Force. Rather than allowing chance and happenstance to guide an airman's experience, we will take a deliberate approach to develop officers, enlisted, and civilians throughout our Total Force. Through targeted education, training, and mission-related experience, we will develop professional airmen into joint force warriors with the skills needed across the tactical, operational, and strategic levels of conflict. Their mission will be to accomplish the joint mission, motivate teams, mentor subordinates, and train their successors.

A segment of warriors requiring special attention is our cadre of space professionals, those that design, build, and operate our space systems. As military dependence on space grows, the Air Force continues to develop this cadre to meet our Nation's needs. Our Space Professional Strategy is the roadmap for developing that cadre. Air Force space professionals will develop more in-depth expertise in operational and technical space specialties through tailored assignments, education, and training. This roadmap will result in a team of scientists, engineers, program managers, and operators skilled and knowledgeable in developing, acquiring, applying, sustaining, and integrating space capabilities.

Sustaining the Force

The Air Force is a retention-based force. Because the skill sets of our airmen are not easily replaced, we expend considerable effort to retain our people, especially those in high-technology fields and those in whom we have invested significant education and training. In 2003, we reaped the benefits of an aggressive retention program, aided by a renewed focus and investment on education and individual development, enlistment and retention bonuses, targeted military pay raises, and quality of life improvements. Our fiscal year 2003 enlisted retention statistics tell the story. Retention for first term airmen stood at 61 percent, exceeding our goal by 6 percent. Retention for our second term and career airmen was also impressive, achieving 73 percent and 95 percent respectively. Continued investment in people rewards their service, provides a suitable standard of living, and enables us to attract and retain the professionals we need.

One of the highlights of our quality of life focus is housing investment. Through military construction and housing privatization, we are providing quality homes faster than ever before. Over the next 3 years, the Air Force will renovate or replace more than 40,000 homes through privatization. At the same time, we will renovate or replace an additional 20,000 homes through military construction. With the elimination of out-of-pocket housing expenses, our Air Force members and their families now have three great options—local community housing, traditional military family housing, and privatized housing.

Focus On Fitness

We recognize that without motivated and combat-ready expeditionary airmen throughout our Total Force, our strategies, advanced technologies, and integrated capabilities would be much less effective. That is why we have renewed our focus on fitness and first-class fitness centers. We must be fit to fight. That demands that we reorient our culture to make physical and mental fitness part of our daily life as airmen. In January 2004, our new fitness program returned to the basics of running, sit-ups, and pushups. The program combines our fitness guidelines and weight/body fat standards into one program that encompasses the total health of an airman.

TECHNOLOGY-TO-WARFIGHTING

The Air Force has established a capabilities-based approach to war planning, allowing us to focus investments on those capabilities we need to support the joint warfighter. This type of planning focuses on capabilities required to accomplish a variety of missions and to achieve desired effects against any potential threats. Our capabilities-based approach requires us to think in new ways and consider combinations of systems that create distinctive capabilities.

Effects Focus: Capabilities-Based CONOPs

The Air Force has written six CONOPs that support capabilities-based planning and the joint vision of combat operations. The CONOPs help analyze the span of joint tasks we may be asked to perform and define the effects we can produce. Most importantly, they help us identify the capabilities an expeditionary force will need to accomplish its mission, creating a framework that enables us to shape our portfolio.

- Homeland Security CONOPs leverage Air Force capabilities with joint and interagency efforts to prevent, protect, and respond to threats against our homeland—within or beyond U.S. territories.
- Space and Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C^4ISR) CONOPs harness the integration of manned, unmanned, and space systems to provide persistent situation awareness and executable decision-quality information to the JFC.
- Global Mobility CONOPs provide combatant commanders with the planning, command and control, and operations capabilities to enable timely and effective projection, employment, and sustainment of U.S. power in support of U.S. global interests—precision delivery for operational effect.
- Global Strike CONOPs employ joint power-projection capabilities to engage anti-access and high-value targets, gain access to denied battlespace, and maintain battlespace access for required joint/coalition follow-on operations.
- Global Persistent Attack CONOPs provide a spectrum of capabilities from major combat to peacekeeping and sustainment operations. Global Persistent Attack assumes that once access conditions are established (i.e. through Global Strike), there will be a need for persistent and sustained operations to maintain air, space, and information dominance.
- Nuclear Response CONOPs provide the deterrent "umbrella" under which conventional forces operate, and, if deterrence fails, avails a scalable response.

This CONOPs approach has resulted in numerous benefits, providing:

- Articulation of operational capabilities that will prevail in conflicts and avert technological surprises;
- An operational risk and capabilities-based programmatic decisionmaking focus;
- Budgeting guidance to the Air Force Major Commands for fulfilling capabilities-based solutions to satisfy warfighter requirements;
- Warfighter risk management insights for long-range planning.

Modernization and Recapitalization

Through capabilities-based planning, the Air Force will continue to invest in our core competency of bringing technology to the warfighter that will maintain our technical advantage and update our air and space capabilities. The Capabilities Review and Risk Assessment (CRRA) process guides these efforts. Replacing an outdated threat-based review process that focused on platforms versus current and future warfighting effects and capabilities, our extensive 2-year assessment identified and prioritized critical operational shortfalls we will use to guide our investment strategy. These priorities present the most significant and immediate Air Force-wide capability objectives.

We need to field capabilities that allow us to reduce the time required to find, fix, track and target fleeting and mobile targets and other hostile forces. One system that addresses this operational shortfall is the F/A–22 Raptor. In addition to its contributions to obtaining and sustaining air dominance, the F/A–22 will allow all weather, stealthy, precision strike 24 hours a day, and will counter existing and emerging threats, such as advanced surface-to-air missiles, cruise missiles, and time sensitive and emerging targets, including mobile targets, that our legacy systems cannot. The F/A–22 is in low rate initial production and has begun Phase I of its operational testing. It is on track for initial operational capability in 2005. A com-

plementary capability is provided by the F–35 Joint Strike Fighter, providing sustainable, focused CAS and interservice and coalition commonality.

We also recognize that operational shortfalls exist early in the kill chain and are applying technologies to fill those gaps. A robust command, control, and sensor portfolio combining both space and airborne systems, along with seamless real-time communications, will provide additional critical capabilities that address this shortfall while supporting the Joint Operational Concept of full spectrum dominance. Program definition and risk reduction efforts are moving us towards C4ISR and Battle Management capabilities with shorter cycle times. The JFC will be able to respond to fleeting opportunities with near-real time information and will be able to bring to bear kill-chain assets against the enemy. Additionally, in this world of proliferating cruise missile technology, our work on improving our C4ISR capabilities—including airborne Active Electronically Scanned Array (AESA) radar technology—could pay large dividends, playing a significant role in America's defense against these and other threats. To create this robust command and control network, we will need a flexible and digital multi-service communications capability. We are well on our way in defining the architecture to make it a reality. The capabilities we are pursuing directly support the Department's transformational system of interoperable joint C4ISR.

There is a need for a globally interconnected capability that collects, processes, stores, disseminates, and manages information on demand to warfighters, policy makers, and support people. The C2 Constellation, our capstone concept for achieving the integration of air and space operations, includes these concepts and the future capabilities of the Global Information Grid (GIG), Net Centric Enterprise Services, Transformational Communications, the Joint Tactical Radio System, and airborne command, control, and communication assets, among others.

One of the elements of a sensible strategy to maintain U.S. power projection capabilities derives from a global aerial refueling fleet that serves Air Force, Navy, Marine Corps, and coalition aircraft. Our current fleet of aging tankers met the challenges of OEF and OIF but is increasingly expensive to maintain. The fleet averages more then 40 years of age, and the oldest model, the KC–135E, goes back to the Eisenhower administration. Recapitalization for this fleet of over 540 aerial refueling aircraft will clearly take decades to complete and is vital to the foundation and global reach of our Air Force, sister Services, and coalition partners. The Air Force is committed to an acquisition approach for this program that will recapitalize the fleet in the most affordable manner possible.

Capabilities-driven modernization and recapitalization efforts are also taking place on our space systems, as we replace constellations of satellites and ground systems with next generation capabilities. The Evolved Expendable Launch Vehicle (EELV) has completed six successful launches. Using two launch designs, we will continue to seek responsive, assured access to space for government systems. Space-based radar (SBR) will provide a complementary capability to our portfolio of radar and remote sensing systems. We will employ internet protocol networks and high-bandwidth lasers in space to transform communications with the Transformational Satellite, dramatically increasing connectivity to the warfighter. Modernization of GPS and development of the next-generation GPS III will enhance navigation capability and increase our resistance to jamming. In partnership with the National Aeronautics and Space Administration (NASA) and the Department of Commerce, we are developing the National Polar-orbiting Operational Environmental Satellite System, which offers next-generation meteorological capability. Each of these systems supports critical C4ISR capabilities that give the JFC increased technological and asymmetric advantages.

Space control efforts, enabled by robust space situation awareness, will ensure unhampered access to space-based services. Enhanced space situation awareness assets will provide the information necessary to execute an effective space control strategy. However, we must be prepared to deprive an adversary of the benefits of space capabilities when American interests and lives are at stake.

Additional capability does not stem solely from new weapon system acquisitions. It results from innovative modernization of our existing systems. One example is incorporating a Smart Bomb Rack Assembly and the 500-lb. version of the Joint Direct Attack Munition (JDAM) into the weapons bay of the B–2. In September 2003, we demonstrated that the B–2 bomber is now able to release up to 80 separately targeted, GPS-guided weapons in a single mission. This kind of innovation reduces the number of platforms that must penetrate enemy airspace while holding numerous enemy targets at risk. The second order consequences run the gamut from maintenance to support aircraft.

We will also address the deficiencies in our infrastructure through modernization and recapitalization. Improvements to our air and space systems will be limited

without improvements in our foundational support systems. Deteriorated airfields, hangars, waterlines, electrical networks, and air traffic control approach and landing systems are just some of the infrastructure elements needing immediate attention. Our investment strategy focuses on three simultaneous steps: disposing of excess facilities; sustaining our facilities and infrastructure; and establishing a sustainable investment program for future modernization of our facilities and infrastructure.

Finally, we need to continue to modernize and recapitalize our information technology infrastructure. To leverage our information superiority, the Air Force is pursuing a modernization strategy and information technology investments, which target a common network infrastructure and employ enterprise services and shared capabilities.

Science and Technology

Our investment in S&T has and continues to underpin our modernization and recapitalization program. Similar to our applied-technology acquisition efforts, the Air Force's capability-based focus produces an S&T vision that supports the warfighter.

The Air Force S&T program fosters development of joint warfighting capabilities and integrated technologies, consistent with DOD and national priorities. We will provide a long-term, stable investment in S&T in areas that will immediately benefit existing systems and in transformational technologies that will improve tomorrow's Air Force. Many Air Force S&T programs, such as directed energy, hypersonics, laser-based communications, and the emerging field of nanotechnology, show promise for joint warfighting capabilities. Other technology areas, such as miniaturization of space platforms and space proximity operations, also show promise in the future. Through developments like these, the Air Force S&T program will advance joint warfighting capabilities and the Air Force vision of an integrated air and space force capable of responsive and decisive global engagement.

Capabilities-Based Acquisition / Transforming Business Practices

To achieve our vision of a flexible, responsive, and capabilities-based expeditionary force, we are transforming how we conceive, plan, develop, acquire, and sustain weapons systems. Our Agile Acquisition initiative emphasizes speed and credibility; we must deliver what we promise—on time and on budget. Our goal is to deliver affordable, sustainable capabilities that meet joint warfighters' operational needs.

We continue to improve our acquisition system—breaking down organizational barriers, changing work culture through aggressive training, and reforming processes with policies that encourage innovation and collaboration. Already, we are:

- Realigning our Program Executive Officers (PEOs). By moving our PEOs out of Washington and making them commanders of our product centers, we have aligned both acquisition accountability and resources under our most experienced general officers and acquisition professionals.
- Creating a culture of innovation. Because people drive the success of our Agile Acquisition initiatives, we will focus on enhanced training. Laying the foundation for change, this past year 16,500 Air Force acquisition professionals, and hundreds of personnel from other disciplines, attended training sessions underscoring the need for collaboration, innovation, reasonable risk management, and a sense of urgency in our approach.
- Reducing Total Ownership Costs. With strong support from the Secretary of Defense, we will expand the Reduction in Total Ownership Cost program with a standard model ensuring that we have accurate metrics.
- Moving technology from the lab to the warfighter quickly. Laboratories must focus on warfighter requirements and researchers need to ensure technologies are mature, producible, and supportable. Warfighters will work with scientists, acquisition experts, and major commands to identify gaps in capabilities. With help from Congress, we have matured our combat capability document process to fill those gaps. During OIF, we approved 37 requests for critically needed systems, usually in a matter of days.
- Tailoring acquisition methods for space systems. In October 2003, we issued a new acquisition policy for space systems that will improve acquisitions by tailoring acquisition procedures to the unique demands of space systems.

Transformation of our business processes is not limited to acquisition activities. Our Depot Maintenance Strategy and Master Plan calls for financial and infrastructure capitalization to ensure Air Force hardware is safe and ready to operate across the threat spectrum. Our increased funding for depot facilities and equipment modernization in fiscal year 2004–2009, along with public-private partnerships, will result in more responsive support to the JFC. We expect to maximize production and

throughput of weapon systems and commodities that will improve mission capability.

Our logistics transformation initiative will revolutionize logistics processes to improve warfighter support and reduce costs. The goal of the Air Force's logistics transformation program, Expeditionary Logistics for the 21st century, is to increase weapon system availability by 20 percent with zero cost growth. Our current initiatives—depot maintenance transformation, purchasing and supply chain management, regionalized intermediate repair, and improved logistics command and control—will transform the entire logistics enterprise.

Our depots have put some of these initiatives into place with exceptional results. In fiscal year 2003, our depot maintenance teams were more productive than planned, exceeding aircraft, engine, and commodity production goals and reducing flow days in nearly all areas. Implementation of "lean" production processes, optimized use of the existing workforce, and appropriate funding, all contributed to this good news story. In addition, our spares support to the warfighter is at record high numbers. In 2003, supply rates and cannibalization rates achieved their best performance since fiscal years 1994 and 1995, respectively. Fourteen of 20 aircraft design systems improved their mission capable rates over the previous year, with Predator UAVs improving by 11 percent, and B–1 bombers achieving the best mission capable and supply rates in its history. Thanks to proper funding, fleet consolidation, and transformation initiatives, spare parts shortages were reduced to the lowest levels recorded across the entire fleet.

Financing the Fight

An operating strategy is only as good as its financing strategy. Similar to acquisition, logistics, and other support processes, our finance capabilities are strong. We are taking deliberate and aggressive steps to upgrade our financial decision support capability and reduce the cost of delivering financial services. Our focus is on support to our airmen, strategic resourcing and cost management, and information reliability and integration. The initiatives that will get us there include self-service web-based pay and personnel customer service, seamless e-commerce for our vendor payment environment, budgets that link planning, programming, and execution to capabilities and performance, financial statements that produce clean audit opinions while providing reliable financial and management information, and innovative financing strategies.

INTEGRATING OPERATIONS

The Air Force excels at providing communications, intelligence, air mobility, precision strike, and space capabilities that enable joint operations. Our airmen integrate these and other capabilities into a cohesive system that creates war-winning effects. Integration takes place at three levels. At the joint strategic level, integration occurs between interagencies and the coalition. Integration also takes place within the Air Force at an organizational level. At its most basic level, integration takes place at the machine-to-machine level to achieve universal information sharing which facilitates true integration at every level.

Integrating Joint, Coalition, and Interagency Operations

The ever-changing dynamics of global events will drive the need to integrate DOD and interagency capabilities and, in most cases, those of our coalition partners. Joint solutions are required to produce warfighting effects with the speed that the global war on terrorism demands. Fully integrated operations employ only the right forces and capabilities necessary to achieve an objective in the most efficient manner. We must also integrate space capabilities for national intelligence and warfighting.

We are pursuing adaptations of our C2 organizations and capabilities to support this vision. While the Air Force's global C2 structure has remained relatively constant, throughout our 57-year history, the demands of a changing geopolitical environment have stressed current C2 elements beyond their design limits.

We have conducted an extensive review of our C2 structures to support the National Security Strategy objectives of assure, dissuade, deter, and defeat as well as the Secretary of Defense's Unified Command Plan (UCP). We will enhance our support for the JFC and our expeditionary posture through a new Warfighting Headquarters Construct. This will enable the Numbered Air Forces to support Unified Combatant Commanders in a habitual supported-supporting relationship. Working with their strategy and planning cells on a daily basis will ensure that Air Force capabilities are available to the JFC's warfighting staff. This new headquarters will provide the Combined Air Operations Center (CAOC) with sufficient staff to focus on planning and employment of air, space, and information operations throughout the theater.

We are also adapting the capabilities of our CAOCs. The CAOCs of each headquarters will be interconnected with the theater CAOCs, all operating 24 hours a day, 7 days a week. They will be operated as a weapons system, certified and standardized, and have cognizance of the entire air and space picture. This reorganization will increase our ability to support our combatant commanders, reduce redundancies, and deliver precise effects to the warfighters. As we near completion of the concept development, we will work with the Secretary of Defense and Congress to implement a more streamlined and responsive C2 component for the combatant commanders and national leadership.

Integrated operations also depend on integrated training. We continue to advance joint and combined interoperability training with our sister Services and the nations with which we participate in global operations. The Joint National Training Capability (JNTC) will improve our opportunities for joint training. The aim of the JNTC is to improve each Service's ability to work with other Services at the tactical level and to improve joint planning and execution at the operational and strategic levels. The Air Force has integrated live, virtual, and constructive training environments into a single training realm using a distributed mission operations (DMO) capability. JNTC will use this DMO capability to tie live training events with virtual (man-in-the-loop) play and constructive simulations. Live training in 2004—on our ranges during four Service-conducted major training events—will benefit from improved instrumentation and links to other ranges as well as the ability to supplement live training with virtual or constructive options. These types of integrated training operations reduce overall costs to the services while providing us yet another avenue to train like we fight.

Integrating Within the Air Force

The Air Force is continuing to strengthen and refine our AEF. The AEF enables rapid build-up and redeployment of air and space power without a lapse in the Air Force's ability to support a combatant commander's operations. The Air Force provides forces to combatant commanders according the AEF Presence Policy (AEFPP), the Air Force portion of DOD's Joint Presence Policy. There are 10 AEFs, and each AEF provides a portfolio of capabilities and force modules. At any given time, two AEFs are postured to immediately provide these capabilities. The other eight are in various stages of rest, training, spin-up, or standby. The AEF is how the Air Force organizes, trains, equips, and sustains responsive air and space forces to meet defense strategy requirements outlined in the Strategic Planning Guidance.

Within the AEF, Air Force forces are organized and presented to combatant commanders as Air and Space Expeditionary Task Forces (AETFs). They are sized to meet the combatant commander's requirements and may be provided in one of three forms: as an Air Expeditionary Wing (AEW), Group (AEG), and/or Squadron (AES). An AETF may consist of a single AEW or AEG, or may consist of multiple AEWs or AEGs and/or as a Numbered Expeditionary Air Force. AETFs provide the functional capabilities (weapon systems, expeditionary combat support and command and control) to achieve desired effects in an integrated joint operational environment.

One of our distinctive Air Force capabilities is Agile Combat Support (ACS.) To provide this capability, our expeditionary combat support forces—medics, logisticians, engineers, communicators, security forces, services, and contracting, among several others—provide a base support system that is highly mobile, flexible, and fully integrated with air and space operations. ACS ensures responsive expeditionary support to joint operations is achievable within resource constraints—from creation of operating locations to provision of right-sized forces. An example of this capability is the 86th Contingency Response Group (CRG) at Ramstein Air Base, organized, trained, and equipped to provide an initial "Open the Base" force module to meet combatant commander requirements. The CRG provides a rapid response team to assess operating location suitability and defines combat support capabilities needed to establish Air Expeditionary Force operating locations.

Another example of ACS capability is the light and lean Expeditionary Medical System (EMEDS) that provides the U.S. military's farthest forward care and surgical capability. Air Force medics jump into the fight alongside the very first combatants. Whether supporting the opening of an air base or performing life saving surgeries, these medics bring an extraordinary capability. They carry backpacks with reinforced medical equipment, permitting them to perform medical operations within minutes of their boots hitting the ground. Complementing this expeditionary medical capability is our air evacuation system that provides the lifeline for those injured personnel not able to return to duty. The other Services and our allies benefited greatly from this capability in OEF and OIF. The Army and Navy are now de-

veloping a similar light and lean capability. The success of EMEDS is also apparent in the reduction of disease and non-battle injuries—the lowest ever in combat.

Horizontal Machine-to-Machine Integration

We also strive to increasingly integrate operations at the most basic level—electron to electron. Victory belongs to those who can collect intelligence, communicate information, and bring capabilities to bear first. Executing these complex tasks with accuracy, speed, and power requires assured access and the seamless, horizontal integration of systems, activities and expertise across all manned, unmanned, and space capabilities. Such integration will dramatically shorten the kill chain.

Machine-to-machine integration means giving the warfighter the right information at the right time. It facilitates the exchange of large amounts of information, providing every machine the information it needs about the battlespace and an ability to share that information. In the future, we will significantly reduce the persistent challenges of having different perspectives or pictures of the battlefield. Examples would be to ensure that the A–10 could see the same target as the Predator or to guarantee that the F–15 has the same intelligence about enemy radars as the Rivet Joint.

We want a system where information is made available and delivered without regard to the source of the information, who analyzed the information, or who disseminated the information. It is the end product that is important, not the fingers that touch it. The culmination of the effort is the cursor over the target. It is an effect we seek, and what we will provide.

The warfighters' future success will depend on Predictive Battlespace Awareness (PBA). PBA relies on in-depth study of an adversary before hostilities begin in order to anticipate his actions to the maximum extent possible. We can then analyze information to assess current conditions, exploit opportunities, anticipate future actions, and act with a degree of speed and certainty unmatched by our adversaries. PBA also relies on the ability of air and space systems to integrate information at the machine-to-machine level and produce high-fidelity intelligence that results in a cursor over the target. The result—integrated operations—is our unique ability to conduct PBA and impact the target at the time and place of our choosing. This machine-to-machine integration will include a constellation of sensors that create a network of information providing joint warfighters the information and continuity to see first, understand first, and act first.

The C2 Constellation is the Air Force capstone concept for achieving the integration of air and space operations. Our vision of the C2 Constellation is a robust, protected network infrastructure, a globally based command and control system to encompass all levels of the battle and allow machines to do the integration and fusion. It uses Battle Management Command and Control and Connectivity and consists of command centers, sensors, and systems like the U–2, SBR, the Distributed Common Ground System, and our CAOCs. Given the C2 Constellation's complexity, the Air Force recognizes the need for an architecture to address myriad integration issues—methodically—so all elements work in concert.

SECURING AMERICA'S NEXT HORIZON

Armed with the heritage of air and space power in combat, the lessons learned from our most recent conflicts, and the powerful advances in technology in the 21st century, we stand ready to deliver decisive air and space power in support of our Nation. Whether called to execute a commanding show of force, to enable the joint fight, to deliver humanitarian assistance, or to protect our Nation from the scourge of terrorism, we will deliver the effects required. Our ability to consistently answer the call is our dividend to the Nation, a result of our sustained investment in people, technology, and integration.

Our portfolio of advantages provides dividends on the battlefield. We bring to bear a diversified collection of capabilities, which answer the needs of a spectrum of combat and humanitarian operations. As one would with any investment, we will monitor, maintain, and adjust our investments as needed to reflect the demands of a dynamic environment. Transformational initiatives in the way we organize, train, and equip reflect such adjustments, changes that will result in significant gains for our force, for the joint team, and for our Nation. Yet, we will not shift our focus from the core competencies that have provided the foundation for our success and continue to do so. The success of the Air Force resides in the airmen who employ the technology of warfighting through integrated operations with our joint and coalition partners. This is our heritage and our future. This is America's Air Force.

Chairman WARNER. Thank you, General, for that statement. I think the committee as a whole is very appreciative of the good

strong reports from each of you that we have received this morning.

We will now proceed to a first round of 6 minutes each and I will lead off. General Schoomaker, we are preparing to have one of the largest rotations of forces in Iraq in contemporary military history. That not only involves the training to have those men and women ready when they arrive, but also the equipment. You and I have spent some time here recently in consultation on how at this very moment further adaptations are being made to the equipment, particularly the high-mobility multipurpose wheeled vehicle (HMMWV), to meet the ever-changing type of threat and weaponry being used. General Hagee, you are about to oversee your forces once again returning to Iraq.

So I will ask each of you to discuss the ramifications of this very significant turnover of forces and equipment, whether it is the HMMWV, personal vests, or body armor. What is the status as they go into this face of harm's way?

General SCHOOMAKER. Sir, as you correctly stated, this is one of the largest movements we have had since World War II. It is very complex. We have approached it in a very deliberative fashion, we have extended the period of time in which this rotation will take place to provide for the adequate preparation time, training, coordination, reconnaissance, and all of the things we have to do to ensure an appropriate seamless turnover of forces for this very complicated theater.

Included in this is the extensive management of the equipment that will remain behind. Any equipment that we have designed, especially for force protection, including the up-armored vehicles, not just the up-armored HMMWVs but the extensive efforts we have been making on other larger vehicles that are there—supply trucks, the body armor, these kinds of things. We have, I am happy to say, met the goal—which I testified to previously—in both Iraq and Kuwait to have the Interceptor Body Armor now over there in sufficient numbers for everybody to have. All of that will remain in place and it is being managed in a very detailed way that will ensure that nobody is not protected with the very best equipment that we can acquire.

We have tripled the number of up-armored HMMWVs that are in the theater and are moving toward a requirement of 4,100. This is a constantly moving target. We have included the Marine Corps' requirements in that number and we are working very closely with General Hagee's people to ensure that adequate distribution of vehicles for their sector takes place.

We have significantly increased production of this equipment. You and I have had extensive conversations about not only the up-armored HMMWV situation but also the add-on armor kits that are being produced. So unless you want to go into more detail, sir, I will stop there.

Chairman WARNER. That is fine.

General Hagee.

General HAGEE. I will not repeat what General Schoomaker said, but we are ready. We have about 3,000 vehicles—which includes both large vehicles and the smaller HMMWVs—that we are hardening right now in conjunction with the Army. The Army is also

leaving behind some of their so-called up-armored HMMWVs. When the transfer of authority takes place we believe that we will have all of our vehicles hardened and ready to go.

We have enough body armor for every single marine to produce sufficient protection, not only in Iraq but in Afghanistan. Working with the Army, we have also developed technical means against these improvised explosive devices (IEDs), but I cannot go any further here in open session.

In addition, we have spent the last few months working with the Army doing extensive training, taking their lessons learned from Iraq. We have sent every single maneuver battalion through an extensive 1-week course out in southern California. We have taken all of our pilots and put them through a 2-week course down at Yuma, Arizona. We have also taken our combat support and combat service support marines, reminded them that every marine is a rifleman, and sent them through an extensive training course.

Sir, as we deploy this month we believe we are ready.

Chairman WARNER. Thank you.

The Commandant mentioned Afghanistan. Obviously, the theaters are in some competition for equipment. It would be my expectation that you find that your forces in Afghanistan are equally well equipped as those in Iraq. Am I correct on that, General?

General SCHOOMAKER. That is correct, sir.

Chairman WARNER. You mentioned in your opening statement the tremendous value the Guard and Reserve have held throughout this and indeed other conflicts. Yet when the Secretary of Defense came, he very forthrightly said that there had been some analytical studies made of the Guard and Reserve and their training, and workup for such operations should be changed.

Can you elaborate on how you are working with the Guard and Reserve community to begin to make them into units that are more readily able to integrate with the Active Forces?

General SCHOOMAKER. Sir, I would be happy to. At the highest level, our initiative of modularity that allows us to plug and play Reserve component units with active component units in a seamless fashion is, of course, our objective. Take a look at the way that we have been and are currently preparing and have been preparing the three guard brigades that are part of this current rotation going in for OIF 2. We have put the very best equipment on these soldiers, about $3,000 a set, including Interceptor Body Armor, the very best of weaponry, and all of the other equipment that is out there. They have been going through one of the most extensive training regimens, both at the National Training Center and at the Joint Readiness Training Center, which replicates very closely the environment in which they will operate, with extensive civilians on the battlefield, etcetera.

Chairman WARNER. Thank you for that, General.

Lastly, General Jumper. The brunt of the transportation has fallen in many ways on your Transportation Command. What is the status of those aircraft and their ability to really handle this enormous transfer of forces that it is beginning to undertake?

General JUMPER. Mr. Chairman, a great deal of planning has gone on, not only for the airborne portion of this, but also for the portion that we send on ships. I have talked to General Handy, the

commander of the U.S. Transportation Command, about this and he has a flow plan that is going to get this done in a timely fashion.

I am confident that the planning for this has been good and that the flow will be normal.

Chairman WARNER. The Navy's role, Admiral, is up and ready on this?

Admiral CLARK. That is correct, sir. As we speak, we have a ship full of General Hagee's helicopters in the Red Sea en route, and all of the other shipping that is required is under control and ready to go.

Chairman WARNER. Thank you, gentlemen.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

As I indicated in my opening remarks, the budget that is before us does not include funding to pay for the incremental costs of operations in Iraq and Afghanistan. How are we going to pay for the costs that we know are going to be incurred before a supplemental budget is presented to us in next January?

Let me ask General Schoomaker specifically. Do you have an estimate of the incremental costs that are going to be required to continue those ongoing operations at the same level in Iraq and in Afghanistan?

General SCHOOMAKER. Sir, I do not have an estimate, other than to look at the level at which we are currently operating. This year our share of that supplemental approached around $38 billion, in the fiscal year 2004 budget.

Senator LEVIN. Do you have an estimate as to what the approximate monthly incremental cost would be to maintain those operations at the current level?

General SCHOOMAKER. At the current level, sir, I believe we are expending around $3.7 billion in Iraq.

Senator LEVIN. Per month?

General SCHOOMAKER. Per month, yes, sir.

Senator LEVIN. Those are incremental costs?

General SCHOOMAKER. This is what I understand right now to be the total cost of operating in Iraq. In Afghanistan it is about $900 million a month.

Senator LEVIN. Do you have the costs for the other Services? General Hagee, do you have a cost?

General HAGEE. Sir, right now, within the Marine Corps, we are projecting for this fiscal year expending about $800 million to $900 million. Discussing this with the Secretary of the Navy, we believe that for this year it is about $1.5 billion. We have captured those costs. We have submitted them to the Office of the Secretary of Defense (OSD) and we expect for them to be paid out of the supplemental.

Senator LEVIN. General Schoomaker, General Hagee, press reports indicate that the Central Intelligence Agency (CIA) is concerned that a civil war could erupt in Iraq within the next 6 months. How prepared are your forces, given the large rotation, to address that potential turn of events if this occurred, General Schoomaker?

General SCHOOMAKER. Sir, we are going to have a peak of almost 200,000 people in there at the peak of the rotation. We certainly are not intending to hold those people in there. That is part of the rotation base.

I have heard of the discussions about the possibility of civil war and that is clearly a possibility, but I have not heard anybody predicting that in fact that is the case. We are prepared to deal with whatever comes our way. We are very well prepared to fight. We are very well prepared to do our duty there in the manner that we are doing it now.

Senator LEVIN. General Hagee, do you have any comment on that?

General HAGEE. Sir, I would align myself with the Chief of Staff of the Army.

Senator LEVIN. There were a number of expectations and assumptions that were based on prewar intelligence that did not pan out. For example, the expectation that many Iraqi army units would defect. That did not happen. There was an expectation that Iraqi police would stay at their stations. That did not happen.

The fact that these did not happen led to subsequent events, such as the looting and the destruction of government files and buildings. These events probably led to what I and others consider to be a major error; the decision of Ambassador Bremer to disestablish the Iraqi army. As a result the various Iraqi security units had to be rebuilt from the ground up.

There are certain other predictions, assumptions, and assessments, made by the Intelligence Community which did not take place. Obviously, the first is the presence of WMD. General Hagee gave us one example of how our actions were affected by those assessments and predictions. The same thing could be said relative to a CIA assessment that Iraq had UAVs that were intended for delivering WMD, but apparently they did not.

There were more than 500 sites where WMD or WMD-related activities were possibly located. This means that there may have been targets that we did not strike because we were concerned about collateral damage from the potential release of chemical and biological weapons. Those are just some of the assessments and predictions that did not pan out.

This is my question to each of you: Have you been interviewed by either the Senate or House Intelligence Committees or by any other congressional committee to determine the impact of prewar intelligence on the planning for or the conduct of OIF? General Schoomaker?

General SCHOOMAKER. No, sir, I have not.

Senator LEVIN. Admiral Clark?

Admiral CLARK. No, sir.

Senator LEVIN. General Hagee?

General HAGEE. No, sir.

Senator LEVIN. General Jumper?

General JUMPER. No, sir.

Senator LEVIN. Do we have contingency plans in the event that Iraq, after sovereignty is transferred to them, does not agree to provide the status that we want for our U.S. forces in Iraq? Once sovereignty is transferred, we are going to have to deal then with

whoever that sovereign is relative to the operation of our forces and presumably reach an agreement with that entity that represents the government of Iraq relative to the status of our forces and the ability of our forces to operate.

Do we have contingency plans in the event that Iraq does not agree to provide the status that we want or allow the U.S. forces to operate freely there? General, let me again start with you. Do you know of any contingency plan?

General SCHOOMAKER. Sir, I am not aware of what is going on in that regard. I think it is appropriate for General Abizaid to address that.

Senator LEVIN. Do any of you have any comment on that? [No response.]

My time is up. Thank you.

Chairman WARNER. Senator McCain.

Senator MCCAIN. Thank you, Mr. Chairman. I want to thank the witnesses for being here today.

General Schoomaker, this transition that was just discussed of troops being rotated in Iraq will result in about 40 percent of those troops being Guard and Reserve units. Is that correct?

General SCHOOMAKER. Sir, I believe the last figure I was given is about 37 percent.

Senator MCCAIN. This is probably the largest percentage of guardsmen and reservists in a combat situation in history. Would you agree with that?

General SCHOOMAKER. Sir, I would not be able to agree with that. I do not know. I am not sure.

Senator MCCAIN. I do not have the facts, but I continue to disagree with the assertion made by the Secretary of Defense and all of you again today that we will not have significant impact on retention of guardsmen and reservists. Many of these guardsmen and reservists will be there for their second tour, is that correct?

General SCHOOMAKER. Sir, I do not have the figures before me, but if I recall the testimony the Secretary gave the other day, something like 7 percent of the Guard and Reserve has been called up more than once.

Senator MCCAIN. Well, we will find out, I guess. As I have said before, I hope that I am wrong.

You intend to expand, General Schoomaker, the size of the Army by 30,000 individuals over 4 years. Is that correct?

General SCHOOMAKER. Sir, I have asked to grow some headroom in the Army so that we have the ability to do the modularity, movements, and transformation that we want to do, while we find the offsets for them within our current end strength authorization.

Senator MCCAIN. I guess I had better repeat the question, General Schoomaker: Is there going to be an increase of 30,000 troops over a 4-year period?

General SCHOOMAKER. Yes, sir.

Senator MCCAIN. Do you intend to ask for that to be paid for each year in an emergency supplemental? It is not reflected in any budget request by the DOD.

General SCHOOMAKER. No, sir, it is not. That is what I asked for; it is under the supplemental funding under the current level of operations that we have. As I said before, we have 11,000 people

right now above our statutory end strength that are being paid for through the supplemental because of the level of operations. What I have asked for is to be able to target who we keep so we can form more units while we fund the offsets in personnel within our current authorization through our restructuring and other initiatives.

Senator MCCAIN. Which again, in all due respect, ends up with an increase of 30,000 personnel. Is that correct?

General SCHOOMAKER. Yes, sir. I asked to be able to grow to that level. We cannot achieve that level overnight. This is going to be incremental growth over that period.

Senator MCCAIN. But each year is it the intention to ask for the funding for this out of emergency supplemental funding?

General SCHOOMAKER. Sir, as long as we have this emergency, yes, in conjunction with what we have in our program. Obviously if the emergency terminates then we will have to terminate this, but this is why we built the off-ramps during the period of growth.

Senator MCCAIN. I guess my point is, Mr. Chairman, I have not known of personnel increases being paid for in the name of emergency supplementals to pay for a conflict. I think what it does is it increases the size of the deficit and again deceives the American people about the size of the deficit and the debt that we are incurring per household.

General Jumper, are you aware that members of the Senate Armed Services Committee staff were given falsified information by the people at Tinker Air Force Base?

General JUMPER. No, sir, I am not.

Senator MCCAIN. You were not aware of this issue being discussed in an open hearing? Your liaison people did not inform you of our concern about that?

General JUMPER. No, sir, not about false statements. I have heard nothing about false statements.

Senator MCCAIN. I showed before the committee doctored documents that were given to the staff of this committee. You know nothing about that?

General JUMPER. I am sorry, sir; I do not.

Senator MCCAIN. General Hagee, do you need additional members of the Marine Corps to carry out your responsibilities?

General HAGEE. As I see the situation right now, no, sir.

Senator MCCAIN. You do not?

General HAGEE. I do not, sir.

Senator MCCAIN. Thank you.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator McCain.

Senator MCCAIN. I would like to have several questions submitted for the record.

Chairman WARNER. Without objection, all members are given that opportunity.

You raised very important questions relative to the budget and the supplemental, as did Senator Levin. I wish to make it clear that, having been in the building myself for many years, these witnesses before us received guidance from the Secretary of Defense as to what to do. They did not make the decision not to include in their own budget process the cost for those personnel. I think we

all agree on that. It is a level above them where that decision was made as to the allocation of the budget costs.

Are we agreed on that, gentlemen?

Senator LEVIN. I think that is usually true.

Chairman WARNER. Yes. They are responding to the actual facts, but the decision on the budget was made, frankly, by the Office of Management and Budget (OMB) and promulgated through the Secretary of Defense.

Senator LEVIN. They could appeal it to the President, I guess, under Goldwater-Nichols.

Chairman WARNER. Senator Lieberman.

Senator LEVIN. Good old Goldwater-Nichols.

Senator LIEBERMAN. Thank you, Mr. Chairman, and again thanks to the chiefs for being here.

Mr. Chairman, there have been some references made and questions asked regarding the ongoing debate about the quality of our intelligence about WMD and the way in which the administration used that intelligence. Those are important questions. I think it is even more important that we focus, as I believe all of us want to do, and as Senator Levin mentioned in his opening statement, on how we support you and our forces to successfully complete the mission in Iraq. While the inquiry regarding WMD and the intelligence is significant certainly as we go forward, what is really important is to go forward.

We are there now. We have successfully carried out what I have for more than a decade believed was a just and necessary mission, which was to overthrow Saddam Hussein. I have no doubt, thanks to the skill and bravery of your forces, that America and the world are safer as a result.

Now the question is how to complete the next phase, which in some sense is a different mission. So my questions will focus on that. I, like everyone else, have been reading lately and hearing about Mr. Abu Mus'ab al-Zarqawi, a Jordanian thought to have links to al Qaeda. We now link him to a number of bombings in Iraq and now have found this disk with what looks like a request by him to the leadership of al Qaeda for support for what he called "a secular war against the Shias."

I must say, parenthetically, I have always been struck by the conclusion that there was no link between al Qaeda and Saddam Hussein. How could there be a link, they say, because al Qaeda is theological and Saddam was very secular? I am not reaching a conclusion here, but I am just urging others not to reach a conclusion. Unfortunately, they had something that tied them together, which was their hatred of us.

I now return to my question. The news about Zarqawi leads me to ask, how would you describe the insurgency we are facing now? Am I right in concluding it is a mix of Baathist loyalists, Saddam loyalists, and terrorists? Is that the conclusion you reach about the enemy we are facing in this phase of the conflict in Iraq? I will start with you, General Schoomaker, and then General Hagee.

General SCHOOMAKER. Sir, I think it has been best described as being a combination of former regime loyalists and dead-enders. There are certainly some criminal elements that are being paid to

perform certain things by them, and obviously you have seen intelligence that there are other entities that are there.

It appears from what has been in the open press today that there is a direction towards trying to work the seams between the different entities within the country to their advantage. I will pass the question to General Hagee.

Senator LIEBERMAN. As you advise the Secretary and equip and staff General Abizaid, I take it that you have no doubt that part of the element we are fighting in Iraq is terrorists. They are not just the Baathist loyalists, is that right, General?

General SCHOOMAKER. Yes, sir, I think that that is clear. The evidence is there. But terror is a tactic as well as a philosophy.

Senator LIEBERMAN. Right.

General SCHOOMAKER. I think that we nevertheless, regardless of what the source of it is, are seeing terror tactics used against us in this insurgency. The source of it from my perspective matters less from my area of responsibility, which is to protect and prepare our soldiers to perform over there. I would agree in that regard.

Senator LIEBERMAN. That is an important point and I accept it. There may be terrorist groups that have come in from outside, but the point is that from the point of view of your forces terrorism is terrorism. It could be the Baathists using terrorist means.

General Hagee.

General HAGEE. Sir, I agree with that assessment.

Senator LIEBERMAN. Let me ask a more general question, which builds a little bit on questions that have been asked before. I will ask each of you this. Does the budget submitted by the administration give you the resources you need to fight the ongoing war against the insurgents in Iraq and conduct those essential military activities to win the peace as well as to be prepared to fight and win if necessary elsewhere in the world?

Understanding that you can never have everything you want in a world of limited resources, what would be your top unfunded requirement if in fact you feel that you received as much of your priority list as you need in the administration's budget?

General SCHOOMAKER. Sir, I would have to submit that for the record. I would not like to guess at that at this stage. I would like to say that the 2004 budget with supplemental is sufficient to prepare us and to conduct the operations that we are doing today. What we have in the 2005 Army budget is sufficient to prepare and equip the Army to do the day-to-day things to support our preparation for the war. It does not include the contingency costs of actually operating over in that theater.

Senator LIEBERMAN. What you would like to submit in writing is what your top unfunded requirement would be. Did I understand that correctly?

General SCHOOMAKER. If you are asking me that question, that is the way I would prefer to answer it, yes, sir.

[The information referred to follows:]

The fiscal year 2005 budget supports our highest Army base program priorities. Should additional funds become available, we would apply them first to accelerate our force protection efforts, including ballistic armor protection and individual soldier equipment.

Senator LIEBERMAN. Fine.

Admiral Clark.

Admiral CLARK. The demand on the Navy is certainly not the same as it is on the Army and the Marine Corps with regard to this specific fight. The requirement for us to be represented globally certainly is there. Thirty-two percent of my force is forward-deployed today. I have sufficient resources to execute that.

Over the course of our discussion, I have talked on a consistent pattern about the requirement to make sure this force is ready. In my opening testimony I spoke to the value of readiness. I assure you that this budget has the resources in it to make sure that it is ready and I can respond this afternoon if I have to.

With regard to my most pressing requirement—and you are exactly right, in a perfect world I could dream up some things that we could go faster. I fundamentally believe that one of the things that is costing us in the acquisition side of the house is that many of our programs—because of resources, we are not able to move fast enough, so we have them on a program on minimum sustain rate or do not invest as rapidly as we could which ends up costing the Nation more.

But I will tell you that for me, the focus is now on how to create the Navy of the future. For too many years we did not buy enough ships and airplanes. That would be my most pressing need and that is where I would put additional resources: to recapitalize ships, aircraft, and submarines, in a more rapid manner.

Senator LIEBERMAN. Thanks, Admiral.

I know I am over my time, Mr. Chairman. I wonder if we could just ask General Hagee and General Jumper to respond, please?

Chairman WARNER. Yes, of course.

General HAGEE. Sir, with the combination of the budget and the supplemental we can handle day-to-day operations and any other contingencies that come up. As far as the number one item on my list, it would be resetting the force, ensuring as we use the equipment either in Iraq or Afghanistan or wherever that we have sufficient funds to either purchase new equipment or to refurbish the equipment that is coming back.

Senator LIEBERMAN. Thank you.

General Jumper.

General JUMPER. Sir, we also have the resources to do our job, and resetting the force quickly and being able to recapitalize, as Admiral Clark says, are the two priorities on the Air Force's list.

Senator LIEBERMAN. Thank you all for your testimony. Thanks for what you do for us and our country every day.

Chairman WARNER. We thank you, Senator Lieberman.

Senator Dole.

Senator DOLE. Thank you, Mr. Chairman. I certainly want to thank the Service Chiefs for being here today, but I also want to thank you for the great work that you are doing in leading our young men and women in the military as they fight and battle terrorism both here at home and abroad. Thousands of young men and women in my home State of North Carolina are currently fighting the war on terror in Iraq. We are forging a process of peace and in doing so we are moving toward turning control of the government and society back to the Iraqi people.

In Iraq and Afghanistan, our Nation is helping to rebuild schools and hospitals, water supply systems and roadways. We have made great progress, thanks to our diverse and skilled workforce, which is meeting the challenges with a courage that makes us all very proud indeed.

With this month's deployment of North Carolina's 30th Heavy Enhanced Separate Brigade, I have been made painfully aware of some of the problems faced by the National Guard units as they mobilize. General Schoomaker, what are you doing to guarantee that the service members are expeditiously transitioned to active duty payrolls and that their lodging and subsistence are of the same quality as the active units that are training on the same bases?

Would you respond to that, and then also to the budget request news release sent out by DOD which proposes, "the use of innovative management to improve the mobilization process." Could each of you go into more specifics about how your Service intends to meet that objective?

General SCHOOMAKER. Senator Dole, thank you very much. As I think you might know, I spent considerable time with the 30th Brigade, Old Hickory, all the way from its pre-mobilization through the mobilization process and through its most recent training at the Joint Readiness Training Center. We have pulled out all stops to ensure that they are absolutely prepared, equipped, trained, have all of the benefits, and to ensure that they have mission success.

To answer the second part of your question, we are going to school on ourselves in preparation for mobilization. We are learning very much about what we are doing now and have been doing in mobilization. Both the Chief of the Army National Guard and the Chief of the Army Reserve are working with us to achieve the initiatives through modularity and a transition from what we used to call an "alert, train, deploy" mentality to a "train, alert, deploy" capability within our Reserve components.

Senator DOLE. Would others answer briefly, please.

Admiral CLARK. Very briefly, we have now only 1,900 Reserves mobilized. Our problem and challenge is significantly different than the other Services. Suffice it to say that the main way we are taking this on, Senator, is this: We are rebalancing the active-Reserve mix so that we do not get caught in a position where if we have to go accomplish some mission, we are forced to have a lot of Reserves on day one. We have restructured our fast response force so that Reserves will not be required for at least the first 60 days of any operation we might be required to be involved in.

General Schoomaker's comment about learning from ourselves is absolutely true. We continue to do that. The biggest area for us has been in pay. We have made great progress with the computer systems to support that.

General HAGEE. Senator, we are an expeditionary ready force. We have active duty personnel located with our Reserve units to ensure that their training meets the same standards as our Active-Duty Forces. We are ready to activate those individuals within an extremely short period of time to respond to any contingency.

General JUMPER. Senator, in the Air Force we train our Air National Guard and Air Force Reserve to the same standards as the active and they share the same equipment. We have a very high volunteer rate for our normal rotations in the Air Force, but we are configured with our Air Expeditionary Forces so that we can call forward the active portions of those forces as force packages as we need them if we want to avoid mobilization.

Still, with our high volunteer rates we do not think that that is necessary in normal times.

Senator DOLE. General Jumper, I have an interest in the A–10 aircraft. This year's budget shows a significant procurement funding increase for the A–10. The A–10 certainly has shown its continued capabilities in Iraq, despite its status as an aging aircraft. Does the budget investment support your goal of extending the service life of this aircraft to 2028? Have recent operations further validated the use of other platforms, like the F–16 and the B–1, for the close air support mission?

General JUMPER. Well, Senator, especially since Kosovo and particularly into Afghanistan, we have worked close air support with every kind of airframe that we have. The most significant addition has been our bomber force. In many cases we have been able to provide close air support with greater accuracy with our GPS-guided bombs than we have actually being closer to the ground with some of our fighter aircraft.

But our F–16s, our A–10s, and our bomber aircraft are all committed to that mission. We will continue to have, in the Air Force, dedicated airplanes whose sole mission is close air support like the A–10. As you say, we have a significant upgrade program. How this will play out into the future and how we work this with the aging aircraft problems with the A–10 is yet to be determined, but we will continue with dedicated close air support capability in our Air Force.

Senator DOLE. Thank you.

My time has expired. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator, for your contributions on these questions.

Now, Senator Reed.

Senator REED. Thank you, Mr. Chairman.

Gentlemen, thank you for your service to the Nation and your individual branches of the Service. My theme will be reminiscent of many that are here today. The most remarkable thing about this budget is what it leaves out, not what it includes. It leaves out the cost of operations in Iraq and Afghanistan, and the deliberate increases as a result of 30,000 additional Army troops that were committed to.

I think it is a deceptive way to finance the operations of the military and I think it also has practical ramifications. It impacts the Army most specifically and the Marine Corps to a similar degree.

General Schoomaker, as I understand, the way we are financing operations today is that this budget proposal will cover the routine operations of the Army through the 2005 year, but operations in Afghanistan and Iraq and other contingencies are being funded out of the 2004 supplemental?

General SCHOOMAKER. That is correct, sir.

Senator REED. At the current burn rate, when do you run out of 2004 supplemental money? What day or month?

General SCHOOMAKER. Sir, we are funded through the end of this year. At the burn rate, we are funded through the end of the fiscal year.

Senator REED. You are funded until September 30?

General SCHOOMAKER. Until 30 September, yes, sir.

Senator REED. The 30th. If this supplemental is delayed past September 30, say the end of November, or even delayed until the following year, which is customary nowadays, you will burn out all the money that is appropriated?

General SCHOOMAKER. That is correct, sir.

Senator REED. In trying to balance the commitments and the demands, do you anticipate cutting down base support operations as a way to cover shortfalls?

General SCHOOMAKER. Sir, quite frankly I only have visibility of what the Army has. I do not know what OSD has available. I am concerned, and I think this is what you are getting to, on how we bridge the gap between the end of this fiscal year and whenever we can get a supplemental in the next year. I do not have an answer for you exactly how we would do that.

Senator REED. Thank you, General.

Admiral Clark, do you have similar concerns?

Admiral CLARK. I do not, because I do not have that kind of surge requirement at this time. If I had to increase the pace of aviation operations, then I would need additional resources. I will end up being the party that pays for the Marine Corps transportation and that is a small amount that we will have to deal with. We expect to be covered out of the 2004 supplemental for this movement and then next year we will have to deal with when they would be coming home.

Senator REED. General Hagee, your comments?

General HAGEE. Sir, I share the Chief of Staff of the Army's concerns about this.

Senator REED. General Jumper?

General JUMPER. Sir, so do I. We are funded through the end of fiscal year 2004 and then we will have to either cash flow or find a way to bridge until any potential supplement in 2005.

Senator REED. So if we do not see a supplemental up here in the middle of the summer, given the way we work, you gentlemen in varying degrees are facing a funding problem beginning September, or beginning October 1. Is that a fair assumption?

General SCHOOMAKER. Yes, sir.

Senator REED. Admiral Clark, except for the Navy?

Admiral CLARK. Based on what I said last time, I do not have any requirements that I know of at this time, but I might have a small transportation requirement.

Senator REED. General Hagee.

General HAGEE. Yes, sir, we will have a challenge during that first quarter. We would take actions like General Jumper mentioned: forward flowing or cash flowing until the supplemental became available.

Senator REED. Let me ask another related question. This goes against the Army because they are bearing so much of this burden

and bearing it extremely well, General. The Secretary of Defense had a chart at the last hearing which he is going to use to talk about the end strength increases. What I find remarkable is that from September 2003 to December 2003 the Army lost 10,000 soldiers at a time that stop-losses were in place, and at a time that we were contemplating at least increasing the number of soldiers.

I am concerned that this trend, if it continues, will be serious in terms of manning the forces, regardless of whatever end strength and by whatever means we achieve, coupled together with the anticipation in July when OIF 1 finishes of significant recruitment problems and retention problems. Could you comment upon that, General Schoomaker?

General SCHOOMAKER. I am not familiar with the chart you just held up and I do not know about losing 10,000 soldiers.

Senator REED. This is the Secretary of Defense's chart, with the end strength of the actual Army. They show in September 2003 499,301, and in December, 490,174. This is a loss of about 10,000 personnel in end strength. That is his chart.

General SCHOOMAKER. Sir, our statutory end strength at the end of last year was 480,000.

Senator REED. I am probably being confusing. The numbers I refer to is the actual end strength, not the statutory.

General SCHOOMAKER. That is temporary end strength, that has grown within their authority, and within the authority of the Secretary of Defense.

Senator REED. I am not questioning the legality. It appears to me that we lost 10,000 soldiers, real boots on the ground, at a time we had stop-loss orders in effect, and at a time in which we were trying to begin our recruitment for these additional soldiers.

General SCHOOMAKER. Sir, they are not related. That is what I am trying to tell you. We have met our retention and recruiting goals at 100 percent of the force. The force waxes and wanes based upon who we are mobilizing, and who we are moving, and it has been as high as twice that number during part of the year.

Senator REED. If you could provide me a more specific written response——

General SCHOOMAKER. Yes, sir, I will.

[The information referred to follows:]

The drop in end strength is directly attributable to traditionally low enlisted accessions in December and the end of the active component, 12-month skill-based stop loss/stop move program. Historically, the active Army does not bring many new soldiers onto active duty during the holiday season. Thus, each year, strength dips a few thousand in December and recovers in January. In the summer of fiscal year 2003, the Army terminated the skill-based stop loss/stop move program. The termination plan provided for most solders who were subject to stop loss to depart the active Army between October 31, 2003 and December 20, 2003. Approximately 8,000 soldiers chose to depart during that time. A new stop loss policy began in January 2004, and only affects soldiers in deploying units. It will not be based on a soldier's military occupational specialty. With the implementation of unit stop loss and a return to accessing new soldiers in January, all factors indicate a steady increase in strength into the summer months.

Senator REED. I will provide more specific questions perhaps.

If you just look at the lines here, we are increasing actual end strength month by month though last year. We hit a peak in December of last year and we started going down. If the next report for January, February, and March shows continued deterioration in

actual end strength, I think it undercuts your ability to conduct your mission and it raises a serious problem. I will just stop there.

General SCHOOMAKER. Yes, sir.

Senator REED. Thank you, Mr. Chairman.

Chairman WARNER. Senator Allard.

Senator ALLARD. Thank you, Mr. Chairman. I have a brief statement I would like to have included in the record just prior to my questioning.

Chairman WARNER. The statement will be put into the record.

[The prepared statement of Senator Allard follows:]

PREPARED STATEMENT BY SENATOR WAYNE ALLARD

Thank you, Mr. Chairman. I want to express my appreciation to each of you for your leadership and dedication. A year ago, our Nation was demanding much of our military. Our forces were fighting in Afghanistan, assisting local forces in Yemen, Djibouti, and Georgia, and defending our homeland. Since then, they have taken on a new mission: the securing and stabilization of Iraq. The mobilization of thousands of men and women in the Reserves and National Guard are indicative of the size and scope of our current military operations. Despite many hardships, our soldiers, sailors, airmen, marines, and coast guardsmen have stepped forward and embraced their country's call to arms. We thank them for their service. We thank each of you for providing them with the leadership they need to defend our Nation.

Even as we confront our foes around the world today, we must prepare to meet the threats of tomorrow. The ongoing transformation of the military is vital to the future safety and security of this great Nation. We must not avoid making difficult choices about legacy systems. Nor should we turn away from the cost of investing in new technologies. We must remain committed to this effort. The superiority of American arms in the decades to come is at stake.

I want to thank our witnesses for taking the time to appear before us today. I know each of you have many responsibilities, particularly during this time of conflict. Yet, it is important for us to hear from you the needs of the men and women under your command. So, I again thank you for being here.

Thank you, Mr. Chairman. I look forward to our time of questions.

Senator ALLARD. Just recently, I went to a Board of Visitors meeting, which is advisory to the Superintendent of the Air Force Academy (AFA), and I want to take this opportunity to thank General Jumper as well as Secretary of the Air Force Roche for attending the last two Board of Visitors meetings. I know they are very busy individuals and their commitment to the future leaders of the Air Force is very much appreciated.

I would also add that this last meeting was probably the best Board of Visitors meeting I have had the chance to attend in the 6 years that I have been on the Board. We are under new leadership with Jim Gilmore, who is our chairman, and both the Superintendent of the AFA, General Rosa, as well as the Commandant, General Weida. They gave good reports and I think most generally, in talking with the members of the Board, they felt that considerable progress had been made at the AFA as far as addressing this problem with sexual assaults that they have just been dealing with for the last year or so.

I would ask General Jumper, who was there and listened, if he might share with this committee his assessment of where we are with sexual assault issues there at the AFA and how the plan is moving forward.

General JUMPER. Thank you, Senator. I appreciate your efforts, sir, to reinvigorate the Board of Visitors and to get the members interested in what is going on out there. You and Chairman Gil-

more have done a superb job of that and I think that is what made the meeting such a success.

Senator, there is a great deal that has gone on as we implement the provisions of the Fowler Commission report. We have about 80 percent of those recommendations implemented at the AFA. The actions that you and the Board of Visitors took at the last meeting went a long way in implementing many of the rest of those provisions. As we have looked at the agenda for change at the AFA, I think we have seen an excellent response, especially with regard to the use of alcohol among the cadets. The number of incidents have gone down dramatically. We do not declare success on that. We just take it as a trend.

The number of sexual assault incidents that have been reported since the new leadership has been in place is 10. Those are being dealt with. The issue that we are consumed with right now, that I know Senator Collins is worried about, is the issue of confidentiality and actually how we implement something that allows some element of confidentiality. We are working on that right now with the DOD Inspector General to try and find a way to accommodate all the concerns surrounding that.

I think from the alcohol uses, to the reporting, to the response team measures that we have put in at the AFA, I think that the attitude that I see when I go out there is positive. Senator, I visit often and I randomly go around and talk to the cadets, as does Secretary Roche. I see a recognition of the problem. I see less and less denial and a determination to get on with fixing the elements of this problem.

We will continue to press forward with all energy, Senator, to get through this thing.

Senator ALLARD. Thank you, General Jumper.

General Schoomaker, the President's fiscal year 2005 budget request provides over $1.4 billion for the DOD's chemical demilitarization program. You have a major role in that, or the Army has a major role in it. I was looking at the budget request and how the Government Performance and Results Act (GPRA), which is a provision that has been put in place by Congress for agencies to measure the progress and results of their programs, received the lowest rating as far as measuring results.

It does not necessarily reflect funding, but there are also some problems with cost overruns and some other problems. I wonder if you would just share with me about the funding and some of the evaluations of that program. The bottom line question is are we going to be able to meet the 2012 treaty deadline for the Army's chemical demilitarization program?

General SCHOOMAKER. Sir, I know that Acting Secretary of the Army Brownlee is personally involved in running this issue. I am not as familiar with it and I would be glad to provide for the record the information.

[The information referred to follows:]

The Army remains committed to safely and efficiently meeting treaty deadlines.

Senator ALLARD. Yes, I wish you would do that, because the GPRA measurement on that means that you are setting goals and objectives and you are not meeting them. I am concerned about

that. Could you give this to me and perhaps maybe the rest of the members of the committee who are interested in knowing what is happening?

General SCHOOMAKER. I would be glad to.

Senator ALLARD. I am particularly concerned about the cost overruns and everything that we are hearing about in that particular program. I think that is an area of concern and something that we need to watch.

I have another question for you. The Denver Post reported 3 weeks ago that as many as 40 women have been sexually assaulted while serving our country in Iraq. Then The Washington Post wrote an article and then USA Today wrote an editorial on that. As a result, Secretary Rumsfeld ordered a comprehensive investigation into the matter.

Is the Army addressing the problem of sexual misconduct when soldiers are deployed?

General SCHOOMAKER. Would you say the last part of your question again?

Senator ALLARD. Are you addressing this problem in the Army?

General SCHOOMAKER. Yes, sir, we are. We are addressing it very aggressively. This has been a subject that has received leadership attention. It is a chain of command issue. It is a leadership issue. It is a discipline issue. We have significant resources available to us to handle it and we are reviewing those in regard to much of what General Jumper just spoke to.

Senator ALLARD. Back to you, General Jumper. Last November the Armed Services Subcommittee on Strategic Forces, which I chair, held a hearing on the current status of many of our military space programs. It was noted that many of these programs had fallen behind schedule, experienced enormous cost overruns, and they may not be appropriately managed.

I believe that we cannot allow our military space programs to continue down this path, which could eventually threaten our space dominance. I believe that we need to seriously examine the size and type of satellites that we are building and I believe our launch capabilities need to be much more responsive and much more affordable.

General Jumper, given that the cost of building a few large, highly capable satellites is becoming prohibitively expensive, do you believe it is time for us to begin examining the possibility of building large quantities of smaller, less capable satellites that together provide the same overall capability?

General JUMPER. Senator, I can tell you that Pete Teets, who is the Space Executive for OSD and the Under Secretary of the Air Force, is focused on the ability of our space industry to perform. It has to do with a number of things, not the least of which is getting our arms around the requirements.

It has long been a practice in the space industry that requirements can come from all directions and that they are perhaps not properly constrained. We are taking aggressive action to get hold of the requirements.

Certainly one of the things that has to be looked at is the size and complexity of the satellites. There is a large effort going on with the development of microsat technology and what it might be

able to do for us, especially as we look at being able to focus on specific areas. I take your point, sir, and I know that Mr. Teets is looking at that and I think that is probably one of the alternatives to the way we are going now.

Chairman WARNER. Thank you very much, Senator. We are past the time.

Senator ALLARD. Thank you. Sorry, I did not realize.

Chairman WARNER. Not at all.

Senator ALLARD. Thank you, Mr. Chairman.

Chairman WARNER. It is a very important question.

Senator Pryor.

Senator PRYOR. Thank you, Mr. Chairman.

Admiral Clark, I was interested in a comment you made about moving the Navy to more technically advanced ships.

We are moving toward much more technically advanced ships. I am curious about that. In a sense, are you saying that we are going to have fewer and fewer tasks that, say, an E–1 can perform on those ships and more and more tasks on those ships that E–6s will perform? How will that work?

Admiral CLARK. You have it exactly. The technology that we are inserting in our new platforms is going to require a more experienced, call it a richer experienced, force. I said in my opening testimony that our asymmetric advantages are technology and the genius of our people, and I want all of it I can get.

DD(X) starts construction in 2005. DD(X) will be an all-electric ship. It will have the ability to project fires 100 miles. It will revolutionize naval fires. Today we can do it at around 10. This will change the way we fight with the Marine Corps, and it will change the way we support Army units on the ground.

A typical ship today that size maybe would have 500 or 600 people on it. This one is going to have between 100 and 150 people on it. No, I do not anticipate that there are going to be many E–1s there. It is going to require a very experienced group of people to operate this ship.

This is why I need all of the incentive tools to shape the force, and it is why I am one chief that is talking about a force that is much more capable but with fewer people in it.

Senator PRYOR. Right. I assume for budgetary reasons there will be fewer people with a higher pay scale, is that right? But does that wash out in the end in terms of——

Admiral CLARK. Well, it absolutely is shaped differently. For 4 years, I have been coming up here talking about making my force richer and experienced. When I got here, the top six, that is E–4 through 9, were 69.9 percent of my force. In 2004 it goes to 73.3, and in this budget it goes to 74 percent of my force.

You cannot change this overnight and we have been progressively growing the experience in the force. It provides more opportunity for our people, but also sends them the message: We need you, we need your skill set, and this is what the Navy is going to be like in the future.

Senator PRYOR. Let me ask this in light of that, and I follow what you are saying completely. I recently received a letter from a constituent from my State of Arkansas and I believe he is stationed in Japan. Under the high-tenure system, it sounds like he

is about to be forced to retire. He is an E–6. I do not know all of his background, and do not know a lot about him, but I do have his letter right here.

I wonder if we should reevaluate our high-tenure system in light of what you just said, that there may be some people that maybe do not go up their promotion chain, but are awfully good at what they do. We should keep those people for a longer period of time. Does that make sense?

Admiral CLARK. That absolutely makes sense. As CNO, one of the things I get to do is put policies in place. In order to shape the manpower force, I put policies in place that put a limit on an individual that has served for a number of years and has not been promoted, in order to then make room for a hard charger that has the potential to serve much longer in the future. I put rules in on how long they can serve without being promoted.

Having said that, every individual is an individual, and I have waiver clauses on every one of those policies. That option is always open and we assess each case as required to meet the needs of the current and future naval service.

Senator PRYOR. Yes, because, based on what you said a few moments ago, it seems like you want preferably more tenured people, more experienced people, and fewer of them per ship. I understand that. I did not want to point out an inconsistency, but I just did not know how that worked.

General Schoomaker, let me ask you a question about this huge rotation that you are undergoing right now in Iraq. I think you are moving out 125,000, and moving in 110,000, if I understand the numbers correctly. Could you just give us a status report on that rotation?

General SCHOOMAKER. Sir, the rotation is on schedule and moving very well in every aspect, from the transportation plan to the transfers authority in the theaters.

Senator PRYOR. We are right on the timetable?

General SCHOOMAKER. We are doing very well, yes, sir.

Senator PRYOR. Are there any hidden or maybe unexpected costs that you had not anticipated? Are the costs of the rotation tracking your schedule?

General SCHOOMAKER. I am aware of nothing that is different in that regard.

Senator PRYOR. Let me also ask this, General Schoomaker. Since I have been on this committee, which has been just over a year now, we have heard a lot about transformation. What is the most significant development or developments in transformation in this budget that we are talking about today? What should we see in the Army over this fiscal year, that we as a committee can look to and track and follow the transformation process?

General SCHOOMAKER. Sir, it would take the rest of the hearing for me to lay it all out. We are going to come over and provide exquisite detail to every member and every staff member that would like to see what we are doing. In short, modularizing the force, increasing the number of modules, and putting enablers in that cause these modules to be much more powerful than they are today. This changes the doctrine to look much more like the doctrine of the future, not the doctrine of the past. Using this momentum, as a re-

sult of the war and the focus and the level of funding, we have to reset for tomorrow, not reset for yesterday.

You will see three new brigades this year, at least three new brigades next year, and four brigades the following year. We will increase the Active Force by 30 percent with a minimal cost to our program.

If you take a look at the National Guard, Lieutenant General Blum is building towards 34 brigades that look exactly like the kinds of brigades that we have. If we go all the way to the end of what we can do, we could end up potentially with 82 brigades in the United States Army. That means that the dwell time issues, the kinds of pressures that are on the Guard and Reserve and the Active Force, can be reduced. The force is also stabilized so that people stay longer in one place, kids go to the same schools, spouses work, and people can invest in homes and develop equity like other people do. All of these kinds of things are all part of this transformation.

Transformation is not just equipment. It is about the full dimension of the doctrine.

Chairman WARNER. Thank you very much, Senator, General.

Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman.

General Schoomaker, last Saturday I had the great privilege of participating in a welcome back ceremony for 24 soldiers from the Maine National Guard who were returning from Afghanistan. I would note that Maine has the third highest percentage of guardsmen and women being deployed right now in the entire Nation.

Last week Secretary Rumsfeld suggested to us that the Guard is not overstressed and he provided us with a chart that showed that only 7 percent of our Guard have been mobilized more than once during the past 10 years. That does not reflect the experience of my Guard units in Maine at all. Many of them have been deployed three times in the last 10 years. Some were mobilized with only 5 days notice. Many of them had no idea how long they were going to be gone nor when they would return.

I want to emphasize that the members of the Maine Guard are very proud of their service and they do a fabulous job, but repeated deployment over a 10-year period, 3 times in 10 years, has imposed a tremendous strain on their families. I am reminded of the old saying that you recruit the soldier, but you retain the family. I think, as Senator McCain and others have suggested, that we are going to see an exodus from the Guard and Reserves that is going to be very harmful because of these repeated deployments.

I have two questions for you. First, how are you going to restructure the Guard units so that you spread the burden more evenly? My units are clearly in this 7 percent. Second, will the additional 30,000 active duty troops that you are requesting help relieve some of the excessive pressure on these overused Guard units?

General SCHOOMAKER. Senator, thank you very much for your question and thank you for the service of your constituents. We are very proud of them. While you were meeting them I was down in Senator Pryor's State with 400 Guard commanders and command sergeant majors from across the whole United States working on exactly what you are talking about.

This is not an issue of how many people as much as it is what capabilities and how many units of capability we have available to us. The overstressed people that we have in the Guard and Reserve and the Active Force are in specialties that have high demand of which we have too few of them. So much of our transformational activity is balancing lesser used capability within our force into the more highly used capabilities within our force, so we can reduce that stress.

I would like to refer to the rain barrel analogy that the Secretary of Defense used the other day. I used it with him but he beat me up a little bit when I first used it. Apparently he liked it because he used it with you. The problem is we are paying for a full barrel of rain water here. I would prefer to call it maybe whiskey, but we had to go with rain water. The spigot is too high up on the side of the barrel and we are not able to assess all of that liquid that is in the bottom of that barrel.

What we want to do is move that spigot down by creating more of the low-density units and take the units we have too many of that we do not use enough and convert them and balance them across the Active, Guard, and Reserve Force structure. It is essential. To do this we have to have some room, and thus the temporary bump. That buys us the ability to start doing it now, because the faster we can create more of these brigades that look like each other in other capabilities the faster we will be able to relieve the stress on the force. That kind of pulls it together.

Because of this rebalancing that we do, that temporary strength goes away and the units remain when it is over.

Senator COLLINS. Thank you.

Admiral Clark, you did not think you were going to get off scot-free today when I am here. I am going to submit several questions to you about shipbuilding, but I want to bring up a different issue today with you. A few months ago I also welcomed back to Brunswick Naval Air Station a squadron of P–3 pilots and crews who had been assigned overseas to provide support in both our operations in Afghanistan and in Iraq.

Could you comment on the role of the P–3 aircraft in OEF and OIF and what you see as the future for our marine patrol aircraft?

Admiral CLARK. Absolutely, and thank you for asking the question. This is a group of people who everybody really needs to know about for what they have been doing for America. This airplane, which was designed over 30 years ago, actually probably 40 years ago, was designed to go hunt submarines.

It is a classic example of what happens in America when you apply the genius of our people and you keep introducing new systems. Over time we have put better and better sensors on this airplane, which was designed to do reconnaissance, and sometimes even underwater reconnaissance. In OIF, I will tell you that they operated principally in support of the land forces. We operated them at an extraordinary rate.

These airplanes are wearing out. In fact, I took a proposal to the Secretary of Defense recently and said that I cannot keep flying them at this rate. The rate that we are flying them at today will not meet the transition for the new airplane that we have in this year's budget, the R&D for, the multimission maritime aircraft

(MMA). We cannot get to the transition without limiting the flight hours on this airframe.

These people have done a fabulous job and it is our task to husband this resource, use it where the Nation must use it in order to deal with the global war on terrorism and the challenges that we face. The men and women flying in these old airplanes are doing a magnificent job.

Senator COLLINS. Thank you.

Chairman WARNER. Thank you, Senator, very much.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman.

I want to express how proud I am of our troops and the efforts they are making in keeping our Nation secure, and also of the great military leadership that we have had.

General Schoomaker, I understand that the Army is attempting to reset your prepositioned stocks. General Hagee, your statement suggests that this task is already largely accomplished for the Marine Corps. However, I believe both of your Services are also continuing to use at least some portion of those stocks in support of ongoing operations in Iraq. I have two questions.

First, what is the current status of your prepositioned stocks, and how much do you plan to continue to draw on them during OIF 2? Second, based on those answers, how long will it take you to reset your prepositioned equipment, how much supplemental funding will it require, and what is the impact on your ability to respond to other missions in the meantime? Thank you.

General SCHOOMAKER. Senator, thank you for the question. The most heavily used prepositioned stocks are those that are actually in Kuwait right now, the ones that we used for the war. The 3rd Infantry Division, for instance, deployed from Fort Stewart and Fort Benning, fell in on those prepositioned stocks and that is what they used to fight the war.

We have something like 9,000 pieces of equipment in those prepositioned stocks that require resetting. This will take us a couple years to do. Most of this equipment is the equipment that was used for the phase one-two operations, or the battle operations. We are not using them today, so we are starting to reset the equipment.

The equipment that we have sent into theater for current operations, primarily HMMWV and other wheeled vehicle forces, is different. I think the one that is most used right now is the one that is in Kuwait. We are resetting it. Others are intact and available to us for worldwide commitment.

Senator AKAKA. General Hagee.

General HAGEE. Yes, sir. I may have not been quite clear. We are resetting the force right now. We are in the midst of accomplishing that. We have not completed the refurbishment of our three maritime prepositioning squadrons. We have one that is essentially complete and ready to respond to any contingency. We have several ships in the two other squadrons that are complete.

The remaining ships are either providing equipment to our forces in Iraq, the forces that are getting ready to flow in, or are in the process of being refurbished right now. How long it will take until we have all three squadrons back up will be a function of how long

we will have to use the equipment there in Iraq. We are going to be working on this for a couple more years to come.

Senator AKAKA. General Schoomaker, your statement makes clear the need for all soldiers, regardless of their specialty, to be able to engage in combat missions. This guidance, the wisdom of which continues to be made abundantly clear in Iraq, seems to imply the need for additional training, especially on small arms. I know that the Army has for some time had a shortfall in ammunition. The direction you are heading in would indicate that shortages are likely to increase. If it is not classified, what is the current size and cost of your ammunition shortfall and what are your plans to address it?

General SCHOOMAKER. Sir, let me start with the last part of your question first and if it does not answer your question I will provide the rest for the record. I have asked them to take a look at opening another facility for small arms production this year. We are in the process of doing that right now.

You are correct, we are stressed in the small arms area, have been for quite a while, and I am concerned about it. The need to train all soldiers to a higher level, especially the combat support and combat service support soldiers, to do live fire convoy protection against ambushes, and to improve their proficiency in individual arms, puts additional strain on our small arms ammunition budget. We are doing that training right now. We are proceeding and I am told that we are okay in terms of having the ammunition available today to do that.

But I know if we fire at this rate that we are going to have to produce ammunition more in the future, so now is the time to facilitize in order to enable that.

I think it will cost between $30 and $40 million to create another facility to do this. Right now the Army has one small arms ammunition manufacturing facility.

Senator AKAKA. General Schoomaker, your statement emphasizes the Army's need to continue its efforts in leader development and states that you will ensure that leaders get "the right mix of operational assignments and training and education opportunities for now and in the future."

I am wondering how your initiative to extend the length of time that soldiers stay at a given post to up to 6 or 7 years interacts with your leader development goals, especially at posts that have a small number of units or that have very similar type units. Can you explain how soldiers at small or homogeneous posts will get multiple assignments that will advance their leadership skills over a 7-year period?

General SCHOOMAKER. Yes, sir. Obviously we have to look at the larger posts as being the ones that are the easiest at which to do this. Take Fort Hood, Texas, for example. With two divisions there, you have the ability to professionally develop in an operational setting much easier than you do on some of the outlying ones.

In some cases we are going to have to look regionally to be able to do the things that we want to do with some of the smaller places. Our commitment to the professional military education piece, however, remains the same and we are working the whole process right now. I quite frankly do not see that we will have a

problem maintaining the institutional training side such as schools and education.

We need to ask ourselves the opposite question than we have always asked. The question ought to be, "Why are we moving this soldier?" If the answer is good then we will move that soldier. If the answer is, "well, because he or she has been here 2 or 3 years and it is time to move," I do not think that cuts the mustard. As long as we can continue to develop the soldier and provide cohesion in the unit that soldier and his or her family should stay.

I think we are going to find an overwhelming number of cases in which we do not have to move soldiers. Every soldier we do not move is a soldier in the force. We have an average of 63,000 soldiers every day in motion that are not in units. By stabilizing this Army, I can certainly get 8 to 10,000 soldiers manning brigades. That is part of what we have to do. That is part of what we are doing inside of this temporary 30,000 that we are talking about. We are finding those people and getting them to the units so that we can bring down that temporary piece of it.

I am sorry for such a long answer, but it is an extremely complicated process that will make this Army better in the future than it was before we went into this.

Chairman WARNER. Thank you very much, Senator, for your questions.

Senator AKAKA. Mr. Chairman, thank you very much.

Chairman WARNER. Senator Chambliss.

Senator CHAMBLISS. Thank you, Mr. Chairman.

General Hagee, I was pleased to see your comments in your written statement relative to the purchase of Blount Island and what an asset that has been to the Marine Corps. I think that the peacetime mission as well as the wartime mission at Blount Island is going to be an even greater asset to the Marine Corps in the future.

I was going to ask you about the armor plating of the HMMWVs and the tactical trucks, but you responded to Senator Warner's question and mentioned that. I am very proud of the work that the folks at the Marine Corps Logistics Base (MCLB) in Albany have done there and I am glad to hear that the leadership as well as the men and women in theater have a great appreciation for the improvement of those systems.

General Schoomaker, I want to go back to Senator Allard's question to you relative to these allegations of sexual assault in Iraq and Kuwait. I know this is not isolated to Iraq and Kuwait. It is not isolated to the Army. These are the latest allegations that have come forth. You mentioned that this is a chain of command issue. I want to make sure that you are comfortable with the fact that the chain of command is operating to the extent that you as Chief of Staff of the Army are getting information directly from the ground on what is happening with respect to these allegations. I want to make sure that you have a procedure in place that is not just adequate, but a procedure in place that is working to allow the allegations of this nature to be brought forth in the proper and sensitive respect that it should be brought forth, and that these allegations are being handled in a very professional manner and that justice is being meted out.

Are you comfortable that that is being done?

General SCHOOMAKER. Sir, I am comfortable that we have the resources and the procedures and the regulations and the training and everything else that is required. You are hitting on the most important part and that is compliance with all of this. That is why the Acting Secretary of the Army and I are personally involved and we are energized to make sure that we are complying. We have a task force that the Acting Secretary set up to look into this, to make sure that we are in compliance, and to find out why in each case that we find ourselves not in compliance, why we are not.

I will tell you, this goes back to the chain of command and discipline. It goes back to things that are fundamental, and we need that to address that and fix it. Unfortunately, we are not aware of all of these allegations, what Senator Allard was talking about there regarding those numbers. We are not aware of each and every one of those, so I do not know what the magnitude of what his figures are. We are on top of this and will continue to do it. This extends into our military academy.

Senator CHAMBLISS. That is an issue that the Personnel Subcommittee, if not the full committee, Mr. Chairman, is going to be following very closely because it is critically important to you, I know, and certainly to us and to all members of each branch of the service.

General SCHOOMAKER. Sir, I would add that, since I have a daughter going into the Army, that I have a personal interest in making sure.

Senator CHAMBLISS. Well, I know you are concerned, but I just want to make sure it gets the profile that it needs to be attended to.

General Jumper, I appreciate your comment about the work that the blended wing is doing at Robins. Now Brigadier General Lynn is commanding the first blended wing that I think is going to be the precedent for every branch of the Service in the future relative to the integration of the Guard and Reserve into the Active Force. Those men and women down there continue to do a terrific job and I am just as proud of them as you are.

I want to talk with you for a minute about strategic airlift. You talked about the C–17 and the great work that it is doing, has done, and continues to do in theater. I agree with that, and strategic airlift has been absolutely central to our success in both Afghanistan and Iraq over the past 3 years. It has also been central to the success of the expeditionary Air Force for much longer than that.

Now, you are currently in the process of revising the mobility requirements study to incorporate lessons learned in OIF and OEF, and I understand this study is going to be complete by June 2005. However, I do not think it takes a complex, time-consuming study to determine that we simply do not have enough airlift. We cannot build enough C–17s, or modify enough C–5s fast enough to produce the amount of airlift capability that we need.

One illustration of this, which I find a little troubling, is that 125 times over the last 3 years DOD has contracted with the Russians to use An–124 aircraft for strategic airlift because we simply did not have enough of our own. At the same time, DOD and the Air

Force seem to be dragging their feet on funding C–5 modernization programs which could help alleviate our need to contract with the Russians.

I would appreciate your comments on this situation as well as your comments on how you will fund the C–5 modernization effort in order to increase our strategic airlift capacity.

General JUMPER. Yes, sir, Senator, and thank you for that question. The global mobility forces that are out there working every day are indeed the key to our ability to reach out around the world. The current mobility study has put the requirement at 54.5 million ton-miles per day. That is the number that we are challenging and we are looking and looking again to see if that is the right measure or if we need to rethink it completely in this contingency world that we live in.

In order to get to that number, we were on the track that got us to some number of C–17s plus a re-engined and re-engineered C–5. Part of our work with the C–5s is to see how many of the C–5s that are currently in the inventory are capable of being modified. Do they have service life left? Have they been overworked? That work is ongoing and as part of the study that is due in the summer of 2005 we will then be able to put those together and come up with an answer on the right combination of C–17s and C–5s modified to be able to meet the requirement.

That work is ongoing. It is on the front burner. We have made some adjustments in the funding of the C–5 to move from the Reliability and Enhancement and Re-engining Program (RERP) to the avionics modernization program in the C–5 so we can keep more of those compatible with the current Federal Aviation Administration (FAA) and international regulations. But I can assure you, Senator, this is an area of concern for us and we are going to keep pushing this.

Chairman WARNER. Thank you very much, General, and thank you for raising the questions about the sexual assault. Sexual assault is a primary concern to this full committee.

Senator Clinton.

Senator CLINTON. Thank you, Mr. Chairman, and thanks to all of you for the work you do every day and for once again coming to appear before this committee.

General Schoomaker, I am equally concerned along with Senators Chambliss and Allard on the investigation into the allegations of sexual assault and misconduct. Will you be sharing the results of the investigation with this committee at some future date?

General SCHOOMAKER. Senator, I would be glad to. We are taking a look at our internal processes and making sure that they are being complied with and find out if there are things that we have to tailor. We would be glad to share that.

Senator CLINTON. I would appreciate that. Does the internal processes review also include looking at these individual cases that have come to the attention of the press? Obviously that concerns us as well.

General SCHOOMAKER. Yes, ma'am.

Senator CLINTON. Thank you, General.

General, with respect to the news that yesterday the Army Corps of Engineers admitted it had falsely stated that the Air Force and

the Small Business Administration were involved in the awarding of the contract to Halliburton for the rebuilding of Iraq's oil industry, will you direct the Corps to provide this committee with information on how it decided to award that contract to Halliburton?

General SCHOOMAKER. I will ask them to do that, Senator.

Senator CLINTON. Thank you, General.

General, I am deeply impressed by the work that the Army is doing under the rubric of transformation. The report that you have provided us in this posture review is very reassuring and persuasive as you make these significant changes. I am also concerned about some very old problems, and the recent unclassified study by the Army's Combined Arms Center at Fort Leavenworth, a 504-page internal Army history of the Iraqi war, which pointed out considerable problems in logistics.

In reading the press reports of this report, we are struck by all of the old-fashioned problems we had. People could not communicate. They always were outracing their supply lines. They did not have the information as well as the resources that they thought. The fact that the strategy of starting the war before all support groups were in place, in order to achieve an element of surprise, taxed the resources of local commanders.

How are you addressing that issue? Is that an issue that is reflected in this budget or are there additional resources and changes that need to be taken into account?

General SCHOOMAKER. Those issues are reflected in the budget. The logistician for the combined force land component commander, General Christianson, is now the G–4 of the Army. He suffered the problem on that end. He is now part of the solution, and we are aggressively looking at it.

You are exactly right, we have not made the best use of our information technologies. We have not done things that we can do to fix this. But in all fairness, I also have to say that the distances and the speed at which all of this occurred seriously exposed these issues. These are far greater distances than were anticipated doctrinally. I have heard it said that the distance from Kuwait to Mosul, up where the 101st was, is like going from Omaha Beach to Berlin. That is a pretty good distance. That is a lot further than Patton tried to do in his Redball Express.

I think this is a serious issue because it has everything to do with our strategic and operational level agility, and our ability to do the logistics. There is also a lot of money tied up in this. Believe me, we are going to school on this piece.

Senator CLINTON. General, I know that many of us on this committee want to be very helpful to you in confronting this set of challenges, and it does strike me that there is an opportunity here to think a little bit outside the box. I have long thought that we ought to be pushing much harder on alternative energy and clean energy. We use fuel cells, for example, to lift off our space shuttles, but we are not yet figuring out how to use them in our military on a day-to-day basis.

There are some opportunities not just in the immediate arena about how we should solve this problem the best we can right now, but also opportunities to think outside the horizon about what could we be working on at this moment that would help us. We

would appreciate any suggestions or ideas that you or any of the other Services have that would enable us to help on this.

I was particularly struck in the report about the failure of communication, which was so reminiscent of what happened in New York on September 11. Police were not able to talk to firefighters, people in one part of the building could not communicate with someone in another part; and then to read that again the radios were out of range, and people were improvising with cell phones. We just have to get a better grip on what we need to do with technology.

Just as the Defense Advanced Research Projects Agency (DARPA) and the space program were the source of new technology that had tremendous effects both for the military and civilian side, we need to be making some of those investments today as well.

General SCHOOMAKER. I do not disagree with you.

Senator CLINTON. The final point I would make to all the Services, General, is that I appreciated what you said about train, alert, and deploy, and I continue to be concerned about the medical and dental readiness of our Guard and Reserve. I asked this question for all of our Service Chiefs at last year's posture hearings, but since then a General Accounting Office (GAO) study released in 2003 found that the Army had not been able to consistently carry out the statutory requirements for monitoring the health and dental status. The result was that many reservists called up could not be deployed because of health, and particularly, dental problems.

I would like to get some additional information about what we are doing to try to deal with that. Of course, the fact that we do not have universal health care insurance so Guard and Reserves are on the civilian economy, and do not necessarily have the health care that they need, is an issue far beyond this hearing. I would appreciate knowing about whatever the Army or other Services are doing to try to make sure that we have the health status as good as possible.

General SCHOOMAKER. Senator, I am happy to report that we are tracking this very well. For those we have mobilized, we have a baseline of their medical status as they went in. As they come back out, we are doing a very good job in comparing the baseline to make sure they are corrected.

But you are exactly right. We were previously funded to have one physical every 5 years for our Guard members and no dental. This means that they arrive with only what they have been doing with themselves. It is one of the reasons why we changed the mobilization criteria. Now we mobilize for the first 25 days, and do a medical check. If we have problems, we demobilize. We only keep those that pass it as it goes forward.

We have to fix this systemically in the future, and part of that is being better prepared before an alert so that we can deploy more rapidly with a more ready force.

Senator CLINTON. Thank you.

Chairman WARNER. Thank you very much.

Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman.

I want to congratulate all of you on the continuing superb performance of our men and women in uniform. I could not be

prouder. They have been stressed in a number of different situations. They have consistently shown discipline and courage on the battlefield or in the streets of the cities in Iraq. Many of them had to have felt threatened, but they have held their fire, they maintained their discipline in the face of hostility, and have won friends as a result. I am just very proud of them.

Also I am proud and hope we can continue to improve our jointness idea, where air, ground, naval, and marine forces all work together as one force for America. As we do that, I think we will utilize our existing resources better. We get more bang for the buck that we have invested. I could not be prouder of what you are doing. We are transforming in the middle of a war. It is a very stressful time to have to do that. Maybe it is a good time in the sense that we are learning exactly what we need to be effective.

As you noted on logistics, General Schoomaker, you learn from stress. We are learning from stressing our Guard and Reserve how we can do it better.

General Schoomaker, is it fair to say that since you have been in your position, one of your top priorities has been this personnel issue; how to confront it, how to use our Guard and Reserve better and more effectively, and how to configure our Active-Duty Forces effectively?

General SCHOOMAKER. That is correct. We are funding almost 2.6 million people in uniform, and we need to figure out how to get the most out of each and every one of them, not just them individually, but how to configure them in a way that is most useful for not only the current operating environment but what the future one is going to be. We cannot transform without transforming the personnel system.

Senator SESSIONS. I think you are correct. We are looking forward to your report on this intensive analysis you have done about troop strength, configuration, and the brigades idea that you have. I do think that it is time for us to think anew, out of the box, as Senator Clinton said, and really develop a force that is appropriate, perfect if possible, for the future we might be facing.

I thought I understood you to say that you could maybe even increase the effective force by 30 percent with this rearrangement. Did I understand that?

General SCHOOMAKER. Sir, there is no question we can.

Senator SESSIONS. Well, that is a tremendous thing. I know you have increased our manpower and our end strength by utilizing the flexibility that has been given you. But also to be able to increase the effectiveness of our force by 30 percent, Mr. Chairman, that is tremendous.

General SCHOOMAKER. Sir, I have to reemphasize, the increase in manpower is temporary. I do not intend to retain that manpower. I want it long enough to get the pump primed and to get these capabilities developed, so that I can have that 30 percent increase within the level of end strength that I have today.

Senator SESSIONS. Well, General Schoomaker, you are a combat veteran. You have been a special forces guy all your life. You understand warfare, and if you say you can do that I think we ought to give you the chance to do it. I will be supportive for sure.

General SCHOOMAKER. I appreciate it.

Senator SESSIONS. General Schoomaker and General Hagee, we are going to have a lot of equipment that has also taken some hits and wear and tear in the deserts of Iraq and Afghanistan, and we have to reset that equipment so it will be available for you. I am pleased to see this budget does have a 7-percent defense budget increase but I am concerned. It is good that the President has done this. But do we have enough, and do we have a plan to reset that equipment, tracked vehicles, wheeled vehicles, and other equipment that maybe suffered substantial wear and tear? General Schoomaker and General Hagee?

General SCHOOMAKER. Sir, this year we are resetting the equipment that we can with the additional funding we have through the supplemental. We do not have the funds to reset this equipment within the program beyond this year. I will say it one more time: I think we have to have 2 years of supplemental beyond this emergency to reset this force. It is just going to take us that long to do it. War and the level of operation that we have conducted over there consumes equipment. It consumes engines, transmissions, and even metal on aircraft. This is a huge task. I said that approximately 9,000 pieces of equipment need to be reset alone for the prepositioned stocks.

Senator SESSIONS. I have heard that a figure of $3 billion may be necessary. Is $3 billion a figure that you could vouch for?

General SCHOOMAKER. Senator, that figure does not resonate with me. I think that the supplemental that will be required will be considerable if we continue this level of operation and reset the force.

Senator SESSIONS. General Hagee.

General HAGEE. Yes, sir. We are using the 2004 supplemental to reset the force during this fiscal year. We are also capturing those costs of equipment expenditure both in Afghanistan and in Iraq and would expect that those costs would be covered by a supplemental in 2005 or in the out years.

Senator SESSIONS. I think we are going to have to confront that. After the last Gulf War I think we learned we did not set aside enough money to refurbish our equipment and it cost us in the long run. It is better to invest that early rather than later.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much, Senator. Thank you very much.

Senator Ben Nelson.

Senator BEN NELSON. Thank you, Mr. Chairman.

Thank you, gentlemen, for being here today. Let me add my appreciation to the families of the military because, like many of my colleagues, I have made calls to those who have lost loved ones. I have spoken to wives, I have spoken to parents. They are all resolute in their pride of the service of their loved one. We all recognize how important that service is and how important it is to do everything that we can to have adequate end strength for security of the forces as well as for the importance of the mission.

Perhaps in the long term restructuring makes sense and a temporary effort to try to make certain that we have end strength sufficient to take care of security of the troops and the mission makes sense. What I hope is that the process of restructuring is being

based on that need rather than on the budget process. The budget process is in my judgment the equivalent of making a pie a piece at a time. That way, we never really know what is coming and we cannot see a comprehensive budget at any one particular point in time because of one nuance or another. We cannot do it in this budget, but it will be in a supplemental, or rather in two supplementals.

I hope in the next 3 years there are no more than two supplementals, but I suspect it will not be limited to the DOD budget. There will be supplementals for other things as well.

I hope that the process here of reorganization, which cannot ignore budgetary constraints and budgetary concerns, will not be driven simply by a budget. I think there may be a feeling among some of my colleagues that the budget may have more to do with it than it should.

I only want to say that as a prelude to asking, General Schoomaker, in your judgment is this being done, not simply for budgetary purposes, but for the end strength requirements that you see today and tomorrow?

General SCHOOMAKER. Sir, I am not sure I exactly followed your question, but I will tell you why we are doing this. We have an enormous amount of momentum as a result of this conflict and we ought to take advantage of this momentum that we are paying for, because we are conducting operations, and we ought to reset ourselves the way we want to be tomorrow, not set ourselves the way we were.

It is kind of a silver lining in a black cloud—if we had to pay for this level of motion to get this whole thing moving, it would take us decades to do the kind of transformation that we can do now within this window of opportunity. It is as simple as that in my mind. It may not be complex enough to answer your question, but I think that this is a window of opportunity.

Senator BEN NELSON. At the end of the day, it is not being done primarily for budgetary purposes? It is being done to transform the military and to protect troops and mission?

General SCHOOMAKER. That is correct.

Senator BEN NELSON. Present and future missions.

General SCHOOMAKER. In the end, we end up with the same size force configured differently, with better capability for the future.

Senator BEN NELSON. In the interim, is that end strength sufficient to protect the security of the troops and the mission? I know in the long term transformation may get us to where we need to be, but what about the immediate term? To use another analogy, if you want to cut asparagus in your garden you have to plant it 2 years early. What I am concerned about is making sure that in the current situation we will have protection of our troops.

General SCHOOMAKER. Sir, in the current situation, what we know today, we are fine. This is working for what we know today. I cannot predict what is going to happen in the future. If we end up with a huge conflict in the future, all bets will be off.

Senator BEN NELSON. I understand that.

One more question. I appreciate your response to my letter regarding the Army's aviation review. Do you have any idea when

this might conclude so that we would know what is going to happen with regard to any potential changes that might develop?

General SCHOOMAKER. I expect that no later than the end of this month I will be back-briefed on the final results, and we will share that here. We will gladly open it up and let everybody look at it.

Again, we are looking at modularity.

Senator BEN NELSON. Yes.

General SCHOOMAKER. Right now all these brigades are different, from the number of helicopters in them, to the number of units, to sub-units within these brigades. The way they are organized is extraordinarily inefficient.

Senator BEN NELSON. I appreciate the fact that you are doing that. I think it is important to continue to make those reviews.

General Jumper, I would like to commend you first for continuing your vision to maintain what has been referred to as a Total Force, blending together active Air Force, Air Force Reserve, and the Air National Guard. It has been successful in Nebraska, we believe. We have watched it very carefully.

As part of balancing your forces, are you planning to move current KC–135s from Reserve units to the active? If so, do you know what would happen to the missions for those that would be losing their KC–135s?

General JUMPER. Sir, there is a flow plan that has been shown around and I will make sure you get that flow plan. I would not want to try to articulate any piece of it because it is a total plan. It is out there, and I will be glad to get that to you.

Senator BEN NELSON. If you get it to me personally, that will satisfy my questions.

General JUMPER. Yes, sir.

Senator BEN NELSON. I appreciate it.

Thank you very much, gentlemen. Thank you for your service.

Chairman WARNER. Thank you very much.

Senator Bill Nelson.

Senator BILL NELSON. Gentlemen, thank you for your service to our country.

General Jumper, in the course of the intelligence that was given to us prior to us voting on the resolution regarding Iraq, we were told not only about the WMD, but we were also told about the UAVs. All of this information has since been unclassified by statements that were made by the President as well as the Secretary of State. The information includes the UAVs as a threat to the interests of the United States and being put on ships off the Atlantic coast that could threaten United States eastern seaboard cities with WMD.

What we were not told was, as reported by The Washington Post a week ago, that Air Force intelligence totally discounted the story of the UAVs. The Air Force intelligence that should know more about UAVs than anybody else in the country. Did you know about that Air Force intelligence report?

General JUMPER. No, sir, I did not at the time. The Intelligence Community gets together all elements of its intelligence sources and they come together, as the Air Force does, and each contributes their knowledge to the effort. That goes into an overall assess-

ment that is put out by the Central Intelligence Agency (CIA) that has privy to everything.

I did not know. At the time this was not an Air Force position that was contrary to another position. This was our input at the time to the overall effort as part of the Intelligence Community.

Senator BILL NELSON. Were you the Chief of Staff of the Air Force at the time?

General JUMPER. I was, sir, yes.

Senator BILL NELSON. Mr. Chairman, there is another example as we get into this question of how were we so faulty on the intelligence, and how we were not told that there was a disagreement, a dispute as to the accuracy of that intelligence. Instead, it was presented to us as, in this case with UAVs, as if it was the gospel truth. Here the Air Force Chief of Staff did not even know about the disagreement in Air Force intelligence, and that it had no truth to it.

Chairman WARNER. Would you allow me to read into the record.

Senator BILL NELSON. Please, Mr. Chairman.

Chairman WARNER. "The classified version showed there was a major disagreement on the issue from the agency with the greatest expertise on such aircraft, the Air Force. The Air Force does not agree that Iraq is developing UAVs primarily intended to be delivery platforms for chemical and biological warfare (CBW) agents. It said 'The small size of Iraq's new UAVs strongly suggests a primary role of reconnaissance, although CBW delivery is an inherent capability.'"

I think you will find that much of the material that came before the Senate did have the caveats and so forth set forth in them.

Senator BILL NELSON. Well, according to what you just read, it clearly states the Air Force's opinion that they did not have the capability of delivering the WMD. We find out that General Jumper, the Chief of Staff of the Air Force, does not even know about that dispute. That concerns me and it concerns the obvious question that we have to answer in the future of having accurate and timely intelligence in order to protect ourselves.

Thank you for sharing that, Mr. Chairman.

General Schoomaker, you have stated here that we should train, alert, and deploy the Reserves instead of alert, train, and deploy the Reserves. Yet the budget just submitted has a $600 million shortfall in the training for the Reserves. Why?

General SCHOOMAKER. Sir, I cannot answer that. I will get back to you on it. I was unaware of it.

Senator BILL NELSON. It is there. What I do not know is that it might not just be the Reserves. It may be the National Guard as well. But whether it is $600 million just for the Army Reserves or $600 million for the Reserves and the National Guard, the question is obviously begged, what you are trying to do in remolding the Army? I congratulate you. You have had a lot of accolades around this table today, and we want to see you succeed. It is a changing world and we have to succeed. Yet we have a budget in front of us with a $600 million shortfall.

General SCHOOMAKER. Sir, I will look at that. I do not understand it that way. But, taking your word for it that is where it is, I will look at it and I will get back to you and let you know.

[The information referred to follows:]

Based on projected Reserve component mobilizations in fiscal year 2005, $606 million for drills and annual training was realigned from the Reserve component pay accounts to support other priorities, including the extension of TRICARE to the Reserve components. At the projected mobilization levels, the Reserve component training budget provides the funds necessary to conduct military occupational specialty training (individual training at 95 percent), professional military education training (leader training), and the necessary operational tempo to support collective training for those units preparing for mobilization and deployment while in a Reserve status, as well as enabling recently demobilized units to maintain their readiness edge.

Senator BILL NELSON. Perhaps at some time, Mr. Chairman, we might want to get General Helmly, the head of the Reserves, to come up and let us specifically get at this. This budget is not reflecting where the Chief of Staff of the Army wants to go.

General SCHOOMAKER. Sir, General Profit is here from the Office of the Chief of the Army Reserves and also General Blum, who is the Chief of the National Guard Bureau.

Chairman WARNER. Does the Senator wish to have the General approach the microphone and give a response to your question?

Senator BILL NELSON. Absolutely.

Chairman WARNER. Fine. General Schoomaker, will you invite your colleague up, please.

General BLUM. I thank you for the opportunity to respond on this. We are working very closely with the Army on this. It is one Army with three components, for the first time in the history of this Nation. General Schoomaker is using Army fiscal assets against all three components to assure that all three components are ready to do what this Nation requires or asks of them.

I am not aware of the $600 million shortfall that you are talking about, but I will be happy to look at what you see and I would be glad to discuss it. If the goal for us is to have all the money we need and want to achieve the level of readiness that we would like, that goal does not exist in any budget with any supplemental. There will be some risk, and General Schoomaker and General Helmly, the Chief of the Army Reserve, and I are working in a very collaborative effort to make sure, as we move to this modularity piece, which is a big piece to solving the problem, that the units get what they need in time to be ready so they can make the train, alert, and deploy model.

It is not intended that everybody in the Army, all three components, will be equally and adequately resourced, to be completely combat-ready at any moment. The people that are being reset obviously are coming back in, refitting and reconfiguring. That is where resources come from that set up the people who are moving into the getting-ready set, so that when they are ready and they are called upon they have had the training, equipment, and resources they need to go down range and do their jobs.

But I would very much like to see what you have, and if we are short, sir, we will work to identify those shortfalls for you.

General SCHOOMAKER. We need to look at this, because we may disagree on what it is you are talking about here. I am unaware of that level of underfunding.

Senator BILL NELSON. What I am trying to do is help you.

General SCHOOMAKER. Sir, I can use all the help I can get, believe me. But you have presented something here that just does not resonate with me. We have been working so closely together, so I am surprised I would not know something like that.

Senator BILL NELSON. Mr. Chairman, I want to help General Schoomaker, because jihadists, as I have reported to you, are going across the Syrian border and they are killing our American men and women. There is an offer out there on the table which I have reported to you all, to General Myers, to the Secretary of State, and the Secretary of Defense, etcetera. There is an offer on the table to seal that border, as presented by President Assad. If that had not filtered down to you, General Schoomaker, I would suggest that that is something you might want to follow up on. It is obviously of considerable concern to you to be able to secure that border.

General SCHOOMAKER. Sir, I watched the Secretary's testimony when you raised that issue. I have been on that border and I know what it takes to seal borders, and that would be an incredible effort if that were possible.

Chairman WARNER. Thank you very much, Senator.

Senator Kennedy.

Senator KENNEDY. Thank you. Thank you, Mr. Chairman.

Again, I want to thank all of you for service to the country. We are all grateful and we thank you for being here today.

General Schoomaker, I want to just focus on one area and that is the HMMWVs, light-skinned HMMWVs. I visited a wonderful young person, and I am sure you have too, out at Walter Reed on Saturday. He had been wounded December 10, losing both of his legs in Iraq. We have had 16 killed from Massachusetts. A great number of those have been as a result of riding in light-skinned HMMWVs.

The wonderful young person is Private John Hart. Brian Hart, his father, and his mother Alma ask that the one thing to try and make sure is that we are not going to let these young people out there in light-skinned HMMWVs. You are aware of this issue and the problem.

We have had conflicting testimony in recent months and also going back to 2003, on the numbers that are going to be needed in terms of the HMMWVs and also the add-on armor kits. Starting on September 30, 2003, HMMWV requirements were 1,723. When you were here on November 17, the number that was mentioned was 3,600. Now I believe 4,149 is the exact figure.

The up-armored HMMWV is more of a challenge. If we go strictly with the up-armored HMMWV, it could be as late as the summer of 2005 before we would have all of them. Secretary Brownlee was talking about 3,600 when he testified on November 19. You are now talking about 4,100 at the present time.

In the budget for this year you have $355 million, which is 818. In 2005 it is $156 million. For HMMWV add-on armor kits it is $209 million for this year and none for 2005. Medium truck add-on armor kits saw zero funding in 2004 and will see zero funding in 2005 for heavy truck add-on armor kits, its zero funding in 2004 and zero funding in 2005.

Does the President's 2005 budget fully fund your requirement for the up-armored HMMWVs?

General SCHOOMAKER. Sir, your numbers are correct on the up-armored HMMWVs. The difference in when we testified before you last on this issue and now is the marine requirement.

Senator KENNEDY. Marine and Air Force too, I believe.

General SCHOOMAKER. Yes, sir. The requirement has quadrupled. Our total requirement for the entire Army in the future is about 11,000 up-armored HMMWVs. We did not have that requirement before. The answer is, against the entire Army requirement, no, it is not funded here. It is going to take us years to do that.

I think you know that Secretary Brownlee had the chief executive officers (CEOs) of both AM General and O'Gara-Hess together this week or last week. They are looking at how to increase the production levels at the facilities. We are raising production levels from 80 to 220 a month, and right now in those plants they are working two 10-hour shifts. We are looking at how we might be able to increase it further.

Senator KENNEDY. I think the area and the requirement of the greatest need is obviously Iraq and having sufficient numbers of either the armored HMMWVs or the armor kits. I am just wondering when we are going to be able to get those. How are we going to be able to tell the parents of these kids that we do not have armored HMMWVs or armor kits available?

General SCHOOMAKER. Sir, we are producing the add-on armor kits in great number.

Senator KENNEDY. Well, the 2004 funding is $209 million and there is none in 2005. You have $209 million for 2004 vehicles; in fiscal year 2005, zero out. You only have enough in the request for 818 HMMWVs. Given the magnitude of this problem and the magnitude of the problem today in Iraq, it is difficult to see how something as basic as these HMMWVs and the body armor are not being met.

We have the statement from Lieutenant General James Helmly, who said: "The suddenness, the uncertainty, the rapidity with which we mobilized the units not only caught them, the Army, flat-footed but it meant you had shortages of body armor that came up, shortages of up-armored HMMWVs." That is January 21, 2004. He did not mean you. I know you have come in to it.

What we are asking is why the budget now for the Army does not reflect the need that you have in Iraq to make sure that every one of those young soldiers is going to be in an armored HMMWV or going to be guaranteed that the add-on armor kits are going to be there.

General SCHOOMAKER. Sir, the budget is only part of the answer. We are using the current supplemental funding to fund much of the level of effort that we have going on, including the local efforts I know you are aware of all of the local efforts that are going on to manufacture things.

The Army never intended to up-armor every HMMWV, until this kind of situation arose that we have today. We never intended to have this number of HMMWVs. We have taken armored units, artillery units, and all kinds of other units, and put them into HMMWVs as motorized formations, which never existed before. This is an area where you cannot fix it overnight. It is a matter of physics.

Senator KENNEDY. I understand that this was not anticipated. Many of us thought that might be the case. It was not anticipated.

Mr. Chairman, I would like to just ask if the General could provide, from the supplementary other funding, all the funding that you have available. I want to know so I can tell this family exactly whether or not HMMWVs and the body armor these parents are talking about have the highest priority.

General SCHOOMAKER. Sir, force protection is our highest priority.

Senator KENNEDY. I talked to General Abizaid 5 months ago and he said: "The supplemental request will permit the services to rapidly resolve this equipment problem, rapidly resolve the procurement of up-armored HMMWVs." That was 6 months ago.

General SCHOOMAKER. Sir, we have tripled the number of up-armored HMMWVs in theater.

Senator KENNEDY. Okay, but how many are necessary to be replaced in Iraq today? How many young people are going out on patrol today in Iraq in the light-skinned HMMWVs?

General SCHOOMAKER. Sir, I do not know.

Senator KENNEDY. If any of them are going out it is wrong, I think. You would agree, would you not?

General SCHOOMAKER. Sir, there are some people that do go out there and they go out on purpose, but there is capacity there for people to use the up-armored ones for their patrols.

Senator KENNEDY. General, we can get into this. You will have a tough time convincing the young boy I saw, who lost both his legs 4 weeks ago in a light-skinned HMMWV.

Now, if there are areas that are passive, okay. I think that it is a tragedy if we are not ensuring that every young serviceman that goes on out in any dangerous area in Iraq, is not going to be adequately protected. I do not understand it. If you have the supplementary funding and the production list, I want to know how we are going to guarantee this so I can tell tell the Hart family, that there is not going to be a young person that is going to go out on a patrol in a risky area in Iraq that is not going to have the adequate protection. We ought to be able to do that. I am sure you agree with that.

General SCHOOMAKER. Sir, I do. I am with you 100 percent. We will provide you with that data.

Senator KENNEDY. If we can get that from you and the supplementary services and what is happening over there in terms of these patrols, I would appreciate it.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator Kennedy.

When I opened the question period of this hearing, the question period, my first question related to the HMMWVs and their status. I think Acting Secretary Brownlee and the Chief of Staff are doing their very best. I should point out that in my detailed discussions with you, General, about the issue of the HMMWV, you carefully pointed out to me that there are some missions during which the men are safer using the lighter weight HMMWV. Am I not correct on that?

General SCHOOMAKER. Sir, there are people making choices on which vehicle they want. The choices are not random, but because

the nature of the mission requires it, they choose not to use the up-armored HMMWV. This whole measure of protection against IEDs and other things is a matter of a multitude of capabilities, as has been discussed, to include some that we should not discuss here.

I am confident that we are doing everything we can to move increasingly more up-armored HMMWVs and other armored vehicles into theater to do exactly what Senator Kennedy is talking about. We share the same goal here.

Chairman WARNER. It is important that you share the same goal.

Senator KENNEDY. I thank the chair, but the fact is you are below the requirement that the Army has set for themselves and this budget which we are having our hearing on does not provide the makeup of the requirement that the Army itself has set. That is my point. If it does and I am wrong and you are making it up with supplementary funds, then I look forward to hearing from you.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you.

General Hagee, do you wish to make any further comments about the HMMWVs that will be in your units going over?

General HAGEE. No, sir. I have already addressed that in my statement, sir.

Chairman WARNER. Thank you.

Now, Senator Levin, you and I will conclude here. Would you like to lead off and we will just alternate with questions?

Senator LEVIN. I would be happy to do that.

Just on this HMMWV issue, is the facility that is armoring the HMMWVs working three shifts?

General SCHOOMAKER. I do not know how many shifts they are working. I am told they are working 20 hours a day, and I believe that is two shifts of 10 hours.

Senator LEVIN. Can we check that out?

General SCHOOMAKER. Yes, sir.

Senator LEVIN. Just to make sure that they are working 24–7? As to whether there is anything more that we can do moneywise, we do not have to wait for a supplemental. This issue is important enough that it could be done tomorrow if there is any indication that the budget is the reason. If it is not the reason, then is the facility going 24–7? If it is not, then we expect it will be.

General SCHOOMAKER. Sir, I will get you all of the facts on this.

[The information referred to follows:]

No, the facility that is up-armoring the HMMWV is currently working two 10-hour shifts each day. During these shifts, the contractor is producing 185 vehicles for March, 205 vehicles for April, and 220 vehicles per month for May through August 2005. This contractor is fully capable of meeting our needs.

Senator LEVIN. General, one of the disadvantages of the new unit rotation approach is that the expertise that is gained and the relationships with Iraqis that have been built over a 12-month period are severed abruptly. They are cut abruptly in a major way as these whole units rotate. It would be much less dramatic if it was individual rotation. Is that an issue which is being addressed in some way?

General SCHOOMAKER. Sir, as I mentioned, we are stretching this rotation and the turnover over a period of 4 or 5 months for exactly

that reason. I know for instance the unit that I talked to in the training base the other day has already made four trips over there and is doing right-seat rides. This period of handoff here is deliberate and the intention is to make sure to pass all the contacts to one another and be comfortable in that regard.

General HAGEE. Senator, I would like to add that we are doing the same thing in the Marine Corps. We are working very closely with the 82nd Airborne Division over there. We have already made several trips over there, and we are going to take our time in the handover to ensure that we are completely familiar with that battleground.

Chairman WARNER. I will shift to a question here now for the CNO. The subject is shipbuilding, which is something that you and I have worked on for many years. The budget request for the Navy's shipbuilding and conversion account is almost $1.5 billion less than last year. The Navy states there are nine ships in the budget request, but two of these ships, one DD(X) and one LCS, which has been your ship from the beginning, are funded with the research, development, test, and evaluation (RDT&E) funds at a fraction of what these ships will eventually cost.

I am also concerned that the budget request projects only six ships in the fiscal year 2006 budget.

Can you enlighten us as to why DOD reduced the shipbuilding and conversion account by 13 percent in this particular request before us here today? You have often spoken of your 375-ship Navy. I think we are at 297 this morning, thereabouts?

Admiral CLARK. 294 this morning, Mr. Chairman.

Chairman WARNER. 294.

Admiral CLARK. Yes, sir.

Well, the path to 375 is to start buying new ones and to buy the kind of ships that we need for the future. The LCS will allow us to buy the kind of ships we need to dominate the near-land arena and we are going to have to buy them in numbers. They are going to be smaller ships, but we are not buying them just so we can buy small ships to have numbers. Because it is plug-and-play, it is going to be a revolutionary kind of a concept in the way we build, outfit, and put the combat systems in the ship, again with very low manning. That is what we need in the future.

Your specific question about why this number is lower than last year is that each year when I have come to testify before this committee I have been trying to make this number bigger. As I mentioned in my opening statement, I have balanced this the best I know how. Because we have been allowed under the procurement rules to procure the first ship of a class in R&D, the number for this particular year is a lower number. The reality is that if we had paid for it all in 1 year the Shipbuilding and Conversion, Navy (SCN) number itself would be remarkably bigger.

The other thing about it is that we have several ships that are being done in modernization programs that constitute major segments of the total SCN fund. I am talking specifically about the SSGNs and the engineering-refueling overhauls in the submarines and so forth.

As I have said before, we need to think about recapitalizing the ships in the Navy with a stream of resources. I have said that I

am reaching for a $12 billion stream and that is what I have been doing.

I have testified in response to a previous question about the importance of DD(X) and the importance to our future Navy. Where I see ourselves today, Mr. Chairman, is here. We have been working to get to the point where we are today, where the ships are going to start rolling off the line, and this is a great victory for the Navy, and it has happened because we had the support of Congress to get here.

This is not a finished task. In order to create the resources to recapitalize the Navy, we are trying to transform the way we do business in the Navy. The resources that have allowed us to move from the number I talked to you about when I started this job—I had just between 4 and 5, it was under $5 billion that year in the account. In the whole decade of the 1990s it was barely over $6 billion per year. This is the hole that we created.

I am pleased that this year, in new construction, we are at almost $10 billion, and with the other modernization we are at $11.1 billion. We are on the way. We are not there and we have to keep working at it.

It is exactly what we are working on right now, the development of the program for next year. We take a dip next year, but we are looking at that hard to see how we can recover from that. 2006 happens to be a very difficult year for us.

When the Secretary of Defense was here he raised a question about the gap that we have taken in DD(X) in 2006. I will tell you that there is a learning curve to be had in any shipbuilding project, as in any development program. If I had plenty of resources, I would have funded that ship in 2006 and kept right on going as fast as we could. The fact is I am required to put all of the money in 1 year to buy a ship for a 4- to 6-year construction or a 6- or 7-year construction for a carrier and I did not have the resources in the 2005 bill to put it in 2006. We will be working that hard to see how we can improve that number for next year. We desperately need to do that to get to the size Navy we need.

The other point that was made is that the Navy is more capable than it has ever been before—a very factual statement. Lethal platforms. There is one area, though, where numbers really count. The laws of physics still prevail and I have not figured out a way to have one of these ships be in more than one place at one time.

I never said 375 is the exact number. It is about the right number. As you analyze the scenarios and the kind of forward presence that the Nation wants when representing the country, that number will ebb and flow. It is the target for us to reach for and we are seeking to rechannel funds so we can realize the Navy of the future.

Chairman WARNER. Thank you, Admiral. I know from the many years I was privileged to serve in this body it is not a matter of preference to the Navy, but we are very conscious as a Nation of the need for the sea lanes to be kept open, not only for security purposes but also for protecting our commerce. Therefore, Congress has historically been very supportive of shipbuilding for the United States Navy. Thank you.

Senator Levin, why do you not take a question.

Senator LEVIN. Thank you, Mr. Chairman.

I would like to ask General Schoomaker about the effect of rotation on the capability of the forces that we have there. As I understand it, the 4th Infantry Division is modern and digitized. The 101st Air Assault Division has a huge helicopter fleet. Both of those units are coming out. Will their replacements be as capable?

General SCHOOMAKER. The geometry and the way General Abizaid is changing the shape of Iraq over there, require different kinds of capabilities. The forces that we are putting in there are sufficient for the tasks that he wants them to perform.

I think you know that the Stryker brigade is going to be one of the areas where the 101st was, for instance, in the north. This is one of the areas where he is starting to move more things towards local control. We are meeting his requirement with the force structure that he wants.

I ought to remind you that, even though the 4th Infantry Division was there, for instance, we basically dismounted them out of most of their heavy platforms and put them in HMMWVs to do the kind of things that they were going to do, such as motorized force, artillery, in some cases armor, and infantry. We are meeting the need that he articulated, and it certainly is not the same kind of force that went in and fought the war and then stayed.

Senator LEVIN. This is sort of a follow-up to that, Mr. Chairman.

What did Secretary Rumsfeld mean when he said that the capability of the security forces in Iraq will increase?

General SCHOOMAKER. I believe he is talking about our Iraqi security forces.

Senator LEVIN. Thank you.

Chairman WARNER. Let us talk about another aspect of intelligence. We have had a lot of discussions, of course, about the WMD and things like that. However, we must as a Nation constantly be improving our intelligence from lessons learned. We cannot wait until six different committees look into the intelligence as they are looking at the issues now. On a real-time basis, we have to contribute to the Intelligence Community and strengthen the decisions and the knowledge that we think are best.

I would like to ask all of you this question. There has been significant attention paid to the national intelligence, as we said. There were reports shortly after major combat operations concluded in Iraq about problems with tactical intelligence. What is your assessment of the intelligence support provided to the battlefield commanders in the Iraq and Afghanistan theaters of operations? What improvements to national, theater, and tactical intelligence need to be made now to best support our combat forces and others all over the world who are relying on this intelligence? What initiatives have you taken in your respective military departments to ensure the strongest tactical intelligence?

Why do we not give you a rest, General, and we will start in with General Jumper.

General JUMPER. Thank you, Mr. Chairman. The biggest problem we found as a result of our lessons learned from OIF was our bomb damage assessment and how we were able to get accurate and timely bomb damage assessment to the commanders on the ground. Part of this is what I call an administrative problem. It is a prob-

lem of definition in what it takes to score an enemy vehicle destroyed, which I think really has to be relooked. We are undertaking that now to try and get those definitions which are more useful to the field commander, who is much more concerned about whether he is going to have to deal with an enemy tank company in the next 5 or 6 hours than he is with whether or not the national intelligence was able to score a kill because the turret was separated from the body of the tank.

It is that sort of detail we are trying to correct, and we are also trying to organize ourselves so that we take advantage of all the sensors that are over that battlefield. Among the Services here, we have hundreds of vehicles over that battlefield with sensors that can be turned on to this surveillance problem after they deliver their weapons. That is one thing we are going to focus on with some energy, in order to get that corrected. It has been a chronic issue with late Battle Damage Assessment (BDA) and we are going to take that one head-on.

You will see money in our budget against this notion of being able to network the platforms we already own. We saw some magnificent results during the dust storm in OIF. During the depth of that dust storm, we put together our JSTARS vehicles with a Global Hawk vehicle, networked the bombers and some of the assets from the other Services, in order to know exactly when reinforcements were moving down out of Baghdad toward especially the Medina Division south of Baghdad, we were able to coordinate with our space efforts to know exactly when the dust storm was going to be there and then to network those assets to be able to destroy them as they moved down, even before they got into position.

Chairman WARNER. What about the targeting? Your targeting is highly dependent on accurate intelligence.

General JUMPER. That intelligence, of course, was the real-time surveillance that was made available because we were able to focus those platforms on that particular problem.

The question is, then, how do we arrange these assets so that we can shift from some of the national priorities of collecting intelligence to be analyzed into putting those same assets against the real and emerging problems that exist on the battlefield at any one moment, like we were able to do during the dust storm?

With proper networking, you can treat this as an interleaved solution. You can focus for just very short periods of time, seconds or minutes, on one problem long enough to get an answer and then go back to another chore, much like you do with a network of computers.

This is what we are trying to do. There is money in the program to be able to do this with networking, with programs like the E–10A, and other command and control efforts along with the Intelligence Community to network this in a proper way.

Chairman WARNER. Thank you.

General Hagee.

General HAGEE. Yes, sir. This is an issue that we are addressing, just like the logistics issue that Senator Clinton brought out. Sir, when you talk about tactical intelligence, you are talking about information that is fleeting, and it is really important that you get it quickly to the user on the ground.

I would divide this into three main areas. One is UAVs, and General Jumper talked a little bit about that and the ability of our UAVs to quickly get that information down to the individual marine or soldier who is on the ground. We are addressing that in this particular budget.

The second area, which General Jumper talked about quite a bit, is having these various sensors be able to talk to one another, to fuse this information and turn the data into actual intelligence quickly for that individual on the ground. We are addressing that large area.

The third area has to do with human intelligence (HUMINT). When you get right down to it, there is just some information that you can only get via HUMINT. I believe that we need to do much better in this particular area. Having discussed some of this with Director Tenet, I know he feels exactly the same way and is doing what he can to increase this Nation's HUMINT capability.

Chairman WARNER. Thank you very much. I likewise want to see emphasis put on HUMINT.

Admiral?

Admiral CLARK. Well, there are several areas that I would focus on. I would start by saying that there were some great victories in intelligence and we are focusing on all the things that did not turn out right. I happen to believe that one of the first things that we need to focus on is continued work to turn strategic intelligence into tactical intelligence with the speed of light. We are unable to do that and get it to the end user. What I believe happens today is that there is a lot of intelligence that is there, and we own it, but we cannot get it to the right place.

Let me give you an example of things that worked very well. It has been little talked about, but we were able to determine that they were trying to and were ready and prepared to deploy mines in the waterways. If they had done so we would have been working for months to get them all out of there. Fortunately, we saw them doing it. We had the intelligence to get it done.

Here is what I think that leads to. I believe the future is going to have a much greater focus and influence on a requirement for pre-hostilities. This is why I believe that gets me to sensors. General Hagee mentioned UAVs. It is all unmanned sensors. We had, for the first time ever, a half dozen pre-production models of unmanned sensors over there working in the waterways. It is important to have the ability to know before hostilities start and to be able to operate clandestinely in enemy territory or in near-land arenas. Lacking that, you cannot play your hand until hostilities start.

We have to have the platforms and the sensors to be able to do that. We need unmanned vehicles in the air and on the surface. A major problem for us is we have to sort ourselves out in the waterways, where it is free for everybody to be. You cannot do that with a large platform. This is why a low-cost LCS is so important to me. We have to have a smaller platform that can react with speed and saturate and dominate the area with unmanned vehicles, so that we own the space.

Networking is vitally important. General Jumper mentioned that. Let me go to the next point.

We call it Automatic Target Acquisition (ATA). ATA is really fundamentally machine-to-machine discussions instead of machine-to-human, by human-to-machine discussions. We have to exploit our technical advantage there.

I would say that the other issue with sensors is we have programs in the budget that are going to vastly improve our capability. Working with the Air Force, Active Electronically Scanned Array (AESA) radar is coming. It will tremendously improve our ability to see the ground. Then we have to be able to communicate it, just as Senator Clinton talked about the whole issue of communications. The modern communications that will carry these data streams is a primary investment priority for the Nation.

Chairman WARNER. Did you wish to include in that the programs for countering anti-ship missiles?

Admiral CLARK. Absolutely.

Chairman WARNER. That is a growing concern to this Senator.

Admiral CLARK. Yes, sir.

Chairman WARNER. All right, thank you.

Now, General Schoomaker.

General SCHOOMAKER. Sir, thank you. I will be very brief here.

We learned a lot. We have a lot of lessons learned. There are about 127 areas specifically in tactical intelligence from OIF lessons learned and OEF. About 107 of those have been rectified and are working.

There are four key areas. One of them is tactical collection. It has already been spoken to here across the board. It really is saying that every soldier is a sensor, and you are collecting from everybody that is in touch with the space. It has to do with HUMINT, it has to do with the integration of UAVs, and it has to do with the kinds of things that you can do and live.

It really is an issue of understanding that intelligence is an operation. It cannot be a union issue here. You have to fight for knowledge, and that is one of the things that we know. It is things like having a common operating picture for both blue forces and red forces.

The second one is in reporting, and that is reporting from the soldier all the way up to the national level. We are not making the best use of our information technology (IT) infrastructure, of our processes and all the rest of it, still legacy.

Also crucial is access to national level intelligence. There is still too much difficulty in terms of accessing databases across the board in a timely fashion. I am now talking about the tactical level, which is still very complicated.

Chairman WARNER. That is something we should address very promptly. I would appreciate if you would give me a little memorandum on how you see that problem and what recommendations you would like to make to Congress to step into this situation.

General SCHOOMAKER. Sir, this is a huge issue and I think we all share this question of how we really get access so that we can mine all of what we really know in a way that is coherent.

Chairman WARNER. Let us close out on this issue. You will come back to me and coordinate your memorandum with the other Service Chiefs. Senator Levin and I serve on the Intelligence Commit-

tee, and that, to me, is something we should pay a high level of attention to.

General SCHOOMAKER. Sir, I would add this last point and I will quit. That is, networking the analytical centers, so that we are not only networking Services but are networked across the interagencies and the joint services, national through tactical, is very important to us.

The last point I will make is that one of the things that makes our future formation so powerful is that we are putting a significant reconnaissance, surveillance, and target acquisition (RSTA) capability within those formations. We are talking about the modular brigades, ground cavalry kinds of organizations, UAVs, and scouts with the kinds of optics and sensors that we need. The payback on this in terms of capability is huge and that is one of the main centerpieces of what we are doing.

Chairman WARNER. As a seasoned combat soldier, you know that intelligence is an enormous force multiplier.

Senator Levin.

Senator LEVIN. Thank you.

I want to go back to the issue of national intelligence and the shortfalls and errors there. I asked you about whether or not you had been interviewed relative to the effect of impact of prewar national intelligence on the planning for or conduct of OIF and you indicated no. Now I want to ask you another question relating to the national intelligence, and that is whether or not you have seen any reports or analyses of the impact of that national intelligence on the conduct of OIF. Have you seen any reports on the issue inside your service or anywhere else?

It does not make any difference where we start. General Jumper, again we will give you the first shot.

General JUMPER. Sir, I am scanning here. That is a broad question. I cannot recall anything particular that analyzed that. If I come up with something I will get back to you immediately.

[The information referred to follows:]

Sir, I have staffed this issue with our Senior Intelligence Office, the Director for Intelligence, Surveillance, and Reconnaissance, and his staff. We have no documentation or other indications of any reports of analysis concerning the impact of prewar national intelligence on the conduct of Operation Iraqi Freedom.

Senator LEVIN. Thank you.

General Hagee.

General HAGEE. No, sir, I have not.

Senator LEVIN. Admiral Clark.

Admiral CLARK. No, I have not.

Senator LEVIN. General.

General SCHOOMAKER. Sir, we only have the lessons learned kind of information within our own resources. I have seen that, but nothing else.

Senator LEVIN. In terms of what I am talking about, you have not seen that kind of an analysis?

General SCHOOMAKER. To the best of my knowledge I have not, sir.

Senator LEVIN. Now, I have a pending request, as our chairman knows, that is sitting on the Secretary of Defense's desk. It is a pending report to have interviews with our military leaders, includ-

ing our commanders in the field, to see if we cannot make an assessment of the impact of our national intelligence on the conduct of OIF. I am just hopeful that we can get a positive answer from the Secretary of Defense. There just is no justification, it seems to me, for the delay in getting a positive answer, and it is essential that this committee and other committees look at that aspect of our prewar intelligence.

I am just going to state this. I am not going to ask you a question on this. I am just going to state this as a fact, that we are awaiting the answer to that request. It seems to me that it is a responsibility of this committee and the similar committee on the House to understand that impact. I know that the Secretary of Defense has representatives here. Perhaps we can get a prompt answer and a positive answer to my request.

Chairman WARNER. On that point, when you and I were visiting with the Secretary, I think it was last week, we discussed a range of those inquiries and he seemed to indicate that he is going to take these under serious consideration.

Senator LEVIN. I hope he does. I think our responsibility is a heavy one here for the future well-being of this country as well as for any accountability and responsibility in the past. The future it seems to me requires that we do everything we possibly can to understand the effect of our intelligence on operations and planning, as well as the other aspects of intelligence for other purposes. That is right within the purview of this committee, and I would hope that the Secretary of Defense would help us carry out that responsibility with a positive answer.

I have just one last question for General Hagee. There have been press reports that some of the Marine Corps officers believe that the Army was too confrontational in its approach in Iraq and unnecessarily antagonized the population, and that the Marines were going to pursue something less confrontational as a way of encouraging greater Iraqi cooperation against the insurgents. I am wondering if you would comment on those press reports, and tell me whether they are accurate or not?

General HAGEE. Sir, I have seen those press reports and I can tell you that the Army and the Marine Corps are working together very well to ensure that we have learned all the lessons that they have gathered over there and that we can implement them when they go in.

When the Army first went in, the battlefield looked a certain way and, because of the great performance of those soldiers over there, that battlefield has changed. Both the Army and the Marine Corps are changing their tactics to respond to that change.

Senator LEVIN. Thank you.

Chairman WARNER. Thank you.

Gentlemen, we have had an excellent hearing and we will be submitting additional questions for the record. Thank you very much and pass a well-done down to your troops.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

SPARE PARTS AND LOGISTICS SUPPORT

1 and 2. Senator WARNER. General Schoomaker, last year, Congress supported the Army's request for significant increases in funding for fiscal year 2004 to address challenges in the Army's spare parts and logistics support program. Current estimates indicate, however, that the Army will only be able to spend approximately 70 percent of what was authorized by Congress. Why is the Army unable to fully execute the amount authorized by Congress? What are the consequences for the Army of not spending the funding for spare parts and logistics support program that was authorized by Congress?

General SCHOOMAKER. In the fiscal year 2004 budget request the Army assumed risk in base operations support (BOS) to support an emergent requirement to increase the inventory of spare parts. The realignment plan, developed prior to operations in Iraq, was a 3-year effort to increase spares on the shelf in anticipation of future needs. With the onset of war in 2003, the Army used fiscal year 2003 supplemental funds to accelerate the replenishment of repair parts. As a result, the funds originally budgeted for this effort are no longer required for this program and will be realigned to BOS, the original source of these funds. This action does not reduce the availability of spare parts.

3. Senator WARNER. General Schoomaker, Admiral Clark, and General Jumper, departmental and Service investments in basic research serve many purposes, one of which includes training of the future defense workforce in disciplines of critical importance to our national security. Do you feel confident that the current investment trend will ensure an adequate number of appropriately-trained domestic experts to fill the Department of Defense's (DOD) need for an innovative workforce in key disciplines such as mechanical, aerospace and chemical engineering, computer architecture, mathematics, physics, and oceanography?

General SCHOOMAKER. Basic research supports the fundamental training of graduate students in the key disciplines indicated, and these individuals can contribute to our future defense workforce needs. The current funding streams are sufficient to ensure an adequate number of students to fill the DOD's needs, assuming other significant factors, such as sudden funding reductions, competition with private industry for similar resources, or a decline in the number of native-born U.S. citizens acquiring advanced technical degrees, do not disrupt the trend.

Admiral CLARK. I am confident that both our investments and the way in which we have structured our research and development (R&D) programs will ensure an adequate number of the kinds of domestic research scientists and engineers that you have mentioned. Between the Naval Research Lab and the In-house Laboratory Independent Research (ILIR) program, we have roughly $115 million going annually to help develop appropriately trained scientists and engineers in key disciplines.

In addition, we are working with the National Science Foundation (NSF) to start a $10 million pilot program, commencing in fiscal year 2005, that is focused on bringing into the Naval Research Enterprise the next generation of scientists and engineers. This program, called Naval Research—Science and Technology for America's Readiness (N–STAR), is focused on revitalizing connections between the Navy's R&D centers and the Nation's universities.

General JUMPER. The current Air Force Science and Technology (S&T) investment portfolio, including over $215 million for basic research, is focused on providing technology that ultimately enables warfighting capabilities. Although there may be a perception that overall basic research funding is in decline, Air Force "core" basic research has actually increased about $13 million or almost 5 percent real growth over the fiscal year 2004 President's budget. This Air Force basic research investment is closely linked with academia and this link is expected to attract, develop, and produce graduates that can compete in future job markets that support our endeavors in delivering the warfighting capabilities needed to ensure our national defense. While recruiting and retaining scientists and engineers (S&Es) continues to be a challenge, we have no indication that there will be a shortage of S&Es in the future.

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

TANKERS

4. Senator MCCAIN. General Jumper, according to the Air Force, "There is only a negligible amount of funds in the fiscal year 2005 budget that falls under the

tanker lease heading, and no funds to actually lease aircraft. Should the current review and Congress concur leasing is the best way ahead, funds could be reallocated using the normal budgeting tools." Exactly what funding is there in this budget that relates in any way to the tanker program?

General JUMPER. There is no money included in the fiscal year 2005 President's budget for the KC–767A program. The KC–767A program accelerates the start of our tanker recapitalization effort. However, the tanker recapitalization program of record in the fiscal year 2005 President's budget, PE41221F KC–135 Tanker Replacement, has funding that starts in fiscal year 2006 and notionally delivers its first aircraft in fiscal year 2010, depending on the recommendation of the analysis of alternatives.

5. Senator MCCAIN. General Jumper, from the Air Force's statement, am I to understand that it is your intention to fund the lease of up to 20 tankers by reprogramming from other systems?

General JUMPER. The National Defense Authorization Act for Fiscal Year 2004 authorized leasing 20 tankers and buying 80 more under multiyear authority. If the program is approved by the Office of the Secretary of Defense (OSD), we intend to submit an above threshold reprogramming for fiscal year 2005 funds.

FORCE PROTECTION

6. Senator MCCAIN. General Schoomaker, I am perplexed about a situation dealing with base security forces. The Army active duty, Reserve and National Guard security forces are, according to your words and every outside expert, stretched thin. In fact, at Fort Huachuca in Arizona and Army bases elsewhere, security forces, military police (MP), and gate guards are supplemented by the civilian guards. Why are Army and National Guard service members guarding Air Force bases?

General SCHOOMAKER. In September 2002, OSD and the Air Force asked the Army to provide force protection augmentation at Air Force installations based on the Air Force's inability to sustain global force protection and security levels. In December 2002, the Secretary of the Army signed a Memorandum of Agreement providing force protection augmentation at Air Force installations for 2 years. We are currently in the second year. Army augmentation is scheduled to end in November 2004.

7. Senator MCCAIN. General Jumper, why are you using Army guardsmen and reservists to provide gate guard and base security force protection and have chosen not to augment or replace your base security force with contract or civilian security guards?

General JUMPER. The use of Army guardsmen was, and remains today, a stopgap measure used until longer-term solutions like civilian and contractor guard forces are fully developed. Since the service agreement was started in January 2003, we have shifted from a mobilized Army augmentation force to a 100-percent volunteer force in the second year of this 2-year agreement. Originally, the Army provided over 8,000 soldiers to augment Air Force force protection capabilities. Today, that number has been reduced to less than 5,300 soldiers. We are using every available means to meet these increased demands through utilization of technology infusion, Air Reserve component volunteers, manpower realignments within end strength limits, civilian conversions, and contract development. Our goal remains the same: reduce reliance on mobilized Guard and Reserve Forces as alternatives come online.

FUTURE COMBAT SYSTEM

8. Senator MCCAIN. General Schoomaker, an independent assessment of the Future Combat Systems (FCSs) "other transaction authority" agreement conducted by a subcontractor called CommerceBasix highlighted the financial risk associated with this $15 billion agreement that was being negotiated with Boeing. Among other things, this due diligence assessment concluded that if the Army did not address the issues it identified in the May 31, 2003 version of the "other transaction authority" agreement, the Army's contractually based financial risk could exceed $1 billion. To what extent were the issues raised in this assessment adequately addressed in the final "other transaction authority" agreement with Boeing?

General SCHOOMAKER. The other transaction agreement executed between the Department of the Army and Boeing for the system development and demonstration (SDD) phase of the FCS program contained sufficient contractual provisions to provide necessary protections for both the Army and Boeing. We are of the opinion that

the contractual issues raised in the CommerceBasix findings were addressed in the SDD other transaction agreement and that the provisions provided sufficient safeguards for the government's $14.1 billion program investment.

9 and 10. Senator MCCAIN. General Schoomaker, to what extent have you evaluated the Army's legal and financial risks associated with the final "other transaction authority" agreement with Boeing? Will you provide a copy of documents that reflect your evaluation to this committee?

General SCHOOMAKER. As previously responded, I have not undertaken any evaluation regarding the FCS. The Acting Secretary of the Army has commissioned the Institute for Defense Analysis (IDA) study and the Army will release the study in the June 2004 timeframe.

11. Senator MCCAIN. General Schoomaker, did Army Acquisition Chief Claude Bolton, at any time, convey CommerceBasix' analysis, or any information regarding this analysis, to Boeing?

General SCHOOMAKER. Not to my knowledge.

12. Senator MCCAIN. General Schoomaker, if Mr. Bolton conveyed CommerceBasix' analysis, or any information regarding this analysis, please indicate to whom, and when, he did so.

General SCHOOMAKER. I have no knowledge of this.

13. Senator MCCAIN. General Schoomaker, please provide a copy of both the May 31, 2003, and the final version of the FCSs "other transaction authorization" agreement.

General SCHOOMAKER. The information requested is attached.

CONCERNING

FUTURE COMBAT SYSTEMS (FCS)
SYSTEM DEVELOPMENT AND DEMONSTRATION (SDD) PHASE

Agreement No.: DAAE07-03-9-F001
Modification No.: PZ0007
Prior Total Government Funds Obligated to Date: $240,456,470.00
Total Government Funds Changed by This Action: $336,000,000.00
New Total Government Funds Obligated to date: $576,456,470.00
Modification Effective Date: 10 December 2003
Authority: 10 USC. 2371 and Section 845 of the Public Law 103-160, as modified by Section 804 of Public Law 104-201, and as amended by Section 803 of the Floyd D. Spence National Defense Authorization Act for FY 2001.

Line of Appropriation: See Attachment 12

The Government priority rating for the Defense Priorities and Allocations Systems (DPAS) (15 CFR 700) under this agreement is DO. Boeing is required to adhere to all of the requirements of this rating.

Boeing CAGE Code: 69236

1. The purpose of this Modification PZ0007 is to establish the definitive agreement of the parties for CLIN 0001 regarding the effort necessary to accomplish Systems Development and Demonstration (SDD) for the Future Combat Systems Increment I and related efforts in support of future increments.

2. The parties agree that for the period from the date of signature of this modification until the Agreement completion, that CLIN 0001 shall be Cost-Plus-Fixed/Incentive-Fee. CLIN 0002 and its related CLINs shall continue to be Cost-Plus-Fixed-Fee.

3. Any language conflict between this modification PZ0007 and any prior Agreement language shall be resolved in favor of this modification PZ0007.

4. The Executive Summary, Table of Contents, Articles I through XXXIII, and Attachments One through Fourteen attached to this Modification supersede and replace the Executive Summary, Table

of Contents, Articles I through XXXIII, and Attachments One through Fourteen of the original Agreement signed 30 May 03.

5. To implement this change, the appropriate original pages for the Executive Summary, Table of Contents, Articles I through XXXIII, and Attachments One through Fourteen are deleted from the Agreement and the attached replacement pages for the Executive Summary, Table of Contents, Articles I through XXXIII, and Attachments One through Fourteen are substituted in lieu thereof.

The parties mutually agree that the Executive Summary, in its entirety, to include the Systems Development and Demonstration Phase (SDD) Statement of Objectives (SOO) for achieving Initial Operational Capability (IOC) and Key Tenets of the Program, is included as an overview of the Program and to describe the overarching objectives and vision for the Future Combat Systems (FCS) Unit of Action (UA) for IOC and beyond; and that the Executive Summary is non-contractual and non-binding on either party, unless specified elsewhere within the Agreement.

EXECUTIVE SUMMARY

FCS UNIT OF ACTION SYSTEMS SYSTEM DEVELOPMENT AND DEMONSTRATION PHASE

FCS OVERVIEW

1. The goal of US Army Transformation is the creation of the Future Force (FF). The FF will be strategically deployable and capable of performing operations across the spectrum of conflict in a joint inter-operational environment.

2. The FF is characterized by an innovative and revolutionary new operational and organizational concept for the Unit of Action (UA). The UA is the tactical warfighting echelon of the FF, comprised of echelons at Brigade and below to fight tactical engagements and win battles. The UA is designed to win on the offensive, across the spectrum of conflict, against any expected adversary as part of a division-like Unit of Employment (UE) or Joint Task Force (JTF). In a low-end Small-Scale Conflict (SSC), one or more UAs can operate directly under a JTF. A UA can serve as an Army Forces (ARFOR) component headquarters for the JTF in this framework. The UA will account for the mission sets of these combat formations, with the exception of Special Forces (SF), Ranger, and Airborne Forces. The Army's UA will be part of a joint team that is decisive in any operation, against any level threat, in any environment. This team must be strategically and operationally responsive, rapidly deployable; able to change patterns of operations faster than the enemy can respond, and adjust to enemy changes of operations faster than he can exploit them. The UA accounts for these mission sets by operating as a Family of Systems (FoS) and a System of Systems (SoS). A FoS is a set or arrangement of independent systems that can be arranged or interconnected in various ways to provide different capabilities. The mix of systems can be tailored to provide desired capabilities dependent on the situation.

3. The Future Combat Systems (FCS) is a Family of Systems (FoS) networked to operate as a System of Systems (SoS) and will serve as a core materiel building block within the UA. The program goals are to: (1) acquire Future Combat Systems, (2) equip Soldiers, and (3) field FCS to UAs to enable achievement of the UA Operational and Organizational (O&O) Plan. The Army intends to field FCS Increment I with Initial Operational Capability (IOC) in 2010 for an FCS-equipped maneuver battalion and Full Operational Capability (FOC) in 2012 for the Army's first Future Force UA. Boeing is not responsible for the entire UA; they are only responsible for the specific work identified in the Agreement.

4. "FCS are comprised of a family of advanced, networked air- and ground-based maneuver, maneuver support, and sustainment systems that will include Manned and Unmanned (MUM) platforms. FCS are networked via a Command, Control, Communications, Computers, Intelligence, Surveillance, Reconnaissance (C4ISR) architecture including networked communications, network operations, sensors, battle command system, training, and both MUM Reconnaissance and Surveillance (R&S) capabilities that will enable levels of Situational Understanding (SU) and synchronized operations heretofore unachievable. FCS will operate as a SoS as defined in Chairman of the Joint Chiefs of

Staff Instruction (CJCSI) 3170.01B that will network existing systems, systems already under development, and new systems to be developed to meet the needs of the UA. The network will enable improved Intelligence, Surveillance, and Reconnaissance (ISR), enhanced analytical tools, joint exchange of blue and red force tracking down to the tactical level, battle command, real-time sensor-shooter linkages, and increased synergy between echelons and within small units. It will also enable the UA to connect to UE and Joint-Interagency-Multinational (JIM) capabilities, making these capabilities available to the small units of the UA as well as with adjacent, non-contiguous units. FCS will enable the networked UA to develop the situation in and out of contact, set conditions, maneuver to positions of advantage, and to close with and destroy the enemy through standoff attack and combat assault per the OF UA O&O Plan." (Operational Requirements Document (ORD), 14 April 2003, Change 3, Joint Requirements Oversight Council (JROC) approved).

BACKGROUND

1. On 14 March 2002 Defense Advanced Research Projects Agency (DARPA) awarded an Other Transaction Agreement (OTA), Section 845 for Prototypes to The Boeing Company to serve as the U.S. Army's Lead Systems Integrator (LSI). The Boeing Company was selected as the LSI to partner with the Government in an Integrated Product Process Development (IPPD) environment to develop, manage and execute all aspects of the FCS program through Concept and Technology Development (CTD), with an option for System Development and Demonstration (SDD). This Agreement constitutes the exercise of the option contemplated in the CTD Agreement, MDA972-02-9-0005. Key among the LSI CTD responsibilities was to manage risk and facilitate transition to Milestone B. Continuing with the LSI into SDD was contingent upon the successful execution of the CTD Phase and negotiation of the subsequent SDD Agreement. The FCS program, cooperatively executed by DARPA and the Army, successfully exited the Concept and Technology Development (CTD) phase.

2. While the Army intends to retain the LSI for the foreseeable future, to maintain competition throughout the life cycle, significant portions of SDD and Initial Production (IP) will be competitively awarded by the LSI to subcontractors specifically selected for their domain expertise. The initial capability increment is the first in a series of time-phased requirements, all of which are expected to be satisfied by the same LSI. SDD has competitive subcontracts, and performance specifications will be used to acquire the SDD hardware and software from a series of competitive actions. These specifications were made available for industry comment, during the CTD phase, to further encourage competition. It is planned to continue into IP for Increment I with the LSI using subcontracts being competitively awarded to the maximum extent feasible.

3. The Army, other Services, Joint activities or Allies have initiated or developed a number of technologies, and there are a significant number of ongoing programs that have relevance to FCS. In excess of one hundred (100) programs have been evaluated as having a need to interact with the FCS Program for SDD Increment I. During SDD additional programs may be added as complementary programs while others may be deleted. "Complementary Programs" for purposes of this Agreement is defined in Article I, subparagraph F.

SDD PHASE

1. The Increment I SDD phase will complete the integration of the FCS into a stable, interoperable, producible, supportable, and cost effective SoS that satisfies initial user expectations. The SDD phase includes Systems Integration and Systems Demonstration. During Systems Integration, the LSI will use the approved O&O and the JROC-validated Mission Needs Statement (MNS) and Operational Requirements Document (ORD) to integrate selected technologies at a SoS level. Recognizing that UA and FF development and demonstration work is ongoing and in parallel with the FCS SDD work, the

LSI is also charged to work closely with the UA/FCS Proponent and the Army to ensure FCS SDD work is closely synchronized with the larger UA and FF development effort. The LSI will also ensure that the FCS roadmap to objective FCS capabilities is properly informed by, and synchronized with, CTD work for subsequent increments of FCS capability. The LSI will provide required program information and data to support decision-making through the IPPD structure. The Government will participate in all program decisions, to include Make/Buy and approval of competitive selection decisions, and the Government may disapprove any action taken under these processes. Linkage of the LSI's Modeling and Simulation (M&S) design work to the Army's FF Battle Labs will provide customer feedback to support FCS design work as envisioned under Simulation and Modeling for Acquisition, Requirements and Training (SMART). During the systems integration process, M&S and component-level tests will verify technology and subsystem integration to ensure subsystem performance is achievable. The Distributed Product Description (DPD) will provide the complete digital system description within which the virtual technology component hardware will be tested. During Systems Demonstration, components will undergo a mix of virtual and physical testing. System simulation and its interactions with internal and external components will be accomplished through the use of M&S technologies, System Integration Laboratory (SIL) and networking to complement physical testing. Systems Demonstration will include prototype build and the execution of a series of Synthetic User Tests and Developmental Tests (DT). Results of testing will be integrated into the final production design prior to approval for entry into IP at Initial Production Decision (IPD). The prototype equipment may be refurbished (under separate contract), dependent upon suitability for use, availability of funds and identified needs, in the current production configuration and delivered to the First Unit Equipped (FUE) for New Equipment Training.

SDD STATEMENT OF OBJECTIVES FOR ACHIEVING IOC

These objectives must be read as a whole as the elements are inter-related. As with the SoS, the whole is much greater than the sum of the parts. While these are the overall objectives for the SDD Agreement and beyond, the greater objective of achieving IOC by the end of the decade must shape the work and decisions that are made in SDD.

1. Field FCS SoS solutions to UAs with initial FCS Increment I equipped battalion at IOC by the end of the decade and a FOC FCS Increment I equipped UA by 2012 to enable the UA to fight effectively as articulated in the UA O&O Plan:
   a. An organized, manned, trained and equipped subset (to be defined at Initial Production Decision ([IPD]) of the FCS-equipped UA ready to begin new equipment and organizational training, leading to Operational Test Readiness Review III and the Initial Operational Test.
   b. Successful verification of each critical operational issue during Operational Test.
   c. Successful verification that the SoS is fully supportable and vital logistics goals are achieved.

2. Achieve a successful SDD effort:
   a. At IPD, Production and Deployment Entrance Criteria are achieved /demonstrated.
   b. At IPD, FCS UA Increment I Capabilities Specification is demonstrated for Increment I required performance.
   c. The LSI/Army partnership has defined, planned, and managed the systems engineering process to transform the FCS ORD into a tested SoS solution suitable for start of IP, conducted system reviews as defined in the Systems Engineering Management Plan (SEMP), and prepared for the IPD Defense Acquisition Board (DAB) review. These actions support achieving Increment I threshold capability.
   d. At Critical Design Review (CDR) all schedules impacting/influencing the SoS are aligned with all performance expectations considered low to moderate risk for IPD.

e. Necessary actions taken to ensure an achievable schedule in support of equipping UAs with initial force capability by the end of the decade. Sufficiently detailed Integrated Master Plan (IMP) and Integrated Master Schedule (IMS) facilitating management of the efforts to achieve IOC by end of decade are accomplished, with significantly greater detail through SDD.
f. An Earned Value Management System (EVMS) for the LSI, first tier subcontractors, and select second tier subcontractors whose contributions exceed the dollar thresholds for requiring EVMS or who are designated by the PM, FCS as needing this level of management insight are implemented and validated.
g. Advanced Collaborative Environment (ACE) fully deployed and operational prior to CDR.

3. Adopt a spiral development process to target the objective capability:
   a. Cost parameters necessary to support achieving objective capability, including specific recommendations on the development, fielding and support of future increments, to include life cycle cost impacts are identified.
   b. A plan for integrating, scheduling, measuring, and controlling the evolution of the FCS SoS development, test, and fielding leading to objective FCS Full Operational Capability (FOC) determined through continuous User requirements development and reflected in the latest version of the FCS ORD continues to be maintained.
   c. CTD work on subsequent FCS increments of capability is synchronized in an efficient and effective manner over time with previous increments under development or in production.
   d. All elements of the FCS program including LSI, Government, suppliers, and associate contractor activities are integrated into an event driven plan. Work is closely coordinated with Training and Doctrine Command (TRADOC) and Headquarters, Department of Army (HQDA) so that each increment of FCS capability is properly integrated and synchronized with the larger roadmaps for the UA and FF. Risk reduction activities with spiral development objectives for each program event including the plan to incrementally improve capability throughout the systems' life cycle based on spiral upgrades and technology insertion has been defined.
   e. Concurrent development of program increments, with the UA/FCS Proponent, to ensure rapid technical integration and support parallel CTD activities under DARPA or Army purview have been planned.

4. Establish FCS Enterprise as a solid enduring partnership between Combat Developers, Materiel Developers and Industry:
   a. TRADOC Deputy Chief of Staff, Development (DCSDEV), Unit of Action Maneuver Battle Lab (UAMBL), TRADOC System Manager for FCS work in concert with the Material Developers and the LSI to establish and evolve the FCS operational and mission requirements.
   b. DARPA, Research, Development, and Engineering Command (RDEC), PEOs, Program Manager, Army Test and Evaluation Command (ATEC) and Defense Contract Management Agency (DCMA) work in concert with the Combat Developers and the LSI to establish and define materiel solutions to meet continuous User requirements development needed to support and evolve the program to objective capability.
   c. LSI and Industry partners work in concert with the Material Developers and Combat Developers to design, develop, produce, field, sustain and support fielding of each increment of FCS FoS to FF UAs.

5. Key Performance Metrics will be demonstrated and documented in the SoS and individual system performance specifications based upon Increment I Key Performance Parameters (KPPs) and their prioritized ORD requirements:
   a. Reliability, supportability, efficiency, and deployability goals will be specifically identified, metrics will be established and incorporated into the documented performance baseline at the SoS and individual system levels.

b. Supportability, sustainment, deployability, and fielding planning, including establishment of processes; procedures, and logistics management metrics, will be developed and tested to ensure logistics requirements are met across the FCS SoS. Performance-Based Logistics (PBL) business processes and performance standards will be developed and validated, data management and analysis processes will be designed, and the PBL concept for sustainment will be expanded to incorporate complementary systems into the FCS Supportability Strategy. Collective performance of the requirements under this contract will be evaluated for effectiveness in achieving Operational Availability, Operation and Support Costs and Footprint.

c. Key data have been provided and maintained on the ACE to ensure a solid foundation for Simulation-Based Acquisition activities to ensure close collaboration with the User in design work as envisioned in SMART.

d. Development of SoS and FoS performance level modeling and simulation capability for use in analyzing requirements, evaluating design performance, and supporting system level testing has been managed and coordinated. System level modeling and simulation of information management, interoperability, lethality, survivability, supportability, agility/versatility, responsiveness, and vulnerability effectiveness evaluation has been developed. Use of this modeling and simulation capability across the SoS, FoS, testing, and other users, as needed, to support evaluation of FCS performance for selected designs including analysis of life-cycle cost impacts is coordinated.

6. LSI responsibility for total systems integration will be established and leveraged to ensure success both for SDD and beyond:
   a. The management resources, engineering resources, products, and services required to design, build, procure, test, field and sustain prototypes or simulations for the integrated FoS, including the distributed network systems, platforms, supportability, and training, when integrated and operated with systems external to FCS, constitute the FCS SoS are provided.
   b. Competitive procurement and management of systems and subsystems to the extent feasible to ensure "best of industry" involvement in the development of the FoS elements.
   c. Complementary systems and specific interaction needed to properly support the FCS program have and will continue to be identified in collaboration with PM, FCS.
   d. Program, including future increments, is shaped within planned funding and potential future cost constraints.

7. All actions needed to achieve future compliance with the Army Release, Fielding and Transfer Program (AR 700-142) dated May 1, 1995, and achievement of Material Release prior to IOC and FOC are taken.

KEY TENETS OF THE PROGRAM

- Create Opportunity for Best of Industry to Participate.
- Leverage Government Technology Base to Maximum Extent.
- Associate On-Going Enabling Efforts With LSI-Led Activity.
- Collaborative Environment From Design Through Life Cycle.
- As a Minimum, Commonality at Subsystem/Component Level.
- Design/Plan for Technology Integration
- Retain Competition Throughout Future Force Acquisition.
- Appropriate Government Involvement in Procurement Processes.
- Maintain and Shape Government Acquisition Community
- Maintain and Shape the Industrial Base of the Future
- Program Affordability--Balance Performance and Sustainment
- Consistent and Continuous Definition of Requirements

ARTICLE I: SCOPE OF THE AGREEMENT

A. Structure

1. The Boeing Company, as the LSI, and its industry teammate, Science Applications International Corporation (SAIC), shares with the United States Army a common vision for the FCS that will serve as the materiel foundation for the UA. The parties are entering into an extended alliance between the Government and industry to provide advanced technologies that support enhanced warfighting capabilities and techniques for the Army to fulfill an expanding and evolving set of Army missions for the 21st century. This Agreement expresses the relationship between Boeing, as the LSI, and the Government, as represented by the Program Manager, Future Combat Systems and the Grants Officer. The LSI will continue to use the "best of industry" to work together with the Government to achieve a successful SDD Increment I phase, and to achieve the Army Vision of fielding an FCS threshold capability to enable the UA to achieve its O&O Plan with threshold FCS equipped maneuver battalion this decade.

2. A program management decision process, that addresses Cost As an Independent Variable (CAIV), will be used to focus on the cost, schedule, and performance trade-offs in relation to SoS Life Cycle Cost (LCC) containment and Total Ownership Costs (TOC) estimates to help achieve operational capability within program cost constraints. Boeing's CAIV process contains three basic tenets: (1) setting cost targets; (2) allocating cost targets to subcontractors; and (3) reporting on program-level cost targets.

3. The planned funding for the program is a primary constraint for the Agreement. All proposed changes that increase cost will include recommendations of statement of work requirements to be modified, reduced, or deleted in order to perform within the existing Agreement funding constraints, unless the Grants Officer notifies Boeing that additional funds will be made available.

B. Program Definitization

(Paragraph B was applicable only to the definitization period from 30 May 03 through 26 Nov 03. This language is retained to document the historic record. However, changes were made to the original paragraphs 2 and 3 to update funding amounts through modification P00006.)

1. The FCS SDD program effort is undefinitized at this time. The definitization period is referred to as "Program Definitization." Program Definitization is planned to be funded at $190,000,000.00 and is intended to ensure a timely definitization. The $190,000,000.00 is considered to be insufficient to ensure maintenance of the currently planned program schedule. There is no requirement for Boeing to work beyond the funding specifically provided in the Agreement.

2. Funds are now currently available for the full $190,000,000.00 plus an additional $42,456,470.00, for a new total funding of $232,456,470.00 for CLIN 0001. The Government's obligation under this Agreement is contingent on the availability of appropriated funds from which payment for Agreement purposes can be made. No legal liability on the part of the Government for any payment may arise until funds are made available to the Grants Officer for this Agreement and until Boeing receives notice of such availability, to be confirmed in writing by the Grants Officer. The funds that are currently available are $232,456,470.00 for CLIN 0001.

3. The $240,456,470.00 is the current limitation of the Government's liability for all Agreement CLINs. If the Agreement is terminated prior to definitization, no amount above the $130,000,000.00 can or

will be added for either cost or fee. If additional funding is added, then the limitation of liability will be increased by the amount of the additional funding.

4. The FY 04 funding identified, $60,000,000.00, will be provided as early as available, but it is recognized that this may not be until late October or even November and that until such time as additional funding is obligated, the actual amount obligated to the Agreement is the Government's limitation of liability.

5. Definitization will include a cost estimate for the SDD Agreement and provision for applicable fee (fee for the balance of the Agreement is not defined at this time and may include fixed, incentive, award, etc.). The fee arrangement, described herein, used for the period through definitization, shall not set a precedent for the fee arrangement for the balance of the program. The fee for the definitization period is comprised of two parts, a base fee and an incentive fee. The incentive fee is comprised of five elements as described below. Any unearned incentive fee will be retained for use as fee for future incentive period(s) in the definitized Agreement with the specific application period and criteria determined by the fee determining official.
   a. The fee for the period through definitization consists of a base fee in support of the overall definitization effort, and an incentive fee arrangement to support the definitization by rewarding the accomplishment of the major elements during definitization of the OTA. The total fee opportunity for the definitization period is $24,685,560.00. This consists of a base fee of $9,874,224.00 in support of the overall definitization effort, and an incentive fee arrangement to support the definitization by rewarding the accomplishment of the major elements as identified below.
      (1) Technical: $1,645,704.00,
      (2) Software: $1,645,704.00,
      (3) Manpower agreement: $3,291,408.00,
      (4) Subcontracts: $3,291,408.00 ($1,645,704.00 for the competitive subcontracts and $1,645,704.00 for the MGV Subcontracts) and
      (5) A fee for the definitized and signed Agreement in the amount of $4,937,112.00 for definitization of the OTA.

   The fee for element 5, the definitized and signed Agreement, is reduced the longer it takes to definitize. The fee for the definitized and signed Agreement is $4,937,112.00. Commencing 210 days after award of the Agreement, the fee for element 5 will be reduced by $822,852.00, and reduced an additional $822,852.00 every 30 calendar days thereafter until the Agreement is definitized or the element 5 fee exhausted.
   b. The total fee associated with the $130,000,000.00 is $16,890,120.00. Of that amount $6,756,048.00 is base fee, and the balance is for the following incentive fee elements:
      (1) $1,126,008.00 is for Technical,
      (2) $1,126,008.00 is for Software,
      (3) $2,252,016.00 is for Manpower agreement,
      (4) $2,252,016.00 is for Subcontracts ($1,126,008.00 for the competitive subcontracts and $1,126,008.00 for the MGV Subcontracts), and
      (5) $3,378,024.00 is for the definitized and signed Agreement.
   c. The total fee associated with the $60,000,000.00 is $7,795,440.00. Of that amount $3,118,176.00 is base fee, and the balance is for the following incentive fee elements:
      (1) $519,696.00 is for Technical,
      (2) $519,696.00 is for Software,
      (3) $1,039,392.00 is for Manpower agreement,
      (4) $1,039,392.00 is for Subcontracts ($519,696.00 for the competitive subcontracts and $519,696.00 for the MGV Subcontracts), and
      (5) $1,559,088.00 is for the definitized and signed Agreement.

d. The five incentive fee elements are defined as follows:

(1) **Technical** - UA Increment I specification updated to align with JROC approved ORD, dated 14 April 2003. By System Requirements Review (SRR), all JROC ORD requirements will be reconciled. This reconciliation can take two forms:

(a). Establishment of a fully coordinated threshold (either JROC- compliant or approved through the Trade Study process).

(b). Establishment of a Threshold Range contingent upon the outcome of a Trade Study that has yet to be performed, including:

(i) Appropriate justification as to why the Trade Study could not be performed prior to the SRR.

(ii) A Change Control Board (CCB) - approved Trade Study Plan.

(2) **Software** - Demonstration of the Net Fires use case utilizing SoS COE Build 0 on the C4ISR test bench to validate C2 capabilities using SoS COE APIs.

(a) The capabilities that are represented by the Net Fires use case shall be described as system engineering requirements that are documented in the Dynamic Object Oriented Requirements System (DOORS) database, and traceable to the ORD, and to the test cases to be run as part of the demonstration. All software process artifacts (peer reviews, etc.) that can demonstrate compliance with the approved software development process shall be compiled and made available for review prior to the demonstration. Compilation on ACE is acceptable.

(b) The C4ISR test bed shall be under configuration control at the time of test and shall have been demonstrated to be suitable for use prior to the demonstration. The LSI SQA organization will be the agent to confer a judgment of suitability.

(c) As part of the readiness review for the demonstration, the LSI shall present the original estimates and the actual values for the following metrics for all software included in the demonstration.

(i) Report on estimated Source Lines of Code (SLOC) at the time of Agreement award vs. actual SLOC at the time of demonstration.

(ii) Report on estimated productivity (SLOC/hr) at the time of Agreement award vs. actual productivity (SLOC/hr) achieved during development of the software for the demonstration.

(iii) Report on estimated levels of software reuse and associated effort at the time of Agreement award vs. actual achieved levels of reuse and associated effort.

(d) These actual values shall be used to revise the cost and schedule estimates for SDD, and presented as additional planning data for program management purposes.

(e) The LSI shall present any suggested changes to the UML style guide/standards based upon implementation of the Net Fires use case.

(3) **Subcontracts** - Competitive subcontracts - 100% of all competitive subcontracts resolved and 85% definitized. Resolved means that a proposal or bid has been submitted, evaluated and/or negotiated or a cost agreement is in place. If negotiations are not complete, the LSI will submit to the Grants Officer a statement outlining final cost expectations, with adequate and proper back up. Manned Ground Vehicle (MGV) subcontracts will be fully definitized or the following: (1) Subsystem source selections complete, (2) United Defense UD/General Dynamics (GD) work split defined, and (3) The LSI completes an analysis of the UD/GD proposals and submits substantiated pricing data with adequate backup to the Grants Officer.

(4) **Manpower Agreement** - Agreement between LSI and Government on LSI manpower will be considered complete after the Grants Officer notifies the LSI that the Grants Officer and the PMO are satisfied with the appropriate staffing levels for the IPTs.

(5) **Definitization of Agreement** - This is the final definitive agreement for SDD, including the fee arrangements for the balance of the SDD program. For definitization, the parties must harmonize Boeing's projected expenditures with the funding profile and scope of work.

e. The base fee in support of the overall definitization effort shall be paid based upon the ratio of cumulative costs incurred, to date, to the total estimated costs for program definitization. The incentive fee pool will be paid on a provisional basis prior to accomplishment of the specific elements as defined above. A provisional billing payment may be made on a pro-rata basis against the 180 day definitization period. The 180 day period represents 12 planned vouchers and Boeing will equally divide the provisional fee payments. When an element is completed, the balance of the fee available relative to that element will be paid with the approval of the Grants Officer.

f. Funds above the $190,000,000.00 may be provided at the Government's discretion to maintain Program schedule. A provisional fee for billing purposes will be provided at ten dollars provisional fee, for every one hundred dollars of estimated cost funded. Based on the fee structure negotiated at definitization the amount of provisional fee made available to Boeing will be adjusted either up or down as appropriate, and will be consistent with the fee structure for the balance of the Agreement in its entirety. If excess fee has been paid then it will either be decremented from the next voucher submitted or otherwise submitted to the Government based on the specific direction of the Grants Officer.

g. The complexities and risk associated with the FCS SDD Increment 1 Program are significant. The challenges of the program warrant the establishment of the maximum possible opportunity to earn fee. The fee available to be earned shall be based on the total negotiated cost base for the Agreement, including all normally allowable and allocable costs such as subcontracts, labor hours, and normal and customary rate applications in accordance with Boeing's approved disclosure statement. This commitment to provide an incentive commensurate with Program risk does not endorse or prohibit any particular fee structure, which shall be subject to negotiation for definitization. Establishment of the award fee arrangement requires a set of award fee evaluation areas and criteria that provide the expectations for excellent performance, and Boeing's achievement of excellent performance will enable Boeing to earn the maximum fee available. (Note: The award fee arrangement was changed to a fixed fee/incentive fee arrangement at definitization as described in Article VII, Fee.)

6. Boeing shall perform the work tasks to satisfy the accomplishment criteria for the first two IMP program events, SoS Requirements Review (SoSRR) and the Program Definitization, by 180 days after award. The scheduled IMP events are supported by doing those tasks that have been identified as needing to be initiated in the first six months. The following tasks are part of that process.
   a. The Initial Baseline Review (IBR) for the program shall be conducted by 120 days after award.
   b. It is understood that the initial IMP/IMS will need further refining at the IMS task level. Some tasks may require greater definition to support the criteria for the IMP events and additional tasks may need to be defined or eliminated. It is expected that the fidelity for the program will be of adequate detail by definitization to support both the agreed to dollars and the funding profile for the program.
   c. The LSI will accompany PM, FCS on the scheduled visits to the PEO/PMs associated with Complementary Systems between June 2003 and September 2003. The LSI will participate with the Government in preparing and finalizing all Memoranda of Agreement (MOAs) by definitization. The LSI will participate with the Government in attempting to prepare and finalize all Subordinate Memoranda of Agreement (SMOAs) by definitization. The LSI will prepare all draft Associate Contractor Agreements (ACAs) prior to definitization. Some of the drafts (those ACAs where an initial SMOA has been signed and the complementary program prime contractor has been directed by the Government initiate discussions with the LSI to develop an ACA) will

have been worked with applicable contractors and some will be Boeing generated documents only.

7. Timely accomplishment of the Program Definitization will include: the detailed Integrated Master Schedule (IMS) at the LSI level by 135 days after award; the validation of the linkage between the Work Breakdown Structure (WBS), the Integrated Management Plan/Integrated Master Schedule, and the Technical Baseline to the agreed to cost by 165 days after award in order to achieve a definitive Agreement by 180 days after award. If the Agreement is not definitized within 30 days after the fee for the definitized and signed Agreement has been exhausted (per Article I, paragraph B.5.a. above), the definitization will be subject to Disputes, Article XV. Towards ensuring timely accomplishment the parties agree to meet within 30 days of award and identify the appropriate supporting tasks to the above schedule. Both parties will ensure periodic management reporting to facilitate the understanding of the progress being made.

8. The modification that definitizes the ceiling priced Agreement is planned to be a totally superceding modification for the entire FCS SDD program, incorporating those fixed portions of the business arrangement reflected in this Article for the definitization period.

9. There will be no Government manpower provided through definitization, unless the Agreement is expressly modified to provide Government manpower in lieu of LSI manpower. The requirements for Government Manpower will be identified and finalized during the definitization process. The government furnished equipment, property, information, facilities, and services (GFX) list will be finalized during the definitization process.

10. The Statement of Work (SOW) at Attachment 1 is the SDD program SOW for FCS Increment I. The SOW, the terms and conditions other than the business arrangement for definitization, and all other attachments will be finalized during the definitization process so that all Agreement requirements at definitization will match the ceiling for the Agreement. There have been changes to the documents subsequent to 2 May 2003 and prior to execution of this Agreement. All such changes will be addressed during the definitization process. The ceiling price for the Agreement for definitization purposes is the Government's funding limitation and is not reflective of the proposal submitted. The definitization process will reconcile these issues to arrive at a definitive agreement.

C. Agreement

1. This Agreement is an Other Transaction pursuant to 10 U.S.C. 2371 and Section 845 of the 1994 National Defense Authorization Act, (Public Law 103-160) as amended. An incentive fee arrangement will be used to create incentives for Boeing to achieve the program goals, as described in Article VII, Fee.

2. This Agreement is not a procurement contract, grant, or cooperative agreement. The Federal Acquisition Regulation (FAR) and Department of Defense FAR Supplement (DFARS) apply only as specifically referenced herein. This Agreement is not intended to be, nor shall it be construed as, by implication or otherwise, a partnership, a corporation, or other business organization. The Army will obtain access to program results and certain rights to patents, data and software pursuant to Articles XVII, Patent Rights and XVIII, Data and Software Rights.

3. As part of the competition to select an LSI for CTD, industry was advised of the Government's intent to exercise a follow-on option with the selected LSI for SDD. This Agreement, DAAE07-03-9-F001, constitutes the exercise of the SDD option contemplated by DARPA and the Army in the CTD solicitation and Agreement, MDA972-02-9-0005.

4. The Senior Procurement Executive for the agency approved, in writing, that in accordance with Section 845 of the National Defense Authorization Act for Fiscal Year 1994, Public Law 103-160, as amended (10 U.S.C. § 2371 *note*), the use of an OTA, that exercises the option contemplated by DARPA and the Army in the CTD phase, continues the use of non-traditional defense contractors in significant roles, and provides for innovative business arrangements or structures that would not be feasible or appropriate under a FAR-based procurement contract, and is the appropriate instrument for the FCS SDD Phase.

D. Non-Disclosure of Sensitive Government Program Information

1. In the course of Agreement performance, the Government may furnish Boeing information (written, verbal or otherwise) developed outside of the FCS program, regarding Army programs and initiatives that are often sensitive to past, present, and future procurements within the Government (hereafter "Sensitive Government Program Information"). If the Government initially makes a disclosure of Sensitive Government Program Information to Boeing in non-written form, e.g., verbally, the information disclosed shall be identified as being Sensitive Government Program Information and confirmed, as such, in writing, by the Government within thirty (30) days from such disclosure. Subject to the foregoing, Sensitive Government Program Information will be marked as such before it is provided to Boeing. Boeing agrees to use reasonable efforts not to use or reproduce Sensitive Government Program Information for any purpose other than fulfilling the FCS Program (the "Purpose"), and to keep Sensitive Government Program Information in confidence, disclosing it only for the Purpose to (a) Boeing employees assigned to or supporting the FCS Program, (b) the Government and its FCS Program support contractors, and (c) other companies, organizations, or individuals that have agreed contractually to control Sensitive Government Program Information under the same conditions set forth herein. The obligations set forth above shall not apply: to information which is or becomes publicly available, or to information which is already in the possession of the recipient without restrictions, or to the extent prior written authorization of the Government is given, or after three (3) years after receipt of the information. This provision does not supersede the terms and conditions of Article XVIII, Data and Software Rights.

2. Boeing shall establish appropriate written procedures as required to carry out the obligations of subparagraph D.1.

E. Lower Tier Agreements

Boeing may disclose such Sensitive Government Program Information to subcontractors, regardless of tier, on the FCS program, provided that it includes subparagraph D.1. in each such subcontract.

F. Definitions

The following definitions are used for purposes of this Agreement in lieu of definitions that may occur elsewhere:

1. The term "Agreement" as used herein refers to these articles and the attachments hereto.

2. The term "Lead Systems Integrator" or "LSI" or "contractor" refers to The Boeing Company, acting as a single party, responsible to the U.S. Government through the Program Manager, Future Combat Systems and the Grants Officer, U.S. Army Tank-automotive and Armaments Command (TACOM).

3. The term "Program" refers to the Future Combat Systems (FCS) as described in the Executive Summary paragraph entitled FCS Overview.

4. The term "Program Manager, FCS (PM, FCS) refers to the Government's Program Manager, Future Combat Systems (PM, FCS), and their designated staff.

5. The term "Program Manager, LSI" or "PM, LSI" refers to the Boeing Program Manager and their designated staff.

6. The term "Office of the Program Manager" refers to the PM, FCS and PM, LSI and their designated staff.

7. The term "Parties" or "Party" refers to Boeing or Contractor and TACOM or Government.

8. The term "Statement of Work" or "SOW" refers to the tasks to be accomplished by Boeing, and its subcontractors, in the performance of this Agreement, as defined in Attachment 1, SDD SOW.

9. The term "User" refers to the TRADOC (Training and Doctrine Command) Systems Manager (TSM) Future Combat Systems (FCS). The TSM FCS is the user representative voice in all discussions related to FCS.

10. The term "Initial Operational Capability" or "IOC" means within the Integrated Master Schedule (IMS), an FCS-equipped maneuver battalion has completed hand-off and fielding of all materiel required by the Army's concept, soldiers are trained to standard, and required support is in place. In addition, Materiel Release of the FCS System of Systems (SoS), in accordance with the Army Release, Fielding and Transfer Program (AR 700-142) dated May 1, 1995, has been achieved. Boeing's required effort to support IOC is represented by this SDD Agreement and subsequent contracts.

11. The term "Integrated Product Team" or "IPT" refers to a multidisciplinary group of people who are collectively responsible for completing particular program objectives as described in their respective IPT Charter.

12. The term "IPT Leader" (LSI) and "IPT Co-leader" (Government) refers to the co-equal technical leaders of their respective IPT. Refer to Article IV, Management of the Program.

13. The term "Integrated Master Plan" or "IMP" refers to an event driven program plan, which organizes the work effort by establishing Program Events and associated Significant Accomplishments.

14. The term "Integrated Master Schedule" or "IMS" refers to an integrated schedule, of time-phased tasks, that supports the Program Events and Significant Accomplishments of the IMP.

15. The term "In-Process Review" or "IPR" refers to a predetermined agreed upon event to assess the status of program cost, schedule, and performance objectives.

16. The term "Integrated Product and Process Development" or "IPPD" refers to a management technique that simultaneously integrates all essential acquisition activities through the use of multidisciplinary teams to optimize the design, development, demonstration, evaluation, manufacturing and supportability process. IPPD facilitates meeting cost, schedule, performance, and supportability objectives from systems concept through production, including field support. One of the key tenets is multidisciplinary teamwork through IPTs.

17. The term "Advanced Collaborative Environment" or "ACE" refers to the shared data, tools, models, simulations, and the ability to access data and information based on logical business rules throughout the Future Combat Systems enterprise.

18. The term "Complementary Programs" means those items, data, software, programs or systems that are required to meet the functionality and performance of the FCS UA Increment I Capabilities Specification that are neither developed nor provided as part of the Lead System Integrator (LSI) effort, and any product that is needed to accomplish the SoS integration that will be provided through the Complementary Program related processes. The definition of Complementary Programs includes Associated Programs, which are those programs outside the UA that FCS must interface with. Complementary programs will require an exchange of hardware, software, information and/or collaborative interaction between the LSI and other Government agencies and contractors for design, integration, test, production planning or program planning purposes. Complementary Programs consist of property (including software and data) or materiel furnished to the LSI through LSI agreements with the specific contractors. Government Furnished Property (GFP) consists of property or material furnished to Boeing directly from the Government without oversight of the LSI. Non-Line of Sight Launch System and Intelligent Munitions System are identified in the ORD as FCS Core Programs but are considered Complementary Programs for the purposes of this Agreement.

19. The term "non-traditional defense contractor" means an entity that has not, for a period of at least one year prior to the date of the transaction (other than a contract, grant or cooperative agreement) for a prototype project under the authority of 10 USC 2371, Section 803 is entered into, or performed with respect to -
    a. Any contract that is subject to full coverage under the cost accounting standards prescribed pursuant to section 26 of the Office of Federal Procurement Policy Act (41 U.S.C. 422) and the regulations implementing such section; or
    b. Any other contract in excess of $500,000 to carry out prototype projects or to perform basic, applied, or advanced research projects for a Federal agency, that is subject to the Federal Acquisition Regulation.

20. The term UA "Board of Directors" refers to a group assembled at the discretion of the Program Executive Officer (PEO), Ground Combat Systems (GCS) consisting of Army and Office of Secretary of Defense (OSD) officials to include other PEOs, RDEC Directors, Army Materiel Command functional leaders, TRADOC, ATEC, DCMA, individuals with special expertise and LSI executive leadership to assist the PEO GCS in his responsibilities for planning, control and oversight to ensure achievement of key Program objectives.

21. The term "Program Generated Adjustment (PGA)" as referenced within the Agreement Articles, means Boeing is entitled to monetary and/or other consideration for Grants Officer-directed and/or mutually agreed upon changes to this Agreement. The Grants Officer, at its sole option, may direct that the modification implementing the adjustment (a) maintain the overall schedule and estimated cost by removing requirements from the Agreement that reduce cost and/or schedule by an amount equal to the increased cost and/or schedule caused by the event giving rise to the Program Generated Adjustment, and/or (b) increase estimated cost and/or schedule, as appropriate, to account for the impact of the change. Unless directed otherwise by the Grants Officer, any request by Boeing for a Program Generated Adjustment will maintain the overall schedule and estimated cost and include recommendations of statement of work requirements to be modified, reduced, or deleted in order to perform within the existing Agreement schedule and cost boundaries. Adjustments implemented under (a) above will not cause any revision to the amount of Fee available for this Agreement. Any

reference to an Equitable Adjustment under this Agreement in a FAR or DFARS clause is hereby replaced with the term "Program Generated Adjustment", as defined herein.

22. The term "Family of Systems (FoS)" refers to the FCS ORD definition of the FCS Family of Systems as consisting of advanced, networked air and ground based maneuver, maneuver support and sustainment systems that include manned and unmanned platforms and is networked via a C4ISR architecture, including networked communications, network operations, sensors, battle command systems, training, and manned and unmanned reconnaissance and surveillance capabilities.

23. The term "System of Systems" (SoS) refers to the FCS ORD definition of SoS as a network of systems integrated to perform one common mission, to include the networking of existing systems, systems already under development, and new systems to be developed to meet the needs of the Unit of Action."

24. The term "Full Operational Capability" (FOC) refers to the fielding of an FCS equipped UA able to effectively execute the O&O Plan.

25. The term "Terms and Conditions" refers to the terms and conditions of this Agreement, which are contained within the Articles and referenced clauses, unless formally modified by modification to the Agreement.

26. The term "Spiral In" refers to taking capabilities (currently outside of the FCS program) and inserting them into the FCS equipped future force.

27. The term "Spiral Out" refers to taking capabilities (currently inside of the FCS program) and inserting them into other programs to improve near term capabilities.

28. The term "Spiral Forward Systems" refers to the following FCS core systems: (1) Unmanned Aerial Vehicle (UAV) Class II, (2) Armed Robotic Vehicle (ARV)-Assault and ARV-Recon, (3) Loitering Attack Missile (LAM), (4) Intelligent Munitions System, (5) UAV Class III, (6) UAV Class IVb, and (7) FCS Maintenance and Recovery Vehicle (FMRV).

29. The terms "IPT Control Board (ICB)," "Configuration Control Board (CCB)" and "Program Configuration Control Board (PCCB)" are defined in the FCS Configuration and Data Management Plan (D786-10008-1) available on the ACE.

ARTICLE II: TERM

A. The Term of the Agreement

The performance period of this Agreement commences upon the Agreement Effective Date and continues for one hundred three (103) months. The Initial Production Decision (IPD) is estimated to be sixty six (66) months from date of award unless terminated earlier in accordance with the Limitation of Funds provision, Article VI, Obligation and Incremental Funding Schedule or the Termination provision, Article II. If all funds are expended prior to the end of the term, the parties have no obligation to continue performance. Articles in this Agreement, which by their express terms or by necessary implication, apply for periods of time other than as specified in this Article, must be given effect, notwithstanding this Article.

B. Termination Provisions

In the event of a termination of this Agreement, it is agreed that disposition of intellectual property developed under this Agreement shall be in accordance with provisions set forth in Article XVII, Patent Rights and XVIII, Data and Software Rights. The Government and Boeing will negotiate in good faith a reasonable and timely adjustment of all outstanding issues between the parties as a result of termination.

C. Termination Notification

1. Should the Government terminate work, or substantially reduce work under the Agreement worth twenty-five percent (25%) or more of the total Agreement amount, Boeing will provide appropriate notices, in accordance with Section 1372 of Pub. L. 103-160 and Section 824 of Pub. L. 104-201, (1) to all potentially affected employees or their official representatives; (2) to the State dislocated worker unit or entity designated by the State to carry out rapid response activities under section 134(a)(2)(A) of the Workforce Investment Act of 1998 (29 U.S.C. 2864(a)(2)(A)); (3) to the chief elected official of the unit of general local government within which the adverse effect may occur; and (4) to each first-tier subcontractor with a subcontract of $500,000 or more; and will require that each such subcontractor provide notice to each of its subcontractors with a subcontract of $100,000 or more and impose a similar notice and flow down requirement to subcontractors with subcontracts of $100,000 or more.

2. This notice to the employee shall have the same effect as a notice of termination to the employee for the purposes of determining whether such employee is eligible to participate in employment and training activities carried out under title I of the Workforce Investment Act of 1998 (29 USC secs. 2801 et seq. generally; for full classification, consult USC Service Tables volumes), except in a case in which the employer has specified that the termination of, or substantial reduction in, the contract is not likely to result in plant closure or mass layoff as defined in 29 USC 2101.

D. Lower Tier Agreements

Boeing shall notify its first-tier subcontractors with subcontracts valued at $500,000 or more and require them to include the notification requirement in subparagraph C. above to subcontractors with subcontracts valued at greater than $100,000 or more.

E. Extending the Term

The parties may extend, by mutual written agreement, the term of this Agreement if funding availability and opportunities reasonably warrant. Any extension shall be formalized through modification of the Agreement by the Grants Officer and the Boeing Contracts Manager.

F. The following FAR/DFARS clauses apply:

52.249-6	Termination (Cost-Reimbursement) (9/96) Tailoring: Except that disputes between the parties will be handled under this Agreement as identified in Article XV: Disputes.

ARTICLE III: DELIVERABLE SCHEDULE

A. Deliverable Schedule – Data and Software

1. Boeing shall submit or otherwise provide the deliverables (including Software) listed in Attachment 2, Deliverables List as part of its LSI responsibilities to support the SDD phase. Submittal of deliverables will be via the Advanced Collaborative Environment (ACE). Deliverables will be marked in accordance with Article XVIII, Data and Software Rights.

2. The ACE workflow will be the process used for approving data listed in Attachment 2 that requires approval (i.e., Block 8 contains an "A").
   a. Sixty (60) calendar days prior to its due date, the individual(s) who has the authority to approve the data for the Government will be identified. The Government will provide this information to Boeing who will enter it into the ACE workflow. At thirty (30) days prior to the deliverable due date, if this individual has not been identified, Boeing will notify the Grants Officer, or his designated representative, so that the Government may provide the name of the Government individual that has approval authority.
   b. Boeing will notify the Government approval official, via the ACE workflow process, that the deliverable is available for final review and approval. Twenty (20) calendar days after the Government approval official has received notification, unless otherwise specified in Attachment 2, the deliverable will be deemed approved by the Government if neither comments nor disapproval are received.

3. "Data" and "Software", as defined in Article XVIII, Data and Software Rights, which are day-to-day IPT products (such as technical assessment results, analysis, distributed product descriptions, trade studies, and plans) that are first generated in the performance of this Agreement and which are made available to the Government via the ACE, and which are not listed in Attachment 2, will be subject to Government Purpose Rights (GPR) whether or not marked with the GPR legend unless greater restrictions are applicable thereto as specified in Article XVIII,B.6.

B. Deliverable Schedule – Hardware

At the completion of the Agreement all system prototypes and SILs shall either become deliverables to the Government or the Government may decide to have them transferred to a subsequent follow-on production contract with Boeing at the Government's discretion. All such deliverables shall be F.O.B. Origin. Any residual property (prototypes, etc.) will vest and undergo disposition in accordance with Article XII, Government Furnished Equipment, Property, Information, Facilities, and Services.

C. SDD Completion

1. Performance of this Agreement shall be deemed to have been completed thirty (30) calendar days after the successful accomplishment of the IMP events and SOW requirements or upon termination in accordance with Article II, Term, subparagraph A. or subparagraph F. or Article VI, Obligation and Incremental Funding Schedule, subparagraph D. Refer to Article I, B., for SOW requirements.

2. This Agreement shall remain open, administratively, until the following actions at a minimum have been settled:
   a. Closeout of subcontracts;
   b. Disposition of Government Property and Plant Clearance actions;
   c. Disposition of Classified Material;
   d. Final Patent Report;

e. Final Modification Identified;
f. Final Audits Conducted;
g. Final Payment Made.

D. The following FAR/DFARS clauses apply:

52.246-9	Inspection of Research and Development (Short Form) (April 1984) Tailoring: Unless otherwise agreed, records of inspection work performed by Boeing will be posted to the ACE.

ARTICLE IV: MANAGEMENT OF THE PROGRAM

A. Program IPT Structure

1. The following IPTs are the initial IPTs for the SDD phase:
¦ Program Manager IPT (level I)
¦ Advanced Collaborative Environment (ACE) IPT (level II)
¦ Complementary Programs IPT (COM) IPT (level II)
¦ Force Development IPT (FDV) IPT (level II)
¦ Integrated Simulation and Test (IST) IPT (level II)
¦ Logistics Requirements & Readiness IPT (LOG) (level II)
¦ SoS Engineering & Integration (SEI) IPT (level II)
¦ C4ISR Systems Integration (C4I) IPT (level II)
¦ Spiral Development & Technology Planning (SDT) IPT (level II)
¦ Lethality Systems Integration (LET) IPT (level II)
¦ Manned Ground Vehicles (MGV) Systems Integration IPT (level II)
¦ Soldier Systems Integration (SLD) IPT (level II)
¦ Unmanned Aerial Vehicles (UAV) Systems Integration IPT (level II)
¦ Supplier Management & Procurement (SMP) IPT (level II)
¦ Training (TRN) IPT (level II)
¦ Unmanned Ground vehicles (UGV) Systems Integration IPT (level II)

B. Management and Program Structure

1. Boeing will structure its performance so as to facilitate appropriate span of control consistent with the SOW, WBS, IMP and IMS. The Program Manager, LSI exercises program management and system integration responsibilities to include technology insertion, risk management, life cycle cost, and program evolution through each of the Government acquisition milestones. For purposes of this Agreement any body, regardless of its title, i.e., "Working Group", "Integrated Design Team," will be referred to as an "IPT."

2. Boeing will use its Integrated Product and Process Development (IPPD) process centering on customer focus, multidisciplinary teamwork and total life cycle planning to facilitate the creation, staffing, and operations of the jointly led Integrated Product Teams (IPT). This collaborative working relationship helps to ensure successful execution of program plans, within cost, schedule, performance, and supportability objectives. The IPPD process will ensure effective participation, including PM, FCS and User groups such as Integrated Concept Teams (ICTs), Battle Labs and TRADOC System Managers (TSMs), in key performance trade decisions that impact operational capabilities.

3. The PM, FCS will ensure that all key Government stakeholders are officially represented on an IPT where appropriate.

4. The ACE shall be used for IPT collaboration, workflows and approvals for IPT work products and formal deliverables.

C. Board of Directors

The Board of Directors may be convened during program performance at the discretion of the PEO, GCS in order to discuss top-level issues affecting, or that may affect, the program. The Board, in their advisory

capacity, will provide to the PEO, GCS, as required, advice and counsel so that the PEO may fulfill their responsibilities for program planning, control and oversight to ensure key objectives are achieved.

D. IPT Structure

1. The FCS program will be managed and led through the Office of the Program Manager, co-chaired by both the PM, FCS and PM, LSI. Reporting to the Office of the Program Manager are level II IPTs (as listed in paragraph A), which shall be jointly established and chartered by the PM, FCS and the PM, LSI. Boeing will lead each IPT, regardless of IPT level, with the Government providing appropriate Co-leaders, unless the PM, FCS and the PM, LSI agree otherwise.

2. Supporting level II IPTs will be sub-IPTs, and Working Groups (WG) or other organizations, which will be referred to as level III IPTs. Sub-IPTs and Working Groups will be established by level II IPT leaders with concurrence of the level II IPT Co-leader.

3. Lower level IPTs (IV, V, VI, etc.) are not capped but must be structured and chartered in accordance with Boeing's IPPD process. The Government reserves the right to participate on these lower level IPTs and to co-lead with the concurrence of the lower level IPT leader.

4. Boeing shall provide administrative support and coordination of the day-to-day business activities for all IPTs.

5. Each IPT Charter shall be concurred in by IPT Leadership. Charters will contain goals from the Statement of Work, deliverable products and schedules, processes, responsibilities, authority and budget. Subcontractor and Government employees will participate in IPTs.

6. Boeing will require that each IPT has an:
   a. IPT Charter and Team Execution Plan (TEP): These documents define the purpose, responsibilities, membership and chain of authority for the IPT.
   b. Input into the IMP/IMS that establishes the products and resources for the allocated actions of the IPT.

E. Management Reserve

Use of the management reserve pool within this Agreement that was created from the difference between the competitive subcontracts' Final Proposal Revision versus Most Probable Cost ($662 million), and adjustments to MGV subcontract funding ($250 million), will be subject to PM, LSI and PM, FCS approval.

F. Government Member IPT Responsibilities

1. The Government may, in its sole discretion, appoint members to each IPT. Government members of the IPT are empowered by the PM, FCS to express their views and interests and are responsible to the PM, FCS for their actions. Government members of the IPT will report regularly and frequently to their home office, their Government team Co-leader, and the PM, FCS to ensure a common Government view is maintained for the execution of the program. The Program Management Office may provide IPT representatives that are Support Contractor employees under contract to support the Program Management Office. Support Contractor employees acting in this capacity shall have first signed a Proprietary Information Agreements (PIA) with Boeing or shall provide to the Boeing Contracts Manager a copy of an existing Government FCS Non-Disclosure Statement (NDS) prohibiting the unauthorized disclosure of Boeing proprietary information. A representative will be

assigned to each IPT to report potential cost and schedule impacts to the Grants Officer. Such representative may be responsible for reviewing input and providing support to multiple IPTs. The Boeing and Government members of the IPTs do not have authority to make decisions that would result in a change to the Agreement. All required changes to the Agreement will be documented, in writing, via Agreement modification.

2. The parties agree that Government members of an IPT do not have authority to, and therefore shall not, direct the efforts of Boeing subcontractors, regardless of tier.

G. IPT Issue Resolution

1. It is the intent of the parties that IPT actions will be taken as a result of consensus between the IPT Leader and IPT Co-leader. In the event consensus cannot be achieved, then the issue must be raised to the next level of the IPT structure in accordance with the following process:
   a. An inability to reach consensus between the IPT Leader and IPT Co-leader of the IPT will result in the decision of the IPT Leader being followed until such time as the issue is resolved. This decision can be reviewed by appeal to the IPT to which they report. The Government IPT Co-leader can initiate a request to review the decision or issue where consensus is not achieved.
   b. The IPT Co-leader will submit a request for review of that decision, in writing, to the leaders of the IPT to which they report. The request for review will (i) describe the decision to be reviewed; (ii) identify the reason for the disagreement; and (iii) identify an alternative decision.
   c. The higher-level IPT Leader and IPT Co-leader will determine if they can reach a consensus decision themselves or if they need to involve their team to resolve the issue. All decisions by a higher-level IPT will be made within two (2) business days following receipt of a request to review a decision in order to facilitate effective program performance.
   d. Any decision can be appealed to the next higher-level IPT. The new request for review will be handled in accordance with the procedure described in paragraphs (a) through (c).
   e. The final decision-making authority for an issue raised by this procedure will be the Program Manager, LSI. Any decision by the PM, LSI that does not sustain an appeal shall be immediately provided to PM, FCS. Should the PM, FCS disagree, he may request the Grants Officer provide appropriate direction to Boeing. In this case, if the direction results in an increase to Boeing's cost or an impact to schedule, then Boeing will be entitled to a Program Generated Adjustment. The Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) will be in accordance with Article XIII, Modifications.

2. Issue resolution by elevation to next higher level IPT is not the preferred method. IPTs are empowered and expected to quickly resolve issues within the scope of their Charter. However, if a Lead or Co-lead decides that the issue is at an impasse, and the issue impacts cost, schedule or performance; it, shall be brought to the attention of the Office of the Program Manager within one business week of reaching the impasse.

H. Earned Value Management System

1. In the performance of this Agreement, Boeing will use its Earned Value Management System (EVMS) as documented in the Integrated Performance Management Manual (IPM Manual) per Advance Agreement (AA) on The Boeing Company EVM System, dated October 31, 2000, between The Boeing Company and the Government regarding the Single Boeing Company EVMS. The IPM Manual has been recognized by the Government as complying with the criteria provided in the Interim Defense Acquisition Procedure "Operation of the Defense Acquisition System" Tab C, Table 3 Contract Reporting Requirements dated 30 October 02.

2. If Boeing's EVMS is not recognized by the cognizant Administrative Agreements Officer (AAO) as complying with EVMS criteria (or Boeing does not have an existing cost/schedule control system that has been accepted by the Department of Defense), Boeing shall apply the system to the Agreement and shall be prepared to demonstrate to the AAO that the EVMS complies with the EVMS criteria referenced in paragraph 1 of this clause.

3. The Government shall require Integrated Baseline Reviews (IBR) and subsequent baseline quality reviews (BQR). IBR reviews shall be scheduled as early as practicable and should be conducted within 120 calendar days after (1) Agreement award, (2) the exercise of significant agreement options, or (3) the incorporation of major modifications. The objective of IBRs and BQRs is for the Government and Boeing to jointly assess areas, such as Boeing's planning, to ensure (1) complete coverage of the statement of work, (2) logical scheduling of the work activities to include integration of all major performers' (subcontractors) detailed activities into a singular and fully integrated performance measurement baseline that adheres to the program master plan, (3) adequate resourcing, and (4) identification of inherent risks. BQRs will be the logical extension to the IBR to ensure continued integrity of the Performance Measurement Baseline, and will be conducted at periodic intervals when deemed needed by the Government or Boeing throughout the Agreement's period of performance.

4. Boeing agrees to provide access to all pertinent records and data requested by the Grants Officer, AAO or other duly authorized Government representative. Access is to permit Government surveillance to ensure that the EVMS complies, and continues to comply, with the criteria referenced in paragraph 1 of this section.

5. Boeing shall require all subcontractors with subcontracts worth more than $5M to manage their portion of the program using an approved earned value system. For subcontracts greater than $5M, the subcontractor will use a Cost/Schedule Status Report (C/SSR) to report their EVMS information and for all subcontracts in excess of $50M, the subcontractor will use a Cost Performance Report (CPR) to report their EVMS information

I. Office Space and Administrative Support

1. The following three paragraphs apply only to (1) temporary, short-term accommodations of the parties' personnel at Government and Boeing facilities, and (2) long-term accommodation of a limited number of Boeing personnel at TRADOC and other Government facilities as required in the Agreement Statement of Work paragraph 3.1.1.1.2 and listed in Attachment 7.
   a. Due to the highly collaborative nature of the business relationship, the parties mutually agree that each party may be required, or may have to from time-to-time, provide to the other party the use of office space, furniture, equipment, services, miscellaneous office supplies, administrative support, etc. for the mutual benefit of the FCS program. Attachment 7, Office Space and Administrative Support lists the Army installations and minimum requisite support to be provided to Boeing; and further lists the Boeing locations and minimum requisite support to be provided to the Government.
   b. Office space and administrative support will be provided on a no-charge-for-use basis.
   c. Either party may immediately report to the Grants Officer or Boeing Contracts Manager, as the case may be, regarding inadequacies, defective space, furniture, equipment, etc., or non-availability of support, together with a recommended plan for obtaining the required support, listed in Attachment 7, Office Space and Administrative Support. The parties, via the Grants Officer and Boeing Contracts Manager, mutually agree to resolve any support issues as expeditiously as possible.

2. The following paragraph applies to requests for long-term accommodations of Government personnel at Boeings' and its subcontractors' facilities.

The number of accommodations is baselined as shown in Attachment 7, and any requirements above that baseline will require business case analysis and PCCB/CCB and Grants Officer prior approval. Approved requests will entitle Boeing to a program generated adjustment. Any reduction below the baseline may entitle the Government to a downward adjustment. Office space and administrative support will be provided in accordance with Boeing and their subcontractors' disclosure statements.

J. Work Breakdown Structure (WBS)

The agreed to WBS is the primary structure by which work is organized and managed, and costs tracked under this Agreement. The WBS will be updated to reflect jointly agreed-to changes, additions or deletions due to subcontract and Complementary Program definition and changes in scope of work due to subsequent Agreement modifications. The baseline WBS for the Agreement is the SDD WBS Structure, document D786-10158-1, released Revision B, dated 18 Nov 03, and the SDD WBS Dictionary, D786-10157-1, released Revision B, dated 18 Nov 03.

K. Class IV Unmanned Aerial Vehicle

1. Boeing is subcontracting the FCS Class IV UAV effort to Northup Grumman (NG). The subcontract has not been awarded yet. The projected value is $130.8 million. This value was used for the purpose of definitizing this Agreement. The Class IV UAV effort under the NG subcontract consists of two key elements: (1) Design and Development and (2) Integration. In addition to this pending subcontract, NG is currently on contract with the US Navy for similar Design and Development effort for the Navy's version of a Class IV UAV. To enhance joint interoperability and reduce costs, the Army and Navy may establish a joint program.

2. In the event the joint program described in Paragraph K.1 occurs, the Grants Officer will request a proposal to decrease the effort associated with Class IV UAV.

ARTICLE V: IDENTIFICATION OF WORK TO BE PERFORMED

1. The primary Agreement Contract Line Item Numbers (CLINs) are CLIN 0001 and CLIN 0002. These CLINs are summarized below and details of the CLINs and their sub-CLINs are contained in Attachments 13 (CLIN 0001) and 14 (CLIN 0002). New CLINs (e.g., CLIN 2001) issued under the authority of CLIN 0002 are also detailed in Attachment 14.

2. CLIN 0001: Performance of the FCS Increment I SDD phase as described in this Agreement.

3. CLIN 0002
   a. CLIN 0002 is not subject to Article VII, Fee. The intent of CLIN 0002 is to cover work that is not, or could not have been, reasonably anticipated to be covered under CLIN 0001, to include any effort for spiraling technology into the current force. Grants Officer authorized Work Directives will originate from within the Government. If the Government decides not to pursue that work, the decision will have no impact on Boeing's performance under CLIN 0001. All work performed under this CLIN will be initiated, as determined by the Grants Officer, as work that is only feasibly accomplished by Boeing, by virtue of the work it is performing under CLIN 0001. The work performed will not be feasible to compete and must be appropriate to be performed under a Section 845 Other Transaction Agreement.
   b. Grants Officer-issued Work Directives will specify the (1) particular tasks, (2) deliverables, (3) schedule, (4) the funds available for the work, and may include (5) the number of man-hours reimbursable. All effort expended under a Work Directive will be reimbursed on a Cost-Plus-Fixed-Fee (CPFF) basis. The Limitation of Funds clause at Article VI, Obligation and Incremental Funding Schedule, subparagraph D. applies.
      (1) Upon receipt of a Grants Officer-issued Work Directive, Boeing will submit a proposal to perform the work described in the Work Directive to the Grants Officer within 20 business days from after the effective date of effort under the Work Directive. Boeing will begin effort under the Work Directive as directed by the Grants Officer as soon as the Agreement is modified to provide the specific tasks, value, schedule and funding for the Work Directive.
      (2) In the event work under a Grants Officer-issued Work Directive must begin in an expeditious manner (e.g., "hot start") a single composite hourly rate, derived from a single location chosen by Boeing in order to develop the composite hourly rate, consisting of $148.00/hour estimated cost and $22.00/hour of fixed fee for a total of $170.00/hour. The composite hourly rate will be derived from a broad mix of labor categories (e.g., engineering, logistics, administrative, managerial, subcontracted, etc.) established in advance for the purpose of initiating such "hot start" effort under a Work Directive, and may be updated annually. When a Work Directive is based on a composite rate, Boeing will submit a proposal to adjust the amount of funds for the Work Directive based on a proposed estimate of cost and fixed fee to be negotiated. Boeing is required to submit the proposal to the Grants Officer within 20 business days after the effective date of the Work Directive. Boeing is encouraged to build the proposals using Alpha teaming with the Government, including DCMA and DCAA as appropriate.

ARTICLE VI: OBLIGATION AND INCREMENTAL FUNDING SCHEDULE

A. Obligation

1. The Government's liability to make payments to Boeing is limited to only those funds obligated under this Agreement or by modification to the Agreement. The Grants Officer may obligate funds to the Agreement incrementally. In no case shall the Government's financial liability exceed the amount obligated under this Agreement. The Government funding amount is that amount indicated in the "Total Government Funds Obligated to Date:" block on the title page of this Agreement and subsequent modifications, and is also cited in Attachment 12 to the Agreement.

2. The total negotiated amount for CLIN 0001 is $14,780,000,000.00.

B. Incremental Funding

1. The Government will provide funds under this Agreement on an incremental basis pursuant to the "Limitation of Funds" clause below, and as described in this section B., hereunder. A portion of the total estimated Agreement amount shall be obligated on the date of award.

2. By signing this Agreement, the Government undertakes to plan for, and provide available funding when and as required, per the schedules below. It is estimated that the incremental amounts are sufficient for the performance of work in each of the cited periods. Boeing shall so plan and execute the work required by this Agreement so as to expend and/or commit funds compatible with the schedule set forth in subparagraph C. below.

3. The Government intends, but cannot guarantee, that it will fully fund this Agreement.

4. The Government may provide, at its discretion, such funds on an incremental basis within each fiscal year. If the Government cannot provide funding when required, written notice shall be provided to Boeing to that effect, in a timely fashion, along with a projection of the extent of delay, and/or shortfall in funding, as applicable. Boeing, in turn, will notify subcontractors and adjust subcontracts, as appropriate.

C. Funding Schedules

CLIN 0001:

Period	Amount	Cumulative Amount
FY03 - Award through 30 Sep 2003	$131,456,470.00	$131,456,470.00
FY04 - 1 Oct 2003 through 31 Oct 2004	$1,325,900,000.00	$1,457,356,470.00
FY05 - 1 Nov 2004 through 31 Oct 2005	$2,632,900,000.00	$4,090,256,470.00
FY06 - 1 Nov 2005 through 31 Oct 2006	$3,467,600,000.00	$7,557,856,470.00
FY07 - 1 Nov 2006 through 31 Oct 2007	$3,155,600,000.00	$10,713,456,470.00
FY08 - 1 Nov 2007 through 31 Oct 2008	$1,950,500,000.00	$12,663,956,470.00
FY09 - 1 Nov 2008 through 31 Oct 2009	$1,012,800,000.00	$13,676,756,470.00
FY10 - 1 Nov 2009 through 31 Oct 2010	$807,500,000.00	$14,484,256,470.00
FY11 - 1 Nov 2010 through 31 Oct 2011	$295,743,530.00	$14,780,000,000.00
FY12 - 1 Nov 2011 through completion	$-0-	$14,780,000,000.00
Total:	$14,780,000,000.00	$14,780,000,000.00

D. The following FAR/DFARS clauses apply:

52.232-22	Limitation of Funds (4/84)

ARTICLE VII: FEE

The fee arrangement for this Agreement includes a 10% fixed fee, as identified in the CLIN values, and a total of 5% incentive fee, to be earned in accordance with this Article. The Government shall pay Boeing a fixed fee, in accordance with Article IX, "Payment," for performing this Agreement. The incentive fee will target performance of selected program milestones and is distributed as follows:

.50% PDR
.50% CDR
1.75% IPD 1
1.75% IPD 2
.50% SoS Integration & Verification

Each of the fixed incentives for events consists of three sub-events. The fee distribution for sub-events is as follows:

Performance	50%
Cost	20%
Schedule	30%

A. FIXED FEE

1. The Government shall pay Boeing a fixed fee, in accordance with Article IX, "Payment," for performing this Agreement, in the amounts specified below.

(a)	FY 04	$	115,105,739.00
(b)	FY 05	$	233,373,141.00
(c)	FY 06	$	309,183,508.00
(d)	FY 07	$	286,602,609.00
(e)	FY 08	$	157,005,115.00
(f)	FY 09	$	71,839,928.00
(g)	FY10	$	73,339,969.00
(h)	FY11	$	21,104,431.00
TOTAL:		$	1,267,554,440.00

B. PERFORMANCE/COST/SCHEDULE INCENTIVE FEE

1. The FCS SDD Incentive Fee is designed to address the unique partnership between the U.S. Army and Boeing, and acknowledge our shared destiny by providing strategic incentives for Boeing to successfully complete SDD, and move the program into production. The Incentive Fee addresses the complexities of this program, by establishing long-term incentives that allow for the parties to work closely together throughout SDD, while providing Boeing the opportunity to reap the benefits of successful transition into the production phase of the program.

2. The Incentive Fee also affirms the FCS partnership that is essential to program success, by promoting collaborative program execution and metrics, and recognizing the relationship of contributing industrial partners to a successful FCS program.

3. The parties to this Agreement acknowledge that key objectives of the SDD program are to prove out technologies and systems integration, and to move the program forward into production, at an

affordable cost, and on schedule. To this end the Government desires to incentivize Boeing for successfully meeting these objectives within certain performance, cost, and schedule constraints.

4. The parties further acknowledge that FCS is a dynamic program and subject to change, therefore, as a minimum, one year prior to the scheduled completion of an incentive fee event the Government and Boeing will reassess the criteria for each incentive fee event, to determine if it still has merit, requires alteration, or if additional criteria should be added. If the parties cannot reach mutual agreement, this determination will be subject to Article XV, Disputes.

5. Each incentive fee event listed below shall consist of various sub-events covering performance, cost, and schedule. Each sub-event is an all or none arrangement, in that any and all criteria within the sub-event must be met; is independent; and is not contingent upon other incentive fee events or sub-events.

6. All sub-events pertaining to Schedule identified in this clause are based on the dates located in the Acquisition Program Baseline (APB) (Incentive events One and Two), or the Integrated Master Schedule (IMS), (Incentive events Three, Four, and Five). Should an APB date corresponding to Events One and Two be revised, scheduled sub-event dates would change accordingly. Should Events Three, Four, and Five be incorporated into the APB, the APB scheduled dates shall control. If Boeing fails to successfully complete a sub-event in accordance with the related APB or IMS dates, any later change to these dates shall not be applied retroactively for purposes of determining fee for that sub-event.

7. Program Management Performance/Cost/Schedule – Incentive Event One

This first incentive fee event corresponds to measurable criteria associated with System of Systems Preliminary Design Review (PDR). The SoS PDR is conducted to confirm that the design approach (as an integrated composite of people, product, and process solutions) at the SoS level (system, subsystem, and component) satisfies the functional baseline; and demonstrates a particular focus on operation as a System of Systems network via C4ISR architecture within the context of the Unit of Action (UA). Risks are mitigated with closure plans for remaining risks demonstrating required progress. As a result of successful completion of the PDR, the "Design-to" baseline is approved. It will also authorize the project to proceed to detailed design.

The Government shall pay Boeing $31,688,000.00 for meeting Performance criteria, as follows:

a. Performance - PDR Completion. Successful performance for PDR completion is defined as the closeout of the final action(s) resulting from the formal PDR review, as designated in the Integrated Master Plan (IMP).

The Government shall pay Boeing $12,675,000.00 for meeting Cost criteria, as follows:

b. Cost - Management of Life Cycle Cost. The LSI's Cost as an Independent Variable (CAIV) management process, which addresses all phases of the FCS program, i.e., Development, Production and Support, as defined in the FCS LSI Life Cycle Cost Containment (LCCC) plan, CDRL A015, will be demonstrated to be in place and providing tangible results. Successful performance of the criteria will be demonstrated by the following:

(i) An Army approved System Life Cycle Cost Estimate has been developed, per CDRL A016.

(ii) Affordability/cost involvement in the Trade Study process; cost goals/targets considered in all significant design decisions.
(iii) The LSI has demonstrated the Affordability Initiative Process defined in the LCCC plan. This will be accomplished through specific examples of each of the five initiative categories defined in Section 5.0 of the LCC Containment Plan.
(iv) Cost targets will be sub-allocated to the IPTs at the levels defined in the LCCC plan.
(v) The Army will have received at least two quarterly reports from the LSI's CAIV tracking process.

The Government shall pay Boeing $19,013,000.00 for meeting Schedule criteria, as follows:

c. Schedule - The criteria in paragraphs (a) and (b) above are successfully completed within the schedule window defined in the Acquisition Program Baseline (APB).

8. Program Management Performance/Cost/Schedule – Incentive Event Two

This second incentive fee event corresponds to measurable criteria associated with the System of Systems Critical Design Review (CDR). The SoS CDR is conducted to demonstrate that the detailed designs (as an integrated composite of applicable people, product, and process solutions) at the SoS level (system, subsystem, and component) are complete, meet requirements, and the system and subsystem are ready for fabrication, coding, assembly, and integration of qualification units, and demonstrates a particular focus on operation as a System of Systems network via C4ISR architecture within the context of the UA. As a result of successful completion of the SoS CDR, the "Build-to" baseline, production, and verification plans are approved. Approved drawings are released and authorized for fabrication. Completion also authorizes coding of deliverable software and system qualification testing and integration. All open issues should be resolved with closure actions and schedules.

The Government shall pay Boeing $31,688,000 for meeting Performance criteria, as follows:

a. Performance - CDR Completion. Successful performance for CDR completion is defined as the closeout of the final action resulting from the formal CDR review, as designated in the Integrated Master Plan (IMP).

The Government shall pay Boeing $12,675,000.00 for meeting Cost criteria, as follows:

b. Cost - Management of Life Cycle Cost. The LSI's Cost as an Independent Variable (CAIV) management process, which addresses all phases of the FCS program, i.e., Development, Production and Support, as defined in the FCS LSI Life Cycle Cost Containment (LCCC) plan, CDRL A015, will be demonstrated to be in place and providing tangible results. Successful performance of the criteria will be demonstrated by the following:

(i) Affordability/cost involvement in the Trade Study process; cost goals/targets considered in all significant design decisions.
(ii) The LSI has demonstrated the Affordability Initiative Process defined in the LCCC plan. This will be accomplished through specific examples of each of the five initiative categories defined in Section 5.0 of the LCC Containment Plan.

The Government shall pay Boeing $19,013,000.00 for meeting Schedule criteria, as follows:

c. Schedule - The criteria in paragraphs (a) and (b), above are successfully completed within the schedule window defined in the APB.

9. Program Management Performance/Cost/Schedule – Incentive Event Three

This third incentive fee event corresponds to Initial Production Decision One (IPD 1). The objective of IPD 1 is to obtain a favorable production decision for the following FCS platforms: Infantry Carrier Vehicle (ICV), Manned Combat System (MCS), Non-Line of Sight - Cannon (NLOS-C), Command and Control Vehicle (C2V), and Unmanned Aerial Vehicle (UAV). Data from System Development and Demonstration testing will be used to support the IPD1, and assure that the system demonstrates a particular focus on operation as a System of Systems network via C4ISR architecture within the context of the UA.

The Government shall pay Boeing $110,908,000.00 for meeting Performance criteria, as follows:

a. Performance – An FCS design that demonstrates to the IPD1 decision authority that the FCS is ready for the initiation of production.

The Government shall pay Boeing $44,363,000.00 for meeting Cost criteria, as follows:

b. Cost - Management of Life Cycle Cost. The LSI's Cost as an Independent Variable (CAIV) management process, which addresses all phases of the FCS program, i.e., Development, Production and Support, as defined in the FCS LSI Life Cycle Cost Containment (LCCC) plan, CDRL A015, will be demonstrated to be in place and providing tangible results. Successful performance of the criteria will be demonstrated by the following:

(i) Affordability/cost involvement in the Trade Study process; cost goals/targets considered in all significant design decisions.
(ii) The LSI has demonstrated the Affordability Initiative Process defined in the LCCC plan. This will be accomplished through specific examples of each of the five initiative categories defined in Section 5.0 of the LCC Containment Plan.

The Government shall pay Boeing $66,545,000.00 for meeting Schedule criteria, as follows:

c. Schedule - The criteria in paragraphs (a) and (b), above are successfully completed within the schedule window defined in the IMS (See paragraph 6 above).

10. Program Management Performance/Cost/Schedule - Incentive Event Four

This fourth incentive fee event corresponds to measurable criteria associated with Initial Production Decision Two (IPD2). The objective of IPD2 is to obtain a favorable production decision for the following FCS platforms: Reconnaissance and Surveillance Vehicle (RSV), Non-Line of Sight - Mortar (NLOS-M), Medical Vehicle (MV) and all Unmanned Ground Vehicles. Data from System Development and Demonstration testing will be used to support the IPD2, and assure that the system demonstrates a particular focus on operation as a System of Systems network via C4ISR architecture within the context of the UA.

The Government shall pay Boeing $110,908,000.00 for meeting Performance criteria, as follows:

a. Performance – An FCS design that demonstrates to the IPD 2 decision authority that the FCS is ready for the initiation of production.

The Government shall pay Boeing $44,363,000.00 for meeting Cost criteria, as follows:

b.(1) Cost - Management of Life Cycle Cost. The LSI's Cost as an Independent Variable (CAIV) management process, which addresses all phases of the FCS program, i.e., Development, Production and Support, as defined in the FCS LSI Life Cycle Cost Containment (LCCC) plan, CDRL A015, will be demonstrated to be in place and providing tangible results. Successful performance of the criteria will be demonstrated by the following:

(i) Affordability/cost involvement in the Trade Study process; cost goals/targets considered in all significant design decisions.
(ii) The LSI has demonstrated the Affordability Initiative Process defined in the LCCC plan. This will be accomplished through specific examples of each of the five initiative categories defined in Section 5.0 of the LCC Containment Plan.

b.(2) CAIV criteria. The total Future Combat Systems (less Non-Line of Sight Launch System) recurring production costs that are incurred in the support of IOC are at or below the Army estimated position (the goal, as stated in the LCCC plan). This goal will be updated at major milestones to include PDR and CDR, with input from Boeing). The assumptions, definition of recurring production cost, and process for review and possible updates related to this goal are contained within the FCS Life Cycle Cost Containment Plan, CDRL A015. Successful achievement of this goal will be determined by extracting and summing the recurring production costs from the production contracts signed after both IPDs are complete and then comparing this total to the above goal.

The Government shall pay Boeing $66,545,000.00 for meeting Schedule criteria, as follows:

c. Schedule - The criteria in paragraphs (a) and (b) are successfully completed within the schedule window defined in the IMS (See paragraph 6 above).

11. Program Management Performance/Cost/Schedule - Incentive Event Five

This fifth incentive fee event corresponds to measurable criteria associated with the System of Systems Integration and Verification phase 5.1 and System of Systems Integration and Verification complete, with a particular focus on operation as a System of Systems network via C4ISR architecture within the context of the UA.

The Government shall pay Boeing $31,688,000.00 for meeting Performance criteria, as follows:

a. Performance - System of Systems Integration and Verification phase 5.1 and System of Systems Integration and Verification complete. Successful completion of this criterion is demonstrated by meeting the significant accomplishments designated in the IMP.

The Government shall pay Boeing $12,675,000.00 for meeting Cost criteria, as follows:

b.(1) Cost - Management of Life Cycle Cost. The LSI's Cost as an Independent Variable (CAIV) management process, which addresses all phases of the FCS program, i.e., Development, Production and Support, as defined in the FCS LSI Life Cycle Cost Containment (LCCC) plan, CDRL A015, will be demonstrated to be in place and providing tangible results. Successful performance of the criteria will be demonstrated by the following:

(i) Affordability/cost involvement in the Trade Study process; cost goals/targets considered in all significant design decisions.

(ii) The LSI has demonstrated the Affordability Initiative Process defined in the LCCC plan. This will be accomplished through specific examples of each of the five initiative categories defined Section 5.0 of the LCC Containment Plan.

b.(2) CAIV criteria.

The total Future Combat Systems (less Non-Line of Sight, Launch System) recurring production costs that are incurred in the support of FOC are at or below the Army estimated position. This goal will be updated at major milestones to include PDR and CDR, with input from Boeing. Successful achievement will be determined by extracting and summing the recurring production costs from the first three production contracts signed after both IPDs and LUT 3 are complete, and then comparing this total to the above goal.

Additionally, the total Future Combat Systems (less Non-Line of Sight, Launch System) Average Unit Procurement Cost (AUPC) for the 15 UAs of Increment I must be at or below the Army estimate identified in accordance with the Army Cost Analysis Manual, which will be reviewed at major milestones to include PDR and CDR, with input from Boeing. Successful achievement will be determined by comparing the government's AUPC estimate, as of award of the third production contract, to the Army AUPC estimate identified in accordance with the Army Cost Analysis Manual.

The assumptions, definition of recurring production cost and the AUPC, and a process for review and possible updates are contained within the FCS Life Cycle Cost Containment Plan, CDRL A015.

The Government shall pay Boeing $19,013,000.00 for meeting Schedule criteria, as follows:

c. Schedule - The criteria in paragraph (a) and (b), above are successfully within the schedule window defined in the IMS (See paragraph 6 above).

12. Within thirty (30) days of successful completion of an incentive event, the Government will issue an Agreement modification authorizing payment of the incentive fee. Boeing may submit a voucher for the incentive fee immediately upon receipt of this modification from the Grants Officer authorizing payment.

13. In the event an incentive fee is not earned, the fee amount is not subject to carry over to following incentive periods. Any unearned fee may be used in any way that the Government determines is in its best interest.

14. During the performance of this Agreement, the parties may mutually agree to reallocate any incentive fee associated with future events. This reallocation may be made to acquire additional performance under this Agreement, or to acquire FCS effort under another contractual instrument, if the funding is appropriate for the effort involved.

ARTICLE VIII: MAKE/BUY, COMPETITION AND DIRECTED SUBCONTRACTS

A. Make/Buy

1. The Government reserves the right to participate in all program decisions, to include Make/Buy, competitive selection decisions, and if considered in the program's interest to direct placement of subcontracts. Any decision by the Government that results in an increase to Boeing's cost or an impact to schedule for performance, will entitle Boeing to a Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F) in accordance with Article XIII, Modifications. While the Government will generally not interfere with Boeing's internal processes, the Government reserves the right to disapprove any Make/Buy decision under Boeing's processes regarding systems, subsystems or components. Government approval includes, but is not limited to, all tactical and/or prototype FCS hardware and software at all levels except modeling and simulation.

2. The Army Acquisition Executive (AAE), or his designee, shall approve all Make/Buy decisions for FCS related hardware or software at the system or subsystem level.

3. The PM, FCS, or designee, shall have approval of the Make/Buy decisions for all lower level items. However, lower level decisions made by the Boeing IPT Leader, if agreed to by the IPT Co-leader, will require no additional approval. If agreement is not obtained at the IPT level, then the process at Article IV, subparagraph G. shall apply.

4. Procurement of the Systems of System – Common Operating Environment (SoSCOE) software is subject to the following process:

   Boeing has been granted approval by the Army Acquisition Executive to manage and control the SoSCOE, with the following conditions:
   a. SoSCOE shall be developed as Open System Architecture.
   b. Boeing shall not introduce any proprietary components unless explicitly approved by the Government. Each component will be reviewed within the SoSCOE sub-IPT and, if necessary, to introduce a proprietary component, then Government concurrence is required to proceed.
   c. The Government shall have approval of all Make/Buy components of SoSCOE. The process to achieve that approval is defined in the process flow diagram titled, "SoSCOE Make/Buy Process" posted on ACE and incorporated by reference.
   d. Boeing shall develop and submit for Government approval critical interface definitions.
   e. Boeing shall pursue aggressive risk management and mitigation for SoSCOE.
   f. Boeing will lead a working group or sub-IPT consisting of itself, industrial partners, and the Government in defining the following:
      (1) The SoSCOE Architecture and Component Partitioning;
      (2) SoSCOE standards and ICDs;
      (3) SoSCOE API specifications and compliance tests;
      (4) Managing the component competition, as required;
      (5) Component acceptance testing and SoSCOE integration;
      (6) Critical interface definitions;
      (7) This group will be chartered and be an ongoing effort throughout this phase.

B. Competition

1. Boeing is authorized to use best commercial practices under this Agreement. If in Boeing's judgment FCS program goals may be jeopardized, then relief of flow down provisions shall be identified, in writing, to the Grants Officer via the Boeing Contracts Manager. The Grants Officer shall approve,

or disapprove, any relief from normal flow down requirements within 10 business days from receipt of request. If the Grants Officer does not either approve, or disapprove, Boeing's request within ten (10) business days, Boeing's request shall be deemed to have been approved.

2. During performance under the CTD Agreement, MDA972-02-9-0005, Boeing developed, and delivered to the Government, a best value competitive process to select major systems and subsystems, to include access to all source selection data, which the Government approved under the CTD Agreement. The Government and Boeing mutually agree that Boeing will follow the approved competitive process plan during performance of the SDD Agreement. Boeing shall have the right to subcontract for engineering and consulting services that assist it in its role as LSI, without prior Government approval.

C. Directed Subcontracts

In the event the Government disagrees with a selection made by Boeing as the result of a competition, the Government may direct the subcontract award. Also, if existing technologies, systems and major subsystems already in development, by or for the Government, represent in the Government's view the best approach to achieving capability in the Operational Requirements Document (ORD), the Grants Officer may direct their use and Boeing will not be required to compete that item. Any decision by the Government that requires Boeing to use a directed subcontractor that results in an increase to Boeing's cost or an impact to schedule for performance, will entitle Boeing to a Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) in accordance with Article XIII, Modifications. Directing a subcontract may only be authorized by the Grants Officer. Attachment 9, Directed Subcontracts, lists those directed subcontracts.

D. Competitive Subcontract Safeguards

Boeing shall establish written procedures to assure that Boeing has no unfair competitive advantage in conducting FCS subcontract competitions. Boeing shall require all subcontractors involved in the source selection for competitive FCS subcontracts whose circumstances might create an actual or perceived unfair competitive advantage to incorporate appropriate protection procedures.

E. The following FAR/DFARS clauses apply:

52.244-6	Subcontracts for Commercial Items (4/03)

ARTICLE IX: PAYMENT AND PAYMENT RELATED ITEMS

A. Payment

(Paragraph A.1 was applicable only to the definitization period from 30 May 03 through 26 Nov 03. This language is retained to document the historic record.)

1. Subsequent to definitization, scheduled for 180 days after award, the overall reimbursement structure of this Agreement will be Cost-Plus-Award-Fee (CPAF), for CLIN 0001, and Cost-Plus-Fixed-Fee (CPFF), for CLIN 0002. Prior to definitization, CLIN 0001 provides for cost plus base and incentive fee. The incentive fee for CLIN 0001 will be paid provisionally as described in Article I, B. In consideration for performing Agreement activities, Boeing shall voucher and receive Government payments, subject to the "Limitation of Funds" clause (e.g., Boeing must notify the Government when costs expected to be incurred in the next 60 days, when added to all previously incurred costs, will exceed 75% of the total amount so far allotted to the Agreement by the Government), for all allowable incurred costs, in accordance with this Article and, subsequent to definitization, Article VII, Fee, as applicable.

2. The overall Agreement reimbursement structure after definitization will be Cost-Plus-Fixed/Incentive-Fee (CPFF/IF), for CLIN 0001, and Cost-Plus-Fixed-Fee (CPFF), for CLIN 0002 and its related CLINs, (e.g. 2001). In consideration for performing Agreement activities, Boeing shall submit vouchers and receive Government payments, subject to the "Limitation of Funds" clause (e.g., Boeing must notify the Government when costs expected to be incurred in the next 60 days, when added to all previously incurred costs, will exceed 75% of the total amount so far allotted to the Agreement by the Government), for all allowable incurred costs, in accordance with this Article and, subsequent to definitization, Article VII, Fee, as applicable.

3. Boeing shall submit a consolidated voucher for all applicable CLINs (e.g.; 0001, 2001, 2002, etc.) within a payment period.

4. The DCMA Administrative Agreements Officer (AAO) will ensure DFAS payments for each voucher under CLIN 0001, CLIN 0002 and its related CLINs (e.g., 2001) are correctly disbursed from the appropriate ACRN account.

5. Boeing shall use the Standard Form 1034, public voucher, for purposes of reimbursement.

B. CLIN 0001

(Paragraphs B.1 and B.2 were applicable only to the definitization period from 30 May 03 through 26 Nov 03. This language is retained to document the historic record.)

1. For CLIN 0001, Boeing shall voucher at Cost and applicable Base Fee. Calculation of Base Fee will be based upon the ratio of cumulative costs incurred, to date, to the total estimated costs.

2. For CLIN 0001, Boeing shall voucher the Incentive Fee on a pro-rata basis over the 180 days in accordance with Article I, B. At the completion of an Incentive Fee element, Boeing is authorized to voucher the balance of the fee associated with that element not previously vouchered.

3. Post definitization, Cost and applicable Fixed Fee and earned Incentive Fee shall be invoiced as a consolidated voucher. The voucher shall discretely identify Cost and applicable Fixed Fee and Incentive Fee. Calculation of Fixed Fee will be based upon the ratio of cumulative costs incurred, to

date, to the total estimated costs. Calculation of Incentive Fee shall be as described in Article VII, Fee. Calculation of Fee amounts shall be explained within the voucher.

4. Boeing vouchers will identify sub-CLIN and the appropriate ACRN using an allocation methodology of applying oldest money first.

C. CLIN 0002

1. For CLIN 0002 and its related CLINs (e.g., 2001, 2002, etc.), Boeing shall submit a consolidated voucher at Cost and applicable Fixed Fee. Calculation of Fixed Fee will be based upon the ratio of cumulative costs incurred, to date, to the total estimated costs. The voucher shall discretely identify Cost and applicable Fixed Fee.

2. Boeing vouchers will identify CLIN and the appropriate ACRN. The Government agrees to assist Boeing in identifying costs, by appropriate ACRN, by providing the requisite information with each Work Directive. Requisite information to be provided by Work Directive includes at a minimum (1) Work Directive Number, (2) corresponding CLIN and (3) obligated funding amount.

D. Voucher Content

1. For any given voucher, the Costs claimed for reimbursement shall be consistent with the accounting standards cited in Article X, Financial Management, subparagraph B.

2. The following information will be included on each voucher:
   a. Boeing name and address
   b. Voucher date, number and time period covered by the voucher
   c. Agreement number
   d. Amount claimed (*see Note for (d)*
   e. Taxpayer Identification Number, if required
   f. EFT banking information, if required
   g. Payment Office
   h. CLIN and/or sub-CLIN as appropriate
   i. 2-digit ACRN

Note for (d): Supporting cost details to substantiate the amount claimed, if not provided within the voucher itself, must be traceable to the voucher and available upon request to authorized Government representatives (Grants Officer, DCAA, DCMA, etc.).

3. The information above for each voucher is provided so that the Government Payment Office, Defense Finance and Accounting Service (DFAS) will not have to independently assign or determine the CLIN/sub-CLIN and ACRN from which funds will be disbursed.

E. Payment Process

1. Boeing may submit interim vouchers biweekly to DFAS identified below. Electronic voucher submittal is encouraged, provided that the format and transmission method are mutually acceptable, and otherwise consistent with this Article.

2. DFAS shall pay vouchers as submitted by Boeing.

3. Payment will be made by the following DFAS office within fourteen (14) calendar days following receipt of a proper payment request:

   Defense Finance and Accounting Service (DFAS) -- Columbus Center (HQ0339)
   DFAS-CO/West Entitlement Operations
   P.O. Box 182381
   Columbus, OH 43218-2381

4. Boeing will provide a copy of all vouchers to both the DCMA AAO and the Grants Officer as routine distribution.

5. Final (completion-type) vouchers for any discretely priced CLIN or sub-CLIN shall be submitted to DCMA for review, approval, and forwarding to the payment office.

F. Accounting/Appropriation Data for Payment Office

1. To ease financial administration and in order to provide a single reference location, all accounting and appropriation data, including Accounting Classification Reference Numbers (ACRN), Accounting/Appropriation Data for Payment Office, etc., is located in Attachment 12, Accounting/Appropriation Data for Payment Office.

2. Attachment 12 also contains cumulative totals of the financial obligations made under, and cumulative funds allotted to, this Agreement.

G. Payment-Related Clauses

1. Interest: All amounts that become payable by Boeing to the Government under this Agreement shall bear simple interest from the date due until paid, unless paid within thirty (30) days of becoming due. The interest rate shall be the interest rate established by the Secretary of the Treasury (as provided in 41 USC 611), which is applicable to the period in which the amount becomes due, and then at the rate applicable for each six (6)-month period as fixed by the Secretary until the amount is paid. Interest charges may be reduced following the procedures in FAR 32.614-2.

2. Payments by Electronic Funds Transfer – Central Contractor Registration (CCR): All payments by the Government under this Agreement shall be made by electronic funds transfer (EFT) using Boeing's EFT information contained within the CCR database. If Boeing's EFT information is incorrect, then the Government need not make payment to Boeing until correct EFT information is entered into the CCR database; and any voucher request under this Agreement shall be deemed not to be a proper voucher for the purpose of prompt payment. If the Government makes an uncompleted or erroneous transfer because it uses Boeing's EFT information incorrectly, the Government is responsible for making a correct payment, including any prompt payment penalty due, and recovering any erroneously directed funds; if Boeing is responsible for an uncompleted or erroneous transfer because Boeing's EFT information was incorrect (or if Boeing revised the information within thirty (30) days of Government release of the EFT payment transaction instruction to the Federal Reserve System) and the funds are no longer under the control of the Government payment office, Boeing is responsible for recovery of any erroneously directed funds. If the funds remain under the control of the Government payment office, the Government shall not make payment until such time as Boeing's EFT information is corrected within the CCR database. Government payments shall be deemed to have been made in a timely manner in accordance with the prompt payment terms of the Agreement if, in the EFT payment transaction instruction to the Federal Reserve System, the date specified for payment is on or before the prompt payment due date, provided the specified payment date is a valid

date under the rules of the Federal Reserve System. Boeing may assign the proceeds of this Agreement provided Boeing requires as a condition of any such assignment that the assignee register in the CCR database and be paid by EFT in accordance with this Agreement. The Government is not liable for errors resulting from changes to EFT information made by Boeing's financial agent. The Government shall provide Boeing the available payment information suitable for transmission as of the date of release of the EFT instruction to the Federal Reserve System.

3. Required Central Contractor Registration: Boeing is responsible for the accuracy and completeness of the data within the Central Contractor Registration (CCR) database, and for any liability resulting from the Government's reliance on inaccurate or incomplete data. Boeing is required to confirm on an annual basis that its information in the CCR database is accurate and complete.

4. Certification of Final Indirect Costs: (a) For the purposes of this certificate, Boeing and its subcontractors, will submit the standard FAR certificate of final indirect costs to the cognizant Government activity. If a subcontractor is not otherwise required to submit the standard FAR certificate for final indirect costs, then it shall submit the certificate below; (b) Subcontractors (as applicable) shall -- (1) certify, in below format, any proposal to establish or modify final indirect cost rates; and (2) have the certificate signed by an individual of the subcontractor's organization at a level no lower than a vice president or chief financial officer of the business segment of the subcontractor that submits the proposal. (c) Failure to execute and submit the certification described may result in final indirect cost rates being unilaterally established by the Grants Officer or Administrative Agreements Officer. The Grants Officer may request a copy of Boeing's, or its subcontractors, Certificate of Final Indirect Costs from the cognizant Government agency assigned.

Certificate of Final Indirect Costs

This is to certify that I have reviewed this proposal to establish final indirect cost rates and to the best of my knowledge and belief, all costs included in this proposal (identify proposal and date) to establish final indirect cost rates for (identify period covered by rate) are allowable in accordance with the cost principles of the Federal Acquisition Regulation (FAR) and its supplements, or in the case of a non-traditional defense contractor in accordance with Generally Accepted Accounting Principles (GAAP), applicable to the contracts to which the final indirect cost rates apply.

Firm: _____
Signature: _____
Name of Certifying Official: _____
Title: _____
Date of Execution: _____

5. Assignment of Claims: Boeing may assign its right to be paid amounts due or to become due as a result of the performance of this contract to a bank, trust company, or other financing institution, upon receipt of approval from the Grants Officer, which will not be unreasonably withheld.

I. The following FAR/DFARS clauses apply:

52.216-7	Allowable Cost and Payment (12/02) Tailoring: In paragraph (a)(1), the "authorized representative" for receipt of vouchers will be designated by the Grants Officer at the Start of Work meeting. In paragraph (a)(3), the fill-in is the "14th" day. Also, paragraphs (a)(3) and (g)

	notwithstanding, in the event electronic direct billing authorization is withdrawn by the Defense Contract Audit Agency (DCAA), any Government pre-payment audit will be performed by the cognizant Government agency of a specific Boeing payment request within five (5) business days following their receipt of the payment request, unless the Grants Officer authorizes an extension. The Government reserves the right to perform post-payment audits of Boeing vouchers at its discretion. In addition, the paragraphs (d)(4) and (d)(6) references to the Disputes clause, refer to Article XV: Disputes, under this Agreement. The Government intends that audit or other management oversight activities not interrupt or delay payment. The normal approach will be to allow payments to proceed while collaboratively working together to determine and correct any issue. If in the event that a systemic or process issue is considered to be of a magnitude that it would create the unacceptable situation of providing advance payments, then the Grants Officer may, at his unilateral discretion, delay or reduce payments until the issue is corrected.
52.216-8	Fixed Fee (3/97) Tailoring: This clause applies to CLIN 0001, 0002 and its related CLINs.
52.232-25	Prompt Payment (2/02) Alt 1 (2/02) Tailoring: Paragraphs a.B.ii.2.A to D is not applicable to this Agreement.

ARTICLE X: FINANCIAL MANAGEMENT

A. Government Audit of Records

1. As used in this Article, "records" include books, documents, accounting procedures and practices, and other data, regardless of the type and regardless of whether such items are in written form, in the form of computer data, or in any other form.

2. Boeing's relevant financial records are subject to examination or audit on behalf of TACOM by the Government for a period not to exceed three (3) years after final payment has been made under this Agreement. Boeing shall provide the Grants Officer, or Government designee, direct access to sufficient records and information to ensure full accountability for all funds paid, or proposed to be paid to it, under this Agreement. The Grants Officer will require annual audits of Boeing and its cost-reimbursement based subcontracts. A final audit will be conducted at the end of the SDD program; the final audit shall not duplicate or re-examine the results of prior year audits except to verify that any outstanding issues or newly determined issues have been resolved. Such audit, examination, or access shall be performed during business hours on business days, upon prior written notice, and shall be subject to the security requirements of the audited party. This article shall not be construed to require any party, or entity, or subordinate element of such party or entity that participates in the performance of this Agreement, to create or maintain any record that is not otherwise maintained in the ordinary course of business or pursuant to a provision of law.

3. The Comptroller General shall have access to the records described in this Article until three (3) years after the date of final payment is made by the Government under this Agreement. Boeing shall flow down this provision as indicated at subparagraph C. below. The Comptroller General, at its discretion, shall have access to and the right to examine records of any party to the Agreement or any entity that participates in the performance of this Agreement that directly pertain to, and involve transactions relating to, the Agreement. Excepted from this requirement is any party to this Agreement or any entity that participates in the performance of the Agreement, or any subordinate element of such party or entity, that has not entered into any other agreement (contract, grant, cooperative agreement, or "other transaction") that provides for audit access by a Government entity in the year prior to the date of the Agreement. The only records of a party, other entity, or subordinate element referred to in this paragraph that the Comptroller General may examine are records of the same type as the records the Government has had the right to examine under the audit clauses of the previous agreements that were entered into by that particular party, entity, or subordinate element. This clause shall not be construed to require any party, or entity, or subordinate element of such party or entity that participates in the performance of this Agreement, to create or maintain any record that is not otherwise maintained in the ordinary course of business or pursuant to a provision of law.

B. Accounting Practices

1. Prior to the submission of vouchers to the Government, Boeing shall have and maintain an accounting system: which complies with Generally Accepted Accounting Principles (GAAP) or Cost Accounting Standards (CAS), whichever is applicable to Boeing under this Agreement; and which also complies with the requirements of this Agreement; and which further ensures that appropriate arrangements have been made for receiving, distributing and accounting for Federal funds.
   a. The contract cost principles in 48 CFR 31 and 48 CFR 231 (in the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS) shall apply to determine the allowability of costs charged to the Government.

b. Further, the allowability of any expenditures incurred in the performance of any subcontract award will be subject to those Federal cost principles or accounting standards applicable to the particular type of organization concerned (e.g., full-, modified-, or no CAS coverage).

2. Boeing agrees to an adjustment of the Agreement cost allowance, as appropriate, if Boeing or a subcontractor fails to comply with this Article, subparagraph B.1, or fails to follow an applicable cost accounting practice consistently and such failure results in any increased costs paid by the United States Government. Such adjustment shall provide for no more than the recovery of the increased costs to the United States, together with the interest rate established by the Secretary of the Treasury as provided in 41 USC 611 for such period, from the time the payment by the Government was made to the time the adjustment is effected.

3. Within thirty (30) calendar days after award of each CAS-covered subcontract at the first and second tiers only, Boeing will submit the following information to Boeing's cognizant AAO, copy furnished to the Grants Officer, for transmittal to the subcontractor's cognizant Contract Administration Office:

(a) Subcontract number;
(b) Subcontractor's name and address;
(c) Dollar amount and date of award;
(d) Cognizant IPT;*
(e) Name of Contractor making the award.

* Requirement is effective from 26 Nov 03.

C. Lower Tier Agreements

Boeing shall include in all negotiated subcontracts which Boeing enters into the substance of this Article, except as described in paragraph B.3 above, and shall require such inclusion in all other subcontracts, at any tier, including the obligation to comply with all Federal cost principles, if applicable, in effect on the subcontractor's award date.

D. The following FAR/DFARS clauses apply:

52.215-15	Pension Adjustments and Asset Reversions (12/98)
52.215-18	Revision or Adjustment of Plans for Postretirement Benefits (PRB) Other than Pensions (10/97)

ARTICLE XI: SECURITY

A. Program Security

This program shall be provided protection as required by the appropriate Security requirements required by DD Form 254, Contract Security Classification Specification, (see Attachment 3). The highest level of classification involved in the performance of this SDD Agreement is Top Secret. It is the Government's position that the highest security classification of any deliverable as a result of this Agreement is Top Secret. This Agreement document is unclassified.

B. Protection and Disclosure of Information – Public Release

1. Except for FCS Program information previously approved for public release by the Government under the FCS Program, Boeing shall not release any information, outside of Boeing and its subcontractors, to include Associate Contractors, at any tier, regarding the work performed under this Agreement without first obtaining approval for Public Release as identified in the DD254. All such requests will first go to the Grants Officer who, after appropriate review, will make a determination of the suitability to disseminate program information publicly. Subcontractors and Associate Contractors shall submit such requests through Boeing.

2. Boeing will use computer and communications equipment that meets the requirements identified in the DD254 or Program Security Guide.

C. Lower Tier Agreements

Boeing shall include subparagraph B. above in all subcontracts which Boeing enters and shall require such inclusion in all other subcontracts, regardless of tier.

D. Shipment of Controlled Materials

Unless otherwise directed by the Grants Officer, Boeing shall coordinate and send advance notice of shipment to the consignee transportation officer for all shipments of classified material, protected sensitive, and protected controlled material; explosives and poisons, classes A and B; radioactive materials requiring the use of a III bar label; or when a truckload/carload shipment of supplies weighing 20,000 pounds or more, or a shipment of less weight that occupies the full visible capacity of a railway car or motor vehicle, is given to any carrier for transportation to a domestic destination (other than a port for export).

E. The following FAR/DFARS clauses apply:

252.204-7005	Oral Attestation of Security Responsibilities (11/01)

ARTICLE XII: GOVERNMENT-FURNISHED EQUIPMENT, PROPERTY, INFORMATION, FACILITIES, AND SERVICES

A. General

1. The Government-furnished equipment, property, information, facilities and services collectively referred to as GFX are identified in Attachment 4 to this Agreement. The items that the Government intends to provide from Complementary Programs are listed in Attachment 4a, and become GFX upon execution of the individual MOAs. The items that the Government intends to provide from Technology Transfer Agreements (TTAs) are listed in Attachment 4b, and become GFX upon execution of the individual TTAs. The parties agree that all GFX provided under this Agreement shall be provided rent free for the period of performance specified. All costs for shipping GFX are the responsibility of Boeing and may be charged to the Agreement per Boeings' disclosed practices.

2. The Government's responsibility for providing GFX is limited to $681 million. The Government will use these funds to provide ammunition, unique instrumentation, infrastructure, ATEC Test Integration Network (ATIN), test engineering support, and test range support, as outlined in Attachment 4, subject to the above funding limitation. Should GFX expenses exceed $681 million, the parties will use the CAIV trade process to address any increased GFX requirements. Any items proposed for deletion from the GFX Attachments as a result of the Government limitation of responsibility shall be reviewed at appropriate CCB level to verify the need for the item. For any request for relief submitted under FAR 52.245-5 (a)(4), Boeing must demonstrate that the GFX in question is (1) not suitable for its original intended purpose, and (2) the GFX is critical to FCS; "critical" being defined as necessary to ensure that program performance and schedule goals are achieved.

B. GFX Added During SDD Performance

The parties mutually agree to work together to identify and obtain, in a timely fashion, GFX requirements identified after Agreement award. The parties further agree to use the process described in general terms below to obtain additional GFX requirements for the benefit of the FCS program:

a. Identify requirements on GFX request form (available in ACE)
b. Validate requirement via IPT Leader and Co-leader signature
c. Obtain cognizant Government owner concurrence to provide items*
d. Forward request to the Grants Officer for review/approval/notification to Boeing and periodic bilateral incorporation into the Agreement

* Where Boeing can identify the Government official with responsibility for the desired GFX, Boeing may request rent-free use or transfer of accountability for such GFX directly from the responsible official. In this instance, Boeing will furnish the Grants Officer a copy of any authorization granted. In those instances where Boeing cannot identify the responsible Government official, or cannot obtain rent-free use, Boeing may submit the request to the Grants Officer. The Grants Officer will then determine the Government official responsible for the desired GFX and request rent-free use on Boeing's behalf, or arrange to provide consideration to the GFX owner.

C. MOAs Incorporated by Reference

This Agreement incorporates by reference any and all MOAs governing release of Software listed on Attachment 4 by a Government agency and concurred in by Boeing that are executed by the PEO, GCS and the Government agency for use in the FCS Program.

D. The following FAR/DFARS clauses apply:

52.245-5	Government Property (Cost-Reimbursement, Time-and-Material or Labor-Hour Contracts) (1/86)--(DoD - Deviation, per DAR Tracking Number 99-O0008, 13 July 99, until FAR is revised)(6/03) Tailoring: (1) Property records will be accessible via the ACE; annual reporting of DOD accountable property will be submitted on DD Form 1662. (2) Paragraph (h), change from "the Changes clause" to "Article XIII: Modifications of this Agreement."

ARTICLE XIII: MODIFICATIONS

A. General

1. At any time during the term of the Agreement progress or results may indicate that a change in the Agreement would be beneficial to program objectives. Recommendations for modifications, including justifications to support any changes to the Agreement, will be documented in a letter and submitted by Boeing to the Grants Officer Representative with a copy to the Grants Officer. This documentation letter will detail the (1) technical, (2) chronological, and (3) financial impact of the proposed modification. All of the available Agreement funds will be obligated to the Agreement. Therefore, any requested modification must also identify what work is being modified, reduced or deleted to accommodate the proposed change. Any subsequent modification is subject to mutual agreement, in writing, signed by authorized representatives of both parties. The Government is not obligated to pay for any proposed change until the Agreement is formally revised by the Grants Officer and the Boeing Contracts Manager and made part of this Agreement. Boeing is not obligated to initiate work for any proposed change until such time as a bilateral modification is executed by representatives of both parties. The Government will reimburse Boeing for proposal preparation costs for proposed changes resulting from either Program Generated Adjustments as defined in Article I or CLIN 0002 proposals as defined in Article V, in accordance with Boeing's approved disclosure statement.

2. Modifications, other than those identified in subparagraph 3 below, will normally be bilateral. In the event the Grants Officer directs a unilateral modification, within the general scope of the Agreement, Boeing will identify a ceiling price for the impact of the directed effort and will have the opportunity to propose a Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) in accordance with Article XIII, Modifications. In the event the modification involves new work, the Grants Officer will advise Boeing of the availability of additional funding for the new work or if the new work needs to be accomplished within existing funding constraints. If the Grants Officer determines a Program Generated Adjustment is warranted, the Grants Officer and Boeing Contracts Manager will, in a timely fashion, modify the Agreement accordingly. Boeing will proceed with the directed work based on the Grants Officer direction, provided there are adequate funds on the Agreement to provide for the required work. If Boeing disagrees with the Grants Officer's determination of whether or not a Program Generated Adjustment is warranted, then the determination will be subject to Article XV, Disputes.

3. For minor or administrative Agreement modifications (e.g., changes in the paying office or appropriation data, incremental funding actions, changes to Government or Boeing personnel identified in the Agreement, etc.) no signature is required by Boeing. Modifications will not be required for changes to controlled documents provided the affected IPT Leader and Co-leader have concurred in or approved the change document in writing.

4. The Government will be responsible for effecting all modifications to this Agreement.

B. Cost or Pricing Information in Support of Modifications

1. The cost or pricing information submitted by Boeing prior to Agreement award did not require Truth in Negotiations Act (TINA) certification. The same level of cost or pricing detail must be provided for deletions or reductions of work as is provided for changes or additions. Cost or pricing information submitted after Agreement award to support Agreement modifications shall likewise not require TINA certification.

2. The kind, level of detail, and format of cost or pricing information to support Agreement modifications is identified below:
   a. If the price is controlled under law by periodic rulings, reviews, or similar actions of a governmental body, attach a copy of the controlling document, unless it was previously submitted to the contracting office.
   b. For a commercial item, Boeing shall provide, at a minimum, information on prices at which the same item or similar items have previously been sold, leased or licensed or has been offered for sale, lease or license that is adequate for evaluating the reasonableness of the price of the modification. Such information may include:
      (1) For catalog items, a copy of or identification of the catalog and its date, or the appropriate pages for the offered items, or a statement that the catalog is on file in the buying office to which the proposal is being submitted. Provide a copy or describe current discount policies and price lists (published or unpublished), e.g., wholesale, original equipment manufacturer, or reseller. Also explain the basis of each offered price and its relationship to the established catalog price, including how the proposed price relates to the price of recent sales in quantities similar to the proposed quantities.
      (2) For market-priced items, the source and date or period of the market quotation or other basis for market price, the base amount, and applicable discounts. In addition, describe the nature of the market.
   c. Boeing grants the Grants Officer, or an authorized Government representative, the right to examine, at any time the books, records, documents, or other directly pertinent records to verify the reasonableness of price for (a) or (b) above. For items priced using catalog or market prices, or law or regulation, access does not extend to cost or profit information or other data relevant solely to Boeing's determination of the prices to be offered in the catalog or marketplace.
   d. If neither a. nor b. applies, then Boeing shall submit data in accordance with Table 15-2 of FAR 15.408. This data shall not require TINA certification.
   e. When the proposal is submitted to the Grants Officer, also submit one copy each to the AAO and the cognizant DCAA auditor.

C. The following FAR/DFARS clauses apply:

52.242-15	Stop-Work Order (8/89) Alternate I (4/84) Tailoring: In paragraph (b)(2), change from "30 days" to "90 days".
52.243-7	Notification of Changes (4/84) Tailoring: The "Notice" under paragraph (b) shall be sent directly to the Grants Officer with a copy furnished to the AAO. Also, the negotiable fill-ins for notification and response timeframes in paragraphs (b) and (d) respectively are hereby defined as "15 calendar days" in both of the two fill-ins.

ARTICLE XIV: AGREEMENT ADMINISTRATION

1. The senior program executives are as identified below:

BOEING: Dennis A. Muilenburg, Program Manager

GOVERNMENT: BG Donald F. Schenk, PM, Future Combat Systems
Roland Asoklis, Deputy PM, Future Combat Systems
COL(P) John Bartley, Deputy for Program Integration

2. Administrative and contractual matters under this Agreement shall be referred to the following representatives of the parties:

BOEING: Sean Garcia, Director, Contracts, Pricing & Export-FCS, 314-232-2077
Maureen S. Johnson, Deputy Director, Contracts, Pricing & Export-FCS, 714-372-0500

TACOM: Pamela Demeulenaere, Grants Officer, 586-574-7251
Fred Bultman, Alternate Grants Officer, 586- 574-7861

3. Items delegated to the Administrative Agreements Officer shall be referred to:

DCMA Boeing St. Louis: Pamela S. Burton, AAO, 314-233-9105
Matthew Danter, DCMA FCS Lead Systems Integrator, 314-233-6859

4. Each party may change its representatives named in this Article by written notification to the other party. The Government will effect the change as stated in Article XIII, Modifications.

5. The Grants Officer may designate one or more technical or administrative representatives to act on the Grants Officer's behalf, within specified areas of governmental responsibility and/or for specific functions. Each such designation shall be in writing, and a copy provided to the Boeing Contracts Manager and DCMA. Revocation may be made at any time. Under no circumstances will such representative have authority to make any commitments or changes to this Agreement, or act beyond the specified scope of their authority.

ARTICLE XV: DISPUTES

A. General

The parties shall communicate with one another in good faith and in a timely and cooperative manner when raising issues under this Article.

B. Dispute Resolution Procedures

1. Any disagreement, claim or dispute between TACOM and Boeing concerning questions of fact or law arising from or in connection with this Agreement, and, whether or not involving an alleged breach of this Agreement, may be raised only under this Article.

2. Whenever disputes, disagreements, or misunderstandings arise, the parties shall attempt to resolve the issue(s) involved by discussion and mutual agreement as soon as practicable. In no event shall a dispute, disagreement or misunderstanding which arose more than twelve (12) months prior to the notification made under subparagraph B.3 of this Article constitute the basis for relief under this Article unless the Head of Contracting Activity (HCA) for TACOM, in the interests of justice, waives this requirement.

3. Failing resolution by mutual agreement, the aggrieved party, either the Government or Boeing as the case may be, shall document the dispute, disagreement, or misunderstanding by notifying the other party (through the TACOM Grants Officer or Boeing Contracts Manager, as the case may be) in writing of the relevant facts, identify unresolved issues, and specify the clarification or remedy sought. Within five (5) business days after providing notice to the other party, the aggrieved party may, in writing, request a formal decision by the Grants Officer, TACOM, who shall, in turn, render a decision within forty-five (45) calendar days from receipt of the aggrieved party's case. At the request of the aggrieved party, the Principal Assistant Responsible for Contracting (PARC) and a senior executive designated by Boeing will review the Grants Officer's decision. The request for review of the Grants Officer's decision that is in dispute will be made within thirty (30) calendar days after the Grants Officer's decision has been issued. The TACOM PARC, and Boeing's senior executive shall conduct a review of the matter(s) in dispute and render a decision in writing within thirty (30) calendar days of receipt of a request to review. Any such joint decision is final and binding. In the event a joint decision cannot be reached within thirty (30) calendar days, the TACOM PARC will issue a final decision. Such decision is not subject to further administrative review and, to the extent permitted by law, shall be final and binding. If Boeing disagrees with such decision, Boeing may bring a claim in a court of competent jurisdiction as authorized by 28 USC 1491.

4. Pending final dispute resolution as provided within this Article, Boeing shall otherwise proceed diligently with performance of the Agreement and comply with any directions of the Grants Officer. If an Agreement modification is appropriate in order to implement a final binding dispute decision, the modification will address how the issue of Interest is to be handled, if applicable, and may include appropriate liability release language that represents a full and complete settlement of the issue with no further recourse.

ARTICLE XVI: INTELLECTUAL PROPERTY RIGHTS

Notwithstanding inspection and acceptance by the Government of data or software delivered under this Agreement, and notwithstanding any provision of this Agreement concerning the conclusiveness of acceptance, the Government shall have the right to require Boeing to correct (or update) any such data or software found deficient (or outdated), within three (3) years of the delivery of such data or software. Such correction, or update, shall be at Government expense funded under this Agreement or, if the Agreement is closed, funded under a separate contractual instrument.

ARTICLE XVII: PATENT RIGHTS

The following FAR/DFARS clauses apply:

52.227-1	Authorization and Consent (7/95) Alternate I (4/84)
52.227-2	Notice and Assistance Regarding Patent and Copyright Infringement (8/96)
52.227-10	Filing of Patent Applications-Classified Subject Matter (4/84)
52.227-12	Patent Rights - Retention by the Contractor (Long Form) (1/97)

ARTICLE XVIII: DATA AND SOFTWARE RIGHTS

A. Definitions

1. "Data", as used in this Article, means recorded information, regardless of form or method of recording, of a scientific or technical nature, which includes but is not limited to, trade secrets and mask works. The term does not include financial, administrative, cost, pricing or management information and does not include subject inventions included under Article XVII, Patent Rights.

2. "Software", as used in this Article, means computer software documentation, computer programs, object code listings, source code, and related materials that would enable the software to be reproduced, recreated or recompiled.

3. "Government Purpose Rights", as used in this Article, means rights to use, modify, duplicate, release, perform, display, or disclose Data or Software, in whole or in part and in any manner, for Government purposes only, and to have or permit others to do so for Government purposes only. Government purposes include competitive procurements but do not include any commercial purpose or use. The Government Purpose Rights granted herein are without expiration.

4. "Limited Rights", as used in this Article, means the rights to use, modify, reproduce, release, perform, display, or disclose Data, in whole or in part, within the Government. The Government may not, without the written permission of the party asserting Limited Rights, release or disclose the Data outside the Government, use the Data for manufacture, or authorize the Data to be used by another party, except that the Government may reproduce, release or disclose such Data or authorize the use or reproduction of the Data by persons outside the Government if reproduction, release, disclosure, or use is:
   a. Necessary for emergency repair and overhaul; or
   b. A release or disclosure of Data (other than detailed manufacturing or process data) to, or use of such Data by, a foreign government that is in the interest of the Government and is required for evaluation or informational purposes;
   c. Subject to a prohibition on the further reproduction, release, disclosure, or use of the Data; and
   d. Boeing or its subcontractors asserting the restriction is notified of such reproduction, release, disclosure, or use.
   e. However, such express limitation shall not apply to any Government Systems Engineering and Technical Assistance (SETA) contractors under contract to the Government for the purpose of providing systems engineering and technical assistance services and/or administrative support services; provided that, the parties to whom these Data are disclosed shall have a legitimate need-to-know, and are under contract subject to DFARS clause 252.227-7025 entitled, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends".

5 "Special License Rights", as used in this Article, applies only to Data or Software developed at private expense prior to the date, or outside the scope, of this Agreement. This designation may not apply to a required deliverable under this Agreement unless agreed to by the Government, e.g., for commercial Software or Data pertaining to commercial items. If the Government requests the Data or Software, asserted by Boeing, or a subcontractor, as subject to Special License Rights, a specific written agreement identifying use, purpose and access must be executed prior to the Data or Software being provided to the Government and made a part of Attachment 6, Data or Software to be Furnished with Restrictions. If the Government and Boeing, or a subcontractor, do not agree to satisfactory terms, then the Data or Software shall not be provided to the Government.

6. "Restricted Rights", as used in this Article, applies only to noncommercial Software and means the Government's rights to --
   a. Use a computer program with one computer at one time. The program may not be accessed by more than one terminal or central processing unit or time shared unless otherwise permitted by this Agreement;
   b. Transfer a computer program to another Government agency without the further permission of Boeing if the transferor destroys all copies of the program and related computer software documentation in its possession and notifies the licensor of the transfer. Transferred programs remain subject to the provisions of this Article;
   c. Make the minimum number of copies of the Software required for safekeeping (archive), backup, or modification purposes;
   d. Modify Software provided that the Government may --
      (A) Use the modified Software only as provided in this Article; and
      (B) Not release or disclose the modified Software except as provided in this Article;
   e. Permit contractors or subcontractors performing service contracts (as defined by 37.101 of the Federal Acquisition Regulation) in support of this or a related contract to use Software to diagnose and correct deficiencies in a computer program, to modify Software to enable a computer program to be combined with, adapted to, or merged with other computer programs or when necessary to respond to urgent tactical situations, provided that --
      (1) The Government notifies the party that has granted Restricted Rights that a release or disclosure to particular contractors or subcontractors was made;
      (2) Such contractors or subcontractors are subject to the use and non-disclosure agreement at 227.7103-7 of the Defense Federal Acquisition Regulation Supplement (DFARS) or are Government contractors receiving access to the Software for performance of a Government contract that contains the clause at DFARS 252.227-7025, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends";
      (3) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the Software, or use Software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph(iv) of this clause, for any other purpose; and
      (4) Such use is subject to the limitation in paragraph 6.(i) of this Article; and

   f. Permit contractors or subcontractors performing emergency repairs or overhaul of items or components of items procured under this or a related contract to use the Software when necessary to perform the repairs or overhaul, or to modify the Software to reflect the repairs or overhaul made, provided that --
      (1) The intended recipient is subject to the use and non-disclosure agreement at DFARS 227.7103-7 or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227-7025, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends"; and
      (2) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to this clause, for any other purpose.
7. "Unlimited rights", as used in this Article, means rights to use, modify, reproduce, perform, display, release, or disclose Data or Software, in any manner, and for any purpose whatsoever, and to have or authorize others to do so.

B. Allocation of Principal Rights

1. This Agreement shall be performed with Government funding.

2. Boeing agrees to retain and maintain in good condition until three (3) years after completion or termination of this Agreement, all Data or Software developed under this Agreement necessary to achieve Practical application (as defined in Article XVII, Patent Rights) of deliverable items, components and processes. In the event of exercise of the Government's March-in Rights as set forth under Article XVII, Patent Rights or subparagraph B.3 of this Article, Boeing agrees, upon written request from the Government to deliver to the Government, Data and Software developed under this Agreement necessary to achieve Practical application of deliverable items, components and processes within sixty (60) calendar days from the date of the written request. The Government agrees to pay the costs of delivering such Data and Software and agrees these delivery costs are not covered by payments to Boeing under this Agreement.

3. Boeing agrees that, with respect to Data and Software developed under this Agreement necessary to achieve Practical application of deliverable items, components and processes, TACOM has the right to require Boeing to deliver all such Data and Software to TACOM in accordance with its reasonable directions if TACOM determines that:
   a. Such action is necessary because Boeing or assignee has not taken effective steps within three (3) years after completion or termination of this Agreement, consistent with the intent of this Agreement, to achieve Practical application of deliverable items, components and processes;
   b. Such action is necessary to alleviate health or safety needs which are not reasonably satisfied by Boeing, assignee, or their licensees within three (3) years after completion or termination of this Agreement; or
   c. Such action is necessary to meet requirements for public use and such requirements are not reasonably satisfied by Boeing, assignee, or licensees within three (3) years after completion or termination of this Agreement.

4. With respect to all Data and Software delivered under this Agreement, the Government will subject to subparagraph B.6, receive Government Purpose Rights, or if subparagraph B.5 applies, Unlimited Rights. In the event of the Government's exercise of its right under subparagraph B.3 of this Article, the Government shall, subject to subparagraph B.6, receive Government Purpose Rights in all such Data or Software. With respect to all Data and Software previously delivered to the Government with Government Purpose Rights, the Government shall receive those same rights for the Data or Software.

5. The Government shall have Unlimited Rights in Data or Software that are:

   a. Otherwise publicly available or have been released or disclosed by Boeing, or a subcontractor, without restrictions on further use, release or disclosure, other than a release or disclosure resulting from the sale, transfer, or other assignment of interest in the Data or Software to another party or the sale or transfer of some or all of a business entity or its assets to another party;
   b. Data or Software in which the Government has obtained Unlimited Rights under another Government Agreement/contract or as a result of negotiations; or
   c. Data or Software delivered to the Government, under this or any other Government Agreement/contract or subcontract thereunder, with --
      (1) Government Purpose Rights or Limited Rights and the restrictive condition(s) has/have expired; or
      (2) Government Purpose Rights and Boeing's, or a subcontractor's, exclusive right to use such Data for commercial purposes has expired.

6. Attachment 6, Data or Software to be Furnished with Restrictions, lists Data or Software of Boeing, and its subcontractors, which will be furnished to the Government with rights that are more restrictive than Government Purpose Rights. This list is subject to the subparagraph D. of this Article. Any

subcontract that includes Data or Software to be included in Attachment 6 must be approved by the Government prior to Boeing entering into the subcontract. The list may be amended, subject to approval of the Government, based upon new information or inadvertent omissions. The cognizant IPT Leader and IPT Co-leader must first approve any such requested amendment to Attachment 6. Amendments to Attachment 6 will be considered approved if the Government, via the Grants Officer, does not disapprove, in writing, within five (5) business days for Software that will not be incorporated into FCS systems and within ten (10) business days for Software that will be incorporated into FCS systems following receipt of the requested amendment. No Data or Software shall be delivered under this Agreement with rights, which are more restrictive than Government Purpose Rights unless included in Attachment 6. Boeing and TACOM mutually agree to formally modify the subject Agreement at certain block points; vice each time a request of this nature is submitted to TACOM for approval, in order to facilitate efficient Agreement performance.

7. Except for Data subject to Unlimited Rights or Special License Rights, the Government shall have Limited Rights in Data required to be delivered to the Government under this Agreement and are listed in Attachment 6:
   a. Pertaining to items, components, or processes developed exclusively at private expense and marked with the Limited Rights legend prescribed in this Article, or
   b. Created exclusively at private expense in the performance of an Agreement/contract that does not require the development, manufacture, construction, or production of items, components, or processes.

8. Except for Software subject to Unlimited Rights or Special License Rights, the Government shall have Restricted Rights in Software required to be delivered to the Government under this Agreement that were developed exclusively at private expense and are listed in Attachment 6.

9. The Government will receive a copyright license in any Data or Software item deliverables that are copyrighted. The license will permit the Government to copy, modify, and/or distribute the Data or Software item deliverables in any manner consistent with the restrictions in this Article on the Government's use and disclosure of the Data or Software in the deliverables.

10. Limited or proprietary information disclosed to Boeing or its subcontractors shall be controlled and protected in accordance with a Proprietary Information Agreement (PIA) or other appropriate instrument acceptable to the parties involved with the disclosure.

C. Marking of Data or Software

1. Any Data or Software delivered or provided pursuant to subparagraph B.4 above shall be marked with the following legend:

   "GOVERNMENT PURPOSE RIGHTS"

   "The Government is granted Government Purpose Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

2. Any Data or Software delivered or provided pursuant to subparagraph B.5 above shall be unmarked or marked with the following legend:

"UNLIMITED RIGHTS"

"The Government is granted Unlimited Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

3. Any Data or Software delivered or provided pursuant to subparagraphs B.7, B.8, or A.5 shall be marked with one of the following legends:

(Refer to B.7) "LIMITED RIGHTS"

"The Government is granted Limited Rights to this Data. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

(Refer to B.8) "RESTRICTED RIGHTS"

"The Government is granted Restricted Rights to this Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

(Refer to A.5) "SPECIAL LICENSE RIGHTS"

"The Government is granted Special License Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions of a Special Data or Software Use Agreement as provided for in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

D. Validation of Asserted Restrictions – Data and Software

1. Boeing shall maintain records sufficient to justify the validity of any markings that assert restrictions on Data or Software delivered or required to be delivered under this Agreement and shall be prepared to furnish to the Grants Officer a written justification for such restrictive markings in response to a request by the Grants Officer for such information.

2. Boeing agrees that the Grants Officer may transact matters under this clause directly with subcontractors or suppliers, at any tier, who assert restrictions on Data or Software. Neither this clause, nor any action taken by the Government under this clause, creates or implies privity of contract between the Government and Boeing's subcontractors or suppliers.

3. Requests for Information:
   a. The Grant's Officer may request Boeing to provide sufficient information to evaluate Boeing's asserted restrictions.
   b. Based upon the information provided the Grants Officer may --
      (1) If Boeing (or the applicable subcontractor) agrees that the asserted restriction is not valid;
         (a) Strike or correct the unjustified marking at Boeing's expense; or
         (b) Return the Data or Software to Boeing for correction at Boeing's expense, or
      (2) Conclude that the asserted restriction is appropriate for this Agreement, and notify Boeing in writing.
   c. Boeing's failure to provide a timely response to a Grants Officer's request for information shall constitute reasonable grounds for questioning the validity of an asserted restriction.

4. Government Right to Challenge and Validate Asserted Restrictions:
   a. The Government has the right to challenge any restrictions asserted by Boeing on Data or Software delivered or provided for system or hardware performance under this Agreement. Except for Data or Software that is publicly available, or has been furnished to the Government

without restrictions, or has been otherwise made available without restrictions, the Government may exercise this right only within the later of three (3) years after the date(s) the Data or Software is delivered or provided to the Government, or three (3) years following final payment.

b. Only a Grants Officer's final decision or a court of competent jurisdiction that sustain the validity of an asserted restriction constitute validation of the restriction.

5. Challenge Procedures:
   a. A challenge must be in writing and shall --
      (1) State the specific grounds for challenging the asserted restriction;
      (2) Require Boeing to respond within sixty (60) days; and
      (3) Require Boeing to provide justification for the assertion, in sufficient detail to enable the Grants Officer to determine the validity of the asserted restrictions.
   b. The Grants Officer shall extend the time for response if Boeing submits a written request with appropriate justification.
   c. The Grants Officer may request additional supporting documentation if, in the Grants Officer's opinion, Boeing's explanation does not provide sufficient evidence to justify the validity of the asserted restrictions.
   d. Notwithstanding challenge by the Grants Officer, the parties may agree on the disposition of an asserted restriction at any time prior to a Grants Officer's final decision or, if Boeing has appealed that decision at any time prior to a decision by a court of competent jurisdiction.
   e. If Boeing fails to respond to the Grants Officer's request for information, the Grants Officer shall issue a final decision, in accordance with Artiele XV,: Disputes of this Agreement, pertaining to the validity of the asserted restriction.
   f. If the Grants Officer determines that the asserted restriction has --
      (1) Not been justified, the Grants Officer shall issue promptly a final decision subject to Article XV, Disputes denying the validity of the asserted restriction; or
      (2) Been justified, the Grants Officer shall issue promptly a final decision validating the asserted restriction.

6. The Government agrees, notwithstanding a Grants Officer final decision denying validity of the asserted restriction, that it will honor the asserted restriction for a period of ninety (90) days, after which if there is no formal challenge to the decision, the Government may strike the restriction, remove the legends and there is no liability incurred by this action.

E. Lower Tier Agreements

Boeing shall include this Article, suitably modified to identify the parties, in all subcontracts regardless of tier, including Boeing business units, who will be furnishing Data or Software to be provided to the Government in the performance of this Agreement. Boeing will not, as part of the consideration for awarding the subcontract, obtain rights in the subcontractor's Data or Software.

ARTICLE XIX: FOREIGN ACCESS TO TECHNOLOGY

A. Definition

1. "Foreign Firm or Institution" means a firm or institution organized or existing under the laws of a country other than the United States, its territories, or possessions. The term includes, for purposes of this Agreement, any agency or instrumentality of a foreign government; and firms, institutions or business organizations that are owned or substantially controlled by foreign governments, firms, institutions, or individuals.

2. "Foreign Person" means any natural person who is not a lawful permanent resident as defined by 8 U.S.C. 1101(a)(20) or who is not a protected individual as defined by 8 U.S.C. 1324b(a)(3). It also means any foreign corporation, business association, partnership, trust, society or any other entity or group that is not incorporated or organized to do business in the United States, as well as international organizations, foreign governments and any agency or subdivision of foreign governments (e.g., diplomatic missions).

B. Export Compliance

1. Boeing shall comply with all U.S. export control laws and regulations, including the International Traffic in Arms Regulations (ITAR), 22 CFR Parts 120 through 130, and the Export Administration Regulations (EAR), 15 CFR Parts 730 through 799, in the performance of this Agreement.

2. Pursuant to ITAR §125.4(b)(3), Boeing may disclose classified and unclassified export-controlled technical data to foreign persons when the following conditions apply:
   a. The technical data does not disclose details of the design, development, production, or manufacture of any defense article as limited by §125.4(b)(3).
   b. The disclosure supports the programmatic objectives of the U.S. Army's PEO, GCS and the PM, FCS and relates to technical specifications, design architecture, functional requirements, performance models, purchase orders, and statements of work (SOW).
   c. The PM, FCS Security Office, Deputy Assistant Secretary of the Army (DASA) Defense Exports and Cooperation (DE&C) and Boeing will develop agreed upon processes to define requirements for review and approval of data exported under this exemption.

3. Pursuant to ITAR §125.4(b)(1), Boeing may disclose classified and unclassified export-controlled technical data to foreign persons when the following conditions apply:
   a. DASA DE&C provides written direction to Boeing to disclose ITAR-controlled technical data to a Foreign Person. The PM, FCS may request Boeing to provide copies of the data/information that will be disclosed to the Foreign Person as part of the affirmation process with DASA DE&C.
   b. If the PM, FCS directs Boeing to provide export-controlled technical data to a Foreign Person that is beyond the scope authorized under ITAR Section 125.4(b)(3), then Boeing will, pursuant to ITAR section 125.4(b)(1), document the request and submit a written request to the PM, FCS who will certify the conditions specified by Boeing exist. The PM, FCS will provide the certification to DASA DE&C who may affirm the use of the exemption, in writing to Boeing, provided the conditions certified by the PM, FCS satisfies the ITAR

4. All technical data that is exported under ITAR Sections 125.4(b)(1) or 125.4(b)(3) must be reviewed and approved by the US Army in accordance with approved disclosure guidelines for FCS.

5. Before authorizing CUI disclosures, the PM, FCS Disclosure Authority shall ensure that the contract or agreement contains the requisite access, use, and distribution clauses required before disclosing CUI with another government, international organization, or foreign contractor (Source: SAAL-RP memo, 27 May 2000, Subject: Authority to Disclose Technical Controlled Unclassified Information (CUI)).

C. Lower Tier Agreements

Boeing shall include this Article, suitably modified, to identify the parties, in all subcontracts.

ARTICLE XX: CIVIL RIGHTS ACT

This Agreement is subject to the requirements of Title VI of the Civil Rights Act of 1964 as amended (42 U.S.C. 2000-d) relating to nondiscrimination in employment.

ARTICLE XXI: BOEING INFORMATION

Taxpayer Identification Number: 430400674
DUNS: 016544780
CAGE Code: 69236

ARTICLE XXII: ORDER OF PRECEDENCE

In the event of any inconsistency between the Articles of this Agreement and language set forth in the Attachments thereto, the inconsistency shall be resolved by giving precedence in the following order: (1) Until definitization, if there is any inconsistency between Article I. B. and anything else, then Article I. B. will take precedence; (2) The Articles of this Agreement; (3) SOW; (4) other Attachments to the Agreement. In the event there is any conflict between a clause contained in full text in the Agreement and a referenced clause, the full text clause shall take precedence.

ARTICLE XXIII: EXECUTION

This Agreement constitutes the entire agreement of the parties and supersedes all prior and contemporaneous agreements, understandings, negotiations and discussions among the parties, whether oral or written, with respect to the subject matter hereof. This Agreement may be revised only by written consent of the Boeing Contracts Manager and the TACOM Grants Officer, or as provided in Article XIII, Modifications. This Agreement or modifications to the Agreement may be executed by the parties using a faxed signature or scanned original from the other party and these documents will be deemed as original.

ARTICLE XXIV: LIABILITY AND INSURANCE

A. Liability and Insurance

1. Boeing shall maintain the types of insurance listed in FAR 28.307-2(a), (b), and (c) with the minimum amounts of liability indicated, or commercial equivalent.

B. The following FAR/DFARS clauses apply:

52.228-7	Insurance-Liability to Third Persons (3/96)
52.246-24	Limitation of Liability - High-Value Items (2/97)
52.246-25	Limitation of Liability - Services (2/97)
252.228-7002	Aircraft Flight Risk (9/96) Tailoring: Aircraft in this clause also relates to "Unmanned Air Vehicles" (UAV). Paragraph (d)(4), change from "the Disputes clause of this contract" to "Article XV: Disputes of this Agreement."

ARTICLE XXV: ORDERING FROM GOVERNMENT SUPPLY SOURCES

1. The Grants Officer authorizes Boeing to use Government Federal Supply Schedule Contracts in the performance of this Agreement.

2. This authorization is issued in accordance with provisions of 48 CFR subpart 51.1 "Contractor Use of Government Supply Sources" and can be used only to acquire goods and services required specifically for performance under this Agreement.

3. The Grants Officer will provide the Boeing Contracts Manager a copy of the authorization letter within ten (10) business days of Agreement award.

4. For each order placed to a Federal Supply Schedule vendor (1) a copy of the authorization letter must accompany the order, unless a copy was previously furnished to the vendor, and (2) the following statement must appear on the order:

   "This order is placed under written authorization from the U.S. Army Tank-Automotive and Armaments Command (TACOM) dated [Date of Agreement Award]. In the event of any inconsistency between the terms and conditions of this order and those of your Federal Supply Schedule Contract, the latter will govern."

5. Boeing is also provided authorization for subcontractor's to use Government Federal Supply Schedule Contracts.

6. Boeing's ordering authorization may be unilaterally withdrawn, or suspended, by the Grants Officer, in whole or in part, by providing written notice to the Boeing Contracts Manager.

ARTICLE XXVI: STATEMENT OF WORK CLARIFICATIONS

A. Performance Risk

1. The SOW includes effort valued at $263 million that the parties may later determine, based on overall program affordability, should be reduced or removed from the Agreement.

2. Boeing will use its' best efforts to perform the SOW at the original estimated cost. If, however, during performance of the Agreement, Boeing concludes that affordability constraints prevent Boeing from performing the SOW in whole or in part, the parties agree that effort up to the amount of $263 million will be eliminated from the Agreement, without negative impact to Boeing, using CAIV trade-off candidates and presented to the PCCB for resolution.

B. SOW Language Subject to PCCB Approval:

1. The draft Integrated Master Plan dated 14 November 2003 is part of the negotiated Agreement baseline and is scheduled for PCCB approval on 9 December 2003.

2. The SOW language and new CDRL items identified below may be added to the Agreement after PCCB approval, appropriate CAIV trade/PGA action, and Grants Officer authorization. Boeing shall conduct a PCCB for these changes within 90 calendar days of the effective date of modification PZ0007.

a. New SOW 3.1.1.4 Configuration/Data Management. The LSI shall provide configuration and data management (CDM) through the FCS ACE IAW the CDM Plan. The LSI will develop and manage processes and policies implemented in related program CDM organizations, including managing the FCS data repository, and providing oversight of configuration management policies and processes employed by other LSI organizations and suppliers. The LSI shall manage the FCS interface control documents relating to SoS internal and external interoperability. It is the intent of the Department of Army to conform its information resources to standardized metadata and categorization configurations so that Army users can identify, catalog, search, and share information, and, thereby, support Network Centric Warfare capabilities. To that effect the contractor shall capture all data content for the architecture products of the Future Combat Systems (FCS) in accordance with the structures of the DoD Core Architecture Data Model (CADM). Specifically, the contractor shall provide all architecture deliverables in the form of XML documents created using the XML tags defined by OASD(NII)A&I and available at the DoD Metadata Registry and Clearinghouse (ref: http://diides.ncr.disa.mil/xmlrce/uscr/index.cfm). All the XML deliverables shall be validated in accordance with the XML Schema Definition (XSD) also maintained by OASD(NII). The contractor shall, in coordination with the Army's Architecture Executives (e.g. TRADOC, ASA(ALT) and CIO/G-6), ensure that all delivered XML architecture products for FCS can be readily imported into the appropriate data repositories (e.g., the DoD Architecture Repository System-DARS). (A011, A063) {WBS 1.1.1.2.4, 1.1.2.1.3.3}

b. New SOW 3.1.2 - Simulation and Modeling for Acquisition, Requirements, and Training (SMART) Management

The LSI shall develop and implement a SMART program for the effective development, use, and integration of Live, Virtual, and Constructive (LVC) M&S capabilities in support of the full range of M&S domains. The LSI in conjunction with the PM, FCS UA SMART Management Office shall establish a SMART Management Team, consisting of LSI IPTs, and Government representatives, to provide the overarching, program-wide management, coordination and guidance for implementing processes relating to SMART and for the development and use of models and simulations in support of the FCS program. This SMART management team will ensure the proper policies, procedures, tools, and training are in place to ensure an integrated, coherent management approach to SMART across all elements of the program. The LSI shall provide source data to the Government to support the Government's update and maintenance of their UA SMART Simulation Support Plan (SSP). The LSI shall approve and coordinate changes to IPT and supplier Simulation Support Plans. The SMART Management Team shall develop and maintain a measurement plan and process as part of the SSP to establish SMART metrics to include audits and assessments. The LSI shall collect metrics from the SMART suppliers and develop an annual report showing the use of M&S across the program.

3.1.2.1 SMART Lifecycle Activities. The LSI shall, in collaboration with Government agencies, IPT leads, and suppliers, manage, coordinate, and facilitate development of the SoS and FoS M&S capabilities for use in all M&S supported activities IAW the Simulation Support Plan.

3.1.2.2 The LSI shall conduct FCS program SMART product requirements, and M&S implementation reviews. The reviews shall ensure development and maintenance of the FCS program SMART solutions are integrated across the FCS program to meet FCS M&S requirements and demands. The LSI in conjunction with the S&T IPT and PM, FCS SMART Management Office shall coordinate with the Army Science and Technology (S&T) community to identify SMART S&T requirements to reduce risk for future FCS increments.

3.1.2.3 The LSI, in collaboration with other IPTs, TRADOC, AMC and other Army organizations, shall develop requirements for LVC M&S capabilities for SoS trade studies, SoS force effectiveness and performance assessment, requirements validation, design analysis, test design, demonstrations and tests, training, and operational uses. As a part of the requirements process, the SMART Management Team shall develop an approved list of common models, simulations, or simulation components for use across the program.

3.1.2.4 The LSI in conjunction with the PM, FCS SMART Management Office shall serve as the enterprise level integrator to ensure FCS M&S efforts that address requirements, design, training, manufacturing, production, and operational uses are not duplicated among the efforts of the LSI, subcontractors, and Government. The LSI shall also ensure reuse and recommend commonality of M&S tools to include AMC RDECOM facilities and capabilities for materiel research, development and evaluations, and TRADOC Battle Lab and school facilities conducting experimentation efforts focused on Unit of Action DOTMLPF requirements development and demonstration.

3.1.2.5 The LSI shall ensure M&S representations are consistent among the Government, LSI, and suppliers. The SMART Management Team shall develop a plan to identify resources required to maintain and support delivered SMART capabilities. The LSI as a part of the SSP shall develop a phased SMART integration plan that includes initial development and a roadmap/plan for SMART upgrades to support both Increment 1 and subsequent increments. The plan shall ensure LVC M&S capabilities developed for SDD support, to the maximum extent possible, planned future increment processes and functions (e.g., training, post deployment software support, supportability, and interoperability). This plan shall incorporate maximum reuse of M&S components across functional teams and throughout the life cycle of the program. The LSI shall not develop models, simulation, or architectural artifacts for which there exist effective and efficient alternatives without prior approval from the Grants Officer.

3.1.2.6 The Team shall ensure that any models, simulations, architectures, and documentation (including source code) necessary for full functional use, maintenance and upgrade of the M&S developed under this Agreement will be accessible through ACE and become Government property at Agreement completion, in accordance with 3.1.1.7.2. [WBS 1.1.1.4]

3.1.2.7 The LSI shall monitor development of simulation federation architecture design alternatives for LVC SoS and FoS simulations. The LSI shall approve and oversee the use of this modeling and simulation capability across SoS and FoS development, testing, and other User Representative support as needed to evaluate FCS performance for selected designs per the Simulation Support Plan. [WBS 1.1.1.4.3]

3.1.2.8 The LSI shall coordinate the maintenance and use of scenarios in support of Force Effectiveness evaluation and FCS design specific performance evaluation. The LSI shall provide existing analysis data in support of TRADOC scenario development efforts. The LSI shall ensure that all Environment (scenario, terrain, atmospheric, and oceanographic) and Behavior (employment and TTP) data sets for analysis are approved by TRADOC (specifically HQ TRADOC ICW TRAC and UAMBL) and that Army Materiel Systems Analysis Activity (AMSAA) certifies all performance data used for formal decisions. The Team shall ensure that a library of scenario results is developed and maintained in ACE for comparison as the design evolves. (A030) [WBS 1.1.1.4.2]

3.1.2.9 The LSI shall facilitate coordination and integration of each system's variant models, emulations, and simulations into the SoSIL, other SILs, and test environments to support development and integration with other elements of the SoS and to ensure both SoS and FoS level demonstration and test objectives are met.

3.1.2.10 The LSI shall ensure that simulation interfaces are validated prior to SoS level integrated test and evaluation. [WBS 1.1.1.4.3]

3.1.2.11 The LSI shall define and develop modeling and simulation requirements for the Distributed Product Description (DPD). These requirements shall address system/subsystem reference models for each system's variants, including physical, dynamic, behavior, other models and data to support ongoing analysis, experimentation, doctrine development, design, test and evaluation.

3.1.2.12 The LSI shall be responsible for SoS/FoS M&S configuration management per the CM Plan, including operation of the FoS level SMART configuration control board. The LSI shall maintain the SMART product database, SMART product configuration management database, and SMART problem-reporting database.

3.1.2.13 The LSI shall establish procedures to verify and validate models and simulations used for the FCS analysis, experimentation, doctrine, design, development, test and evaluation, training, and operational uses in compliance DA PAM 5-11 and the LSI developed FCS Simulation, Validation and Verification Plan; provide verification/validation data to support Government validation and accreditation of models and simulations; and conduct validation and verification of simulations that will support a virtual Operational Test prior to IPD. (A031) [WBS 1.1.1.4.3.3]

c. SOW 3.1.4.5.1 Boeing shall require its subcontractors to flow this requirement for earned value reporting to all lower tier subcontractors having subcontracts greater than $5M to submit a C/SSR, and greater than $50M to submit a CPR. Any tier subcontractor over $5M and less than $25M may request a waiver from the earned value reporting due to low risk and cost impact. Such waivers will be submitted through Boeing to the Grants Officer for coordination and approval.

d. New CDRL Items:

A064 Program Protection Plan
A065 Program Protection Plan Report
A066 Operations Security Plan
A067 Cost as an Independent Variable (CAIV) Plan
A068 Transportability Report
A069 Cooperative Opportunities Document
A070 Manpower Estimate Report
A071 Core Logistics Analysis/Source of Repair Analysis
A072 Information Assurance Strategy
A073 Simulation Support Plan Data Inputs
A074 Product Support Management Plan

A075 FoS w/ Interfaces System Security Authorization Agreement (SABI)
A076 FoS w/ Interfaces System Security Plan (TSABI)
A077 System Security Authorization Agreements (SSAAs) Report
A078 Common Criteria – Protection Profile
A079 Top Secret and Below Integration (TSABI) Guarding Solution System Security Authorization Agreement (DoDIIS)
A080 Telecommunications Security Requirements Document (TSRD)
A081 SoS Key Management Plan

ARTICLE XXVII: SMALL BUSINESS SUBCONTRACTING PLAN

A. Goals

Boeing's Small Business Plan goals for the FCS Program are set forth below:

	FCS SDD Goals (% of Boeing Subcontracted Dollars)
Small Business	17.5%
Small Disadvantaged Business	3.5%
Woman Owned Small Business	2.5%
Historically Underutilized Business Zone Small Business	0.3%
Veteran Owned Small Business	1.5%
Service Disabled Veteran Owned Small Business	0.2%

Note: These goals are based on dollars going to small business through and including the third tier of subcontracts.

B. Subcontracting Reporting

Boeing will provide a summary of its subcontracted effort with small businesses on a semi-annual basis, and at SDD Agreement completion, consistent with the information required by Standard Form 294, Subcontracting Report for Individual Contracts. Boeing will report all subcontracted effort to small businesses to include awards to small businesses from its first, second, and third tier large business subcontracts. Dollars reported as Small Business awards will only be counted once. Boeing format for reporting requirements is acceptable.

C. Lower Tier Agreements

Boeing shall include the Small Business Plan goals as a requirement of all first, second, and third tier large business subcontracts.

ARTICLE XXVIII: ADVANCE AND PRE-AWARD COST AGREEMENTS

1. In order to reduce schedule risk to the Program, it is recognized that Boeing has initiated effort, beginning 21 March 2003, covered under this Agreement prior to Agreement award. Upon Agreement award to Boeing, those allowable and allocable costs incurred up to $9.7M by Boeing in pursuit of effort called for under this Agreement, will be recognized as allowable and allocable to the SDD Agreement to the extent they would have been allocable and allowable had they been incurred subsequent to award of the SDD Agreement. This effort consists of tasks in support of the transition from CTD to SDD such that Boeing can immediately perform SDD work upon award of this Agreement.

2. The Advance Agreement regarding potential pension cost allocation changes signed 29 September 2003 between Boeing Integrated Defense Systems and the DCMA Divisional ACO is incorporated by reference. The AAO's letter of 31 October 2003 regarding potential pension cost allocation changes is incorporated by reference.

ARTICLE XXIX: COMPLEMENTARY PROGRAMS

1. The LSI's efforts with respect to Complementary Programs is set forth in Attachment 1, SDD Statement of Work paragraph 3.1.4.4. A listing of Complementary Programs is at Attachment 11.

2. The Government is responsible for managing the Complementary Program contracts and contractors. PM, FCS will facilitate cooperation between the Government Program Management teams to ensure cooperation from the Complementary Program contractors with Boeing to satisfy the needs of the FCS program. PM, FCS will facilitate the LSI with Complementary Programs SOW requirements by entering into Program Executive Office (PEO) Memoranda of Agreement (MOA) and Program Management (PM) Subordinate Memoranda of Agreement (SMOA) with each Complementary Program.

3. All equipment, property, information, facilities and services provided by Complementary Programs are considered GFX and shall be identified and administered in accordance with Article XII, Government-Furnished Equipment, Property, Information, Facilities, and Services.

4. Boeing may be entitled to a Program Generated Adjustment as it pertains to Complementary Systems within the definition in Article I, when a product or piece of information from a Complementary Program fails to be suitable (including timely availability) for its intended use and there is a negative impact to the program. Any such adjustment will be in accordance with Article XIII, Modifications.

5. For any product, hardware, software or data, that needs to be provided from a complementary program that is not available, then a Program Generated Adjustment, as identified in paragraph 4 above, will be proposed to overcome the problem.

ARTICLE XXX: SDD TECHNICAL BASELINE

1. The SDD Technical Baseline is the FCS UA Increment I Capabilities Specification. Initially, all 14 April 2003 JROC ORD requirements will be incorporated in the FCS UA Increment I Capabilities Specification as either products being developed as part of Increment I or as requirements for spiral forward systems for future implementation. The spiral forward systems identified in Appendix C of the FCS UA Increment I Capabilities Specification are not a part of the initial technical baseline for Agreement performance but may be considered for future inclusion based on affordability and technical readiness decisions. For those items designated as Increment I products, the below trade processes will be used to determine the specific requirements for Increment I.

2. The Increment I Capabilities Specification will contain two separate sections:

   a. The technical baseline for this System Development and Demonstration (SDD) phase including growth provisions of SOW 3.1.1.10.4 that document a SDD design that will accommodate the remainder of the Increment I spiral forward systems and technology integration upgrades necessary to reach the FCS UA Objective Capabilities Specification Requirements.

   b. Separate section identifying and providing the guidelines for development of the objective capabilities that may be fielded during the Increment I timeframe (anticipated 2018-2020). This Increment I Objective Capability portion of the specification will not be included as a delivered design until it has been properly resourced and an Agreement modification implemented.

3. At the request of the Grants Officer, proposals for analyses, trade studies, and affordability assessments will be provided for spiral technologies.

4. The Prime Item Development Specifications will be baselined and placed under formal Configuration Management prior to SoSFR and become part of the Technical Baseline. Distributed Systems Specifications (DSS) will be managed in accordance with the configuration management (CM) process. All Configuration Item Specifications necessary to implement the sustainment and repair concept are included in the technical baseline and will be updated at CDR.

5. The SoS Architectures, including all distributed system architectures and SoS Software Architecture, will be released and placed under CM after SoSRR and become part of the Technical Baseline.

6. Any change to the FCS UA Increment I Capabilities Specification that ultimately impacts a KPP ORD requirement will require an Agreement modification. All other changes will be handled through the program approved CM process.

7. Verification of the Technical Baseline will be accomplished as identified in the LSI's Integrated Test and Evaluation Plan (ITEP), D786-10074-1. The verification criteria of the ITEP will be superceded by Section 4 of the FCS UA Increment I Capabilities Specification when approved.

8. The FCS UA Increment I Capabilities Specification will be defined and baselined using the following process:

   (a) If only an objective requirement in the JROC ORD now exists, the Specification will use either the objective capability or a "TBD" for threshold, and that requirement will be adjudicated through the trade study process.
   (b) If the FCS UA Increment I Capabilities Specification does not, at minimum, meet the JROC ORD threshold capability, the requirement in question will either

(i) Be brought into alignment with the JROC ORD and placed in the FCS UA Increment I Capabilities Specification or:
(ii) Be identified as a trade study candidate and placed in the trade study candidate pool.

(c) If the FCS UA Increment I Capabilities Specification meets the JROC ORD yet
(i) One or more subsystems fail to meet threshold requirements of the JROC ORD, or
(ii) Technical considerations prohibit compliance with program affordability constraints, or;
(iii) Achieving the JROC ORD requires technology which is not achievable within Increment 1, or:
(iv) Available GFE does not support achievement of the JROC ORD, or
(v) Other discrepancies as mutually agreed,
then the requirement in question will be identified as a trade study candidate and placed in the trade study candidate pool.

(d) The trade study process will be implemented as follows:
(i) The requirement will be adjudicated through the approved Trade/CAIV joint process (with participation of PM, FCS, LSI and TRADOC at a minimum).
(ii) If the process determines that a change is necessary to the SoS Increment I Specification, a recommendation will be made to update both the SoS Increment I Specification and the JROC ORD simultaneously.
(iii) The FCS UA Increment I Capabilities Specification update will not be delayed awaiting ORD updates.
(iv) Once the discrepancies have been resolved through approved process, the FCS UA Increment I Capabilities Specification will have contractual precedence.

9. After completion of Para 8 above, the LSI will continue to identify and perform trade studies IAW the program approved Trade Study Process (per SOW 3.1.1.6) for the purpose of system maturation and refinement of system capabilities, including alignment of the Increment I FCS UA Capabilities Specification, DSS', and PCDs.

Note: Spiral forward systems are listed In Article LF "Definitions" under "Spiral Forward Systems."

ARTICLE XXXI: FAR/DFARS CLAUSES

A. Commonly Used Terms

Terms contained within a FAR or DFARS clause including, but not limited to, (1) Schedule, (2) Contracting Officer, (3) Contract, (4) Disputes clause, (5) Administrative Contracting Officer, etc. are interpreted to mean (1) Agreement, (2) Grants Officer, (3) Agreement, (4) Article XV Disputes, (5) Administrative Agreements Officer, respectively. Any other commonly used terms not expressly included in this paragraph, contained within a FAR/DFARS clause, shall also be interpreted in terms of an OTA, Section 845 as the FCS acquisition instrument and not in terms of a FAR procurement contract.

B. Clause Incorporated by Reference

This Agreement incorporates one or more clauses by reference, with the same force and effect as if they were given in full text, except if there is a conflict with a full text clause, in which case the full-text clause would govern. Upon request, the Grants Officer will make their full text available.

C. FAR Clauses Incorporated by Reference

52.223-3	Hazardous Material Identification and Material Safety Data (1/97) "To be provided to the Government during Agreement performance, as required."
52.223-5	Pollution Prevention and Right-to-Know Information (8/03)
52.223-7	Notice of Radioactive Materials (1/97) Tailoring: Paragraph (a), insert "30 calendar" as the fill-in.
52.225-8	Duty-Free Entry (2/2000)
52.249-14	Excusable Delays (4/84)

D. DFARS Clauses Incorporated by Reference

252.223-7002	Safety Precautions for Ammunition and Explosives (5/94)
252.223-7007	Safeguarding Sensitive Conventional Arms, Ammunition, and Explosives (9/99)
252.225-7032	Waiver of United Kingdom Levies (4/03)
252.225-7043	Antiterrorism/Force Protection for Defense Contractors Outside the United States (6/98)
252.228-7005	Accident Reporting and Investigation Involving Aircraft, Missiles, and Space Launch Vehicles (12/91)
252.235-7003	Frequency Authorization (12/91)

ARTICLE XXXII: DESIGN AND SOURCE CONSIDERATIONS

The following DFARS clauses, while not required for the SDD Agreement, will be mandatory under any subsequent contract for Long-Lead Items, Initial Production or Production unless Boeing requests a waiver for itself, or for any of its subcontractor(s), which is subsequently approved by the Grants Officer, provided the clause allows for such waiver request. Boeing shall consider the following clauses in its planning for transition to Production. Design limitations and supply chain management decisions required to comply with these clauses will be documented in sufficient detail, so that, in the event of any subsequent contract for Long-Lead Items, Initial Production or Production, clause compliance can be demonstrated. Potential waivers of any of these requirements need to be identified as early as possible to the Grants Officer to avoid potential schedule impacts.

252.225-7001	Buy American Act and Balance of Payments Program (4/03)
252.225-7002	Qualifying Country Sources as Subcontractors (4/03)
252.225-7014	Preference for Domestic Specialty Metals (4/03) Alt 1 (4/03)
252.225-7016	Restriction on Acquisition of Ball and Roller Bearings (4/03)
252.225-7022	Restriction on Acquisition of Polyacrylonitrile (PAN) Carbon Fiber (4/03)
252.225-7025	Restriction on Acquisition of Forgings (4/03)
252.225-7030	Restriction on Acquisition of Carbon, Alloy, and Armor Steel Plate (4/03)
252.225-7031	Secondary Arab Boycott of Israel (4/03)

ARTICLE XXXIII: TERMINATION LIABILITY

A. Special Termination Liability

1. "Special termination costs," as used in this article, means only costs in the following categories:
   a. Severance pay: Severance pay, also commonly referred to as dismissal wages, is a payment in addition to regular salaries and wages by contractors to workers whose employment is being involuntarily terminated. Payments for early retirement incentive plans are not covered in this article.
   b. Severance pay to be allowable must meet the general allowability criteria in subdivision (a) of this subsection, and, depending upon whether the severance is normal or abnormal, criteria in subdivision (b) for normal severance pay or subdivision (c) for abnormal severance pay also apply. In addition, paragraph (c) of this subsection applies if the severance cost is for foreign nationals employed outside the United States.
      (1) Severance pay is allowable only to the extent that, in each case, it is required by
         (a) Law
         (b) Employer-employee agreement
         (c) Established policy that constitutes, in effect, an implied agreement on the Boeing's part; or
         (d) Circumstances of the particular employment

      Payments made in the event of employment with a replacement contractor where continuity of employment with credit for prior length of service is preserved under substantially equal conditions of employment, or continued employment by the contractor at another facility, subsidiary, affiliate, or parent company of the contractor are not severance pay and are unallowable.

   c. Actual normal turnover severance payments shall be allocated to all work performed in the contractor's plant, or where the contractor provides for accrual of pay for normal severances, that method will be acceptable if the amount of the accrual is reasonable in light of payments actually made for normal severances over a representative past period and if amounts accrued are allocated to all work performed in the Boeing's plant.

   d. Abnormal or mass severance pay is of such a conjectural nature that measurement of costs by means of an accrual will not achieve equity to both parties. Thus, accruals for this purpose are not allowable. However, the Government recognizes its obligation to participate, to the extent of its fair share, in any specific payment. Thus, allowability will be considered on a case-by-case basis.

2. "Reasonable costs continuing after termination" - Despite all reasonable efforts by the contractor, costs which cannot be discontinued immediately after the effective date of termination are generally allowable. However, any costs continuing after the effective date of the termination due to the negligent or willful failure of the contractor to discontinue the costs shall be unallowable.

3. "Settlement of expenses" - Settlement expenses, including the following, are generally allowable:
   a. Accounting, legal, clerical, and similar costs reasonably necessary for
      (1) The preparation and presentation, including supporting data, of settlement claims to the agreements officer; and
      (2) The termination and settlement of subcontracts
   b. Reasonable costs for the storage, transportation, protection, and disposition of property acquired or produced for the agreement.

c. Indirect costs related to salary and wages incurred as settlement expenses in (i) and (ii); normally, such indirect costs shall be limited to payroll taxes, fringe benefits, occupancy costs, and immediate supervision costs.

If settlement expenses are significant, a cost account or work order shall be established to separately identify and accumulate them.

d. Costs in paragraphs 4 (i) (ii) and (iii) of this article to which subcontractors may be entitled in the event of termination.

5. Notwithstanding the Limitation of Cost/Limitation of Funds article of this Agreement, the contractor shall not include in its estimate of costs incurred or to be incurred, any amount for special termination costs to which the contractor may be entitled in the event this Agreement is terminated for the convenience of the Government.

6. The contractor agrees to perform this Agreement in such a manner that Boeing claim for special termination costs will not exceed the amounts specified below:

Army Fiscal Year: ($ in millions)	2004	2005	2006	2007	2008	2009	2010	2011
Special Termination Liability:	$168.9	$376.7	$456.8	$418.8	$207.5	$127.9	$70.7	$0

7. The Government shall have no obligation to pay the contractor any amount for special termination costs in excess of these amounts. Periodic negotiations and adjustments of these amounts reserved for special termination cost will be accomplished as requested by the Grants Officer.

8. In the event of termination, this article shall not be construed as affecting the allowability of special termination costs in any manner other than limiting the maximum amount of the costs payable by the Government.

9. This article shall remain in full force and effect until CLIN 0001 of this Agreement is fully funded.

B. Full Termination Liability

PM, FCS and Boeing agree to pursue Full Termination Liability Cost coverage. PM, FCS agrees to pursue this request with the objective to have Department of the Army (DA) approval. If the requested clause is not approved for incorporation, the Government is not obligated to take any further action regarding this matter, nor can be held liable as a result of not incorporating such requested clause.

Attachment 1

Statement of Work

ATTACHMENT 1

STATEMENT OF WORK FOR THE FCS INCREMENT I SDD PROGRAM

1.0 OVERVIEW

This document defines the Government's requirement for work to be performed by The Boeing Company, in its role as the Future Combat Systems (FCS) Lead Systems Integrator (LSI), to execute the FCS Increment I (see Article XXX) Systems Development and Demonstration (SDD) Program tasks as described below. The role of the LSI is not simply that of a traditional Prime Contractor, but is more that of the Government's partner in ensuring implementation of FCS through engineering a system of systems solution, competitive selection of industry sources for development of the systems comprising the FCS Family of Systems, and integrating and testing these systems to satisfy the Increment I requirements. While this does not preclude the LSI from being a source of individual systems/subsystems development, such development participation requires prior approval of the Government or selection through the competitive procurement process (Article VIII of this Agreement), which includes Government approval. To accomplish this, the LSI/Army Program Manager FCS (PM FCS) partnership will work closely in a collaborative, cooperative environment with TRADOC, and other Army organizations designated to integrate the FCS Family of Systems (FoS) work with the larger Unit of Action (UA) System of Systems (SoS) and Future Force (FF) development efforts.

1.1 PROGRAM OBJECTIVES

The LSI has been selected by the Government to work in a collaborative environment with PM FCS, to ensure a successful development, production, fielding, and sustainment of the full complement of safe, reliable, suitable, and effective FCS materiel in accordance with (IAW) the FCS Operational Requirements Document (ORD) and the FCS UA Objective Capabilities Specification. The LSI is responsible for executing the FCS Increment I SDD program Statement of Work including support in integration of FCS SDD efforts with the Army's larger UA and Future Force Doctrine, Organization, Training, Materiel, Leader, Personnel (Soldiers), and Facilities (DOTMLPF) development work to ensure the UA equipped with the FCS can employ concepts in the UA Operational and Organizational (O&O) plan to achieve capabilities in the O&O and FCS ORD. This SDD Agreement phase addresses the first of successive anticipated increment system designs/developments leading to the envisioned FCS Future Force.

1.2 INCREMENT I SDD DESCRIPTION

The FCS SoS development effort is a complex integration task that implements a coordinated, comprehensive approach across the program elements of Training, Supportability, Networks, Systems, Interoperability, Force Development, and Testing. This high level, overarching integration ensures that the approved UA O&O plan, the Joint Requirements Oversight Committee (JROC) validated Mission Needs Statement (MNS), and the FCS Operational Requirements Document (ORD) guide the program approach to optimize force design, define requirements, ensure interoperability, demonstrate performance, reduce risk, and reach a balance of affordable performance throughout the life cycle. The LSI will define an incremental development plan for the evolution of the FCS into a stable, interoperable, producible,

supportable, and cost effective system that meets the Army FCS ORD through implementation of multiple capability increments. During this SDD Increment I, the LSI will design, integrate, build, support, and test the first capability increment (Increment I) of this incremental development plan. Some systems within the family of systems will achieve these capabilities prior to others and this will result in a phased completion of Increment I SDD. Refer to the FCS SDD Integrated Master Plan and Schedule (IMP/IMS) for detailed program listing and schedule.

1.3 SCOPE

This Statement of Work (SOW) defines the scope of work for the LSI relative to performing SoS management, engineering, procurement, integration, supportability, test, and evaluation during the FCS Increment I SDD phase. The defined scope of this FCS Increment I SDD includes the work necessary to ensure a successful IPD leading to Initial Production (IP) for all the FCS Family of Systems.

1.4 TECHNICAL PERFORMANCE REQUIREMENTS

FCS SoS performance requirements of the O&O and the ORD are used to derive the FCS UA Objective Capabilities Specification. The Increment I performance requirements are then derived from the FCS UA Objective Capabilities Specification and defined in the FCS UA Increment I Capabilities Specification at Agreement start and result in the configuration and capability baseline as defined in Article XXX of this Agreement. SoS Increment I capabilities and the implementing configuration are anticipated to evolve during SDD. Key Performance Parameters (KPPs) and ORD threshold requirements as allocated to Increment I in the FCS UA Increment I Capabilities Specification represent the minimum acceptable needs for the initial Increment I performance baseline. KPPs are non-tradable. Non-KPP ORD threshold requirements that are proposed to be traded will be worked in accordance with the trade process approved by the Government. Subsequent increments (for future procurement) will be defined during this SDD phase to ultimately result in a plan for achieving the full ORD objective capability. The Government will define metrics and criteria for the evaluation of each of the ORD requirements and to require the LSI to provide an Incremental Development Plan for achieving (singularly or in combination) each of the critical criteria in future increments.

1.5 SCHEDULE

The SDD program execution schedule is documented by the event-based Integrated Master Plan (IMP). The Integrated Master Schedule (IMS) is the management tool that schedules the program events and accomplishments found in the IMP.

2.0 APPLICABLE DOCUMENTS

The following documents as invoked in Section 3 provide guidance to and requirements for the LSI during SDD. Unless otherwise specified the version of each specific REFERENCE and COMPLIANCE document in effect at the time of usage shall apply. REFERENCE documents are to be used for guidance only. COMPLIANCE documents are a requirement. Second tier and lower documents (e.g., those documents cited or referenced within a first tier or lower document) cited in LSI COMPLIANCE documents are contractually binding unless specifically designated as a reference within the higher tier document.

3.0 LSI TASKS

The following subsections describe the work scope for the LSI during SDD divided into three major activities:

a. **Subsection 3.1** describes the SoS Engineering Integration and Program Management effort to manage the overarching requirements and SoS design analyses. It includes the definition and allocation of requirements and flowdown of process guidance to the Integrated Product Teams (IPTs) and any associated development subcontractors for networked FoS product design, development, integration, and verification activities.

b. **Subsection 3.2** describes implementation of the SoS requirements into the networked FoS analysis, design, development, integration, and test efforts at the individual FoS level.

c. **Subsection 3.3** describes the LSI activities to coordinate and perform integrated FoS and SoS demonstration and test planning, execution, and evaluation in accordance with test milestones defined in the Integrated Master Plan (IMP) and Integrated Master Schedule (IMS).

d. Data deliverables associated with selected SOW paragraphs are identified by references (Axxx) to specific FCS SDD program Agreement deliverable items per Attachment 2. References to the Work Breakdown Structure are indicated by [WBS x.x.x.x] to the sixth level as appropriate.

3.1 SOS ENGINEERING, INTEGRATION, AND PROGRAM MANAGEMENT

The LSI shall perform the necessary program and engineering management activities associated with planning and conducting the FCS SDD Increment 1 program IAW the Applicable Documents listed in paragraph 2.0, above. The LSI will ensure that the FCS design and processes support smooth transition to the objective capability as defined by the requirements documents and will assist TRADOC to integrate and synchronize the LSI FCS work with the larger UA and FF requirements as specified in the following subparagraphs. [WBS 1.1.1]

3.1.1 SoS Engineering and Integration Management

The LSI shall define, plan, and manage the systems engineering process IAW the SEMP and the Systems Integration Plan to transform the UA Increment I Capabilities Specification into a tested SoS Increment I solution suitable for IP initiation, conduct system reviews as defined in the SEMP and/or IMP, and prepare for the IPD. {A001, A029} [WBS 1.1.1.1, 1.1.1.2, 1.1.1.3, 1.1.1.7]

3.1.1.1 ***Future Force Requirements Integration.*** The LSI shall support TRADOC in refining and allocating UA Operational Requirements; refining operational interfaces with joint, interagency, and multinational (JIM) organizations and forces; and refining joint operational concepts for implementation into final design. This activity is to be sustained on three levels: Unit of Action (UA), Unit of Employment (UE), and Future Force (FF). The LSI will support refinement and maintain traceability of FCS requirements with operational concepts, force design, O&O, ORD, operational architectures, training and leader development, and operational interfaces with programs relevant to FCS (Attachment 11); perform Operational Analysis in support of force requirements; define and analyze future increment upgrades in terms of operational and force impacts; and force initialization, deployment, operations, support, and garrisoning requirements. The LSI will work collaboratively with TRADOC and Headquarters, Department of the Army (HQDA) to integrate FCS SDD work into the larger UA and FF development and demonstration effort in order to help the Army optimize force design and define/refine requirements in a continuous/consistent manner over time, including maintaining currency to the STAR. The LSI will support TRADOC/ UA Maneuver Battle Lab (UAMBL) in the horizontal integration and synchronization of FCS SDD efforts with TRADOC's larger FF/UA DOTMLPF domains. The LSI shall supply data in support of TRADOC documentation of operational requirements, findings, and conclusions that impact the FCS design, Operational and Organizational Concept, or requirements development, and shall ensure rapid dissemination to PM FCS and design engineers to ensure parallel work is effectively synchronized. The LSI will acquire insights from the experimentation, studies, and analysis conducted by the following TRADOC organizations: UAMBL, Combined Arms Center (CAC), Combined Arms Support Command (CASCOM), TRADOC Analysis Center (TRAC), and enhanced Objective Force Battle Labs (including support to UAMBL from other centers and schools as part of the Hub and Spoke concept). These insights acquired will be submitted to TRADOC to ensure their analytic validity and consistency with the UA developmental concepts. The LSI will also provide TRADOC with any insights from their FCS SDD work that could impact UA and FF operational considerations. {A002} [WBS 1.1.1.1, 1.1.1.1.2, 1.1.1.1.3, 1.1.1.1.4. 1.1.1.1.5]

3.1.1.1.1 Force Integration & Analysis. The LSI shall support TRADOC through PM FCS with UA level and FCS system of systems integration, interoperability, and force effectiveness trades necessary to achieve the allocation of ORD requirements to the FCS UA Objective Capabilities Specification. The LSI will support PM, FCS and TRADOC in modeling and simulation efforts for trade studies, assessment, evaluations of force effectiveness, and for User Representative testing and training to include the integration of Government and LSI modeling and simulation efforts. The LSI will also participate in TRADOC Integrated Concept Teams designed to synchronize and optimize all UA and FF DOTMLPF requirements. The LSI shall support planning, coordination, and execution of Unit of Action Maneuver Battle Lab (UAMBL) experimentation that impacts the FCS FoS design, and shall assist in refining Operational and Organizational concept and requirements development. The LSI shall document analyses, findings, and lessons learned. {A002, A030,} [WBS 1.1.1.1.3, 1.1.1.1.4, 1.1.1.1.5]

3.1.1.1. TRADOC Site Representation. The LSI shall provide onsite personnel distributed at TRADOC force development sites based on needs identified by the UAMBL and HQ TRADOC (see Agreement Attachment 7 – Office Space and Administrative Support). These personnel shall coordinate the translation of operational concepts and force requirements and rapidly disseminate continuous requirements development and refinement emerging from UAMBL experiments to coordinate and synchronize operational concepts, force requirements, materiel development, and analytical activities. The LSI shall ensure that UA requirements efforts are current with emerging insights gained from subsequent FCS CTD increments being conducted in parallel with Increment I SDD. [WBS 1.1.1.1.5]

3.1.1.1.3 TRADOC Battle Lab Integration. Based on Attachment 7 and SOW 3.1.4.6 below, the LSI shall provide TRADOC's networked Battle Labs and schools with access to the LSI virtual prototype

designs organized within the FCS ACE Distributed Product Description (DPD), to facilitate operational experimentation with latest baseline designs and also to enable rapid dissemination of User Representative feedback to designers as the UA is designed and developed in parallel with the FCS SDD. This work will be targeted at providing specific system and family of systems performance data through Army Materiel Systems Analysis Activity (AMSAA) to the TRADOC network of Battle Labs and schools. [WBS 1.1.1.5]

*3.1.1.2 **Interface Management.*** The LSI shall identify and manage the technical interface requirements among FCS FoS components and among the FCS FoS and complementary systems (including systems used "in-lieu of" systems listed in the ORD) as defined in Attachment 11 and Article XXIX. The LSI shall establish, monitor and maintain interfaces to systems external to FCS (legacy, higher echelon, Joint, Coalition, and other Government and Non-Government Agencies as defined in Attachment 11) and control internal FoS system-to-system interfaces. {A004} [WBS 1.1.2.1.3.2]

3.1.1.2.1 Interoperability Management. The LSI shall identify, update, and manage the interoperability requirements among the FCS FoS, Army, and joint, interagency, and multinational (JIM) organizations and forces listed in Attachment 11. This effort requires the LSI to monitor and control all FCS interfaces required to satisfy FCS interoperability requirements and includes participation in interface control working groups, development and maintenance of interface control documents, design of FCS interfaces, and verification that interfaces conform to approved Interface Control Documents. In coordination with TRADOC's FF and UA force development work, the LSI shall identify, update, and manage interoperability solutions to meet the User Representatives requirements among the FCS FoS as they relate to the Army's UA and FF developments work, and Army participation in development of JIM organizations, forces, and equipment, including addressing files, applications, standards, protocols and other relevant considerations. The LSI shall submit maintainability and reliability considerations for interoperability to TRADOC (through UAMBL to CASCOM). The LSI shall submit information exchange considerations to TRADOC (through UAMBL to the Architecture Integration Management Directorate). {A035} [WBS 1.1.2.1.2.11, 1.1.2.1.3.2]

*3.1.1.3 **SoS Architecture Development and Management.*** In close coordination with TRADOC, AMC, and other Army organizations, the LSI will develop, integrate, and manage FCS SoS level Operational, System, and Technical View architectures and support TRADOC development of Operational View architectures reflecting O&O Plan and ORD maturation to provide an evolutionary roadmap for SoS architectures using DoD Architecture Framework 1.0 as appropriate. The LSI will manage and update the FCS interface requirements to higher (DoD and JIM) and lower level architecture views, implementing JTA, JTA-A, and JAUS requirements into these views as required. The system design approach shall comply with the applicable portions of the Joint Technical Architecture-Army. PM FCS shall approve any proposed technical designs that deviate from the standards and practices delineated in the Joint Technical Architecture-Army during this Agreement. The LSI will provide FCS developed architecture products synchronized with and entered into the TRADOC Army Architecture Repository Management System, which must be CADM compliant. {A005, A006} [WBS 1.1.1.2.2, 1.1.1.2.2.1]

3.1.1.3.1 System/Subsystem Design Description. The LSI shall develop and maintain a System/Subsystem Design Description (SSDD) as a single document to capture system-level (e.g., electrical, software, mechanical) design concepts and decisions and used as the basis for further system and subsystem development. In addition to system-level architecturally significant contents, the LSI will include design decisions and constraints at appropriate system/subsystem levels as necessary and applicable to meeting system performance requirements and to coordinate interfaces across multiple developers/products (e.g., IPTs, suppliers/platforms, vehicles, sensors). {A007} [WBS 1.1.1.2.2.3]

3.1.1.3.2 FCS Specifications. The LSI shall update and manage the FCS UA Increment I Capabilities Specification reflecting the SDD Increment I compliant capability (as defined in Article XXX) including interfaces to Increment I complementary programs (Attachment 11). The LSI shall also develop and deliver a FCS UA Objective Capabilities Specification reflecting the full FCS ORD to provide overarching guidance for future incremental development planning (3.1.1.10). The LSI will develop, update, and manage all systems level performance specifications, Distributed System Specifications, Prime Item Development Specifications (PIDS), Procurement Control Drawings, and Software Specifications to reflect the Increment I capability only. {A003, A008, A009, A018, A044} [WBS 1.1.1.2.3.2, 1.1.2.1.3.6]

3.1.1.3.3 Requirements Analysis Management. In coordination with PM, FCS, TRADOC, the LSI shall translate operational requirements into systems requirements. This translation includes the development of systems and technical architectural views of the SoS, as well as the FoS that comprise the SoS. The LSI shall capture and appropriately allocate performance, functional, and other derived requirements to the specifications of 3.1.1.3.2. Further, the LSI shall develop and maintain dynamic traceability of requirements linking the ORD to the FCS UA Objective Capabilities Specification and lower tier specifications and system design, enabling identification of change impact. The LSI shall develop and maintain a comprehensive integrated requirements database to capture: continuous FCS requirements development over time to objective capability; FCS requirements, including key attributes related to safety and mission critical functions; traceability between the system level requirements and the Hardware Configuration Item (HWCI) and Computer Software Configuration Items (CSCI) requirements they are allocated to; and traceability between HWCI and CSCI requirements and design components that implement them. {A009, A018} [WBS 1.1.1.2.2; 1.1.1.2.2.1; 1.1.1.2.3.2; 1.1.2.1; 1.1.2.1.3.3; 1.1.1.2.2.3]

3.1.1.3.4 SoS Architecture Development Plan. The LSI shall develop a SoS Architecture Development Plan that defines the SoS Architecture processes, management, and organization to be utilized in the development of architectures. Timelines and milestones for development of the SoS Architectures will be as documented in the IMP and IMS. {A010} [WBS 1.1.1.2.2]

3.1.1.4 Configuration/Data Management. The LSI shall provide configuration and data management (CDM) through the FCS ACE IAW the CDM Plan. The LSI will develop and manage processes and policies implemented in related program CDM organizations, including ensuring that architecture data is synchronized with and entered into the TRADOC Army Architecture Repository Management System (AARMS), managing the FCS data repository, and providing oversight of configuration management policies and processes employed by other LSI organizations and suppliers. The LSI shall manage the FCS interface control documents relating to SoS internal and external interoperability. The LSI will coordinate configuration management of FCS SDD products to ensure an appropriate level of interoperability/consistency with TRADOC, Army Test and Evaluation Command (ATEC), and AMC configuration management policies and procedures for operational and SA-C architecture products. {A011, A063} [WBS 1.1.1.2.4, 1.1.2.1.3.3]

3.1.1.5 Manpower and Personnel Integration (MANPRINT). The LSI shall integrate MANPRINT into system designs to accommodate personnel health and safety, human factors, system safety, soldier survivability, skills/aptitude/development, training, and system manpower requirements. As a part of preliminary design, collaborate with appropriate AMC and other Army agencies, including the TRADOC System Manager (TSM) FCS, to resolve User Representative MANPRINT issues in the design and development of the FCS SoS. MANPRINT considerations and derived requirements must be maintained compatible with the capabilities and limitations of the User population. The LSI will provide policy and processes to ensure consistent incorporation of the MANPRINT program across all configurations. The LSI shall conduct MANPRINT design evaluation during system development, to

include requirement, specification, design, test, and assessment and provide a report on results of evaluation. {A012, A013} [WBS 1.1.1.2.4, 1.1.2.1.2.14]

3.1.1.6 Trade Study and Life Cycle Cost Containment Management. The LSI shall establish policies and procedures relating to the trade study process, including application of Cost as an Independent Variable (CAIV), coordination for studies that cross program elements, and recommendations for final resolution on any issues that affect SoS requirements. The LSI will use SoS trade studies to provide support for technology and design decisions through CDR. Elimination of SoS trade studies after CDR will not effect trade studies or design trades below the SoS level, subcontractor capability and funding, trade studies necessary to evaluate a spiral forward system or trade studies necessary to evaluate spiraling in new technology. The LSI will implement the FCS Life Cycle Cost Containment Plan defined in D786-10012-1 and IAW the Life Cycle Cost Estimation reporting milestones identified in the IMS. The LSI shall develop an overall plan consistent with the Containment Strategy to achieve program affordability, implementing CAIV to balance cost, performance, and schedule, including development of Total Ownership Cost estimates to track progress toward meeting containment requirements and reducing operations and support costs. The LSI will resolve User Representative operational performance issues in conjunction with TRADOC in the design and development of the FCS SoS as well as the individual systems that comprise the FCS FoS. The LSI will ensure FCS FoS and system trades are synchronized and integrated with the larger UA and FF development and demonstration effort. The LSI will provide trade study data to TRADOC to support TRADOC's decision process regarding adjustments to FCS operational requirements and effectiveness. The LSI will support best choice decisions with documented evaluation. Requirements not incorporated into design concepts for Increment I, shall be reassessed as required. The LSI will flow trade study policy and requirements down to the major FCS network and platform development subcontractors. The LSI shall participate in and provide oversight to the conduct of the subcontractors' trade study processes. {A014, A015, A016, A034} [WBS 1.1.1.2.2.4, 1.1.1.2.8]

3.1.1.7 Software Management. The LSI shall establish a Software Process and Management Team, consisting of LSI, Government, and supplier representatives, to provide the overarching program-wide software management, coordination and guidance for processes relating to software. This software management team will ensure that the proper policies, processes, procedures, tools, and training are in place to provide an integrated coherent software management approach across all elements of the program and implementation of an open software architecture across the FCS FoS. The software management team shall update and maintain the FCS Software Development Plan and approve and coordinate changes to IPT and supplier Software Development Plans. The software management team shall assist and verify that the IPTs and their software suppliers implement and maintain organizational software development practices that are certified to at least Level 3 of the Software Engineering Institute Capability Maturity Model for Software (SEI CMM). The software management team shall develop a plan to achieve SEI Capability Maturity Model Integration (CMMI-SW) Level 5 certification by the end of Increment I SDD. The software management team shall develop and maintain a software progress measurement plan to establish software metrics and a measurement process to include audits and assessments. Using the FCS ACE, the team shall collect metrics from the software suppliers and perform analyses to assist IPTs in software defect prevention and reduction as well as cost and schedule adherence. {A017} [WBS 1.1.1.3]

3.1.1.7.1 Software Lifecycle Activities. The LSI shall conduct SoS software requirements, architecture, and design reviews to ensure the development and maintenance of the FCS SoS/FoS software solutions are integrated across all of the UA Battlefield Functional Areas, UE, and Home Station Operating Center (HSOC) to meet FCS requirements and operational architecture demands. The LSI shall also participate in other software reviews to ensure FCS SoS/FoS integration. The LSI shall prepare, deliver for approval, and maintain the FCS SoS/FoS software architecture description document (SADD).

The SADD will address implementation and maintenance of an open architecture that enables industry to develop modular battlefield software enhancements to increase the operational effectiveness of the UA, UE and HSOC. The LSI shall develop a software transition plan to identify resources required to maintain and support delivered software. The LSI will develop a phased software integration plan that includes initial development and a roadmap/plan for software upgrades, including tactical, that support both Increment I, and subsequent increments, taking into consideration the Army Software Blocking Plan. {A017, A036} [WBS 1.1.1.3]

3.1.1.7.2 Software Configuration and Quality Management. The LSI is responsible for SoS/FoS software configuration management per the CDM Plan, including operation of the FoS level software configuration control board. The software management team maintains the software item database, software configuration management database, and software problem reporting database. The LSI shall ensure that all software developed or modified (including source code, firmware and supporting documentation) under this agreement shall be accessible through the FCS ACE and become Government property at the end of SDD. The LSI shall develop and maintain a software quality assurance plan. The team shall perform software quality product and process audits of LSI software activities and supplier software quality engineering. {A017} [WBS 1.1.1.3]

*3.1.1.8 **Performance Assurance.*** The LSI shall ensure SoS and FoS performance is effectively and efficiently achieved to specific documented criteria. The LSI will define SoS and FoS performance by such criteria as: Key Performance Parameters (KPPs), prioritized ORD threshold and objective requirements, Technical Performance Measures (TPMs), Measures of Effectiveness (MOEs), system security, producibility, parts/materials/processes, and affordability. The LSI shall conduct performance test and analysis at the small unit (company) level to establish integrated SoS effectiveness measures across the UA Battlefield Functional Areas (BFA). The LSI will conduct SoS level analysis to evaluate UA Force Effectiveness compared to the SoS specifications. {A020} [WBS 1.1.1.2.5, 1.1.1.2.6]

*3.1.1.9 **SoS Verification.*** The LSI shall conduct a verification program to support the decision to proceed with IP, and provide verification data for Government evaluation of SoS performance by the Joint Interoperability Test Command and Army Test and Evaluation Command. {A021, A022, A029} [WBS 1.1.1.2.7]

*3.1.1.10 **FCS Technology Development and Growth Management.***

3.1.1.10.1 Future Increments Strategy. The LSI will define future Increments concepts and corresponding capabilities as required by CLIN 0002 Work Directives. [WBS 1.1.1.2.10]

3.1.1.10.2 System and Technology Insertion into Increment I. Through separate CLIN 0002 Work Directives, the LSI shall develop a maturation scheduling strategy, technology development analysis plan, transition plans, business case analyses and experimentation plan, and perform analysis, risk identification, and planning for programmatic integration of critical technologies, post FOC baseline, to meet the objective values of the FCS UA Increment I Capabilities Specification and the values within the FCS UA Objective Capabilities Specification. This data shall be accessible through the FCS ACE [WBS 1.1.1.2.10]

3.1.1.10.3 Growth Strategy. The LSI shall define, document and maintain a Growth Strategy for integrating, scheduling, measuring and controlling the evolution of the FCS System of Systems architecture, development, test, and fielding of UAs that meet both the objective requirement of the FCS UA Increment I Capabilities Specification and the FCS UA Objective Capabilities Specification. The Growth Strategy shall be consistent with the FCS Technology Development Strategy. This Growth

Strategy will incorporate potential technology and systems suppliers to the FCS program including LSI, Government entities representing DARPA and AMC, TRADOC, suppliers, and complementary programs and other services and Government Agencies associated with growth beyond the threshold values within the FCS UA Increment I Capabilities Specification. The LSI will include within the Growth Strategy the methodology and details for integrating capability throughout the FCS life cycle based on incremental upgrades and technology insertion, to include Increment I spiral forward systems within the FCS UA Objective Specification as described within the Technology Development Strategy. The LSI will also include in the Growth Strategy all software functionality upgrades beyond the threshold values of the Increment I capabilities specification and a strategy for how the upgrade(s) will be phased in. In addition, the strategy will identify significant change(s) to Increment I software that are required to implement post increment I software. The Growth Strategy shall provide for continuous commercial innovation and development of software that will increase UA operational effectiveness consistent with the UA O&O plan. {A024} [WBS 1.1.1.2.9]

3.1.1.10.4 Growth Provisions The LSI shall design the FCS to facilitate growth to full objective capabilities. The LSI shall include growth provisions and flexibility to accommodate future technologies and spiral forward systems to meet User requirements. The LSI shall specify and implement FCS FoS and associated FCS Systems of Systems and Unit of Action Architectures that include provision for design margin and growth consistent with the FCS Growth Strategy. The LSI shall conduct appropriate trade studies through CDR to determine needed design parameters enabling subsequent capability upgrades, including spiral forward systems, to be readily inserted without significant redesign and retrofit. The LSI shall analyze objective performance requirements associated with Increment I Thresholds, design the Increment I FCS with additional capacity (such as space, weight and power), and interfaces needed to facilitate objective capability enhancements, including spiral forward systems, without significant redesign or retrofit, and document these growth areas within the appropriate technical baseline documentation. The LSI shall, for the IMS, ensure that the technical baseline includes all documentation, planning, and engineering activities needed to facilitate the completion of the physical and network integration (e.g. space, weight, power, and networks allocations and interfaces) of the IMS into the UA. The LSI shall, for the NLOS-LS, ensure that the technical baseline includes all documentation, planning, and engineering activities needed to facilitate the completion the network integration (e.g. network allocations and interfaces) of the NLOS-LS into the UA. [WBS 1.1.1.2.9]

3.1.1.10.5 Critical Technology Management. The LSI will define and monitor current and planned technology maturation and insertion plans to meet the threshold values of the FCS UA Increment I Capabilities Specification. The LSI shall identify, evaluate, develop, and execute risk mitigation plans associated with maturation and integration of critical technologies into Increment I. The LSI shall perform assessments and evaluations for the Government in the development of Technology Transition Agreements required to complete the execution of risk mitigation plans. The LSI will review Government technology programs and advise the Government on their utility for FCS [WBS 1.1.1.2.9]

3.1.1.11 Spiraling Out Capabilities or Technologies to Current Forces. LSI documentation and processes will be structured to facilitate initiatives to spiral out FCS capabilities and technologies to the current force. Individual initiatives will be separately specified by Work Directive using CLIN 0002. [WBS 1.1.1.2.10]

3.1.1.12 SoS Logistics Management. The LSI shall provide the planning and management of all logistics functions to include the development of Performance Based Logistics IAW DoD 5000 series, DoD Future Logistics Enterprise (FLE) - U.S. Army PBL Implementation Guide, and the guidance of TRADOC Maneuver Sustainment Concept. In close coordination with the Army, the LSI shall conduct logistics planning, analyses, and testing and recommend technologies, processes, procedures, and

performance metrics to achieve logistics footprint and operational support cost reduction. The LSI shall coordinate with the Army to identify linkage to the DOD FLE when defining the logistics attributes in the design of the HSOC, the forward support battalion, and the forward base support capabilities. This shall include the evaluation of logistics and readiness requirements for integration across the FCS SoS to support the development and process and procedures to implement defined logistics solutions. The LSI shall submit maintainability and reliability considerations for interoperability to TRADOC (through UAMBL to CASCOM). Integration of the results of these planning and management activities shall begin with GCSS-A and MC4 during SDD and be completed during Low Rate Initial Production (LRIP) {A025, A027} [WBS 1.1.1.7]

3.1.1.13 Programmatic Environmental, Safety and Occupational Health Evaluation (PESHE). The LSI shall update the PESHE including integration of ESOH design considerations. The LSI shall comply with applicable Federal, State and Local regulations and statutes. {A028} [WBS 1.1.1.2.6.15]

3.1.2 Simulation and Modeling for Acquisition, Requirements, and Training (SMART)

The LSI shall manage, coordinate, and as required develop, in collaboration with the Government and suppliers, SoS and FoS performance level modeling and simulation (M&S) capability for use in analyzing requirements, evaluating design performance, and supporting system and SOS level testing IAW relevant sections of the Simulation Support Plan. The LSI, in close coordination with TRADOC, AMC and other Army organizations, shall develop requirements for constructive and virtual simulations for trade studies, SoS force effectiveness and performance assessment, requirement validation, design analysis, and test planning and design to support demonstrations and tests. The LSI shall serve as the enterprise level integrator to ensure FCS M&S efforts addressing requirements, design, training, manufacturing, and production are not being duplicated among the efforts of the LSI, subcontractors, and Government, and to leverage reuse and commonality of M&S tools to include AMC RDECOM facilities and capabilities for materiel research, development and evaluations, as well as TRADOC Battle Lab and school facilities conducting experimentation efforts focused on Unit of Action DOTMLPF requirements development and demonstration. The LSI will ensure integration and cross leveraging of M&S between appropriate program elements. The LSI will ensure M&S representations are consistent among the Government, LSI, and suppliers. The LSI will ensure that the modeling and simulation capability developed in support of SDD also supports planned future increment processes and functions (e.g., training, post deployment software support, supportability, and interoperability). However, the LSI shall not develop models, simulations or architectural artifacts for which there are effective and efficient alternatives existing within the Government as defined in the SIL Development Plan unless specifically authorized by the Government. Government M&S capabilities include, but are not limited to: OneSAF/OTB, CASTFOREM, Janus, VIC, STORM, OASIS, JDEP, and Virtual Proving Ground. The LSI shall maintain and update Government furnished models and simulations as required. The LSI shall ensure that any models, simulations, architectures, and documentation (including source code) necessary for full functional use, maintenance and upgrade of the M&S developed under this agreement will be accessible through the FCS ACE and become Government property at the end of SDD, in accordance with 3.1.1.7.2. [WBS 1.1.1.4]

3.1.2.1 Force Effectiveness Modeling. The LSI shall coordinate and support, among LSI, Government, Industry sources and User Representatives, Operational Analyses, including modeling of interfaces, designs, and testing as necessary to evaluate FCS Increment I Force Effectiveness. The LSI shall document and receive approval of Force Effectiveness SoS, FoS, and UA analysis results through an FCS ACE workflow (that includes: HQ TRADOC, TRAC and UAMBL). HQ TRADOC (ICW TRAC and UAMBL) shall approve both plans and results that in any way affect or represent the force effectiveness of either FCS FoS, SoS or the UA. The LSI will develop, provide analysis data in support of

TRADOC development of scenarios. The LSI shall coordinate the maintenance and utilization of scenarios in support of Force Effectiveness evaluation and FCS design specific performance evaluations. All Environment (scenario, terrain, and weather) and Behavior (employment and TTP) data sets for analysis will be approved by TRADOC (specifically HQ TRADOC ICW TRAC and UAMBL). Army Materiel Systems Analysis Activity (AMSAA) certifies performance data. The LSI shall develop and maintain a library of scenario results within the FCS ACE for comparison as the design evolves. {A030} WBS 1.1.1.4.2]

3.1.2.2 SoS and FoS Modeling and Data Description. The LSI shall develop or acquire Government accredited system level modeling and simulation of the following: responsiveness, deployability, agility and versatility, lethality, survivability, sustainability, training, interoperability, availability, vulnerability, and information management. The LSI shall develop simulation federation architecture design alternatives for virtual (realtime) and constructive (non-realtime) SoS simulations. The LSI will coordinate the use of this modeling and simulation capability across SoS and FoS development, testing, and other User Representative support as needed to evaluate FCS performance for selected designs IAW the Simulation Support Plan. [WBS 1.1.1.4.3]

3.1.2.2.1 System Modeling. The LSI shall coordinate and manage the integration of each system's variant models, emulations, and simulations into the SoSIL, other SILs, and test environments to support development and integration with other elements of the SoS and to ensure both SoS and FoS level demonstration and test objectives are met. The LSI will ensure that individual system-to-system interfaces are validated prior to SoS level integrated test and evaluation. [WBS 1.1.1.4.3]

3.1.2.2.2 Distributed Product Description (DPD). The LSI shall develop and maintain a DPD consisting of system/subsystem reference models for each system's variants, including physical, dynamic, behavior, and other models as required to support ongoing analyses and integration tasks, to verify and analyze performance and other considerations with respect to requirements in the SoS specifications, and to ensure commonality and affordability of system elements within the context of the FoS. The LSI, working in conjunction with Army Materiel Systems Analysis Activity (AMSAA) and other AMC organizations, shall provide performance data for FCS systems translated into inputs for the Army operational simulations (e.g., this includes but is not limited to ONE Semi automated forces (ONESaf) Test Bed, CASTFOREM, JANUS). The DPD feature shall be available for Government access via the FCS ACE. [WBS 1.1.1.4.3, 1.1.1.4.5]

3.1.2.3 Simulation Development, Verification, Validation, and Accreditation and Support. The LSI will provide and implement the necessary Modeling and Simulations (M&S) processes and standards to coordinate simulations development and utilization in support of FoS design evaluation and SoS performance verification. The LSI shall verify and validate models and simulations used for the FCS design, development, and test and evaluation in compliance DA PAM 5-11 and the LSI developed FCS Simulation Validation and Verification Plan, provide verification/validation data to support Government accreditation of models and simulations, and conduct validation and verification of simulations that will support a virtual Operational Test prior to IPD. {A031} [WBS 1.1.1.4.3]

.1.3 SoS Integration Laboratory

The LSI shall design, develop, use, and maintain a SoS Integration Laboratory (SoSIL) with data and analysis results accessible through the FCS ACE, IAW the System Integration Laboratory (SIL) development and maintenance plan for the program life cycle, for use in SoS development, integration, and test. The LSI will provide detailed design, interface, and utilization information in separate documents available for Government review and comment. The LSI shall establish system simulators at

supplier sites as appropriate and provide a framework and detailed interface definitions to integrate simulators across the dispersed sources/User Representatives, including interfacing with complementary programs hardware, software, and SILs, in both industry and Government, IAW SoS test plans. The LSI shall provide interfaces to the DoD Joint Distributed Engineering Plant for interoperability testing, to the AMC RDECOM Laboratories, and to Army technical test capabilities (specific Government site locations requiring interfaces will be as mutually agreed to between the Government and the LSI). The LSI, shall facilitate through the DREN (Defense Research Engineering Network) a link for RDECOM's Laboratories, ATEC facilities, and TRADOC Battle Labs and schools to the LSI SILs and SoSIL to enable concurrent engineering design development and evaluation with User Representative continuous and consistent requirements determination and development to occur between LSI and Government virtual development and prototyping facilities and to avoid duplication of Government capabilities and events. The LSI shall furnish all emerging performance data to AMSAA for validation. {A032} [WBS 1.1.2.1.4.1]

3.1.4 System of Systems Program Management and Control

The LSI shall provide integrated program management, program control, agreement and subcontracts management, data management, and operations management associated with the LSI overarching management of the FCS SoS activities. The LSI shall conduct subcontract procurement activities in an open competitive environment IAW the Competition Process Plan to allow the selection of the best of industry or Government sources for major FCS products. The LSI shall support PM FCS in program contingency planning (e.g., funding changes, threat evolution, requirements changes). The LSI shall use Integrated Process and Product Development (IPPD) as defined in Article IV of this OTA. The LSI shall report management performance metrics at program management reviews. [WBS 1.1.1.6]

3.1.4.1 Program Management. The LSI shall provide the executive level leadership to implement and control FCS program cost, schedule, and performance activities through Agreement closeout. The LSI will conduct monthly PM FCS program status and management reviews and quarterly FCS SDD reviews to the FCS Board of Directors. The LSI will be the primary focal point to the Government FCS Program Management Office, conducting, coordinating, integrating, and administering all aspects of LSI program management IAW the SDD IMP and IMS and using the FCS Program Plan as guidance, leading to a successful Increment I IPD decision and completion of SDD efforts. The LSI will perform technical level management and administration for the development of SDD products. The LSI shall maintain on the ACE a current FCS roster, identifying members by IPT and by Working Group. [WBS 1.1.1.6.4]

3.1.4.1.1 Program Reviews. The LSI will conduct reviews IAW the FCS Program Plan Summary and IMP/IMS to assess SoS program/technical maturity. [WBS 1.1.1.6.3]

3.1.4.1.2 Program Risk Management. The LSI shall execute program risk management by identifying, assessing, and ensuring mitigation of program risks, with separate identification of risks associated with the SoS COE. Each risk identified shall include an assessment of technical, cost, schedule, and programmatic risks IAW the Risk Management Plan. {A033} [WBS 1.1.1.6.4.2]

3.1.4.1.3 Program Documentation and Briefing Support. The LSI shall coordinate generation of information requirements for IPD and other programmatic support, including providing data for PM FCS program briefings and participating on Government Working IPTs. [WBS 1.1.1.6.3]

3.1.4.1. Program Protection. The LSI shall provide for security of both classified and unclassified information, data, hardware, and software generated for the program. The LSI shall comply

with and provide security procedures and processes to satisfy the security requirements identified in the DD Form-254, which specifies requirements for Top Secret-Special Compartmented Information (TS-SCI), Communications Security (COMSEC), National Industrial Security Program Operating Manual (NISPOM), NISPOM Supplement, NISPOM Overprint, Program Security Guides, Security Classification Guideline, DoD 5100.76-M, and AR-380-381 (Special Access Programs); and the Program Protection Plan. [WBS 1.1.1.6.4.4]

3.1.4.1.5 Data Management. The LSI shall coordinate, monitor, and deliver contractually required data items on the FCS ACE unless otherwise specified. [WBS 1.1.1.6.1.3]

3.1.4.1.6 Integrated Product Team Training. The LSI shall conduct IPT training for Level II and III IPTs within 30 days of their IPT Charter being established. The LSI will establish an IPT training program for individuals who are assigned to an established IPT after the initial training period. The IPT training shall address as a minimum the IPT's charter and structure; conflict resolution; cost, schedule, and performance baselines; Agreement modification process; and common practices. [WBS 1.1.1.6.4.6; 1.1.1.5.6]

3.1.4.2 Subcontractor Management. The LSI shall maintain competition throughout the life cycle at the subcontract level IAW the Competition Process Plan. The LSI will ensure utilization of Best Commercial Practices and Best Public-Private Partnerships to reduce cycle times and cost. The LSI will proactively participate in the FCS supply base Make or Buy plans, evaluation criteria, and decision-making processes. The LSI shall manage subcontractor activities to facilitate on-time delivery of quality products consistent with the contractual, cost, technical, and schedule constraints, and ensure coordinated and consistent direction aligned with program objectives. The LSI will coordinate with the suppliers through the LSI Integrated Product Teams (IPTs) and the assigned onsite Major Subcontract Managers (MSM) concerning subcontractors' scopes of work, data deliveries, and funding. The Competition Process Plan shall be available for Government review on the FCS ACE. [WBS 1.1.1.6.1.2]

3.1.4.3 Agreement Management. The LSI shall administer and comply with this Agreement. [WBS 1.1.1.6.1]

3.1.4.3.1 Export & Import Compliance. The LSI shall comply with applicable regulations and statutes regarding exports and imports. [WBS 1.1.1.6.1]

3.1.4.4 Program Management Coordination with Complementary Programs. The LSI shall ensure that the FCS systems developed under this Agreement incorporate the Complementary Programs listed in Attachment 11 needed to fulfill the requirements call out in the SoS Specification; and meet the Army's requirement for successful UA Increment I FOC, including those UE, Legacy, Interim, Joint, International and Multinational interfaces needed to make the UA operational. The LSI shall develop and implement a Complementary Programs Management Control Plan that shall include the process for identifying and managing Complementary Programs. The Plan shall include coordination and interfaces with the UA Supportability Strategy, Fielding Team activities and Material Fielding Agreements prepared by the Logistics Requirements and Readiness IPT. {A038, A061} [WBS 1.1.1.6.5; WBS 1.1.2.1.2.11]

3.1.4.4.1 Complementary Programs Database. The LSI shall develop a database of the Complementary Programs needed to establish interfaces and meet the FCS UA Increment I Capabilities Specification requirements in accordance with the CDRL. {A061} [WBS 1.1.1.6.5]

3.1.4.4.2 Complementary Program Schedules. The LSI shall integrate the complementary program schedules into the overall FCS program IMP/IMS. The LSI shall provide System of Systems

recommendations for the SDD FCS Increment 1 phase Complementary Program integration from analysis of IPT inputs and EVMS data.

3.1.4.4.3. Memoranda of Agreement (MOAs). The PM FCS, with LSI support, will work with PEO GCS in establishing Memoranda of Agreement (MOAs) with the Complementary Programs' Government Program Executive Offices (PEOs) and Subordinate MOAs (SMOAs) with the Program Managers of Army Material Command (AMC) item managers, Research Development Engineering Centers (RDECs), and other Government Agencies to help ensure the definition and management of program interfaces between FCS and complementary programs are adequate to effect required FCS performance. The LSI, with PM FCS support to the extent possible, will, concurrent with Government MOA and SMOA development, establish and manage Associate Contractor Agreements (ACAs), as necessary, with the prime contractors, subcontractors, and/or Original Equipment Manufacturers of identified FCS complementary programs. Complementary programs ACAs shall reference detailed Material Fielding Agreements (MFAs) which shall be developed during SDD by the Material Fielding sub-IPT in coordination with the responsible complementary program office personnel.

3.1.4.4.4 Complementary Programs Risk Mitigation. The LSI shall identify issues and recommend risk mitigation efforts associated with complementary programs development and integration. [WBS 1.1.1.6.5; 1.1.1.6.4.2]

3.1.4.4.5 Complementary Programs Funding. The development cost of the Complementary Programs technologies required for the successful execution of the FCS SDD Program is not funded through this FCS SDD Agreement, except for the following aspects of specific Complementary Programs:

		Cost Included in LSI Procurement	
Complementary Program	Technology	Specific Configuration Changes Dependent upon Completing Current Development	Hardware Required for Prototype Testing
CP387, Ground Standoff Mine Detection System (GSTAMIDS)	Ground Sensors, Procurement Package 12	X	X
CP143, Emitter Mapping (Prophet 2/3)		X	X
CP334, Class IV EO/IR (aka Advanced Electro-Optical / Infrared and ASTAMIDS – (Air Standoff Minefield Detection System)	Air Sensors, Procurement Package 14		X

Complementary Program	Technology	Specific Configuration Changes Dependent Upon Completing Current Development	Hardware Required for Prototype Testing
CP49 Class 4A SIGNITPayload (Tactical SIGINT Payload)			X
CP403, Joint Tactical Radio System (JTRS) Cluster 1	Ground and Air Communications, Procurement Packages 24 and 25		X
CP176 Joint Tactical Radio System (JTRS) Cluster 5			X
CP17, ATCIA	Manned Ground Vehicle	X	
CP80, CTIA	Manned Ground Vehicle	X	
CP264, One SAF Objective System RDTE	Manned Ground Vehicle	X	
CP184, Lightweight 120mm Cannon for Mounted Combat System	Manned Ground Vehicle (MGV) Mounted Combat System (MCS)	X	

[WBS 1.1.1.6.5, 1.1.2.1.2.11]

3.1.4.5 ***Business Management.*** The LSI shall implement the necessary business management unctions to ensure all budget and schedule constraints are met during SDD and shall provide necessary chedule, financial, and other program progress reporting for all CLINs under this Agreement. {A039, \040, A041} [WBS 1.1.1.6.2]

3.1.4.5.1 *Earned Value Management.* The LSI shall implement an earned value management ipproach to ensure program leadership properly manages the use of LSI and subcontractor resources dollars and manpower) and meets or exceeds all program schedule and technical requirements. This nanagement system includes applying effective management control systems as set forth in Article IV of his Agreement that provide disciplined cost and schedule and technical performance data in a timely nanner for program management decision making. [WBS 1.1.1.6.2]

3.1.4.5.2 *Integrated Planning/Scheduling.* The LSI shall ensure adequate plans are developed to upport successful execution of all work projects and programs. This planning and scheduling shall be effected in a single Integrated Master Plan (IMP) and Integrated Master Schedule (IMS), including demonstration, maintenance, and analysis of critical path for both prime and subcontracts. {A043} [WBS .1.1.6.2]

3.1.4.5.3 *Government Furnished Property (GFP) Management.* The LSI shall manage GFP in ccordance with the terms and conditions of the Agreement. [WBS 1.1.2.1.3.4]

3.1.4.6 ***FCS Advanced Collaborative Environment (ACE).*** The LSI shall provide a well organized, intuitive, and rapid electronic collaborative access to a single integrated source of management information, product information, and technical data IAW the FCS Advanced Collaborative Environment (ACE) Implementation Plan. The LSI shall develop, track and routinely report metrics for the FCS ACE to monitor the utility, the support, and the User Representative satisfaction with the interface. The FCS ACE shall be developed to serve as the primary FCS program management decision support system. In addition, the LSI will develop, maintain, and mature the FCS ACE to serve as the primary means of creating, sharing, reporting, collecting, recording, accessing and approving program information between the LSI, authorized FCS major/critical subcontractors, and authorized U.S. Government personnel connected with the FCS program. The LSI shall develop a Distributed Product Description within the FCS ACE organized by the JTA-A views (Operational, Technical, System, System of System) as described in the Simulation Support Plan. The LSI will provide the FCS ACE application development, deployment, software and hardware support, training, infrastructure and sustainment as required. The LSI shall develop and deploy interfaces to selected Government data environments to include the Army Test Incident Reporting System (ATIRS) and Vision hosted by ATEC, and AARMS hosted by TRADOC. The FCS ACE shall support an emerging Interoperable Modeling and Simulation Environment (IMSE) by serving as the single authoritative source of data, and mapping product information to M&S data. The FCS ACE shall accommodate the exchange of information between the system engineers and User Representatives to enhance LSI design work as envisioned in SMART activities. For validation of design information by AMSAA prior to use in modeling, the LSI shall ensure that the FCS ACE provides a means to logically trace this design information to performance requirements. Nothing in this paragraph (3.1.4.6) shall require the LSI to provide infrastructure to Government sites. {A045, A062} [WBS 1.1.1.5]

3.1.4.7 ***Production Operations Planning & Product Assurance.*** The LSI shall develop an Enterprise Production Plan for production transition from SDD to IP and then to Full Rate Production (FRP). This planning will include identification of necessary IP Long Lead items, as well as IP-phase deliverable product quantities. The LSI shall provide product assurance and quality support at all levels of product development and manufacture. The LSI will ensure that production planning supports program objectives, risk mitigation, lean manufacturing, commonality, best practices, breakout opportunities, logistics production, and production readiness, and will ensure related facility planning supports program requirements throughout the program lifecycle. All long lead, initial production, and full rate production planning data will be IAW the Enterprise Production Plan which outlines the strategy, plan, and approach to manage and mitigate risk leading to IP. {A046} [WBS 1.1.1.8]

3.1.4.7.1 *Production Operations Planning.* The LSI shall provide management, oversight, and support to ensure accomplishment of production development, readiness, and supportability planning throughout the program lifecycle. The LSI shall determine and report on industrial capabilities. The LSI will provide management, oversight, and support to ensure facility development, readiness, and supportability planning meets program requirements for cost, schedule, risk, rate, and technology insertion at all levels of manufacture for hardware platforms, common subsystems, and major/critical systems/components. {A047} [WBS 1.1.1.8.1, 1.1.1.8.3, 1.1.1.8.4]

3.1.4.7.2 *Product Assurance & Quality.* The LSI will use its product assurance and quality standards to ensure delivery of hardware platforms, common subsystems, software, and major/critical systems/components that meet program requirements and are available to support testing and demonstration during the SDD phase. [WBS 1.1.1.8.2]

3.1.4.7.3 *Production Design Updates.* Subject to Article XIII (Modifications), the LSI shall accept hardware and/or software design/code changes made during parallel FCS IP design activities to support

ongoing SDD hardware and/or software efforts and incremental development planning. The LSI shall likewise assess completed design/code updates made to hardware and/or software in ongoing SDD efforts for incorporation into the next occurring IP effort. The LSI shall post design changes to the FCS ACE after approval of changes via the FCS change control process IAW the CM Plan. [WBS1.1.1.2.4.1]

3.1.4.8. Home Station Operation Center (HSOC). The LSI shall develop and document the requirements and design for the FCS HSOC. HSOC requirements analysis and design definition activities shall define a networked, in-garrison, battle command planning capability, and interoperability requirements for seamless operations with FCS training and logistics systems. The LSI shall perform the systems engineering, design engineering, site surveys and configuration designs to identify the facility design criteria, the detailed list of equipment, communications connectivity, information protection, war fighter-machine interface, software configuration items, modes of operations, training and supportability provisions and the installation sites. The LSI shall maximize use of FCS embedded hardware and software functionality to satisfy HSOC requirements. The LSI shall also develop a detailed HSOC implementation and procurement plan. The detailed implementation plan shall identify cost, schedules, unique site installation requirements, implementation risk, and recommended facility modification suppliers. The LSI shall coordinate with appropriate customer organizations to assure expectations are being met. (A019) [WBS 1.1.1.2.3.1, 1.1.2.4.2; 1.1.2.4.2.2; 1.1.2.4.4.1]

3.2 FoS ENGINEERING, DEVELOPMENT, AND INTEGRATION

The LSI is responsible for the engineering, development, and integration, including all associated subcontractor performance of FoS units. The LSI shall ensure that a "pit stop engineering" like design approach is an integral and concurrent part of the design activities for the FCS FoS. This design approach includes: generation and application of a "pit stop engineering and maintenance" type efficiencies into the design philosophy and standards of excellence, training of the Integrated Product Design Teams on the "pit stop" design approach and illustrative examples, use of 3-D design simulations (e.g. SMART) of scaled and full scale digital mock-ups, and the conduct of periodic interactive design reviews to apply standards of excellence and gauge progress. Using a "pit stop" approach, the LSI will design to minimize logistics activities emphasizing MANPRINT considerations and supportability/maintainability issues in the battlefield environment. This philosophy takes into consideration ease of maintainability at the lowest possible level ensuring that all unit service/repair actions can be performed quickly in the battlefield environment. This philosophy shall also include embedded training to facilitate ease of use by the operator and maintainer. The LSI shall flow down FCS UA Increment I Capabilities Specification interface, performance, and affordability requirements by ensuring provision for these requirements in the engineering, products, and services required to design, build, procure, and test real or virtual prototypes for the integrated Family of Systems. The LSI shall integrate complementary systems necessary to provide the required capabilities. The LSI will provide for competitive procurement and management of systems and subsystems to ensure best of industry and Government involvement in the development of the FoS elements. [WBS 1.1.2]

3.2.1 FoS Analysis and Integration

The LSI shall conduct performance, design, and affordability analyses/trades, and requirements flow down within the context of the FoS to maintain baseline performance, functional, physical, and logical integration. This includes MANPRINT at both the individual and integrated FoS levels. (A014) [WBS 1.1.2.1]

3.2.1.1 FoS Integration and Trades Analysis. In close coordination with PM, FCS and TRADOC, the LSI shall perform performance analyses and trades across the FoS to ensure integrated Manned/Unmanned Platforms/Vehicles (MUPVs) and the supporting C4ISR network meet SoS requirements. The LSI shall analyze requirements/design to balance system operational performance characteristics (e.g., responsiveness, deployability, agility and versatility, lethality, survivability, sustainability, training, interoperability, availability, and vulnerability) to establish required performance and affordability parameters. The LSI will work with TRADOC to ensure trade decisions consider the larger impact of UA and other FF requirements development. Cost as an Independent Variable (CAIV), producibility, testability, and safety shall be included in the analysis/trades process. The LSI shall support efforts with ongoing Government analysis of a SoS supportability model to identify potential trades to reduce logistics footprint and life cycle costs. The LSI shall ensure that changes to performance requirements, such as reliability, availability, maintainability, and testability (RAM-T), resulting from trade studies are approved through the established configuration management process. (A014, A034) [WBS 1.1.2.1.3.1]

3.2.1.2 Technical Baseline Management and Control. The LSI shall perform tasks to manage and control the FoS technical baseline, including definition and conduct of FoS level trade studies, interface control for both software and hardware across the Family of Systems and from FCS FoS to complementary systems. Configuration Management shall be performed IAW with SoS CM guidance, including CM custodial responsibility for FCS to complementary programs ICDs as defined in complementary programs Government MOAs. The LSI shall create and maintain the Master Equipment List (MEL) and FoS architectures and specifications. The LSI shall manage and maintain a performance baseline of system and subsystem attributes necessary for SoS/FoS analysis, modeling, and simulation, consistent with the Army FCS UA Systems Book. (A011, A014, A018, A034) [WBS 1.1.2.1.3]

3.2.2 Distributed Network Development and Integration

The LSI shall define, design, procure, build, integrate, and test a Networked Battle Command System across the FoS IAW the Software Development Plan (SDP), SoS specifications, C4ISP, TEMP, and applicable segment and subsystem specifications. The LSI will ensure the FCS ACE supports movement of data in and out of SILs to facilitate this Networked Battle Command/C4ISR capability. (A017, A037) [WBS 1.1.2.2, 1.1.2.1.3.8.9]

3.2.2.1 Distributed Network Analysis and Integration. The LSI shall conduct performance and design analyses including all FoS elements with the integrated Networked Battle Command/C4ISR capability to maintain baseline performance, functional, and logical integration. The LSI will perform network performance analyses and trade studies, develop the network configuration, and manage the Distributed Network architectures and requirements including the interfaces to systems and platforms external to FCS and internal FoS system-to-system interfaces. (A018) [WBS 1.1.2.2.2]

3.2.2.2 Distributed Network SIL. The LSI shall develop, utilize, and maintain the Distributed Network SIL to support analysis and testing of network functions IAW the SIL development plan. The DREN will use the actual Networked Battle Command system being developed to the maximum extent possible. (A032) [WBS 1.1.2.1.4.5]

3.2.2.2.1 System Development, Integration and Simulation. The LSI shall use Networked Battle Command/C4ISR element emulation, simulation, and hardware in the loop techniques to design, develop and integrate the diverse components of the integrated Networked Battle Command/C4ISR system and to verify that the proposed design meets the FCS SoS and Networked Battle Command/C4ISR Segment Specifications. [WBS 1.1.2.1.4.5, 1.1.2.2.4]

3.2.2.3 System of Systems Common Operating Environment. The LSI shall define, develop, procure, fabricate, integrate, and test the System of Systems Common Operating Environment (SoS COE) information management backbone and application interface structure for implementation of the distributed network. The LSI shall develop the information assurance applications and services that are common across the network, and perform information assurance risk assessments and mitigation. The LSI shall lead in an Application Program Interface working group consisting of itself, industry partners, and Government as co-lead to address and resolve all SoS COE services and interfaces. The LSI shall define and manage the implementation and configuration, including the interfaces of the SoS COE. The LSI shall develop a SoSCOE subcomponent migration plan that addresses the targeted technology for integration into the incremental versions of FCS. The LSI shall establish a performance evaluation matrix to support procurement and testing of the SoS COE components. The LSI shall integrate and test the SoS COE system with platform/vehicle systems/subsystems. The LSI shall develop or acquire, and deliver (via the FCS ACE) all databases, data sets, and software required to operate the SOS COE, to include ontologies and task integration networks, and make the SoS COE fully functional under operating conditions. {A007, A018} [WBS 1.1.2.2.4]

3.2.2.4 Communication. The LSI shall define, develop, procure, fabricate, integrate, and test the networked communications. {A007, A018} [WBS 1.1.2.2.6]

3.2.2.5 Intelligence, Surveillance and Reconnaissance (ISR). The LSI shall define, develop, procure, fabricate, integrate, and test the distributed ISR elements and application software, including soldier interfaces, common sensor interface, Level 1 fusion with organic and non-organic sensor feeds, and Sensor Data Management for the FCS. The LSI shall develop or acquire, and deliver (via the FCS ACE) all databases and data sets required to operate the aforementioned software, to include all parameters employed by target recognition and fusion algorithms, and make it fully functional under operating conditions. {A007, A018} [WBS 1.1.2.2.5, 1.2.1.3.8.9]

3.2.2.6 Command and Control. The LSI shall define, develop, procure, fabricate, integrate, and test the distributed command and control application software, including soldier interfaces, mission planning, situational awareness and understanding, and battle management for the FCS UA. The LSI shall develop or acquire, and deliver all databases and data sets needed to operate the aforementioned software, to include default icons, topographic and cartographic data, and make it fully functional under operating conditions. {A007, A018 } [WBS 1.1.2.2.3, 1.1.2.1.3.8.9]

3.2.2.7 Training Applications - Network. The LSI shall define, develop, procure, fabricate, integrate, and test the common and unique training applications for the Distributed Network. {A018} [WBS 1.1.2.2.10; 1.1.2.1.3.8.8]

3.2.2.8 Supportability Applications. The LSI shall define, develop, procure, fabricate, integrate, and test an integrated Logistics Decision Support System (LDSS), Interactive Electronic Technical Manuals (IETMs), and a Platform Soldier-Mission Readiness System (PS-MRS) to support each MUPV system type. The LSI will define and recommend the interfaces necessary to incorporate appropriate in-lieu-of systems supportability requirements and information interchange applications IAW the Supportability Strategy. {A018} [WBS 1.1.2.2.11]

3.2.2.9 Network Integration, Test, and Evaluation. Using the Distributed Network SIL, the LSI shall integrate network supporting applications onto the network information management backbone and evaluate their individual and integrated network performance IAW the SoS/FoS distributed network requirements. The LSI generates the formal test plans (including plans for utilization of the Army's Central Test Support Facility) and procedures for verifying network performance against requirements.

The LSI will execute the network level verification tests and analyze/report the results. The LSI shall identify and implement corrective actions and perform retests as required. {A042, A048} [WBS 1.1.2.2.2]

3.2.2.10 Distributed Network Site Representation. The LSI shall provide onsite personnel distributed at C4ISR development sites as listed in Agreement Attachment 7 – Office Space and Administrative Support. These personnel shall coordinate the systems and technical architectural views with the operational views, coordinate and oversee sensor R&D and sensor integration efforts being performed in coordination with PM NV/RSTA and NVESD, and perform liaison with PM FCS, PEO C3T, PEO IEW&S and RDEC, to coordinate complementary programs within the PEOs, coordinate the procurement of "special access" systems (DCGS-A, SAR/MTI and UGS) being managed/procured by Ft Monmouth Program Management offices. [WBS 1.1.2.2.1; 1.1.2.1.3.8.9]

3.2.3 Manned/Unmanned Platform/Vehicle (MUPV) System Development and Integration

The LSI shall define and procure, from best of industry and Government sources per the SDD Competition Process Plan, the design, development, fabrication, integration, assembly, checkout, and verification test and evaluation of virtual and real prototypes for each MUPV system. The LSI shall ensure the design of each primary MUPV system (and applicable variants) meets the requirements provided in the appropriate systems specifications. The LSI shall conduct analyses that balance life cycle cost considerations with requirements in the FCS UA Increment I Capabilities Specification while providing an open architecture approach to maintain commonality across applicable subsystems. The LSI will manage the selected industry sources to ensure FCS FoS level requirements are met and that interfaces between MUPV systems, Networked Battle Command/C4ISR networking nodes, and supportability and training systems are met. The LSI shall perform any required system-to-system integration necessary to validate individual system interfaces prior to SoS level test and evaluation. {A014, A034} [WBS 1.1.2.1.3]

3.2.3.1 MUPV System Analysis and Integration. The LSI shall conduct performance and design analyses in the context of the FoS MUPV systems to maintain baseline performance, functional, and logical integration. The LSI shall perform system performance analyses and trade studies. The LSI shall establish and manage the system architectures and requirements including interfaces. {A014, A034} [WBS 1.1.2.1.2]

3.2.3.2 System Integration Laboratories. The LSI shall define, develop, procure, fabricate, integrate, utilize, and maintain SILs as required to support analysis and testing of MUPV system/subsystem functions IAW the SIL development plan. {A032} [WBS 1.1.2.1.4.7 through WBS 1.1.2.1.4.19]

3.2.3.3 MUPV Subsystems Development and Test. The LSI shall define, develop, procure, fabricate, integrate, support, and test MUPV subsystems. [WBS1.1.2.1.3.8 and 1.1.2.1.1]

3.2.3.3.1 Analysis and Integration. The LSI shall conduct analyses evaluating life cycle affordability considerations with requirements in the FCS UA Increment I Capabilities Specification to ensure affordability of subsystem elements. The LSI shall identify, develop and procure subsystems and common subsystems that result in Life Cycle Cost savings commensurate with ongoing developments, competitive procurements, supportability, schedule, future production, and performance considerations. The LSI shall ensure subsystem designs account for integration with their FoS end item systems to meet system level performance requirements. {A014, A034} [WBS 1.1.2.1.3.8.1 & WBS 1.1.2.1.1 & 1.1.1.2.2.4]

3.2.3.3.2 Design and Development. The LSI, based on the analyses of 3.2.3.3.1, shall procure prototype common and mission equipment hardware/software end items. The LSI shall develop preliminary and detailed design packages for the integrated common and mission equipment end items, focused on a producible, reliable, sustainable, maintainable, affordable design. The LSI shall define, document, and manage subsystem interfaces and maintain an open architecture design. The LSI shall obtain subsystem prototypes, models, and/or simulations as necessary to support development as well as the tests and demonstrations of 3.2.3.3.3. The LSI shall obtain system models and data necessary to support Government and LSI analysis, and training and decision support applications. The LSI shall procure adequate test hardware to enable required testing to be conducted prior to IPD. {A007, A018} [WBS 1.1.2.1.3.8.1 (MGV), WBS 1.1.2.1.3.8.3 (UAV), WBS 1.1.2.1.3.8.4 (UGV)]

3.2.3.3.3 Prototype, Modeling, and Simulation Testing and Demonstration. The LSI shall validate defined functionality and performance characteristics of common and mission equipment subsystem prototypes through tests commensurate with specification requirements. In the event a physical prototype is not required for SDD, the LSI shall conduct appropriate functional and performance demonstration through modeling and simulation of the end item to validate functionality and performance requirements. The LSI will ensure the FCS ACE supports movement of data in and out of SILs to facilitate development of the MUPV control software and system. [WBS 1.1.2.1.2; &1.1.2.1.3.8 & 1.1.2.3.9]

3.2.3.4 MUPV System Integration, Test, and Evaluation. The LSI shall develop and demonstrate a detailed production ready design for each MUPV system variant identified in support of the FCS Increment I capability, including the use of models, emulations, and where necessary, emulated hardware or software as required to provide the necessary data/demonstrations needed to verify readiness for IP. The LSI shall ensure functional, physical, and logical integration of each unique system developed including the distributed network, common equipment, and mission equipment. The LSI shall ensure the system performs within integrated (system-to-system) FoS specification requirements through verification of defined functionality and performance characteristics. To the extent practical, the LSI will ensure prototypes can be refurbished for future testing. [WBS 1.1.2.1.3.8.1, 1.1.2.1.3.8.3; 1.1.2.1.3.8.4]

3.2.3.5 Training Applications – (MUPV). The LSI shall define, develop, procure, fabricate, integrate, support, and test the common and unique training applications for the MUPV systems. {A018} [WBS 1.1.2.1.3.8.8; 1.1.2.2.10]

3.2.4 Supportability

The LSI shall develop and document integrated "factory to foxhole" management, products, and services required to design, develop, assemble, integrate, field, sustain and upgrade (through spiral development) and test the supportability processes and supporting automated applications within the FCS SoS. The LSI shall prepare a UA Supportability Strategy that describes an end-to-end automated sustainment capability that integrates supply chain requirements of the UA, UE, and Enterprise Army. The LSI shall perform analyses to aid in life cycle product support decision making to include developing and implementing metrics, performance standards, warranty requirements, and incentives. The LSI shall describe supportability product design/interfaces as required to address Army supportability implementation beyond the FoS and/or SoS levels for consistency with the existing and emerging U.S. Army supportability infrastructure. The LSI shall implement supportability architectures and requirements IAW the FCS UA Objective Capabilities Specification and UA Supportability Strategy during the design, development, fabrication, and test of MUPV systems to achieve the transportability, deployability, and operational availability goals, to reduce life cycle sustainment burdens, and to establish the basis for Performance Based Logistics (PBL). The LSI shall define the Performance Based Logistics (PBL) business processes, develop the PBL performance metrics and standards, design the data

management and analysis process, and update the PBL concept for sustainment in accordance with the UA Supportability Strategy. The LSI shall conduct analyses and provide recommendations on the implementation of PBL that considers public, private, and partnership capabilities, to include industrial base considerations. The LSI shall perform the duties of the Product Support Integrator (PSI) for FCS during SDD (e.g., logistics planning, modeling and simulations in order to mitigate risk and verify the reduced FCS logistics burden and increased readiness and availability). The LSI shall integrate the products and services generated by the Product Support Provider (PSP), the LSI or its subcontractors, in order to meet SoS requirements for the UA. The LSI shall provide update of PBL implementation analysis at PDR, CDR, and annually thereafter. Implementation and integration of these product designs and processes shall begin with Low Rate Initial Production (LRIP). {A025, A027} [WBS 1.1.2.4]

3.2.4.1 ***Logistics Analysis and Engineering.*** The LSI shall utilize a progressive assurance approach to plan, implement, and manage a supportability and RAM-T program IAW the FCS UA Increment I Capabilities Specification and Supportability Strategy. The LSI shall ensure that the suppliers provide progressive assurance that all RAM-T requirements (hardware and software) are satisfied. LSI shall ensure that suppliers use best commercial engineering approaches to design RAM-T into the platforms and systems early in the design process. The LSI shall establish supportability metrics necessary to gauge the maturation and completion of supportability designs. Supportability metrics shall be tracked to performance under this agreement and shall include as a minimum Operational, Availability, Operations and Support Costs and Footprints. The LSI shall perform logistics support analyses, power management analysis, and engineering design analyses for MUPV systems, common and unique support equipment, and source and level of repair for SoS implementation. The LSI shall plan, develop, implement, coordinate, verify, and validate technical operational and maintenance procedures for each system. The LSI shall develop prototype embedded Class V Interactive Electronic Technical Manuals (IETMs) to support each SDD system type. The LSI shall conduct reliability growth testing, environmental stress screening, and other reliability assurance efforts as appropriate. The LSI shall provide results of RAM-T analyses at each major Increment I SDD program review. {A026, A049} [WBS 1.1.2.1.4.2, 1.1.2.4.2]

3.2.4.2 ***Logistics Product Integration.*** The LSI shall integrate supportability products into the SoS elements including diagnostics/prognostics functions. The LSI shall conduct Maneuver Sustainment analyses in accordance with the FCS Supportability Strategy. The LSI shall define Maneuver Sustainment functions common to applicable variants and mission unique products for each variant. The LSI shall identify medical items for integration into medical and combat vehicles. The LSI shall conduct logistics technical reviews at the system, vehicle, and component levels. {A025} [WBS 1.1.2.4.3]

3.2.4.2.1 ***Supportability Strategy Development.*** The Supportability Strategy shall define the planning, programming, and execution of the support program that meets operational support performance requirements in the most cost effective manner over the total life cycle of the FCS SoS. The supportability strategy facilitates development and integration of the following key integrated logistics support tenants: logistics management information; transportability and deployability; maintenance operations; manpower and personnel; product support management - including performance based logistics and ammunition; facilities; technical data; training and training support; fielding planning; computer resource support and reliability, availability and maintainability. The Supportability Strategy will incorporate supportability strategies of all system and equipment in the UA listed in Attachment I1 of the Agreement. (A025)

3.2.4.3 ***Supportability Data Management.*** The LSI shall develop and provide a database management system that provides access to complete life cycle data for logistics support, including access to supplier data through the FCS ACE. The database shall include performance specification baselines for

future FCS procurements contained in the DPD. The LSI shall ensure data requirements are mapped to sources (to include the diagnostic/prognostic devices utilized in FCS) and cross-walked from there to the supporting applications to include PS-MRS, LDSS, the IETMs, etc. {A051} [WBS 1.1.2.4.3.2]

3.2.4.4 ***Supply Chain Management (SCM).*** Within the construct of PBL, the LSI shall develop and implement a plan, including access to supplier data through the FCS ACE, for the collection of data supporting the integration of all SCM functions associated with FCS systems to ensure that they meet supportability related performance requirements. {A052} [WBS 1.1.2.4.3.4]

3.2.4.5 ***Supportability Test and Demonstration.*** The LSI shall conduct equipment testing and demonstrations for SoS and FoS supportability performance verification. The LSI shall validate Maneuver Sustainment, PBL, and other applicable support concepts during testing and demonstrations. The LSI shall ensure sensor collection of data for logistics decision support system software is adequate to support logistics modeling verification and validation efforts as well as operational PBL. {A026} [WBS 1.1.2.4.1]

3.2.4.6 ***Fielding.*** The LSI shall field all FCS Increment I SDD equipment and coordinate the fielding of all other UA systems to meet testing and training requirements. The LSI shall develop plans to support the fielding of Increment I FCS into the UA including IOC and FOC. The LSI shall conduct fielding analyses and recommend the most suitable fielding methodology for the Increment I of FCS into the UA. {A050} [WBS 1.1.2.4.4]

3.2.5 Training Systems

The LSI shall assist TRADOC in their UA Training Developments responsibilities by providing horizontal integration with FCS SDD work to TRADOC's larger UA and FF developments work. The LSI shall provide the management plans, products, verification and validation, and services required to ensure design, development, fabrication, integration, support and test of a UA training program and a FCS FoS and SoS training system capable of meeting FCS UA Increment I Capabilities Specification and System Training Plan (STRAP) objectives consistent with the Army's concept for FF and UA training. The LSI shall perform training management and planning in accordance with established policy, processes, and procedures. The LSI shall develop, document, and allocate an integrated set of training functional, performance, test, and affordability requirements. The LSI shall design the FCS training system as an integral part of the overall SoS design to meet Increment I requirements and provide for future incremental upgrades. The LSI shall develop and deliver a Training Management Plan that addresses the full range of training support products, architectures, infrastructures, and training development, and the management tools required to provide Increment I capabilities in the institution, operational, unit, and self development domains IAW ATIAS. The LSI shall identify, assess, and mitigate training risks as part of the SDD risk reduction effort and coordinate these risk reduction efforts with the SoS Engineering Technical Risk Manager. The LSI will support the distributed network and platform product development efforts as required to implement/include embedded and standalone training designs within FoS products as necessary to ensure these designs meet SoS specification requirements. The LSI shall establish training product design/interfaces to ensure effective integration with the Army's larger UA and FF training concept and infrastructure IAW the LSI's SoS Architecture. {A053} [WBS 1.1.2.5]

3.2.5.1 ***FCS Training Systems Engineering.*** The LSI will ensure training engineering design analyses are performed at FCS SoS and FoS levels and integrated with TRADOC's larger UA training developments, taking into consideration training for individual, maintenance, crew, unit, leader, and staff teams. The LSI shall determine and document training materials not limited to: operator, maintainer, Training Aids, Devices, Simulators, Simulations (TADSS). The LSI will assist TRADOC in their role in

developing doctrine, tactics, and training products, as required to support the UA O&O and the Army's FF training concept under development, to include interoperability with complementary programs. The LSI shall perform individual system training analysis and will assist TRADOC in conducting collective task analyses IAW TRADOC Regulation 350-70, Systems Approach to Training Management and Processes, TRADOC Pamphlet 350-70-2, Multimedia Courseware Development Guide, and Advanced Distributed Learning Shareable Content Object Reference Model. The LSI shall develop and implement training architectures and requirements IAW the FCS UA Increment I Capabilities Specification. The LSI shall provide configuration and data management for FCS training products. The LSI shall perform system training analysis to identify potential common components and reuse between embedded training, mission planning, mission rehearsal, as well as other system hardware and software. {A014, A034, A054} [WBS 1.1.2.5.1]

3.2.5.2 Training Systems Integration Laboratory. In support of the SoSIL, the LSI shall develop, utilize, and maintain a training SIL as required to support analysis and testing of training functions and ensure this SIL provides integrated functionality with the SoSIL for both SoS and FoS interfaces. {A032} [WBS 1.1.2.1.4.6]

3.2.5.3 Training Product Development/Integration. The LSI shall, IAW TRADOC Regulation 350-70, Systems Approach to Training Management and Processes, develop and integrate FCS training products for UA training developments and FCS SoS and FoS elements, including simulator development, manned systems training, unmanned systems training, training facilities, training support packages, and system training plan. The LSI shall provide FCS FoS and SoS training performance analysis and system training data through the integrated UA level. {A055} [WBS 1.1.2.5.2, 1.1.2.5.2.5]

3.2.5.4 Developmental and Operational Test – Training. The LSI shall provide training for Developmental and Operational Testing for FoS and SoS performance verification. The LSI shall coordinate with AMC and TRADOC to define and develop training plans and products to be provided in support of test and evaluation activities. {A053, A054, A055} [WBS 1.1.2.5, 1.1.3.2]

3.2.5.5 Training Facilities. The LSI shall assess, survey, recommend modifications or additions, and document the analysis of training facilities, support equipment, training articles, threat training systems and simulators, and simulation models/test beds, training areas, and ranges as necessary to support the training of UA equipped with FCS. {A057} [WBS 1.1.2.5.2.4]

3.2.5.6 Tactical Engagement Simulation System. The LSI shall conduct a trade study in coordination with TRADOC to review the range of options available for using a Tactical Engagement Simulation System (TESS). The LSI will use the results of this study to develop short and long range plans to employ TESS within the UA. The LSI will ensure that TESS is fully interoperable with existing Combat Training Centers (CTC) and legacy training systems. {A014, A034} [WBS 1.1.2.5.1, 1.1.2.5.1.1]

3.2.5.7 Common Components/Services. The LSI shall conduct trade studies to review the use and implementation of FCS components/services in FCS applications (e.g., Network Battle Command C4ISR, M&S, Training, etc.), FCS common components, and FCS Training common components. The LSI will use the results of these studies to develop short and long range plans for the FCS equipped UA and as a guide for implementation. {A014, A034} [WBS 1.1.2.5.1, 1.1.2.5.1.1]

3.2.5.8 Training Site Representation. The LSI shall provide onsite personnel distributed as listed in Agreement Attachment 7 – Office Space and Administrative Support. These personnel shall coordinate with the Army G-1 and UAMBL in the refinement of Manpower, Personnel and Training artifacts (MPT, TAD, MER, BOIPFD/QQPRI). [WBS 1.1.2.1.3.8, 1.1.2.5.1.5.3]

3.3 SoS INTEGRATED TEST & EVALUATION

The LSI shall perform FCS FoS integrated test and evaluation in the SoS environment to verify SoS and system level performance in support of the IP decision process. This verification shall be in accordance with the FCS UA Increment I Capabilities Specification requirements allocated to the SDD Increment I design and include verification of interoperability requirements and interfaces IAW approved interface control documents. This activity includes facilities, resources, test phases, planning, execution, evaluation, and reporting as described below and IAW the TEMP. The LSI shall ensure a contiguous thread of M&S support throughout testing. M&S includes representations of components, systems, forces (UA, UE, Joint, and opposing), and threats; scenario generators; environmental simulators; synthetic stimuli; and event controllers. The LSI will ensure M&S serves as input or nodes on the SILs and SoSIL and wraparounds or players in Limited User Test (LUT), Follow-on Development Test and Evaluation (FDTE), and the Initial Operational Test (IOT) implementing the Standard Simulator Database (SSDB) Interchange Format (SIF). The LSI will use M&S to augment Technical testing where available and appropriate. Where Government M&S are not available or appropriate, the LSI shall procure or develop applicable M&S (see 3.1.2). The LSI shall develop and supply all validation and verification data and artifacts necessary for ATEC accreditation before any M&S is used to support testing. All Environment (scenario, terrain, and weather) and Behavior (employment and TTP) data sets for analysis will be approved by TRADOC (specifically HQ TRADOC ICW TRAC and UAMBL). Army Materiel Systems Analysis Activity (AMSAA) certifies performance data. [WBS 1.1.3]

3.3.1 Test Planning and Execution

The LSI shall define and manage the phases of technical testing required to support the FCS Incremental Development Plan and ATEC System Evaluation. The LSI will participate in the combined test planning activities and provide the necessary test planning, test design, test integration, test execution, test assessment, test reporting, and test analysis. The LSI shall provide and/or obtain the necessary test resources/facilities, including use of modeling and simulation capabilities as discussed in 3.1.2, 3.1.3, and 3.3, to perform tests. The LSI shall develop and update the Integrated Test and Evaluation Plan (ITEP) and provide updates for the Test and Evaluation Master Plan (TEMP) which describe the overall combined testing strategy and definition of the spectrum of integrated simulation, test, and evaluation activities associated with FCS. (A058) [WBS 1.1.3.1, 1.1.3.2]

3.3.1.1 Test Planning and Design. The LSI shall ensure adequate test planning and testing to support an iterative design and test process using the FCS ACE to distribute test data results IAW the ITEP and the TEMP. The LSI shall define the specific test phases corresponding to FoS development schedules with staggering/overlapping of testing to accommodate the different levels and parallelism of development planned, e.g., prototype vs. modeling/simulation, subsystems vs. integrated system capability. The LSI shall use these test phase definitions in the development of test plans/scheduling/coordination and test designs for the testing to be performed. The LSI shall plan pre-field and field tests, and plan integrated mission tests. The LSI will ensure test plan consistency with the TEMP and support the Army's Combined Test Organization to ensure close coordination with the Army test community. (A058) [WBS 1.1.3.2.1]

3.3.1.2 Test Integration and Execution. The LSI shall prepare test procedures and range documentation. The LSI shall execute SoS and system testing in accordance with the test plans and designs of 3.3.1.1 and the incremental integration process as FoS capabilities become available for test. [WBS 1.1.3.2.2]

3.3.1.2.1 Test Support Package (TSP). The LSI shall provide and administer TSPs capable of sustaining test and evaluation efforts. The TSPs shall be delivered to the appropriate test sites at least 30-days prior to start of each test. The LSI shall conduct maintenance and provide all repair parts, tools, test fixtures, and facilities except those the Government chooses to provide in response to the System Support Package Component List (SSPCL). {A059} [WBS 1.1.2.4.1.3]

3.3.1.2.2 Logistics Testing. The LSI shall provide technical analyses and operations support to all logistics demonstrations and simulations, maintenance training, and system verification, validation, and integration tests to ensure that requirements for RAM-T and supportability are met. [WBS 1.1.2.4.1.4]

3.3.1.2.3 Ballistic Survivability. The LSI shall support Ballistic Survivability testing by providing test planning, test operations, assistance in damage assessment, repair assistance, and procedures review. [WBS 1.1.3.2.1, 1.1.3.2.2]

3.3.1.3 Test Assessment and Reporting. The LSI shall perform requirements analysis, prepare test assessment and data collection plans, and prepare test assessment/data/corrective action reports. The LSI shall prepare the test resources validation/verification plan. The LSI shall establish a test site data management center, collect/reduce/control test data, and perform data authentication. The LSI shall assess the adequacy and quality of tests performed and report raw results of the testing at the conclusion of each test executed. The LSI will reschedule testing where such assessment warrants. The LSI shall provide the Government all requested data from component, system, and SoS level testing in a form usable by the Army Test and Evaluation Command (ATEC) to support Government independent technical and operational evaluation. The LSI shall develop and maintain a Data Acquisition System accessible through the FCS ACE to support data collection efforts during test operations. Data shall include reports that document significant test incidents in standard Army Test Incident Report System (ATIRS) format and shall be entered into the ATIRS. The LSI will allow and support Government observation and validation of component, system, and SoS testing. {A060} [WBS 1.1.3.2.3]

3.3.1.4 Test Analysis. The LSI shall provide data and analysis of test results to demonstrate that performance requirements are met or an appropriate performance growth model that demonstrates performance progression. The LSI shall jointly review shortfalls with the Government to determine if design changes and/or retesting is required. {A060} [WBS 1.1.3.2.4]

3.3.1.5 Failure Reporting Analysis and Corrective Action System (FRACAS). The LSI shall establish and manage a FRACAS process to support resolution of test incidents through the corrective action process. The LSI shall write test incident reports for tests conducted at non-Government test locations and provide these data to the Government. The LSI will provide data for reliability and maintainability scoring conferences. {A060} [WBS 1.1.3.2.4, 1.1.3.2.3.2]

3.3.2 Test Facilities and Resources

The LSI will partner with the Army to define applicable Government test facilities. The LSI shall plan and conduct testing to take full advantage of the existing investment in DoD ranges, facilities, and other resources (e.g., Aberdeen Proving Ground (APG), Yuma Proving Ground (YPG)) wherever practical. The LSI shall supplement the use of existing facilities with the design, development, modification, implementation, integration, and documentation of other required test facilities, support equipment, test articles, threat systems and simulators, test targets/expendables, and simulation models/test beds as necessary to perform the tests defined in 3.3.1.1. The LSI shall maintain the LSI's facilities and resources that are required to support the combined Development Test and Evaluation (DT&E) and Operational Test and Evaluation (OT&E) objectives, to include the equipment needed to perform software

maintenance and modification. The LSI shall conduct validation and verification assessments of test facilities/support equipment. [WBS 1.1.3.2.5]

3.3.2.1 Test Support Equipment. The LSI shall design, develop, procure, utilize, and maintain test support equipment for use in the SoSIL. [WBS 1.1.3.2.5.2]

3.3.3 Operational/User Test Support

The LSI shall provide for Government Operational/User testing the equipment operations support, planning, maintenance, and training necessary to execute and complete Government Operational/User testing. This also includes participation in the planning, conduct, and monitoring of Battle Lab exercises. The LSI shall obtain approval from TRADOC prior to integrating doctrine and tactics training during tests. The LSI shall provide training to the Army for Army use of the SoSIL for OT&E. The LSI will participate in writing operational test plans and reports and participate in Operational Test Readiness Reviews (OTRRs) and ATEC System Team (AST) meetings. The LSI will provide data and information to support the Government in writing of: Test Incident Reports for tests performed at ATEC test sites, collection and reduction of data using FCS specific instrumentation and data collection, and gathering data and information required for the issuance of Safety Releases. The LSI shall participate in hardware and software testing and provide data as necessary to satisfy safety concerns and hazards that have been defined, including SIL as well as field tests. [WBS 1.1.3.2.5.6]

Attachment 2

Contract Data Requirements List

CDRL PREFACE

1. All deliverables via ACE workflow, unless otherwise noted on the CDRL.
2. Contractor format acceptable, unless otherwise noted on the CDRL.
3. All Data Item Descriptions (DIDs) for guidance only.
4. NORs shall be entered into the TRADOC AARMS.
5. ECPs shall be delivered via ACE and approved via the CCB process.

ABBREVIATIONS

AAA	After Agreement Award
DCR	Design Concept Review

4. Authority (Data Acquisition Document No.) DI-MISC-80508			5. Agreement Reference Attachment 1, 3.1.1.1, 3.1.1.1.1		6. Requiring Office AMSTA-AQ-ABF
7. Transmtl Mthd ACE	8. APP Code A	9. Frequency 5 TIME,	10. As of Date 15 DPT SoSRR	11. Date of First Submission 15 DPT SoSRR	12. Date of Subsequent Submission SoSDCR, SoSFR, SoSPDR, SoSCDR

Block 1:
This submittal may consist of multiple reports based on the individual items listed. Each report shall be a standalone document with a dash number assigned to the Data Item number (i.e., A002-n, where n starts with 1) to distinguish one subject matter report from another. Assignment of the dash numbers shall be arbitrary but shall be sequentially assigned and controlled through LSI data management. A list of the dash number assignments shall be available under ACE.

Block 11:

Initial 15 DPT SoSRR, then 15 DPT SoSDCR, 15 DPT SoSFR, 15 DPT SoSPDR, and 15 DPT SoSCDR

1. Data Item No. A002 (Cont.)	2. Title of Data Item: TRADOC Objective Force Integration Support Documentation	3. Subtitle:

13. REMARKS

1. Document the results and operational lessons learned in accordance with SOW paragraphs 3.1.1.1 and 3.1.1.1.1 Objective Force Requirements and Force Integration & Analysis, accumulated from assisting TRADOC/UAMBL but not limited to, the following areas:
   a. [DOCTRINE] UA doctrine requirements integration; refining UA operational concepts to develop UA and FCS doctrinal products; initiation of UA field manuals; identification of new required UA-specific publications; development of program directives for UA doctrinal publications; defining proponent, select combined arms, multi-service, and as directed, multi-national FCS doctrine implications; standardization of UA doctrine that crosses functional lines; review of other doctrine for accuracy and horizontal integration; quality control of UA publications; periodic review of publications for consistency/impact to FCS SDD and UA developmental work.
   b. [ORGANIZATION] Refining organizational concepts in the UA O&O Plan; development of personnel requirements; determining major FCS equipment requirements; determining the breakout of UA organizational elements; summarizing relevant information for equipment assignment, mobility, and concept of operations; obtaining approval for the UA Table of Organization and Equipment (TOE); developing the FCS FoS Basis of Issue Plan; recommending new manpower requirements criteria; Total Army Analysis process.
   c. [TRAINING] Developing individual training plans, course administrative data, and programs of instruction; developing training systems (training management plan, products, verification/validation, and services required to design, develop, assemble, integrate, and test a UA training plan/program); developing, utilizing, and maintaining a training system laboratory to support analysis and testing of training functions; integrating training products based on STRAP into the FoS elements; providing SoS performance analysis for training at the integrated SoS level; FoS and SoS performance verification test and demonstration for training.
   d. [MATERIEL] Refining materiel requirements documents; refinement of FCS ORD/Capabilities Development Document and KPPs for Milestone C; refinement of STRAP; refinement of Critical Operational Issues and Criteria in TEMP; refinement of FCS STAR; SMART process.
   e. [LEADER] Defining the Leader Development Support System and requirements.
   f. [PERSONNEL] Ensuring the Soldier is central in the development and design of the FCS FoS and that all personnel requirements/documentation, such as the Manpower Estimate Report, properly reflect TRADOC's requirements. Intent is to reduce the level of human specification.
   g. [FACILITIES] Determining new or unique facilities requirements to support FCS fielding and maintenance.
   h. [UE and OF BATTLE COMMAND REQUIREMENTS INTEGRATION] documentation of UE and OF Networked Battle Command development impact on FCS design.
   i. [OF MANEUVER SUPPORT REQUIREMENTS INTEGRATION] Documenting emerging OF Maneuver Support requirements impact on FCS design.
   j. [OF MANEUVER SUSTAINMENT REQUIREMENTS INTEGRATION] Document emerging OF Maneuver Sustainment requirements impact on FCS design.

Include TRADOC in the approval process.

13. REMARKS

Block 1:

1. Defines the required FCS technical interface requirements among FCS FoS components and among the FCS FoS and complementary systems via configuration controlled ICDs and Interface Specifications. Each of these interface control documents shall be a standalone document with a dash number assigned to the Data Item number (i.e., A004-n, where n starts with 1) to distinguish one interface control document delivery from another. Assignment of the dash numbers shall be shall be sequentially assigned and controlled through LSI data management. A list of the dash number assignments shall be available under ACE. Interface documentation will consists of two part documents for both hardware and software.

Blocks 11 and 12:

1. Initial draft part I documents will be made available as required at SoSCDR, SoSFR, Baselined part I documents will be delivered at SoSPDR.
2. Initial draft part II documents will be made available as required at SoSPDR. Baselined part II documents will be delivered at SoSCDR.

7. Transmtl Mthd ACE	8. APP Code A	9. Frequency 4 TIMES, ASREQ	10. As of Date 30 DPT SoSRR	11. Date of First Submission 30 DPT SoSRR	12. Date of Subsequent Submission SoSPDR, SoSCDR, LRIP, ASREQ

13. REMARKS

BLOCK 10 and 11:

Draft report shall be submitted 30 DPT SoSRR.

Block 12:

Updated reports shall be submitted 30 DPT SoSPDR, 30 DPT SoSCDR, and 30 DPT LRIP, then subsequent updates as required.

Remarks:

1. Ensure criteria are developed to define computation of the quantitative wartime manpower requirements needed for UA performance and to determine essential wartime position and man-hour summary requirements.
2. Include TRADOC in the approval process.

13. REMARKS

Block 1:

Each plan may be a standalone or combined with other plans if appropriate. The documents shall be assigned a dashed data item number as noted below to distinguish one plan from another.

Blocks 9, 10, 11and 12

Define policy and processes, in appropriate software development plans, to ensure consistent software development across all elements of SoS and FoS Increment I SDD. These plans shall include:

A017-01 - Software Development Plan (D786-10006-1 - update as mutually agreed between LSI and PM FCS)
A017-02 - Software Configuration Management Plan (draft 60 days AAA, update as mutually agreed between LSI and PM FCS)
A017-03 - Phased Software Integration Plan (draft 100 days AAA, update as mutually agreed between LSI and PM FCS)
A017-04 - Software Measurement Plan (draft 60 days AAA, update as mutually agreed between LSI and PM FCS)
A017-05 - Software Transition Plan (draft at CDR. Final 6 months prior to IPD)
A017-06 - COTS and other Software Reuse Management Plan (draft 150 days AAA)
A017-07 - Software Quality Assurance Plan (draft 60 days AAA)
A017-08 - SEI CMMI Level 5 Evolution Plan (draft 300 days AAA)

Drafts (or updates for existing plans) shall be delivered as indicated in paragraph 1 above and subsequent updates made as required thereafter. Comments to drafts shall be incorporated in an update at mutually agreed upon date.

Each document with have a dash sequence number assigned to the Data Item sub-number (i.e., A017-02-n, where n starts with 1) to distinguish one document delivery from another as the documents are updated over time. Assignment of the dash numbers shall be shall be sequential starting with 01. A list of the dash number assignments shall be available on ACE.

1. Data Item No. A018 (Cont.)	2. Title of Data Item: Software Artifacts	3. Subtitle: Software Process, Requirements, Design, Test, and Design Artifacts

13. REMARKS

Block 1:

All standalone artifacts/documents shall be assigned a dashed data item number A018-n where n starts with 01) to distinguish one plan delivery from another. Assignment of dash numbers shall be arbitrary but shall he sequentially assigned and controlled though LSI data management. A list of the dash number assignments shall be available under ACE.

Block 8:

Approval required for the Software Requirements Specification, Software Interface Requirements Specification, Software Architecture Description Document, Software Test Plan, and the Software Test Report only. Approval required for all supplier Software Development Plans.

Block 13. Remarks:

1. Documents all software efforts, requirements analysis and decisions, design analysis and decisions, test planning, processes, and reporting for all elements across the SoS and FoS Increment I software in SDD. These artifacts shall be at the appropriate configuration levels as mutually agreed by the LSI and PM FCS but no less than CSCI level. Artifacts may be combined as agreed by the LSI and PM FCS.

These artifacts shall include but not limited to the following:
Meeting minutes, reuse analyses, software development folders, peer review and other development evaluation reports, audit reports, problem reports, metric reports, metric analysis, approved process tailoring/improvements, supplier SDPs, briefings, schedules, requirements specifications, design documents and models, interface specifications and documents, test plans and reports, source code listings, executable software, instruction manuals, programmer's manuals, and selection rationale.

2. All standalone artifacts/documents shall be assigned a dashed data item number A018-n where n starts with 1) to distinguish one plan delivery from another. Assignment of dash numbers shall be arbitrary but shall be sequentially assigned and controlled though LSI data management. A list of the dash number assignments shall be available under ACE using A018 as the data item number.

3. Artifacts may be in contractor format using block 4 as a guide.

4. Artifacts and updates shall be delivered to the FCS ACE and approved via the ACE workflow process. Official approval is not required for meeting minutes and agendas, briefings, peer review and other evaluation reports, audit reports, and problem reports."

Rationale

This change is in the best interest of the Government for the following reasons. These changes reduce ambiguity in the CDRL and unnecessary processing and approvals of artifacts.

k. OTHER (Specify) Controlled Unclassified Information (CUI)	X		1. AIS Processing Requirements (See Block 13) 2. Program Protection Plan (PPP) Requirements	X	

12. PUBLIC RELEASE. Any information (classified or unclassified) pertaining to this contract shall not be released for public dissemination except as provided by the National Industrial Security Program Operating Manual or unless it has been approved for public release by appropriate U.S. Government authority. Proposed public releases shall be submitted for approval prior to release

☐ Direct X Through (Specify):

NO PUBLIC RELEASE OF SAP OR SCI INFORMATION IS AUTHORIZED.
Grants Officer at U.S. Army TACOM, ATTN: AMSTA-AQ-ABF, Mail Stop 321, ATTN: FCS Grants Officer, 6501 E. 11 Mile Road, Warren, MI 48397-5000.

Requests for release of SCI will be through the SCI Contract Monitor: Beverly Gibson at U.S. Army CECOM, ATTN: Beverly Gibson,

to the Directorate for Freedom of Information and Security Review, Office of the Assistant Secretary of Defense (Public Affairs)* for review.
*In the case of non-DoD User Agencies, requests for disclosure shall be submitted to that agency.

13. SECURITY GUIDANCE. The security classification guidance needed for this classified effort is identified below. If any deviation is encountered in applying this guidance or any other contracting factor, or if any part of this guidance is unsatisfactory, the contractor is authorized and encouraged to provide recommended changes; to challenge the guidance or the classification assigned to any information or material furnished or generated on his contract; and to submit any questions for interpretation of this guidance to the official identified below. Pending final decision, the information involved shall be handled and protected at the highest level of classification assigned or recommended. (Fill in as appropriate for the classified effort. Attach, or forward under separate correspondence, any documents/guides/extracts referenced herein. Add additional pages as needed to provide complete guidance.)

Estimated Completion Date: December 2011

Access to FCS information (not authorized for Public Release) by foreign interests (as defined by the NISPOM) is prohibited unless authorized by a valid export authorization.

Item 10.a - Access to classified COMSEC information requires a final US Government clearance at the appropriate level. Further disclosure of COMSEC information by a contractor, to include subcontracting, requires prior approval of the contracting activity.

The following attachments are made part of this DD Form 254:

14. ADDITIONAL SECURITY REQUIREMENTS. Requirements, in addition to NISPOM requirements, are established for this contract. (If Yes, identify the pertinent contractual clauses in the contract document itself, or provide an appropriate statement which identifies the additional requirements. Provide a copy of the requirements to the cognizant security office. Use Item 13 if additional space is needed.) YES X NO

The contractor will abide by DCID's 1/19, 6/9, and 6/3 for all SCI material. Also, see the SCI Addendum identified as Attachment "E" to this DD Form 254. This program is also an Acknowledged SAP. The options identified and checked "ACKNOWLEDGED" in the NISPOM Overprint are now made mandatory. Also see Block 13 for additional requirements.

15. INSPECTIONS. Elements of this contract are outside the inspection responsibility of the cognizant security office. (If Yes, explain and identify specific areas or elements carved out and the activity responsible for inspections. Use Item 13 if additional space is needed.) X YES NO

For SCI, see the SCI Addendum identified as Attachment "E" to this DD Form 254. Otherwise, the Defense Security Service (DSS) has cognizance of this contract. However, the DSS representative must be briefed to the SAP. The Government Program Security Manager reserves the right to inspect the program facility. AR 380-19, NISPOM Overprint and AR 380-381 are documents governing the accreditation of contractor's AIS.

16. CERTIFICATION AND SIGNATURE. Security requirements stated herein are complete and adequate for safeguarding the classified information to be released or generated under this contract. All questions shall be referred to the official named below.

a. TYPED NAME OF CERTIFYING OFFICIAL	b. TITLE	c. TELEPHONE (Include Area Code)

DD Form 254, DEC 99 *Previous editions are obsolete.*

DD Form 254 Reverse, DEC 99

CONTINUATION OF BLOCK 13 OF THE DD FORM 254

Item 10.g – NATO INFORMATION: Access to classified NATO information requires a final US Government clearance at the appropriate level and shall be handled in accordance with Chapter 10, Section 7 of the NISPOM. In addition, prior to accessing NATO information, the facility must be NATO Certified by the Defense Security Service. Subcontracting of NATO information requires prior approval of the Government FCS Security Office.

Item 10.h – FOREIGN GOVERNMENT INFORMATION: Access to classified Foreign Government Information (FGI) requires a U.S. Government clearance at the appropriate level, and shall be handled in accordance with Chapter 10, Section 3 of the NISPOM. Prior approval of the Government FCS Security Office is required before subcontracting.

Item 10.j – FOR OFFICIAL USE ONLY (FOUO) INFORMATION: "FOR OFFICIAL USE ONLY" (FOUO) is not a classification marking. It identifies unclassified DoD information that is exempt from public disclosure. FOUO is a category of Controlled Unclassified Information (CUI). It must not be given general circulation without receiving public release authority in accordance with Block 12 above. FOUO information will be marked, transmitted, safeguarded and disposed of in accordance with Attachment "B".

Item 10.k – CONTROLLED UNCLASSIFIED INFORMATION (CUI): See Attachment "A"

Item 11.c - Collateral classified information generated in support of this contract shall be classified in accordance with the source material used or the Security Classification Guide for Future Combat Systems, dated 29 October 2003, (provided under separate cover) and protected in accordance with the National Industrial Security Program Operating Manual (NISPOM), DoD 5220.22-M, the NISPOM COMSEC Supplement, the NISPOM Carrier Supplement, the Program Protection Plan, the FCS OPSEC Plan and this DD Form 254.

Item 11.d – FABRICATE, MODIFY OR STORE CLASSIFIED HARDWARE: This is not authorized for the facility identified in 6.a, but is checked "yes" for subcontracting purposes only, where necessary.

Item 11.f – ACCESS TO U.S. CLASSIFIED INFORMATION OUTSIDE THE U.S.: Access will be in consonance with the NISPOM and U.S. export laws in support of this effort. If further clarification is required, contact the Government FCS Security Office.

Item 11.g – DEFENSE TECHNICAL INFORMATION CENTER (DTIC): The contractor must prepare and forward DD Forms 1540 and 2345 to the COR for authorization before the services may be requested. Technical information on file at DTIC will be made available to the contractor if the contractor requires such information. The grants officer will certify the field of interest relating to the Agreement.

Item 11.h – REQUIRE A COMSEC ACCOUNT: Contractor is authorized the use of secure telephones (STU-III / STE) with fax, encryption equipment and keying material for classified program requirements.

Item 11.i – TEMPEST REQUIREMENTS: Prior to the implementation of any TEMPEST countermeasures or expenditure of funds, a TEMPEST vulnerability assessment will be conducted at locations processing SAP and/or SCI information. The DA Form 7453, Facility Technical Threat Assessment (FTTA) Worksheet will be provided under separate cover. These completed documents will be forwarded to the Government FCS Security Office for processing within 30 days of receipt.

Item 11.j – OPERATIONS SECURITY (OPSEC) REQUIREMENTS: The contractor will provide an annex to the FCS OPSEC Plan within 60 days of receipt of the government's FCS OPSEC Plan. This annex will address specific threats and protection countermeasures at facilities performing on FCS. This requirement will be flowed down to all subcontractors.

Item 11.l (1) – AUTOMATED INFORMATION SECURITY:

(a) For unclassified access to Government AIS or systems processing US Government information, see "PERSONNEL SECURITY REQUIREMENTS FOR ADP ACCESS" below;

(b) For processing Controlled Unclassified Information (CUI), consult Attachment "A";

(c) Processing of collateral classified information will be in consonance with the NISPOM;

(d) In order to processing SAP information on an AIS, consult attachment "D"; and

(e) If processing SCI Information on an AIS, consult Attachment "E".

PERSONNEL SECURITY REQUIREMENTS FOR ADP ACCESS:

Contractor personnel, to include subcontractors and consultants, meeting the requirements of an automated data processing position (ADP I or II), must satisfy certain personnel security standards regardless of whether or not the information processed by the automated information system (AIS) is classified. Criteria for security position sensitivity and ADP designation of positions is as follows:

I. Critical Sensitive (CS):

(1) Access to TOP SECRET information and/or
(2) Category I Automated Data Processing (ADP) Positions: Those positions in which the Incumbent is responsible for the planning, direction, and implementation of a computer security program; major responsibility for the direction, planning and design of a computer system, including the hardware and software; or, can access a system during the operation or maintenance in such a way, and with a relatively high risk for causing grave damage, or realize a significant personal gain.
(3) Investigation: Single Scope Background Investigation (SSBI) is required.

II. Non-Critical Sensitive (NCS):

(1) Access to SECRET or CONFIDENTIAL information and/or

(2) Category II Automated Data Processing (ADP) Positions: Those positions in which the incumbent is responsible for the direction, planning, design, operation, or maintenance of a computer system, and whose work is technically reviewed by higher authority (ADP-I)
(3) Investigation: National Agency Check or National Agency Check with Inquiries, is required.

Position sensitivity and ADP categories are determined by the employee's supervisor/manager. The investigation must be successfully completed prior to assigning an individual to any ADP I or II duties unless a waiver has been granted through GO channels. If hired within two years of a separation from the government, military or another defense contractor, a contractor's prior investigation may meet the investigative requirements of an ADP position.

Item 11.l (2) – PROGRAM PROTECTION PLAN (PPP) REQUIREMENTS: This plan is effective immediately and is mandatory for use by all FCS program participants, field activities and matrix support personnel at all FCS locations. This plan, or derivative plans developed by the LSI or the LSI's subcontractors, will cover all locations where CPI is researched, manufactured, stored, processed or tested, and a derivative DRAFT PPP will be forwarded to the FCS Security Office for approval within 30 days of receipt of the FCS PPP. A final derivative PPP will be provided to the FCS Security Office 30 days after receipt of comments and recommended changes to the draft derivative PPP. The derivative PPP will be reviewed annually, updated as necessary, and forwarded the FCS Security Office for approval. The plan will address all development or operational environments from concept to demilitarization. The threat analysis will cover both current and future considerations for intelligence collections and sabotage/terrorism in both peacetime and combat environments. The vulnerabilities identification and countermeasures development efforts will include traditional counterintelligence and security disciplines to assist in the protection of all CPI from unauthorized collection efforts. The CPI security risk assessment process will utilize robust system security engineering processes. The implementation of the comprehensive scope of the PPP will ensure adequate protection of CPI and it will also enable international cooperative efforts (when and if applicable). The derivative PPPs submitted will be marked, at a minimum, FOR OFFICIAL USE ONLY (FOUO) or consistent with the level of classified information disclosed.

Block 12 – PUBLIC RELEASE: One (1) paper copy and one (1) electronic copy on disk with full text and graphics must be provided at least eleven (11) working days prior to the requested release date. If all or part of the information was generated by another organization, their written release authorization must accompany the request.

Prior to subcontracting at the Top Secret, COMSEC, SCI, NON-SCI, NATO, FGI or SAP level, the contractor will obtain concurrence on the subcontract DD Form 254 from the Government FCS Security Office.

Reports of loss, compromise or suspected compromise shall be provided to the Government FCS Security Office within 24 hours of the incident, in addition to the reporting requirements outlined in the NISPOM.

COMPLETION OF AGREEMENT: The Government FCS Security Office will be contacted for instructions on destruction, retention or transfer of FCS classified, CUI and unclassified information (documents, media, hardware, software, vehicles, etc.). A final DD Form 254 will be issued providing detailed guidance.

CT19A-59-1	Fusion Based Knowledge for the Objective Force - Demonstration of Prototype BDA Decision Aids in C4ISR SIL. Government to provide initial BDA Decision Aid Framework as developed in first month of STO program	Rapid Battle Damage Assessment	C4ISR	6/30/2005	Donald Porter, Sr. CECOM RDEC 12WD	SoSIL J. Gregg
CT19A-59-2	Fusion Based Knowledge for the Objective Force - SoSIL Demonstration in Integration Phase 3. Government to provide algorithm and/or software as appropriate for inclusion as alternative to FCS algorithm & software, developed in the STO program to this point	Rapid Battle Damage Assessment	C4ISR	1/30/2008	Donald Porter, Sr.CECOM RDEC 12WD	SoSILJ. Gregg

CT Item #	CT Item Description	TTA Title	IPT	Need Date	Providing Agency	Intended User
CT19A-59-3	Fusion Based Knowledge for the Objective Force - BDA as part of FCS Field Test1. Government to provide final algorithm & software for BDA as alternative to FCS final algorithm & software	Rapid Battle Damage Assessment	C4ISR	6/30/2008	Donald Porter, Sr. CECOM RDEC 12WD	SoSIL J. Gregg
CT19B-59-1	Eye in the Sky - Demonstration of prototype BDA Decision Aids in C4ISR SIL. Government to provide initial sensor and software description as developed in first month of STO program	Rapid Battle Damage Assessment	C4ISR	6/30/2005	Paul King CECOM RDEC 12WD	SoSIL J. Gregg
CT19B-59-2	Eye in the Sky – SoSIL demonstration in Integration Phase 3. Government to provide sensor description & implementing software as alternative to FCS sensor description & supporting software.	Rapid Battle Damage Assessment	C4ISR	1/30/2008	Paul King CECOM RDEC 12WD	SoSIL J. Gregg
CT19B-59-3	Eye in the Sky – BDA as part of FCS Field Test 1. Government to provide final sensor selection & if appropriate final hardware prototype with supporting software as alternative to FCS hardware & supporting software, for field test of BDA capability.	Rapid Battle Damage Assessment	C4ISR	6/30/2008	Paul King CECOM RDEC 12WD	SoSIL J. Gregg
CT22A-123-1	Water Generation & Purification & Recovery Technology, Water from Exhaust - Provide engineering expertise to correlate system performance obtained during the demonstration program to FCS operating scenarios & requirements.	Water Generation From Exhaust	MGV	10/31/2003	TARDECDr. Jay Dusenburydusenbuj@tacom.army.mil 586-574-4145	TBD Doug Silva
CT22A-123-2	Water Generation & Purification & Recovery Technology, Water from Exhaust – Demonstration test report which includes performance mapping to FCS requirements & operational scenarios.	Water Generation From Exhaust	MGV	1/31/2004	TARDEC Dr. Jay Dusenbury dusenbuj@tacom.army.mil 586-574-4145	TBD Doug Silva

CT Item #	CT Item Description	TTA Title	IPT	Need Date	Providing Agency	Intended User
CT22A-123-3	Water Generation & Purification & Recovery Technology, Water from Exhaust – Bibliography of applicable source data is provided to the FCS Program along with access to the source data as required.	Water Generation From Exhaust	MGV	10/31/2003	TARDEC Dr. Jay Dusenbury dusenbuj@tacom.army.mil 586-574-4145	TBD Doug Silva
CT22A-123-4	Water Generation & Purification & Recovery Technology, Water from Exhaust – Bibliography of applicable source data is provided to the FCS Program along with access to the source data as required for characterizing filter performance to CBRN threats based on past test programs.	Water Generation From Exhaust	MGV	10/31/2003	TARDEC Dr. Jay Dusenbury dusenbuj@tacom.army.mil 586-574-4145	TBD Doug Silva
CT25A-71	APS components to be determined by LSI and DA	Active Protection System				TBD Tim Williams
CT25B-127	The Threat Warning Sensor to be delivered for transition to the FCS Program will be demonstrated TWS handoff of threat weapons consistent with PCD integrated into a full function PPS on an FCS platform at TRL 8. It will be suitable for integration into the FCS MGV platforms by means of a spril upgrade program	APS Threat Warning Sensor	MGV	3/31/2010	TARDECSteven Schebr(586) 574-5780	TBD Tim Williams
CT26-70	Multiple Deliverables	Signature Management	MGV	TBD	TARDEC Steven Schebr (586) 574-5780	TBD Tim Williams
CT27-83	Lightweight Hull & Vehicle Armor – Ballistic Protection for FCS, Hull lower front, hull lower side, hull skirt, hull upper, hull roof, mission module unique	Lightweight Hull & Vehicle Armor	MGV	TBD	TARDEC/ARL Dr. Douglas Templeton/TARDEC Mike Zoltoski/ARL	MGV IPT (Jamie Childress)
CT29-66-1	Power Distribution & Control – High-Temperature, High-Power Pulse Chargers/DC-DC Converters	Power Distribution & Control	MGV	TBD	TARDEC/ARL Edward Barshaw	TBD Tim Williams
CT29-66-2	Power Distribution & Control – High-Energy Density (HED) Thin Film Capacitors	Power Distribution & Control	MGV	TBD	TARDEC/ARL Edward Barshaw	TBD Tim Williams

CT Item #	CT Item Description	TTA Title	IPT	Need Date	Providing Agency	Intended User
CT29-66-3	Power Distribution & Control – Fast Rise-Time Silicon/Silicon Carbide Switches	Power Distribution & Control	MGV	TBD	TARDEC/ARL Edward Barshaw	TBD Tim Williams
CT29-66-4	Power Distribution & Control – High-Energy, Low-Inductance Pulse Forming Networks (PFNs)	Power Distribution & Control	MGV	TBD	TARDEC/ARL Edward Barshaw	TBD Tim Williams
CT31-78	High Density Packaged Power	Manned Ground Vehicle High Density Packaged Power	MGV	TBD	Dan Herrera/TARDEC Dr. Edward Shaffer/ARL	TBD Bill Siegel

OFFICE SPACE AND ADMINISTRATIVE SUPPORT

A. Army Installations Requiring Boeing On-Site Support

1. The work required to successfully perform the SDD Phase necessitates that the LSI provide full-time, on-site personnel distributed at the below listed Army installations.

2. Following are the Army installations where Post support will be required:

No.	Army Installations	Number of People	Need Date	End Dates	IPT
G1	Ft. Knox (UAMBL)	4	6/1/2003	SoSI&V	TRN
G2	Ft. Knox	11	6/1/2003	SoSI&V	FDT
G3	Ft. Monroe	1	6/1/2003	SoSI&V	FDT
G4	Ft. Sill	1	6/1/2003	SoSI&V	FDT
G5	Ft. Lee	1	6/1/2003	SoSI&V	FDT
G6	Ft. Leavenworth	1	6/1/2003	SoSI&V	FDT
G7	Ft. Leonard Wood	1	6/1/2003	SoSI&V	FDT
G8	Ft. Benning	1	6/1/2003	SoSI&V	FDT
G9	Ft. Gordon	1	6/1/2003	SoSI&V	FDT
G10	Ft. Rucker	1	6/1/2003	SoSI&V	FDT
G11	Ft. Huachuca	1	6/1/2003	SoSI&V	FDT
G12	Ft. Eustis	1	6/1/2003	12/30/2011	TRN
G13	Ft. Monroe	2	6/1/2003	12.30/2011	C4I
G14	Ft. Belvoir	3	6/1/2003	10/1/2008	C4I
G15	Ft. Monmouth	10	6/1/2003	12/31/2011	C4I
G16	TACOM-Warren	1	6/28/2005	7/4/2005	MGV
G17	Ft. Lee	1	6/1/2003	1/1/2011	LOG
G18	APG	4	1/1/2004	Test Complete	IST
G19	WSMR	5	1/1/2004	Test Complete	IST

3. The Government agrees to provide, as a minimum, the Post access, office space, furniture, telephone and computer equipment services, miscellaneous office supplies, miscellaneous administrative support, etc. described below. The requested support identified below is per-person.

(a) Post access shall be provided, as appropriate, to allow LSI on-site personnel to perform their assigned duties. Post access to include vehicle decals, personal identification and badging. Parking shall be provided within a reasonable distance to office spaces.

(b) Office space provided shall be equal to those provided to Government personnel of similar rank or title, performing similar type work activities. Offices spaces shall be heated, cooled, ventilated and lighted as is provided for Government employees.

(c) Office furniture provided shall include, as a minimum, (1) four (4) 110v receptacles, (2) standard desk and ergonomic chair, (3) computer table designed for such use, (4) standard work table and two (2) visitor chairs, (5) a two (2) drawer filing cabinet and a two (2) shelf bookcase, and (6) coat rack.

(d) Telephone equipment provided shall be multi-line and have voice mail, speaker, conference call and headset capability and the ability to dial direct and long-distance. Use of a secure telephone will be provided, as required.

(e) Computing resources shall include Post LAN access to Army resources and Internet access same as is provided for site Government employees. Hardware and software technical support will be provided as required. Access to printers, plotters, fax machines, copiers and other office equipment, will be provided.

(f) FCS SECRET network systems, with provision for classified storage, as otherwise available at that location.

(g) Miscellaneous office supplies and administrative support shall be provided, as required.

B. Boeing and Subcontractor Locations Requiring Government On-Site Support

1. Following are the Boeing and subcontractor locations where Government support will be required:

No.	Boeing Location	Number of People	Need Date	End Dates	IPT
B1	Huntington Beach	7	1/2/2004	12/31/2011	C4I
B2	Seattle	7	1/2/2004	12/31/2011	C4I
B3	Rosslyn	10	10/1/2003	Test complete	IST
B4	Philadelphia	5	1/1/2004	1/1/2011	LOG
B5	St. Louis	2	1/1/2004	1/1/2011	LOG
B6	Huntsville	1	1/1/2004	1/1/2011	LOG
B7	St. Louis	1	5/30/2003	1/1/2011	PM, FCS
B8	Washington, DC	13	1/1/2004	1/1/2011	LOG

No.	Subcontractor Location	Number of People	Need Date	End Dates	IPT
S1	Huntsville-SAIC	6	1/4/2003	9/30/2004	UGV
S2	Huntsville-SAIC	8	10/1/2004	9/30/2007	UGV
S3	Huntsville-SAIC	6	10/1/2007	9/30/2009	UGV
S4	Orlando-SAIC	15	1/1/2004	12/30/2011	TRN

Abstract

This document contains the listing of the Future Combat System (FCS) Integrated Master Plan (IMP) for the System Design and Development (SDD) program.

Introduction

1.1 IMP Description

The FCS Integrated Master Plan (IMP) implements the product orientation of the Integrated Product and Process Development (IPPD) philosophy. The IMP was developed to provide a product development logical sequence to our statement of work and product oriented WBS. All our the FCS Integrated Product Team (IPT) leaders and members collaborated with the Systems-of-Systems Engineering and Integration (SEI) integrated product development (IPD) planners and the government representatives to develop the IMP and Integrated Master Schedule (IMS), so it contains an effective and implementable logical series of Program Events (PE), Significant Accomplishments (SA), Accomplishment Criteria (AC), and allocated tasks for the total period of performance for the FCS SDD program.

The IMP PEs, SAs, and ACs provide the logical roadmap and sequential flow necessary to manage the entire program. The IMP/IMS development approach utilizes a single master scheduling database that includes the IMP and supporting IMS tasks. All IPTs perform tasks that roll up and are directly traceable to the IMP PEs, SAs and ACs.

It is our intention for the responsible IPTs to have Program Office counterpart-participants who will first hand observe the IPTs accomplishment of tasks, ACs and SAs. The IPT leaders monitor and control the completion using earned value management system (EVMS), internal audits, risk management, and other supporting processes and metrics to status progress. The IPTs efforts culminate in an event closure evidence and recommendation of closure acceptance to the next higher level IPT within the product team structure.

The definitions of PEs, SAs and ACs are as follows:

Program Events. PEs represent significant progress decision points that relate system maturity with continued system development. PEs are distributed throughout the contract period and define specific FCS control gates and milestones.

Significant Accomplishments. SAs represent the closure (i.e., accomplishment) of sequenced interim and critical activities that must be completed as entry-level or exit-level constraints for the completion of a PE. They provide a logical path toward product completion. Completion demonstrates that the appropriate closure criteria were achieved and products are ready to be used as building blocks for subsequent activities. SAs define interim and final steps on the path to define, design, develop, produce, integrate, test, and verify the product or system in support of the SOW and other contractual documentation. SAs are organized around the product and event to be supported. Closure of all SAs is a requirement for passage of the event to which they belong.

Accomplishment Criteria. ACs are definitive measures that are used to judge the completion of each SA and demonstrate results. When all of the ACs that define an SA are met, then the SA is satisfactorily completed. ACs are used to highlight specific areas of the work effort collected into sets. These sets make management and management control-tool products (for example, technical parameter tracking, risk monitoring, and critical process or incremental product verification) more effective to monitor and control. Standard verbs associated with ACs are defined clearly in Table 1-1, so that all parties understand the requirements for successful AC completion.

1.2 IMP Standard Verb List

The standard list of verbs used in the FCS IMP to express closure of the SAs and ACs is shown in Table 1-1, together with a verb description.

Table 0-1 List of Standard FCS IMP Verbs

Verbs	Verb Description for IMP activity
Agreed Upon	An authorized party of the Contractor enters into an agreement with the customer, the customer's government, the U.S. government, other companies, or with organizations within the Contractor and the agreement is documented in writing and signed by all parties.
Allocated	The subject parameter has been subdivided or apportioned into parts according to the appropriate product manager. A document that shows the allocation and acceptance has been prepared and is available in Advanced Collaborative Environment (ACE) or other media as required for timely and complete access to the information.
Analyzed	The subject parameter has been technically evaluated through equations, charts, and reduced data.
Approved	The subject configuration item, data, or document has been submitted to the appropriate authority, which has notified the team that it is acceptable.
Available	The subject configuration item, tool, or process is in place or operational. The subject data or document has been added to, and it is accessible in ACE or other media as required for timely and complete access to the information.
Baselined	The subject design, parameter, concept, or configuration item has been finalized, received management approval and is under configuration control.
Compiled	Information/dates have been gathered, cleaned up, and put together to form a definitive document and/or analysis.
Completed	The subject configuration item, data, or document has been prepared and reviewed by contractor management and is available in ACE or other media as required for timely and complete access to the information.
Conducted	The subject event or review has been held and minutes completed.
Defined	The subject configuration item, data, or document has been described in an appropriate description document, which is available in ACE or other media as required for timely and complete access to the information.
Delivered	The subject configuration item, data, or document has been accepted in the form and at the location specified in the contract.
Demonstrated	The subject configuration item, data, or document has been shown to be in accordance with contract requirements through measures where success or failure is determined by observation.
Developed	The subject configuration item, data, or document has been produced through a

Verbs	Verb Description for IMP activity
	sequence of activities that may include planning, design, test, and verification.
Documented	The subject area has been compiled, edited, and put into a draft format for review or in final form.
Established	The subject has been created and set in place in a manner consistent with its intended use (e.g., procedures, baselines established).
Evaluated	A measured comparison of the subject with contract requirements has been completed, and results are in ACE or other media as required for timely and complete access to the information.
Finalized	The subject data or document is complete, has contractor management approval, and may not be changed without formal revision control.
Generated	Data has been created or results have been established or information has been made available to satisfy a goal or expectation.
Identified	The characteristics of a configuration item, process, or function have been made known for the first time.
Implemented	The subject policy, approach, or procedure is being regularly executed.
Incorporated	Information has been obtained and included/combined into subject document/data item.
Initiated	The subject approach or procedure has been started.
Integrated	The subject has been consolidated into an entity (e.g., data, requirement, document, configuration item) by appropriately combining all separate requirements, functional disciplines, and configuration item considerations.
Negotiated	The subject item has been proposed by one party to another, exchanges between parties have taken place and the parties have arrived at an agreement which is documented in writing and sign by both parties.
Performed	A task or assignment has been carried out in accordance with directions, guidelines, and established processes.
Prepared	The subject item has been created, documented, and transferred in acceptable format for review.
Provided	The subject configuration item has been completed and delivered to the receiving agency.
Released	The subject data or document has received all necessary Government and contractor IPT approvals, has been completely distributed, and is available through ACE or other means as required for timely and complete access to the information.
Resolved	Successful determination or solution to an issue or problem declared in writing
Reviewed	The subject data document has been examined critically and satisfies predefined requirements.
Revised	The subject configuration item, data, or document has been updated to account for new requirements and/or facts.
Submitted	Provided to the customer for information or for approval when approval is required beyond that of customer participation in IPT approvals.
Supported	Prime activity has been supplemented and enhanced by providing data, information, or manpower.
Updated	The subject process, data, or document has been reevaluated based on later information, and adjustments have been incorporated.
Validated	The subject requirement, configuration item, data, or document has been reviewed for technical compliance by the contractor, using existing approved procedures, instructions, and checklists.

Verbs	Verb Description for IMP activity
Verified	The subject configuration item, data, or document has been proved to be in accordance with contract requirements by analysis, inspection, demonstration, or test.

2. FCS Integrated Master Plan (IMP) Listing

The FCS IMP indentured listing provided in Table 2-1 shows the Program Events (PE), Significant Accomplishments (SA) and Accomplishment Criteria (AC) defined for the SDD program. It also includes the unique identifier for each IMP item. This identifier is carried over into the IMS so one single integrated database can be maintained for the IMP and IMS. The FCS IMP uses a color-coding as well as an indenture to identify the PEs, SAs, and ACs. PEs are level 1 and are red, SAs are at the second level and are green, and ACs are at level 3 and are blue. In addition, the listing identifies the IPT with primary responsibility for each AC. The IPT code definitions are contained in Table 2-2.

Table 2-1 FCS IMP Listing

OL	PE	SA	AC	Description
1	B00A			Contract Award
1	B01A			System of Systems Requirements Review
2	B01A	010		SoS Requirements and Architecture Updated
3	B01A	010	010	Specification and product tree revised
3	B01A	010	020	System of Systems Operational Views Initial Submission Completed
3	B01A	010	030	SoS System Views Initially Drafted
3	B01A	010	040	Update AV2 to reflect SV Updates
3	B01A	010	050	Update TV-1 & Align with C4ISP TV-1
3	B01A	010	060	SoS Architecture Development Plan Drafted
3	B01A	010	070	SoS Functional Decomp/Analyses compl essential to initial allocations
3	B01A	010	080	Sec 3 Requirements Allocation Update
3	B01A	010	090	SoS TPMs initially drafted to support SoS spec
3	B01A	010	100	SoS/Segment/System trades essential to support SoS Spec
3	B01A	010	110	SoS Specification VCRI updated
3	B01A	010	120	SoS Specification (all sections) aligned to the JROC (April) ORD
3	B01A	010	130	Force Development DOTML-PF design, analysis, and assessments updated
3	B01A	010	140	FCS UA Objective Capabilities Specification
2	B01A	020		Initial Segment (Distributed Systems) Requirements Drafted
3	B01A	020	010	C4ISP Updated
3	B01A	020	020	Initial C4ISR Distributed System Specification (DSS)
3	B01A	020	030	Initial Training Distributed System Specification (DSS)
3	B01A	020	040	Material fielding plan updated
3	B01A	020	050	RAM-T analysis to support subsequent Plan
3	B01A	020	060	Supportability Strategy updated

DL	PE	SA	AC	Description
3	B01A	020	070	Initial Sustainment Distributed System Specification (DSS)

3	B13A	020	020	M&S Initial Framework Complete & Accredited
3	B13A	020	030	Analyses/Evaluation Tools Complete
3	B13A	020	040	C4ISR Integrated Software Build 5 Package Complete
3	B13A	020	050	Gov't/LSI/Supplier Support Team Identified and Committed
3	B13A	020	060	Integration Phase Readiness Review Conducted
2	B13A	030		Program SoS Phase 5 Integration Complete
3	B13A	030	010	IPT Simulation/Emulation Deliveries Complete per SHAD
3	B13A	030	020	Test Support Packages/Objectives Complete
3	B13A	030	030	Pre-Test Analyses on UUT/UA and Predictions Complete
3	B13A	030	050	Phase S5 Early Integration for SoS Technical Testing & Audits (I/F, Design, Functionality, & Config) completed
3	B13A	030	060	Acceptance & installation of simulation/Emulation in SoSIL Environ completed
3	B13A	030	070	Phase S5 SoS Integration for Test and Test Readiness Review (TRR) completed
3	B13A	030	080	Phase S5 SoS Technical Test Series completed
3	B13A	030	090	SoS Test Resources & Facilities completed
2	B13A	040		Program SoS Phase 5 Analyses, Evaluations and Tests Complete
3	B13A	040	010	Analyses Results Compared and Accounted for Relative to Test Results
3	B13A	040	020	Anomalies Resolved/Dispositioned & Break-Of-Configuration Review Complete
2	B13A	050		Program SoS Phase 5 Final Reports Completed
3	B13A	050	010	Integration Phase S5 Technical Test Assessment Review completed
3	B13A	050	020	SoS Phase 5 J&V Assessment Report Complete
3	B13A	050	030	Downstream Objectives Assessed for Necessary Updates
2	B13A	060		System of Systems Assessment Completed
3	B13A	060	010	SoS performance assessment updated
3	B13A	060	020	SoS Effectiveness analysis performed
3	B13A	060	030	Assessment of Requirements/Architecture/Interface/Design Issues supported by necessary Trades
3	B13A	060	040	SoS Engineering specialty analyses performed
3	B13A	060	050	SOS risks assessment and mitigation plans reviewed

OL	PE	SA	AC	Description
3	B13A	060	060	KPPs and TPMs evaluated
3	B13A	060	070	SoS Models and Sims Assessed for Updates
3	B13A	060	080	Force Development DOTMLPF design, analysis, and assessments updated
3	B13A	060	100	SoS Force Development Operational Analysis Updated
1	B14A			SoS Verification Complete
2	B14A	010		Requirements Compliance Closeout Activities
3	B14A	010	010	Final Incremental FCAs completed
2	B14A	020		Increment 1 Requirements Documentation Released
3	B14A	020	010	Final Increment 1 SoS specification released
3	B14A	020	020	Segment & Systems' DSSs, PIDS, ICDs, IERs released
2	B14A	030		C4ISR Software Verification completed
3	B14A	030	010	Software Final Increment Build 6 Construction Completed
3	B14A	030	020	C4ISR Platform Integration and Testing for LRIP Completed
3	B14A	030	030	Software Build 6 Verification Completed
2	B14A	040		System of System Performance Verified
3	B14A	040	010	All PIDS Compliance Verified
3	B14A	040	020	Increment 1 Contract Specification Verification Requirements Demonstrated

3	B14A	050	090	SoS Force Development Operational Analysis Updated
1	B15A			SDD Closeout
2	B15A	030		C4ISR SDD Completed
3	B15A	030	010	Final PIDS, CIDS, CSCIs and ICDs Completed
3	B15A	030	020	Production Capability Approved
3	B15A	030	050	SOSIL Integration and Test Support for LRIP Completed
2	B15A	040		MGV SDD completed
3	B15A	040	010	MGV Software SDD Activities completed
3	B15A	040	020	MGV System Engineering and Analysis and Integration SDD completed
3	B15A	040	030	MGV common subsystems integration into SDD completed
3	B15A	040	040	MGV Mission Variant Inputs into SDD completed
3	B15A	040	050	Misc SoS Event support completed
3	B15A	040	060	MGV subcontracts Completed
2	B15A	050		UAV SDD Completed
3	B15A	050	010	Hardware and Software SDD activities completed

OL	PE	SA	AC	Description
3	B15A	050	020	UAV Program Management performed
2	B15A	060		**UGV SDD Completed**
3	B15A	060	010	Hardware and Software SDD activities completed
3	B15A	060	020	UGV Program Management performed
2	B15A	070		**Software SDD Completed**
3	B15A	070	010	Updated Software Risks & Mitigation plans in Risk Mgmt System reviewed
3	B15A	070	020	Impact of LRIP SW changes evaluated
2	B15A	080		**Subcontract close-out completed**
3	B15A	080	010	Subcontract open items defined
3	B15A	080	020	Subcontract SCLINs & SDRLs status evaluated
3	B15A	080	030	Government property disposition completed
3	B15A	080	040	Subcontract deliveries verified
3	B15A	080	050	Purchase contract close-out folder compiled
2	B15A	090		**SDD Contract Complete and Final SOS Design Delivered**
3	B15A	090	010	BOS Management and tasks completed
3	B15A	090	020	MGV management and tasks completed
3	B15A	090	030	SMP Management and tasks completed
3	B15A	090	040	UAV management and tasks completed
3	B15A	090	050	UGV management and tasks completed
3	B15A	090	060	Supportability management and tasks completed
3	B15A	090	070	Training management and tasks completed
3	B15A	090	080	Lethality management and tasks completed
3	B15A	090	090	Soldier Systems management and tasks completed
3	B15A	090	100	Complementary Programs management and tasks completed
3	B15A	090	110	ACE management and tasks completed
3	B15A	090	120	SE management and tasks completed
3	B15A	090	130	IS&T management and tasks completed
3	B15A	090	140	C4ISR management and tasks completed
3	B15A	090	150	Software management and tasks completed
3	B15A	090	160	Program Management management and tasks completed
3	B15A	090	170	Operations management and tasks completed
3	B15A	090	180	Force Development management and tasks completed
3	B15A	090	190	Final Verified Increment 1 Design Delivered

		NET CHANGE:	$336,000,000.00	

2. Net Obligation Change (Increase/Decrease) to Agreement for *THIS ACTION*:

Total Prior Agreement Obligation:	$240,456,470.00
Net Obligation THIS ACTION:	$336,000,000.00
Current Cumulative Obligation:	$576,456,470.00

PART B. FUNDS ALLOTTED/OBLIGATED

1. The total amount of all funds currently allotted to this Agreement is $576,456,470.00. This is the same amount as the "Total Government Funds Obligated to Date" block on the face page of the original Agreement, considering all Agreement modifications issued.

2. Notes Regarding Funds Allotted/Obligated.

a. Initial Funding, FY03. The Parties agreed and acknowledged at time of original Agreement award that $130,000,000.00 was all the funding that was expected to be available from date of award through 30 Sep 2003.
b. FY04 Funding. TBD
c. CLIN 2001 is a ceiling price CLIN. The contractor may only submit vouchers up to 75% of the ceiling until definitization occurs.
d. d. CLIN 2002 is a ceiling price CLIN. The contractor may only submit vouchers up to 75% of the ceiling until definitization occurs.
e Fee vouchering instructions for subCLINs 0001AX, 0001AY, 0001AZ, 0001BA, 0001BB, 0001BC, 0001BD, 0001BE 0001BF, 0001BG, 0001BH, and 0001BJ

1) For subCLINs 0001AX, 0001AY, 0001AZ, 0001BA, 0001BB, 0001BC, 0001BD, 0001BE 0001BF, 0001BG, 0001BH, and 0001BJ the contractor shall detail separately in its vouchers by subCLIN and ACRN the estimated cost, base fee and provisional incentive fee billed, and DFAS shall pay as billed. (This is necessary to preserve disbursement traceability for the base and provisional incentive fees.)
2) The contractor shall voucher for base fee and provisional incentive fee against subCLINs 0001AX, 0001AZ, 0001BB, 0001BD, 0001BF, and 0001BH in accordance with Article I.B.5.e.
3) The contractor shall voucher for the provisional fee for subCLINs 0001AY, 0001BA, 0001BC, 0001BE, 0001BG, and 0001BJ in accordance with Article I.B.5.f.
4) The contractor shall voucher for subCLINs 0001BK, 0001BL, 0001BM, 0001BN, 0001BP, and 0001BQ in accordance with Article IX.

PART C. OBLIGATION REFERENCE TABLES (Including *THIS ACTION*, Part A., above)

The two tables below are for reference only and aid to tracking obligations made under this Agreement. They merely depict what has already happened, and where to find details. These tables will be updated, as appropriate, with each relevant Agreement modification.

(End of Attachment 12)

Attachment 13

CLIN 0001 Structure

1. CLIN 0001- Performance of the FCS SDD phase as described in this Agreement.

Program Definitization

(i) **Item 0001AA.** Estimated Cost for Program Definitization through 30 September 2003

Total Obligated Amount: $113,109,880.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AA is fully-funded.

(ii) **Item 0001AB.** Base Fee for Program Definitization through 30 September 2003

Total Obligated Amount: $6,756,048.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AB is fully-funded.

(iii) **Item 0001AC.** Incentive Fee for Program Definitization through 30 September 2003

Total Obligated Amount: $10,134,072.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AC is fully-funded.

(iv) **Item 0001AD.** Estimated Cost for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Estimated Cost $50,937,320.00
ACRN: TBD
Notes: This sub-CLIN 0001AD is not fully funded.

(v) **Item 0001AE.** Base Fee for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Base Fee: $3,042,484.00
ACRN: TBD
Notes: This sub-CLIN 0001AE is not funded at this time.

(vi) **Item 0001AF.** Funding for Incentive Fee for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Incentive Fee: $4,563,726.00
ACRN: TBD
Notes: This sub-CLIN 0001AF is not funded at this time.

(iv) Item 0001AG. Funding for Estimated Cost for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $1,267,240.00
Total Estimated Cost: $1,267,240.00
ACRN: AB
Notes: This sub-CLIN 0001AG is fully-funded.

(v) Item 0001AH. Funding for Base Fee for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $75,692.00
Total Base Fee: $75,692.00
ACRN: AB
Notes: This sub-CLIN 0001AH is fully-funded.

(v) Item 0001AJ. Funding for Incentive Fee for Program Definitization from 1 October 2003 through Definitization.

Total Obligated Amount: $113,538.00
Total Incentive Fee: $113,538.00
ACRN: AB
Notes: This sub-CLIN 0001AJ is fully-funded.

Note that the total amount for subCLINs 0001AD through 0001AJ is $60,000,000.00, and that the negotiated amount for the 1 Oct 03 through definitization period remains unchanged.

(vi) Item 0001AK. Funding from Project F56 "C4ISR" through Definitization (Article I.B.4).

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Base Fee: $-0-
Incentive Fee: $-0-
ACRN: AE
Notes: This sub-CLIN 0001AK has been replaced by 0001AX.

(vii) Item 0001AL. Additional Funding from Project F56 "C4ISR" through Definitization (Article I.B.5.f)

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Provisional Fee per Art. I.B.5.f: $-0-
ACRN: AE
Notes: This sub-CLIN 0001AL has been replaced by 0001AY.

(viii) Item 0001AM. Funding from Project 57 "Manned Ground Systems" through Definitization (Article I.B.4).

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-

Base Fee: $ -0-
Incentive Fee: $ -0-
ACRN: AF
Notes: This sub-CLIN 0001AM has been replaced by 0001AZ.

(ix) **Item 0001AN.** Additional Funding from Project F57 "Manned Ground Systems" through Definitization (Article I.B.5.f)

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Provisional Fee per Art. I.B.5.f: $-0-
ACRN: AF
Notes: This sub-CLIN 0001AN has been replaced by 0001BA.

(x) **Item 0001AP.** Funding from Project F52 "RECON" through Definitization (Article I.B.4).

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Base Fee: $-0-
Incentive Fee: $-0-
ACRN: AG
Notes: This sub-CLIN 0001AP has been replaced by 0001BB.

(xi) **Item 0001AQ.** Additional Funding from Project F52 "RECON" through Definitization (Article I.B.5.f)

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Provisional Fee per Art. I.B.5.f: $-0-
ACRN: AG
Notes: This sub-CLIN 0001AQ has been replaced by 0001BC.

(xii) **Item 0001AR.** Funding from Project F55 "SUST" through Definitization (Article I.B.4).

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Base Fee: $-0-
Incentive Fee: $-0-
ACRN: AH
Notes: This sub-CLIN 0001AR has been replaced by 0001BD.

(xiii) **Item 0001AS.** Additional Funding from Project F55 "SUST" through Definitization (Article I.B.5.f)

Total Obligated Amount: $-0-
Total Estimated Cost: $-0-
Provisional Fee per Art. I.B.5.f: $-0-
ACRN: AH
Notes: This sub-CLIN 0001AS has been replaced by 0001BE.

(xiv) **Item 0001AT.** Funding from Project F53 "UGV" through Definitization (Article I.B.4).

Total Obligated Amount:	$-0-
Total Estimated Cost:	$-0-
Base Fee:	$-0-
Incentive Fee:	$-0-

ACRN: AJ
Notes: This sub-CLIN 0001AT has been replaced by 0001BF.

(xv) **Item 0001AU.** Additional Funding from Project F53 "UGV" through Definitization (Article I.B.5.f)

Total Obligated Amount:	$-0-
Total Estimated Cost:	$-0-
Provisional Fee per Art. I.B.5.f:	$-0-

ACRN: AJ
Notes: This sub-CLIN 0001AU has been replaced by 0001BG.

(xvi) **Item 0001AV.** Funding from Project F54 "Unattended Sensors" through Definitization (Article I.B.4).

Total Obligated Amount:	$-0-
Total Estimated Cost:	$-0-
Base Fee:	$-0-
Incentive Fee:	$-0-

ACRN: AK
Notes: This sub-CLIN 0001AV has been replaced by 0001BH.

(xvii) **Item 0001AW.** Additional Funding from Project F54 "Unattended Sensors"through Definitization (Article I.B.5.f)

Total Obligated Amount:	$-0-
Total Estimated Cost:	$-0-
Provisional Fee per Art. I.B.5.f:	$-0-

ACRN: AK
Notes: This sub-CLIN 0001AW has been replaced by 0001BJ.

(xviii) **Item 0001AX.** Funding from Project F56 "C4ISR" through Definitization (Article I.B.4).

Total Obligated Amount:	$22,084,243.00
Total Estimated Cost:	$19,214,969.00
Base Fee:	$ 1,147,709.00
Incentive Fee:	$ 1,721,565.00

ACRN: AL
Notes: This sub-CLIN 0001AX is fully-funded.

(xix) **Item 0001AY.** Additional Funding from Project F56 "C4ISR" through Definitization (Article I.B.5.f)

Total Obligated Amount: $16,015,756.00
Total Estimated Cost: $14,559,779.00
Provisional Fee per Art. I.B.5.f: $ 1,455,977.00
ACRN: AL
Notes: This sub-CLIN 0001AY is fully-funded.

(xx) Item 0001AZ. Funding from Project 57 "Manned Ground Systems" through Definitization (Article I.B.4).

Total Obligated Amount: $20,287,362.00
Total Estimated Cost: $17,651,547.00
Base Fee: $ 1,054,326.00
Incentive Fee: $ 1,581,489.00
ACRN: AM
Notes: This sub-CLIN 0001AZ is fully-funded.

(xxi) Item 0001BA. Additional Funding from Project F57 "Manned Ground Systems" through Definitization (Article I.B.5.f)

Total Obligated Amount: $14,712,639.00
Total Estimated Cost: $13,375,126.00
Provisional Fee per Art. I.B.5.f: $ 1,337,513.00
ACRN: AM
Notes: This sub-CLIN 0001BA is fully-funded.

(xxii) Item 0001BB. Funding from Project F52 "RECON" through Definitization (Article I.B.4).

Total Obligated Amount: $6,376,028.00
Total Estimated Cost: $5,547,629.00
Base Fee: $ 331,360.00
Incentive Fee: $ 497,039.00
ACRN: AN
Notes: This sub-CLIN 0001BB is fully-funded.

(xxiii) Item 0001BC. Additional Funding from Project F52 "RECON" through Definitization (Article I.B.5.f)

Total Obligated Amount: $4,623,972.00
Total Estimated Cost: $4,203,611.00
Provisional Fee per Art. I.B.5.f: $ 420,361.00
ACRN: AN
Notes: This sub-CLIN 0001BC is fully-funded.

(xxiv) Item 0001BD. Funding from Project F55 "SUST" through Definitization (Article I.B.4).

Total Obligated Amount: $4,057,472.00
Total Estimated Cost: $3,530,309.00
Base Fee: $ 210,865.00

Incentive Fee: $ 316,298.00
ACRN: AP

Notes: This sub-CLIN 0001BD is fully-funded.

(xxv) Item **0001BE**. Additional Funding from Project F55 "SUST" through Definitization (Article I.B.5.f)

Total Obligated Amount: $2,942,528.00
Total Estimated Cost: $2,675,025.00
Provisional Fee per Art. I.B.5.f: $ 267,503.00
ACRN: AP
Notes: This sub-CLIN 0001BE is fully-funded.

(xxvi) Item **0001BF**. Funding from Project F53 "UGV" through Definitization (Article I.B.4).

Total Obligated Amount: $4,637,111.00
Total Estimated Cost: $4,034,639.00
Base Fee: $ 240,989.00
Incentive Fee: $ 361,483.00
ACRN: AQ
Notes: This sub-CLIN 0001BF is fully-funded.

(xxvii) Item **0001BG**. Additional Funding from Project F53 "UGV" through Definitization (Article I.B.5.f)

Total Obligated Amount: $3,362,889.00
Total Estimated Cost: $3,057,172.00
Provisional Fee per Art. I.B.5.f: $ 305,717.00
ACRN: AQ
Notes: This sub-CLIN 0001BG is fully-funded.

(xxviii) Item **0001BH**. Funding from Project F54 "Unattended Sensors" through Definitization (Article I.B.4).

Total Obligated Amount: $1,101,314.00
Total Estimated Cost: $ 958,227.00
Base Fee: $ 57,235.00
Incentive Fee: $ 85,852.00
ACRN: AR
Notes: This sub-CLIN 0001BH is fully-funded.

(xxix) Item **0001BJ**. Additional Funding from Project F54 "Unattended Sensors" through Definitization (Article I.B.5.f)

Total Obligated Amount: $798,686.00
Total Estimated Cost: $726,078.00
Provisional Fee per Art. I.B.5.f: $ 72,608.00
ACRN: AR

Notes: This sub-CLIN 0001BJ is fully-funded.

Note that all funding for subCLINs 0001AX, 0001AY, 0001AZ, 0001BA, 0001BB, 0001BC, 0001BD, 0001BE, 0001BF, 0001BG, 0001BH, 0001BJ comes from Program Element "ASM."

(xxx) **Item 0001BK** FY 04 Incremental Funding from Project F56 "C4ISR" (Article IX).

Total Obligated Amount:	$126,800,000.00
Total Estimated Cost	$115,172,229.00
FCCM	$ 111,352.00
Fixed Fee	$ 11,516,419.00
Incentive Fee	$ TBD

ACRN: AL
Notes: This sub-CLIN 0001BK is fully-funded.

(xxxi) **Item 0001BL** FY 04 Incremental Funding from Project 57 "Manned Ground Systems" (Article IX).

Total Obligated Amount:	$116,400,000.00
Total Estimated Cost	$105,725,927.00
FCCM	$ 102,219.00
Fixed Fee	$ 10,571,854.00
Incentive Fee	$ TBD

ACRN: AM
Notes: This sub-CLIN 0001BL is fully-funded.

(xxxii) **Item 0001BM.** FY 04 Incremental Funding from Project F52 "RECON" (Article IX).

Total Obligated Amount:	$36,600,000.00
Total Estimated Cost	$33,243,719.00
FCCM	$ 32,141.00
Fixed Fee	$ 3,324,140.00
Incentive Fee	$ TBD

ACRN: AN
Notes: This sub-CLIN 0001BM is fully-funded.

(xxxiii) **Item 0001BN** FY 04 Incremental Funding from Project F55 "SUST" (Article IX).

Total Obligated Amount:	$23,300,000.00
Total Estimated Cost	$21,163,352.00
FCCM	$ 20,461.00
Fixed Fee	$ 2,415,905.00
Incentive Fee	$ TBD

ACRN: AP
Notes: This sub-CLIN 0001BN is fully-funded.

(xxxiv) **Item 0001BP** FY 04 Incremental Funding from Project F53 "UGV" (Article IX).

Total Obligated Amount:	$26,600,000.00
Total Estimated Cost	$24,160,736.00

FCCM	$ 23,359.00
Fixed Fee	$ 2,415,905.00
Incentive Fee	$ TBD

ACRN: AQ
Notes: This sub-CLIN 0001BP is fully-funded.

(xxxv) **Item 0001BQ** FY 04 Incremental Funding from Project F54 "Unattended Sensors" (Article IX).

Total Obligated Amount:	$6,300,000.00
Total Estimated Cost	$5,722,280.00
FCCM	$ 5,532.00
Fixed Fee	$ 572,188.00
Incentive Fee	$ TBD

ACRN: AR
Notes: This sub-CLIN 0001BQ is fully-funded.

Attachment 14

CLIN 0002 Structure

1. CLIN 2001

(i) Item 2001AA. Cost-Plus-Fixed-Fee (CPFF) ceiling-priced effort for Spiral Development and Technology Planning WD0001

Total Obligated Amount: $5,000,000.00
Estimated # of Hours Reimbursable: 29,412
ACRN: AC (see Attachment 12 for accounting details)
Notes: This sub-CLIN 2001AA is fully-funded.

2. CLIN 2002

(ii) Item 2002AA. Cost-Plus-Fixed-Fee (CPFF) ceiling-priced effort for DCGS-A WD0002

Total Obligated Amount: $3,000,000.00
Estimated # of Hours Reimbursable: 17,647
ACRN: AD (see Attachment 12 for accounting details)
Notes: This sub-CLIN 2002AA is fully-funded.

DAAE07-03-9-F001

AGREEMENT

BETWEEN

THE BOEING COMPANY
P.O. BOX 516
J.S. MCDONNELL BLVD.
ST. LOUIS, MO 63166-0516

AND

U.S. ARMY TANK-AUTOMOTIVE AND ARMAMENTS COMMAND
6501 E. ELEVEN MILE ROAD
WARREN, MI 48397-5000

CONCERNING

FUTURE COMBAT SYSTEMS (FCS)
SYSTEM DEVELOPMENT AND DEMONSTRATION (SDD) PHASE

Agreement No.: DAAE07-03-9-F001
Ceiling Estimate for SDD Phase: $ 14,924,800,000.00
Additional amount available for definitization (Estimated Not To Exceed $14,734,800,000.00)
Total Estimated Government Funding, to ensure Program Definitization: $190,000,000.00
Total Government Funds Obligated by This Action: $130,000,000.00
Of the $130,000,000.00., Cost $113,109,880.00 , Fee $16,890,120.00
Total Government Funds Obligated to Date: $130,000,000.00
Agreement Effective Date: Date signed by Grants Officer
Authority: 10 U.S.C. 2371 and Section 845 of the Public Law 103-160, as modified by Section 804 of Public Law 104-201, and as amended by Section 803 of the Floyd D. Spence National Defense Authorization Act for FY 2001.

Line of Appropriation: See Article V and Attachment 12

Boeing CAGE Code: 69236

This Agreement is entered into between the United States of America, hereinafter called the "Government", represented by the U.S. Army Tank-automotive and Armaments Command ("TACOM"), and The Boeing Company, hereinafter, referred to as "Boeing", or "LSI" or "Contractor" pursuant to and under U.S. Federal law.

The Parties mutually agree the Executive Summary, in its entirety, to include the SDD Statement of Objectives For Achieving IOC and Key Tenets of the Program, is included as an overview of the Program and to describe the overarching objectives and vision for the Future Combat Systems (FCS) Unit of Action for Initial Operational Capability (IOC) and beyond; and that the Executive Summary is non-contractual and non-binding on either Party, unless specified elsewhere within the Agreement.

EXECUTIVE SUMMARY

FCS Unit of Action (UA) System Development and Demonstration (SDD) Phase

FCS Overview

1. The goal of U.S. Army Transformation is the creation of the Objective Force (OF). The OF will be strategically deployable and capable of performing operations across the spectrum of conflict in a Joint inter-operational environment.

2. The OF is characterized by an innovative and revolutionary new operational and organizational concept for the Unit of Action (UA). The UA is the tactical warfighting echelon of the Objective Force, comprised of echelons at Brigade and below to fight tactical engagements and win battles. The UA is designed to win on the offensive, across the spectrum of conflict, against any expected adversary as part of a division-like Unit of Employment (UE) or Joint Task Force (JTF). In a low end Small Scale Conflict (SSC), one or more UAs can operate directly under a JTF. A UA can serve as an Army Forces (ARFOR) component headquarters for the JTF in this framework. The UA will account for the mission sets of these combat formations, with the exception of Special Forces (SF), Ranger, and Airborne Forces. The Army's UA will be part of a joint team that is decisive in any operation, against any level threat, in any environment. This team must be strategically and operationally responsive, rapidly deployable, able to change patterns of operations faster than the enemy can respond, and adjust to enemy changes of operations faster than he can exploit them. The UA accounts for these mission sets by operating as a Family of Systems (FoS) and a System of Systems (SoS). A FoS is a set or arrangement of independent systems that can be arranged or interconnected in various ways to provide different capabilities. The mix of systems can be tailored to provide desired capabilities dependent on the situation.

3. The Future Combat Systems (FCS) is a Family of Systems (FOS) networked to operate as a System of Systems (SoS) and will serve as a core materiel building block within the UA. The program goals are to: (1) acquire Future Combat Systems, (2) equip Soldiers, and (3) field FCS to Units of Action to enable achievement of the UA Operational and Organizational (O&O) Plan. The Army intends to field FCS Increment I with Initial Operational Capability (IOC) in 2010 for an FCS equipped maneuver battalion and Full Operational Capability (FOC) in 2012 for the Army's first Objective Force Unit of Action. Boeing is not responsible for the entire Unit of Action, they are only responsible for the specific work identified in the Agreement.

4. "FCS are comprised of a family of advanced, networked air- and ground-based maneuver, maneuver support, and sustainment systems that will include Manned and Unmanned (MUM) platforms. FCS are networked via a C4ISR architecture including networked communications, network operations, sensors, battle command system, training, and both MUM Reconnaissance and Surveillance (R&S) capabilities that will enable levels of Situational Understanding (SU) and synchronized operations heretofore unachievable. FCS will operate as a System of Systems (SoS) (defined in Chairman of the Joint

Chiefs of Staff Instruction (CJCSI) 3170.01B) that will network existing systems, systems already under development, and new systems to be developed to meet the needs of the UA. The network will enable improved Intelligence, Surveillance, and Reconnaissance (ISR), enhanced analytical tools, Joint exchange of blue and red force tracking down to the tactical level, battle command, real time sensor-shooter linkages, and increased synergy between echelons and within small units. It will also enable the UA to connect to UE and Joint-Interagency-Multinational (JIM) capabilities, making these capabilities available to the small units of the UA as well as with adjacent, non-contiguous units. FCS enable the networked UA to develop the situation in and out of contact, set conditions, maneuver to positions of advantage, and to close with and destroy the enemy through standoff attack and combat assault per the OF UA O&O Plan. "(ORD 14 April 2003, Change 3, Joint Requirements Oversight Council (JROC) approved).

Background

1. On 14 March 2002 Defense Advanced Research Projects Agency (DARPA) awarded an Other Transaction Agreement (OTA), Section 845 for Prototypes to The Boeing Company to serve as the U.S. Army's Lead Systems Integrator (LSI). The Boeing Company was selected as the LSI to partner with the Government in an Integrated Product Process Development (IPPD) environment to develop, manage and execute all aspects of the FCS program through Concept and Technology Development (CTD), with an option for System Development and Demonstration (SDD). This Agreement constitutes the exercise of the option contemplated in the CTD Agreement, MDA972-02-9-0005. Key among the LSI CTD responsibilities was to manage risk and facilitate transition to Milestone (MS) B. Continuing with the LSI into SDD was contingent upon the successful execution of the CTD Phase and negotiation of the subsequent SDD Agreement. The FCS program, cooperatively executed by DARPA and the Army, successfully exited the Concept and Technology Development (CTD) phase.

2. While the Army intends to retain the LSI for the foreseeable future, to maintain competition throughout the lifecycle, significant portions of SDD and Initial Production (IP) will be competitively awarded by the LSI to subcontractors specifically selected for their domain expertise. The initial capability increment is the first in a series of time-phased requirements, all of which are expected to be satisfied by the same LSI. SDD has competitive subcontracts, and performance specifications will be used to acquire the SDD hardware and software from a series of competitive actions. These specifications were made available for industry comment, during the CTD phase, to further encourage competition. It is planned to continue into IP for Increment I with the LSI using subcontracts being competitively awarded to the maximum extent feasible.

3. The Army, other Services, Joint activities or Allies have initiated or developed a number of technologies, and there are a significant number of ongoing programs that have relevance to FCS. In excess of one hundred (100) programs have been evaluated as having a need to interact with the FCS Program for SDD Increment I. During the System Development and Demonstration Phase additional programs may be added as complementary programs while others may be deleted. "Complementary Programs" for purposes of this Agreement is defined in Article I, subparagraph F.

SDD Phase

1. The SDD Increment I SDD phase will complete the integration of the FCS into a stable, interoperable, producible, supportable, and cost effective System of Systems that satisfies initial user expectations. The SDD phase includes System Integration and System Demonstration. During Systems Integration, the LSI will use the approved O&O and the JROC-validated Mission Needs Statement (MNS) and Operational Requirements Document (ORD) to integrate selected technologies at a System of Systems level. Recognizing that UA and OF development and demonstration work is ongoing and in parallel with the FCS SDD work, the LSI is also charged to work closely with the UA/FCS Proponent and the Army to ensure FCS SDD work is closely synchronized with the larger UA and OF development effort. The LSI will also ensure that the FCS roadmap to objective FCS capabilities is properly informed by, and synchronized with, CTD work for subsequent increments of FCS capability. The LSI will provide required program information and data to support decision-making through the IPPD structure. The Government will participate in all program decisions, to include Make/Buy and approval of competitive selection decisions, and the Government may disapprove any action taken under these processes. Linkage of the LSI's Modeling and Simulation (M&S) design work to the Army's OF Battle Labs will provide customer feedback to support FCS design work as envisioned under Simulation and Modeling for Acquisition, Requirements and Training (SMART). During the systems integration process, M&S and component level tests will verify technology and subsystem integration to ensure subsystem performance is achievable. The Distributed Product Description (DPD) will provide the complete digital system description within which the virtual technology component hardware will be tested. During Systems Demonstration, components will undergo a mix of virtual and physical testing. System simulation and its interactions with internal and external components will be accomplished through the use of M&S technologies, System Integration Laboratory (SIL) and networking to complement physical testing. Systems Demonstration will include prototype build and the execution of a series of Synthetic User Tests and Developmental Tests (DT). Results of testing will be integrated into the final production design prior to approval for entry into IP at Initial Production Decision (IPD). The prototype equipment may be refurbished (under separate contract), dependent upon suitability for use, availability of funds and identified needs, in the current production configuration and delivered to the First Unit Equipped (FUE) for New Equipment Training.

SDD Statement of Objectives for Achieving IOC

These objectives must be read as a whole as the elements are inter-related. As with the System of Systems, the whole is much greater than the sum of the parts. While these are the overall objectives for the SDD Agreement and beyond, the greater objective of achieving IOC by the end of the decade, must shape the work and decisions that are made in SDD.

1. Field FCS SoS solutions to Units of Action with initial FCS Increment I equipped battalion at IOC by the end of the decade and a FOC FCS Increment I equipped Unit of Action by 2012 to enable the UA to fight effectively as articulated in the UA O&O Plan
    (a) An organized, manned, trained and equipped subset (to be defined at IPD) of the FCS-equipped Unit of Action ready to begin new equipment and organizational training, leading to Operational Test Readiness Review III and the Initial Operational Test.
    (b) Successful verification of each critical operational issue during Operational Test.
    (c) Successful verification that the System of Systems is fully supportable and vital logistics goals are achieved.

2. Achieve a successful SDD effort
    (a) At IPD, Exit Criteria are achieved/demonstrated.

(b) At IPD, FCS UA Increment I Capabilities Specification is demonstrated for Increment I required performance.
(c) The LSI/Army partnership has defined, planned, and managed the systems engineering process to transform the FCS ORD into a tested SoS solution suitable for start of IP, conducted system reviews as defined in the Systems Engineering Management Plan (SEMP), and prepared for the IPD Defense Acquisition Board (DAB) review. These actions support achieving Increment I threshold capability.
(d) At CDR all schedules impacting/influencing the System of Systems are aligned with all performance expectations considered low to moderate risk for IPD.
(e) Necessary actions taken to ensure an achievable schedule in support of equipping Units of Action with initial force capability by the end of the decade. Sufficiently detailed Integrated Master Plan (IMP) and Integrated Master Schedule (IMS) facilitating management of the efforts to achieve IOC by end of decade are accomplished, with significantly greater detail through SDD.
(f) An Earned Value Management System (EVMS) for the LSI, first tier subcontractors, and select second tier subcontractors whose contributions exceed the dollar thresholds for requiring EVMS or who are designated by the PM, FCS as needing this level of management insight are implemented and validated.
(g) ACE fully deployed and operational prior to Critical Design Review (CDR).

3. Adopt a spiral development process to target the objective capability
   (a) Cost parameters necessary to support achieving objective capability, including specific recommendations on the development, fielding and support of future increments, to include life-cycle cost impacts are identified.
   (b) A plan for integrating, scheduling, measuring, and controlling the evolution of the FCS System of Systems development, test, and fielding leading to objective FCS Full Operational Capability (FOC) determined through continuous User requirements development and reflected in the latest version of the FCS ORD continues to be maintained.
   (c) CTD work on subsequent FCS increments of capability is synchronized in an efficient and effective manner over time with previous increments under development or in production.
   (d) All elements of the FCS program including LSI, Government, suppliers, and associate contractor activities are integrated into an event driven plan. Work is closely coordinated with Training and Doctrine Command (TRADOC) and Headquarters, Department of Army (HQDA) so that each increment of FCS capability is properly integrated and synchronized with the larger roadmaps for the UA and OF. Risk reduction activities with spiral development objectives for each program event including the plan to incrementally improve capability throughout the systems' life cycle based on spiral upgrades and technology insertion has been defined.
   (e) Concurrent development of program increments, with the UA/FCS Proponent, to ensure rapid technical integration and support parallel CTD activities under DARPA or Army purview have been planned.

4. Establish FCS Enterprise as a solid enduring partnership between Combat Developers, Materiel Developers and Industry
   (a) TRADOC Deputy Chief of Staff, Development (DCSDEV), Unit of Action Battle Lab, TRADOC System Manager for Future Combat Systems work in concert with the Material Developers and the LSI to establish and evolve the FCS operational and mission requirements.

(b) DARPA, Research, Development, and Engineering Command (RDEC) Command, PEOs, Program Manager, Army Test and Evaluation Command (ATEC) and Defense Contract Management Agency (DCMA) work in concert with the Combat Developers and the LSI to establish and define materiel solutions to meet continuous User requirements development needed to support and evolve the program to objective capability.
(c) LSI and Industry partners work in concert with the Material Developers and Combat Developers to design, develop, produce, field, sustain and support fielding of each increment of FCS FoS to OF Units of Action.

5. Key Performance Metrics will be demonstrated and documented in the System of Systems and individual system performance specifications based upon Increment I Key Performance Parameters (KPP)s and their prioritized ORD requirements

(a) Reliability, supportability, efficiency, deployability goals will be specifically identified, metrics will be established and incorporated into the documented performance baseline at the System of Systems and individual system levels.
(b) Supportability, sustainment, deployability, and fielding planning, including establishment of processes, procedures, and logistics management metrics, will be developed and tested to ensure logistics requirements are met across the FCS SoS. Performance Based Logistics (PBL) business processes and performance standards will be developed and validated, data management and analysis processes will be designed, and the PBL concept for sustainment will be expanded to incorporate complementary systems into the FCS Supportability Strategy. Collective performance of the requirements under this contract will be evaluated for effectiveness in achieving Operational Availability, Operation and Support Costs and Footprint.
(c) Key data has been provided and maintained on the ACE to ensure a solid foundation for Simulation-Based Acquisition activities to ensure close collaboration with the User in design work as envisioned in SMART.
(d) Development of SoS and FoS performance level modeling and simulation capability for use in analyzing requirements, evaluating design performance, and supporting system level testing has been managed and coordinated. System level modeling and simulation of information management, interoperability, lethality, survivability, supportability, agility/versatility, responsiveness, and vulnerability effectiveness evaluation has been developed. Use of this modeling and simulation capability across the SoS, FoS, testing, and other users, as needed, to support evaluation of FCS performance for selected designs including analysis of life-cycle cost impacts is coordinated.

6. LSI responsibility for total systems integration will be established and leveraged to ensure success both for SDD and beyond

(a) The management resources, engineering resources, products, and services required to design, build, procure, test, field and sustain prototypes or simulations for the integrated Family of Systems, including the distributed network systems, platforms, supportability, and training, when integrated and operated with systems external to FCS, constitute the FCS SoS are provided.
(b) Competitive procurement and management of systems and subsystems to the extent feasible to ensure "best of industry" involvement in the development of the FoS elements.
(c) Complementary systems and specific interaction needed to properly support the FCS program have and will continue to be identified in collaboration with PM, FCS.
(d) Program, including future increments, is shaped within planned funding and potential future cost constraints.

7. All actions needed to achieve future compliance with the Army Release, Fielding and Transfer Program (AR 700-142) dated May 1, 1995 and achievement of Material Release prior to IOC and FOC are taken.

KEY TENETS OF THE PROGRAM

- Create Opportunity for Best of Industry to Participate.
- Leverage Government Technology Base to Maximum Extent.
- Associate On-Going Enabling Efforts With LSI-Led Activity.
- Collaborative Environment from Design Through Life Cycle.
- As a Minimum, Commonality at Subsystem/Component Level.
- Design/Plan for Technology Integration
- Retain Competition throughout Objective Force Acquisition.
- Appropriate Government Involvement in Procurement Processes.
- Maintain and Shape Government Acquisition Community
- Maintain and Shape the Industrial Base of the Future
- Program Affordability--Balance Performance and Sustainment
- Consistent and Continuous Definition of Requirements

{ End of Executive Summary }

ARTICLE I: SCOPE OF THE AGREEMENT

A. Structure

1. The Boeing Company, as the Lead Systems Integrator (LSI), and its industry teammate, Science Applications International Corporation (SAIC) shares with the United States Army a common vision for the Future Combat Systems (FCS) that will serve as the materiel foundation for the Unit of Action. We are entering into an extended alliance between the Government and industry to provide advanced technologies that support enhanced warfighting capabilities and techniques for the Army to fulfill an expanding and evolving set of Army missions for the 21st century. This Agreement expresses the relationship between Boeing, as the LSI, and the Government, as represented by the Program Manager, Future Combat Systems and the Grants Officer. The LSI will continue to use the "best of industry" to work together with the Government to achieve a successful SDD Increment I phase, and to achieve the Army Vision of fielding a FCS threshold capability to enable the Unit of Action to achieve its O&O Plan with threshold FCS equipped maneuver battalion this decade.

2. A program management decision process, that addresses Cost As An Independent Variable (CAIV), will be utilized to focus on the cost, schedule, performance trade-offs in relation to SoS Life Cycle Cost (LCC) containment and Total Ownership Costs (TOC) estimates to help achieve operational capability within program cost constraints. Boeing's CAIV process contains three basic tenets: (1) setting cost targets; (2) allocating cost targets to subcontractors; and (3) reporting on program-level cost targets.

3. The planned funding for the program is a primary constraint for the Agreement. All proposed changes that increase cost will include recommendations of statement of work requirements to be modified, reduced, or deleted in order to perform within the existing Agreement funding constraints, unless the Grants Officer notifies Boeing that additional funds will be made available.

B. Program Definitization

1. The FCS SDD program effort is undefinitized at this time. The definitization period is referred to as "Program Definitization". Program Definitization is planned to be funded at $190,000,000.00 and is intended to ensure a timely definitization. The $190,000,000.00 is considered to be insufficient to ensure maintenance of the currently planned program schedule. There is no requirement for Boeing to work beyond the funding specifically provided in the Agreement.
2. Funds are not currently available for the full $190,000,000.00. The Government's obligation under this Agreement is contingent on the availability of appropriated funds from which payment for Agreement purposes can be made. No legal liability on the part of the Government for any payment may arise until funds are made available to the Grants Officer for this Agreement and until Boeing receives notice of such availability, to be confirmed in writing by the Grants Officer. The funds that are currently available are $130,000,000.00.
3. The $130,000,000.00 is the current limitation of the Government's liability. If the Agreement is terminated prior to definitization, no amount above the $130,000,000.00 can or will be added for either cost or fee. If additional funding is added, then the limitation of liability will be increased by the amount of the additional funding.

4. The FY 04 funding identified ($60,000,000.00) will be provided as early as available, but it is recognized that this may not be until late October or even November and that until such time as additional funding is obligated, the actual amount obligated to the Agreement is the Government's limitation of liability.

5. Definitization will include a cost estimate for the SDD Agreement and provision for applicable fee (fee for the balance of the Agreement is not defined at this time and may include fixed, incentive, award, etc.). The fee arrangement, described herein, used for the period through definitization, shall not set a precedent for the fee arrangement for the balance of the program. The fee for the definitization period is comprised of two parts, a base fee and an incentive fee. The incentive fee is comprised of five elements as described below. Any unearned incentive fee will be retained for use as fee for future incentive period(s) in the definitized Agreement with the specific application period and criteria determined by the fee determining official.

a. The fee for the period through definitization consists of a base fee in support of the overall definitization effort, and an incentive fee arrangement to support the definitization by rewarding the accomplishment of the major elements during definitization of the OTA. The total fee opportunity for the definitization period is $24,685,560.00. This consists of a base fee of $9,874,224.00 in support of the overall definitization effort, and an incentive fee arrangement to support the definitization by rewarding the accomplishment of the major elements as identified below,

1) Technical $1,645,704.00,
2) Software $1,645,704.00,
3) Manpower agreement $3,291,408.00,
4) Subcontracts $3,291,408.00 ($1,645,704.00 for the competitive subcontracts and $1,645,704.00 for the MGV Subcontracts) and
5) a fee for the definitized and signed Agreement in the amount of $4,937,112.00 for definitization of the OTA.

The fee for element 5, the definitized and signed Agreement, is reduced the longer it takes to definitize. The fee for the definitized and signed Agreement is $4,937,112.00. Commencing 210 days after award of the Agreement, the fee for element 5 will be reduced by $822,852.00, and reduced an additional $822,852.00 every 30 calendar days thereafter until the Agreement is definitized or the element 5 fee exhausted.

b. The total fee associated with the $130,000,000.00 is $16,890,120.00. Of that amount $6,756,048.00 is base fee, and the balance is for the following incentive fee elements:

1) $1,126,008.00 is for Technical,
2) $1,126,008.00 is for Software,
3) $2,252,016.00 is for Manpower agreement,
4) $2,252,016.00 is for Subcontracts($1,126,008.00 for the competitive subcontracts and $1,126,008.00 for the MGV Subcontracts), and
5) $3,378,024.00 is for the definitized and signed Agreement.

c. The total fee associated with the $60,000,000.00 is $7,795,440.00. Of that amount $3,118,176.00 is base fee, and the balance is for the following incentive fee elements:

1) $519,696.00 is for Technical,
2) $519,696.00 is for Software,
3) $1,039,392.00 is for Manpower agreement,
4) $1,039,392.00 is for Subcontracts ($519,696.00 for the competitive subcontracts and $519,696.00 for the MGV Subcontracts), and
5) $1,559,088.00 is for the definitized and signed Agreement.

d. The five incentive fee elements are defined as follows:

1. **Technical** UA Increment I specification updated to align with JROC approved ORD, dated 14 April 2003. By System Requirements Review (SRR), all JROC ORD requirements will be reconciled. This reconciliation can take two forms:

A. Establishment of a fully coordinated threshold (either JROC compliant or approved through the Trade Study process).

B. Establishment of a Threshold Range contingent upon the outcome of a Trade Study that has yet to be performed, including:

i. Appropriate justification as to why the Trade Study could not be performed prior to the SRR.

ii. A Change Control Board (CCB) approved Trade Study Plan.

2. **Software**, Demonstration of the Net Fires use case utilizing SoS COE Build 0 on the C4ISR test bench to validate C2 capabilities using SoS COE APIs.

A. The capabilities that are represented by the Net Fires use case shall be described as system engineering requirements that are documented in the DOORS database, and traceable to the ORD, and to the test cases to be run as part of the demonstration. All software process artifacts (peer reviews, etc.) that can demonstrate compliance with the approved software development process shall be compiled and made available for review prior to the demonstration. Compilation on ACE is acceptable.

B. The C4ISR testbed shall be under configuration control at the time of test and shall have been demonstrated to be suitable for use prior to the demonstration. The LSI SQA organization will be the agent to confer a judgment of suitability.

C. As part of the readiness review for the demonstration, the LSI shall present the original estimates and the actual values for the following metrics for all software included in the demonstration.

i) Report on estimated Source Lines of Code (SLOC) at the time of Agreement award vs. actual SLOC at the time of demonstration.

ii) Report on estimated productivity (SLOC/hr) at the time of Agreement award vs. actual productivity (SLOC/hr) achieved during development of the software for the demonstration.

iii) Report on estimated levels of software reuse and associated effort at the time of Agreement award vs. actual achieved levels of reuse and associated effort.

D. These actual values shall be used to revise the cost and schedule estimates for SDD, and presented as additional planning data for program management purposes.

E. The LSI shall present any suggested changes to the UML style guide/standards based upon implementation of the Net Fires use case.

3. **Subcontracts**. Competitive subcontracts - 100% of all competitive subcontracts resolved and 85% definitized. Resolved means that a proposal or bid has been submitted, evaluated and/or negotiated, or a cost agreement is in place. If negotiations are not complete, the LSI will submit to the Grants Officer a statement outlining final cost expectations, with adequate and proper back up. MGV subcontracts will be fully definitized, or the following: 1) Subsystem source selections complete, 2) GD/UDLP work split defined, and 3) The LSI completes an analysis of the UDLP/GD proposals and submits substantiated pricing data with adequate backup to the Grants Officer.

4. **Manpower Agreement.** Agreement between LSI and Government on LSI manpower will be considered complete after the Grants Officer notifies the LSI that the Grants Officer and the PMO is satisfied with the appropriate staffing levels for the IPTs.

5. **Definitization of Agreement.** This is the final definitive agreement for SDD, including the fee arrangements for the balance of the SDD program. For definitization, the parties must harmonize Boeing's projected expenditures with the funding profile and scope of work.

e. The base fee in support of the overall definitization effort shall be paid based upon the ratio of cumulative costs incurred, to date, to the total estimated costs for program definitization. The incentive fee pool will be paid on a provisional basis prior to accomplishment of the specific elements as defined above. A provisional billing payment may be made on a prorata basis against the 180 day definitization period. The 180 day period represents 12 planned vouchers and Boeing will equally divide the provisional fee payments. When an element is completed the balance of the fee available relative to that element will be paid with the approval of the Grants Officer.

f. Funds above the $190,000,000.00 may be provided at the Government's discretion to maintain Program schedule. A provisional fee for billing purposes will be provided at ten dollars provisional fee, for every one hundred dollars of estimated cost funded. Based on the fee structure negotiated at definitization the amount of provisional fee made available to Boeing will be adjusted either up or down as appropriate, and will be consistent with the fee structure for the balance of the Agreement in its entirety. If excess fee has been paid then it will either be decremented from the next voucher/invoice submitted or otherwise submitted to the Government based on the specific direction of the Grants Officer.

g. The complexities and risk associated with the FCS SDD Increment 1 Program are significant. The challenges of the program warrant the establishment of the maximum possible opportunity to earn fee. The fee available to be earned shall be based on the total negotiated cost base for the Agreement, including all normally allowable and allocable costs such as subcontracts, labor hours, and normal and customary rate applications in accordance with Boeing's approved disclosure statement. This commitment to provide an incentive commensurate with Program risk does not endorse or prohibit any particular fee structure, which shall be subject to negotiation for definitization. Establishment of the award fee arrangement requires a set of award fee evaluation areas and criteria that provide the expectations for excellent performance and Boeing's achievement of excellent performance will enable Boeing to earn the maximum fee available.

6. Boeing shall perform the work tasks to satisfy the accomplishment criteria for the first two IMP program events, SoS Requirements Review (SoSRR) and the Program Definitization, by 180 days after award. The scheduled IMP events are supported by doing those tasks that have been identified as needing to be initiated in the first six months. The following tasks are part of that process.

a. The Initial Baseline Review (IBR) for the program shall be conducted by 120 days after award.

b. It is understood that the initial IMP/IMS will need further refining at the IMS task level. Some tasks may require greater definition to support the criteria for the IMP events and additional tasks may need to be defined or eliminated. It is expected that the fidelity for the program will be of adequate detail by definitization to support both the agreed to dollars and the funding profile for the program.

c. The LSI will accompany PM,FCS on the scheduled visits to the PEO/PMs associated with Complementary Systems between June 2003 and September 2003. The LSI will participate with the Government in preparing and finalizing all MOAs by definitization. The LSI will participate with the Government in attempting to prepare and finalize all SMOAs by definitization. The LSI will prepare all draft ACAs prior to definitization. Some of the drafts (those ACAs where an initial SMOA has been signed and the complementary program prime contractor has been directed by the Government to initiate discussions with the LSI to develop an ACA) will have been worked with applicable contractors and some will be Boeing generated documents only.

7. Timely accomplishment of the Program Definitization will include: the detailed Integrated Master Schedule (IMS) at the LSI level by 135 days after award; the validation of the linkage between the Work Breakdown Structure (WBS), the Integrated Management Plan/Integrated Master Schedule, and the Technical Baseline to the agreed to cost by 165 days after award in order to achieve a definitive Agreement by 180 days after award. If the Agreement is not definitized within 30 days after the fee for the definitized and signed Agreement has been exhausted (per Article I, paragraph B,5.a. above), the definitization will be subject to Disputes, Article XV. Towards ensuring timely accomplishment the parties agree to meet within 30 days of award and identify the appropriate supporting tasks to the above schedule. Both parties will ensure periodic management reporting to facilitate the understanding of the progress being made.

8. The modification that definitizes the ceiling priced Agreement is planned to be a totally superceding modification for the entire FCS SDD program, incorporating those fixed portions of the business arrangement reflected in this Article for the definitization period.

9. There will be no Government manpower provided through definitization, unless the Agreement is expressly modified to provide Government manpower in lieu of LSI manpower. The requirements for Government Manpower will be identified and finalized during the definitization process. The GFX list will be finalized during the definitization process.

10.. The Statement of Work (SOW) at Attachment 1 is the SDD program SOW for FCS Increment I. The SOW, the terms and conditions other than the business arrangement for definitization, and all other attachments will be finalized during the definitization process so that all Agreement requirements at definitization will match the ceiling for the Agreement. There have been changes to the documents subsequent to 2 May 2003 and prior to execution of this Agreement. All such changes will be addressed during the definitization process. The ceiling price for the Agreement for definitization purposes is the Government's funding limitation and is not reflective of the proposal submitted. The definitization process will reconcile these issues to arrive at a definitive agreement.

C. Agreement

1. This Agreement is an Other Transaction pursuant to 10 U.S.C. 2371 and Section 845 of the 1994 National Defense Authorization Act, (Public Law 103-160) as amended. Boeing will be incentivized to achieve the program goals by use of an Award Fee plan as described in Article VII, Award Fee.

2. This Agreement is not a procurement contract, grant, or cooperative agreement. The Federal Acquisition Regulation (FAR) and Department of Defense FAR Supplement (DFARS) apply only as specifically referenced herein. This Agreement is not intended to be, nor shall it be construed as, by implication or otherwise, a partnership, a corporation, or other business organization. The Army will obtain access to program results and certain rights to patents, data and software pursuant to Articles XVII, Patent Rights and XVIII, Data and Software Rights.

3. As part of the competition to select an LSI for Concept and Technology Development (CTD), industry was advised of the Government's intent to exercise a follow-on option with the selected LSI for SDD. This Agreement, DAAE07-03-9-F001, constitutes the exercise of the SDD option contemplated by DARPA and the Army in the CTD solicitation and Agreement, MDA972-02-9-0005.

4. The Senior Procurement Executive for the agency approved, in writing, that in accordance with Section 845 of the National Defense Authorization Act for Fiscal Year 1994, Public Law 103-160, as amended (10 U.S.C. § 2371 *note*), the use of an Other Transaction Agreement, that exercises the option contemplated by DARPA and the Army in the CTD phase, continues the use of non-traditional defense contractors in significant roles, and provides for innovative business arrangements or structures that would not be feasible or appropriate under a FAR-based procurement contract, and is the appropriate instrument for the FCS SDD Phase.

D. Non-Disclosure of Sensitive Government Program Information

1. In the course of Agreement performance, the Government may furnish Boeing information (written, verbal or otherwise) developed outside of the FCS program, regarding Army programs and initiatives that is often sensitive to past, present, and future procurements within the Government (hereafter "Sensitive Government Program Information"). If the Government initially makes a disclosure of Sensitive Government Program Information to Boeing in non-written form, e.g., verbally, the information disclosed shall be identified as being Sensitive Government Program Information and confirmed, as such, in writing, by the Government within thirty (30) days from such disclosure. Subject to the foregoing, Sensitive Government Program Information will be marked as such before it is provided to Boeing. Boeing agrees to use reasonable efforts not to use or reproduce Sensitive Government Program Information for any purpose other than fulfilling the FCS Program (the "Purpose"), and to keep Sensitive Government Program Information in confidence, disclosing it only for the Purpose to (a) Boeing employees assigned to or supporting the FCS Program, (b) the Government and its FCS Program support contractors, and (c) other companies, organizations, or individuals that have agreed contractually to control Sensitive Government Program Information under the same conditions set forth herein. The obligations set forth above shall not apply: to information which is or becomes publicly available, or to information which is already in the possession of the recipient without restrictions, or to the extent prior written authorization of the Government is given, or after three (3) years after receipt of the information. This provision does not supercede the terms and conditions of Article XVIII, Data and Software Rights.

E. Lower Tier Agreements

1. Boeing may disclose such Sensitive Government Program Information to subcontractors, regardless of tier, on the FCS program, provided that it includes subparagraph D. in each such subcontract.

F. Definitions

The following definitions are used for purposes of this Agreement in lieu of definitions that may occur elsewhere:

1. The term "Agreement" as used herein refers to these articles and the attachments hereto.

2. The term "Lead Systems Integrator" or "LSI" or "contractor" refers to the recipient, The Boeing Company, acting as a single party, responsible to the U.S. Government through the Program Manager, Future Combat Systems (U.S. Army) and the Grants Officer (TACOM).

3. The term "Program" refers to the Future Combat Systems (FCS) as described in the Executive Summary paragraph entitled FCS Overview.

4. The term "Program Management Office" (PMO) refers to the Army Program Manager, Future Combat Systems and his designated staff.

5. The term "Program Manager LSI" or "PM, LSI" refers to the Boeing Program Manager and his designated staff.

6. The term "Parties" or "Party" refers to Boeing or LSI or Contractor and TACOM.

7. The term "Statement of Work" or "SOW" refers to the tasks to be accomplished by Boeing, and its subcontractors, in the performance of this Agreement, as defined in Attachment 1, SDD SOW.

8. The term "User" refers to the TRADOC (Training and Doctrine Command) Systems Manager (TSM) Future Combat Systems (FCS). The TSM FCS is the user representative voice in all discussions related to FCS."

9. The term "Initial Operational Capability" or "IOC" means within the IMS, an FCS-equipped maneuver battalion has completed hand-off and fielding of all materiel required by the Army's concept, soldiers are trained to standard, and required support is in place. In addition, Materiel Release of the FCS System of Systems (SoS), in accordance with the Army Release, Fielding and Transfer Program (AR 700-142) dated May 1, 1995, has been achieved. Boeing's required effort to support IOC is represented by this SDD Agreement and subsequent contracts.

10. The term "Integrated Product Team" or "IPT" refers to a multidisciplinary group of people who are collectively responsible for completing particular program objectives as described in their respective IPT Charter.

11. The term "IPT Leader" (LSI) and "IPT Co-Leader" (Government) refers to the co-equal technical leaders of their respective IPT. Refer to Article IV, Management of the Program.

12. The term "Integrated Master Plan" or "IMP" refers to an event driven program plan, which organizes the work effort by establishing Program Events and associated Significant Accomplishments.

13. The term "Integrated Master Schedule" or "IMS" refers to an integrated schedule, of time-phased tasks, that supports the Program Events and Significant Accomplishments of the IMP.

14. The term "In Process Review" or "IPR" refers to a predetermined agreed upon event to assess the status of program cost, schedule, and performance objectives.

15. The term "Integrated Product and Process Development" or "IPPD" refers to a management technique that simultaneously integrates all essential acquisition activities through the use of multidisciplinary teams to optimize the design, development, demonstration, evaluation, manufacturing and supportability process. IPPD facilitates meeting cost, schedule, performance, and supportability objectives from systems concept through production, including field support. One of the key tenets is multidisciplinary teamwork through IPTs.

16. The term "Advanced Collaborative Environment" or "ACE" refers to the shared data, tools, models, simulations, and the ability to access data and information based on logical business rules throughout the Future Combat Systems enterprise.

17. The term "Complementary Programs" means those items, data, software, programs or systems that are required to meet the functionality and performance of the FCS UA Increment I Capabilities Specification that are neither developed nor provided as part of the Lead System Integrator (LSI) effort, and any product that is needed to accomplish the SoS integration that will be provided through the Complementary Program related processes. Complementary programs will require an exchange of hardware, software, information and/or collaborative interaction between the LSI and other Government agencies and contractors for design, integration, test, production planning or program planning purposes. Complementary Programs consist of property (including software and data) or materiel furnished to the LSI through LSI agreements with the specific contractors. Government Furnished Property (GFP) consists of property or material furnished to Boeing directly from the Government without oversight of the LSI. NLOS-LS and IMS as identified in the ORD are FCS Core Programs, and are considered Complementary Programs for the purposes of this Agreement.

18. The term "non-traditional defense contractor" means an entity that has not, for a period of at least one year prior to the date of the transaction (other than a contract, grant or cooperative agreement) for a prototype project under the authority of 10 U.S.C. 2371, Section 803 is entered into, or performed with respect to --

(a) any contract that is subject to full coverage under the cost accounting standards prescribed pursuant to section 26 of the Office of Federal Procurement Policy Act (41 U.S.C. 422) and the regulations implementing such section; or
(b) any other contract in excess of $500,000 to carry out prototype projects or to perform basic, applied, or advanced research projects for a Federal agency, that is subject to the Federal Acquisition Regulation.

19. The term FCS "Board of Directors" refers to a group assembled at the discretion of the Program Executive Officer (PEO), Ground Combat Systems (GCS) consisting of Army and Office of Secretary of Defense (OSD) officials to include other PEOs, RDEC Directors, Army Materiel Command functional leaders, TRADOC, ATEC, DCMA, individuals with special expertise and LSI executive leadership to assist the PEO GCS in his responsibilities for planning, control and oversight to ensure achievement of key Program objectives.

20. The term "Program Generated Adjustment" refers to whenever a provision of this Agreement states that Boeing may be or is entitled to a "Program Generated Adjustment", the Government, at its sole option, may direct that the modification implementing the adjustment (a) maintain the overall schedule and estimated cost by removing requirements from the statement of work that reduce cost and/or schedule by an amount equal to the increased cost and/or schedule caused by the event giving rise to the Program Generated Adjustment, or (b) increase estimated cost and/or schedule, as appropriate, to account for the impact of the change. Unless directed otherwise by the Grants Officer, any request by Boeing for a Program Generated Adjustment will maintain the overall schedule and estimated cost and include recommendations of statement of work requirements to be modified, reduced, or deleted in order to perform within the existing Agreement schedule and cost boundaries. Adjustments implemented under (a) above will not cause any revision to the amount of Fee available for this Agreement. Any reference to an Equitable Adjustment under this Agreement in a FAR or DFARS clause, is hereby replaced with the term "Program Generated Adjustment", as defined herein.

21. The term "Family of Systems (FoS)" refers to: "The JROC defines a Family of Systems as a set or arrangement of independent systems that can be arranged or interconnected in various ways to provide different capabilities. The mix of systems can be tailored to provide desired

capabilities dependent on the situation. For this Statement of Work, the FCS Family of Systems is further defined by the FCS ORD as consisting of advanced, networked air and ground based maneuver, maneuver support and sustainment systems that include manned and unmanned platforms and is networked via a C4ISR architecture, including networked communications, network operations, sensors, battle command systems, training, and manned and unmanned reconnaissance and surveillance capabilities."

22. The term "System of Systems (SoS)" refers to: A set or arrangement of systems that are related or connected to provide a given capability. The loss of any part of the system will degrade the performance or capabilities of the whole. The FCS System of Systems is further defined by the FCS ORD as a network of systems integrated to perform one common mission, to include the networking of existing systems, systems already under development, and new systems to be developed to meet the needs of the Unit of Action."

23. The term "Full Operational Capability" (FOC) refers to the fielding of an FCS equipped UA able to effectively execute the O&O Plan.

24. The term "Terms and Conditions" refers to the terms and conditions of this Agreement which are contained within the Articles and referenced clauses, unless formally modified by modification to the Agreement.

ARTICLE II: TERM

A. The Term of the Agreement

1. The performance period of this Agreement commences upon the Agreement Effective Date and continues for one hundred three (103) months. Initial Production Decision (IPD) is estimated to be sixty three (63) months from date of award unless terminated earlier in accordance with the Limitation of Funds provision, Article VI, Obligation and Incremental Funding Schedule or the Termination provision, Article II. If all funds are expended prior to the end of the term, the Parties have no obligation to continue performance. Articles in this Agreement, which by their express terms or by necessary implication, apply for periods of time other than as specified in this Article, must be given effect, notwithstanding this Article.

B. Termination Provisions

1. In the event of a termination of this Agreement, it is agreed that disposition of intellectual property developed under this Agreement shall be in accordance with provisions set forth in Article XVII, Patent Rights and XVIII, Data and Software Rights. The Government and Boeing will negotiate in good faith a reasonable and timely adjustment of all outstanding issues between the Parties as a result of termination.

C. Termination Notification

1. Should the Government terminate work, or substantially reduce work, under the Agreement worth twenty-five (25%) per cent or more of the total Agreement amount, Boeing will provide appropriate notices, in accordance with Section 1372 of Pub. L. 103-160 and Section 824 of Pub. L. 104-201, (1) to all potentially affected employees or their official representatives; (2) to

the State dislocated worker unit or entity designated by the State to carry out rapid response activities under section 134(a)(2)(A) of the Workforce Investment Act of 1998 (29 U.S.C. 2864(a)(2)(A)); (3) to the chief elected official of the unit of general local government within which the adverse effect may occur; and (4) to each first-tier subcontractor with a subcontract of $500,000 or more; and will require that each such subcontractor provide notice to each of its subcontractors with a subcontract of $100,000 or more and impose a similar notice and flowdown requirement to subcontractors with subcontracts of $100,000 or more.

2. This notice to the employee shall have the same effect as a notice of termination to the employee for the purposes of determining whether such employee is eligible to participate in employment and training activities carried out under title I of the Workforce Investment Act of 1998 (29 U.S.C. secs. 2801 et seq. generally; for full classification, consult USCS Tables volumes), except in a case in which the employer has specified that the termination of, or substantial reduction in, the contract is not likely to result in plant closure or mass layoff as defined in 29 U.S.C. 2101.

D. Lower Tier Agreements

1. Boeing shall notify its first-tier subcontractors with subcontracts valued at $500,000 or more and require them to include the notification requirement in subparagraph C. above to subcontractors with subcontracts valued at greater than $100,000 or more.

E. Extending the Term

1. The Parties may extend, by mutual written agreement, the term of this Agreement if funding availability and opportunities reasonably warrant. Any extension shall be formalized through modification of the Agreement by the Grants Officer and the Boeing Contracts Manager.

F. The following FAR/DFARS clauses apply:

52.249-6	Termination (Cost-Reimbursement) (9/96) Tailoring: Except that disputes between the Parties will be handled under this Agreement as identified in Article XV: Disputes.

ARTICLE III: DELIVERABLE SCHEDULE

A. Deliverable Schedule – Data and Software

1. Boeing shall submit or otherwise provide the deliverables (including Software) listed in Attachment 2, Deliverables List as part of its LSI responsibilities to support the SDD phase. Submittal of deliverables will be via the Advanced Collaborative Environment (ACE). Deliverables will be marked in accordance with Article XVIII, Data and Software Rights.

2. The ACE workflow will be the process used for approving data listed in Attachment 2 that requires approval (i.e., Block 8 contains an "A").

a. Sixty (60) calendar days prior to its due date, the individual(s) who has the authority to approve the data for the Government will be identified. The Government will provide this information to Boeing who will enter it into the ACE workflow. At thirty (30) days prior to the deliverable due date, if this individual has not been identified, Boeing will notify the Grants Officer, or his designated representative, so that the Government may provide the name of the Government individual that has approval authority.
b. Boeing will notify the Government approval official, via the ACE workflow process, that the deliverable is available for final review and approval. Twenty (20) calendar days after the Government approval official has received notification, unless otherwise specified in Attachment 2, the deliverable will be deemed approved by the Government if neither comments nor disapproval are received.

3. Day-to- day IPT products such as technical assessment results, analysis, distributed product description (DPD), trade studies, and plans, will be made available to the Government via the ACE. However, unless such day-to-day IPT products are explicitly specified in Attachment 2, these products will not be subject to Article XVIII, Data and Software Rights.

B. Deliverable Schedule – Hardware

1. At the completion of the Agreement all system prototypes and SILs shall either become deliverables to the Government or the Government may decide to have them transferred to a subsequent follow-on production contract with Boeing at the Government's discretion. All such deliverables shall be F.O.B. Origin. Any residual property (prototypes, etc.) will vest and be dispositioned in accordance with the Article XII provision, "Government Property."

C. SDD Completion

1. Performance of this Agreement shall be deemed to have been completed thirty (30) calendar days after the successful accomplishment of the IMP events and SOW requirements or upon termination in accordance with Article II, Term, subparagraph A. or subparagraph F. or Article VI, Obligation and Incremental Funding Schedule, subparagraph D. Refer to Article I, B., for SOW requirements.

2. This Agreement shall remain open, administratively, until the following actions at a minimum have been settled:
(a) Closeout of subcontracts;
(b) Disposition of Government Property and Plant Clearance actions;
(c) Disposition of Classified Material;
(d) Final Patent Report;
(e) Final Modification Identified;
(f) Final Audits Conducted;
(g) Final Payment Made.

D. The following FAR/DFARS clauses apply:

52.246-9	Inspection of Research and Development (Short Form) (April 1984) Tailoring: Unless otherwise agreed, records of inspection work performed by Boeing will be posted to the ACE.

ARTICLE IV: MANAGEMENT OF THE PROGRAM

A. Program IPT Structure

1. The following IPTs are the initial IPTs the SDD Phase will commence with:

- Program Manager IPT (level I)
- Advanced Collaborative Environment IPT (level II)
- Complementary Programs IPT (level II)
- Force Development IPT (level II)
- Integrated Simulation and Test IPT (level II)
- Supportability IPT (level II)
- System of Systems Engineering & Integration IPT (level II)
- Training Systems IPT (level II)
- C4ISR Systems Integration IPT (level II)
- Increment II Concept & Technology Development IPT (level II)
- Lethality Systems Integration IPT (level II)
- MGV Systems Integration IPT (level II)
- Soldier Systems Integration IPT (level II)
- UAV Systems Integration IPT (level II)
- UGV Systems Integration IPT (level II)

B. Management and Program Structure

1. Boeing will structure its performance so as to facilitate appropriate span of control consistent with the SOW, Work Breakdown Structure (WBS), IMP and IMS. The Program Manager, LSI exercises program management and system integration responsibilities to include technology insertion, risk management, life cycle cost, and program evolution through each of the Government acquisition milestones. For purposes of this Agreement any body, regardless of its title, i.e. "Working Group", "Integrated Design Team", will be referred to as "IPT".

2. Boeing will use its Integrated Product and Process Development (IPPD) process centering on customer focus, multidisciplinary teamwork and total life cycle planning to facilitate the creation, staffing, and operations of the jointly led Integrated Product Teams (IPT). This collaborative working relationship helps to ensure successful execution of program plans, within cost, schedule, performance and supportability objectives. The IPPD process will ensure effective participation, including PM, FCS and User groups such as Integrated Concept Teams (ICTs), Battle Labs and TRADOC System Managers (TSMs), in key performance trade decisions that impact operational capabilities.

3. PM, FCS will ensure that all key Government stakeholders are officially represented on an IPT, where appropriate.

4. The ACE shall be used for IPT collaboration, workflows and approvals for IPT work products and formal deliverables.

C. Board of Directors

1. The Board of Directors may be convened during program performance at the discretion of the PEO, GCS in order to discuss top-level issues affecting, or that may affect, the program. The Board, in their advisory capacity, will provide to the PEO, GCS, as required, advice and counsel so that the PEO may fulfill his responsibilities for program planning, control and oversight to ensure key objectives are achieved.

D. IPT Structure

1. The FCS program will be managed and led through the Office of the Program Manager, co-chaired by both the PM, FCS and PM LSI. Reporting to the Office of the Program Manager are level II IPTs (as listed in paragraph A) which shall be jointly established and chartered by the PM, FCS and the PM LSI. Boeing will lead each IPT, regardless of IPT level, with the Government providing appropriate co-leaders, unless the PM, FCS and the PM LSI agree otherwise.

2. Supporting level II IPTs will be sub-IPTs, and Working Groups (WG) or other organizations which will be referred to as level III IPTs. Sub-IPTs and Working Groups will be established by level II IPT leaders with concurrence of the level II IPT Co-Leader.

3. Lower level IPTs (IV, V, VI, etc.) are not capped, but must be structured and chartered in accordance with Boeing's IPPD process. The Government reserves the right to participate on these lower level IPTs and to co-lead with the concurrence of the lower level IPT Leader.

4. Boeing shall provide administrative support and coordination of the day-to-day business activities for all IPTs.

5. Each IPT Charter shall be concurred in by IPT Leadership. Charters will contain goals from the Statement of Work, deliverable products and schedules, processes, responsibilities, authority and budget. Subcontractor and Government employees will participate in IPTs.

6. Boeing will require that each IPT has an:

(a) IPT Charter and Team Execution Plan (TEP): These documents define the purpose, responsibilities, membership and chain of authority for the IPT.
(b) Input into the Integrated Master Plan/Integrated Master Schedule (IMP/IMS) which establishes the products and resources for the allocated actions of the IPT.

E. Government Manpower Support to IPTs – Subject Matter Experts (SME)

NOTE: UNTIL OR UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES AND IMPLEMENTED BY AGREEMENT MODIFICATION, THERE WILL BE NO GOVERNMENT SME PROVIDED IN LIEU OF LSI PERSONNEL. THE ISSUES ASSOCIATED WITH LSI MANAGEMENT OF GOVERNMENT PERSONNEL MUST BE RESOLVED PRIOR TO GOVERNMENT PERSONNEL BEING PROVIDED IN LIEU OF LSI PERSONNEL.

~~1. The Government is supporting IPTs by providing manpower (e.g. subject matter experts) in needed or specialized areas, in accordance with this Article IV.E and as specified in Attachment 10, Government Manpower Support to IPTs. A change in support provided subsequent to Agreement award will require a modification to the Agreement and a Program Generated~~

~~Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.). Program Generated Adjustment will be in accordance with Article XIII, Modifications.~~

~~2. The IPT Leader and IPT Co-Leader may jointly request a change in Government IPT support. In response, to the request, the Government will advise as to the availability of Government manpower, including detailed information on the specific support offered. Upon IPT Leader and IPT Co-Leader concurrence, the Government will provide manpower in support of an IPT. The Government, via the Grants Officer, shall provide to the Boeing Contracts Manager a modification including the information required by Attachment 10.~~

~~3. The IPT Leader and IPT Co-Leader will jointly evaluate the IPTs products and performance to ensure successful team performance. Evaluations will be provided through the appropriate supervision chain for both Boeing and the Government. The level II IPT Co-Leader is directly responsible to the PM, FCS for all lower level Government IPT effort or performance and to provide resolution of issues that may impact program performance within one (1) business day of issue identification to the level II IPT Co-leader.~~

~~4. The Government employee will perform his/her assigned responsibilities and duties under the leadership of the IPT Leader and IPT Co-Leader and will be expected to provide a weekly, or monthly activity report as required by the IPT Leader. The IPT Leader will evaluate the Government employee's performance for continued participation on the IPT and will make available to the Government employee's supervisor such evaluation. The responsibility for the supervision and day-to-day direction of the Government employee, however, will remain with that employee's Government supervisor.~~

~~5. If the Government cannot provide the supplemental manpower levels when planned, written notice, via the Grants Officer, shall be provided to the Boeing Contracts Manager as early as practicable, along with a projection of the extent of delay, and/or shortfall in manpower. To the extent that any Government supplemental manpower is provided late, fails to meet the purpose for which it was intended, to the extent there is a substantial impact and it causes Boeing to be late in its performance of its obligations under this Agreement or requires Boeing to perform additional work, Boeing may be entitled to a Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.). Program Generated Adjustment will be in accordance with Article XIII, Modifications. In addition, the Parties mutually agree, Boeing's award fee evaluation score shall not be adversely impacted by the action, or non-action, of a Government individual supplied to the LSI as Government supplemental manpower, provided that providing Boeing can demonstrate they have acted responsibly in their overall LSI management responsibilities. The comparatively low instance of Government employees should make such extremely unlikely, provided that proper work management is being performed.~~

~~5. Boeing reserves the right to request discontinuance of the participation of a Government individual (e.g. Government supplemental manpower) from any IPT, if that individual fails to meet the purpose for which he/she was assigned, causes Boeing to be late in its performance of its obligations under this Agreement, or requires Boeing to perform additional work. The Boeing Contracts Manager will notify the Grants Officer of the specific situation and the Grants Officer will provide appropriate direction in a timely fashion.~~

~~6. Government provided IPT manpower individuals do not have authority to, and therefore shall not direct the efforts of Boeing subcontractors, regardless of tier. In the event a Government provided IPT individual provides direction to a Boeing subcontractor, regardless of tier, which~~

~~results in an increase to the subcontractor's cost or schedule for performance, the Government will be directly liable for any such subcontractor claim for equitable adjustment; and furthermore, if the direction to the Boeing subcontractor results in an increase to Boeing's cost or schedule for performance then Boeing also will be entitled to an Equitable Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) in accordance with Article XIII, Modifications.~~

F. Government Member IPT Responsibilities

1. The Government may, in its sole discretion, appoint members to each IPT. Government members of the IPT are empowered by the PM, Future Combat Systems to express his views and interests and are responsible to the PM, Future Combat Systems for their actions. Government members of the IPT will report regularly and frequently to their home office, their Government team co-lead, and the PM, FCS to ensure a common Government view is maintained for the execution of the program. The Program Management Office may provide IPT representatives that are Support Contractor employees under contract to support the Program Management Office. Support Contractor employees acting in this capacity shall have first signed a Proprietary Information Agreements (PIA) with Boeing or shall provide to the Boeing Contracts Manager a copy of an existing Government FCS Non-Disclosure Statement prohibiting the unauthorized disclosure of Boeing proprietary information. Each IPT will have assigned a representative reporting to the Grants Officer to review proposed changes to the Program work for cost or schedule impacts. Such representative may be responsible for reviewing input and providing support to multiple IPTs. The Boeing and Government members of the IPTs do not have authority to make decisions that would result in a change to the Agreement. All required changes to the Agreement will be documented, in writing, via Agreement modification.

2. The Parties agree that Government members of an IPT do not have authority to, and therefore shall not, direct the efforts of Boeing subcontractors, regardless of tier.

G. IPT Issue Resolution

1. It is the intent of the Parties that IPT actions will be taken as a result of consensus between the IPT Leader and IPT Co-Leader. In the event consensus cannot be achieved, then the issue must be raised to the next level of the IPT structure in accordance with the following process:

(a) An inability to reach consensus between the IPT Leader and IPT Co-Leader of the IPT will result in the decision of the IPT Leader being followed until such time as the issue is resolved. This decision can be reviewed by appeal to the IPT to which they report. The Government IPT Co-Leader can initiate a request to review the decision or issue where consensus is not achieved.

(b) The IPT Co-Leader will submit a request for review of that decision, in writing, to the leaders of the IPT to which they report. The request for review will: (i) describe the decision to be reviewed; (ii) identify the reason for the disagreement; and (iii) identify an alternative decision.

(c) The higher-level IPT Leader and IPT Co-Leader will determine if they can reach a consensus decision themselves or if they need to involve their team to resolve the issue. All decisions by a higher-level IPT will be made within two (2) business days following

receipt of a request to review a decision in order to facilitate effective program performance.

(d) Any decision can be appealed to the next higher-level IPT. The new request for review will be handled in accordance with the procedure described in paragraphs (a) through (c).

(e) The final decision-making authority for an issue raised by this procedure will be the Program Manager, LSI. Any decision by the PM, LSI that does not sustain an appeal shall be immediately provided to PM, FCS. Should the PM, FCS disagree, he may request the Grants Officer provide appropriate direction to Boeing. In this case, if the direction results in an increase to Boeing's cost or schedule, then Boeing will be entitled to a Program Generated Adjustment. The Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) will be in accordance with Article XIII, Modifications.

2. Issue resolution by elevation to next higher level IPT is not the preferred method. IPTs are empowered and expected to quickly resolve issues within the scope of their Charter. However, any issue under the issue resolution process impacting cost, schedule or performance shall be brought to the attention of the Office of the Program Manager in no longer than one (1) week, if not resolved.

H. Earned Value Management System

1. In the performance of this Agreement, Boeing will use its Earned Value Management System (EVMS) as documented in the Integrated Performance Management Manual (IPM Manual) per Advance Agreement (AA) on The Boeing Company EVM System, dated October 31, 2000 between The Boeing Company and the Government regarding the Single Boeing Company Earned Value Management (EVM) System. The IPM Manual has been recognized by the Government as complying with the criteria provided in the Interim Defense Acquisition Procedure "Operation of the Defense Acquisition System" Tab C, Table 3 Contract Reporting Requirements dated 30 October 02.

2. If Boeing's EVMS is not recognized by the cognizant AAO as complying with EVMS criteria (or Boeing does not have an existing cost/schedule control system that has been accepted by the Department of Defense), Boeing shall apply the system to the Agreement and shall be prepared to demonstrate to the AAO that the EVMS complies with the EVMS criteria referenced in paragraph 1. of this clause.

3. The Government shall require Integrated Baseline Reviews (IBR) and subsequent baseline quality reviews (BQR). IBR reviews shall be scheduled as early as practicable and should be conducted within 120 calendar days after (1) Agreement award, (2) the exercise of significant agreement options, or (3) the incorporation of major modifications. The objective of IBRs and BQRs is for the Government and Boeing to jointly assess areas, such as Boeing's planning, to ensure (1) complete coverage of the statement of work, (2) logical scheduling of the work activities to include integration of all major performers' (sub-contractors) detailed activities into a singular and fully integrated performance measurement baseline that adheres to the program master plan, (3) adequate resourcing, and (4) identification of inherent risks. BQRs will be the logical extension to the IBR to ensure continued integrity of the Performance Measurement Baseline, and will be conducted at periodic intervals when deemed needed by the Government or Boeing throughout the Agreement's period of performance.

4. Boeing agrees to provide access to all pertinent records and data requested by the Grants Officer, AAO or other duly authorized Government representative. Access is to permit Government surveillance to ensure that the EVMS complies, and continues to comply, with the criteria referenced in paragraph 1. of this clause.

5. Boeing shall require all subcontractors with subcontracts worth more than $5M to manage their portion of the program using an approved earned value system. For subcontracts greater than $5M, the subcontractor will use a Cost/Schedule Status Report (C/SSR) to report their EVMS information and for all subcontracts in excess of $50M the subcontractor will use a Cost Performance Report (CPR) to report their EVMS information.

I. Office Space and Administrative Support

1. Due to the highly collaborative nature of the business relationship, the Parties mutually agree that each Party may be required, or may have to from time-to-time, provide to the other Party the use of office space, furniture, equipment, services, miscellaneous office supplies, administrative support, etc. for the mutual benefit of the FCS program. Attachment 7, Office Space and Administrative Support lists the Army installations and minimum requisite support to be provided to Boeing; and further lists the Boeing locations and minimum requisite support to be provided to the Government.

2. Office space and administrative support will be provided on a no-charge-for-use basis.

3. Either Party may immediately report to the Grants Officer or Boeing Contracts Manager, as the case may be, regarding inadequacies, defective space, furniture, equipment, etc., or non-availability of support, together with a recommended plan for obtaining the required support, listed in Attachment 7, Office Space and Administrative Support. The Parties, via the Grants Officer and Boeing Contracts Manager, mutually agree to resolve any support issues as expeditiously as possible

J. Work Breakdown Structure (WBS)

The agreed to WBS is the primary structure by which work is organized and managed, and costs tracked under this Agreement. Work tasks, cost accounts and IPTs are structured to address elements of the WBS. The WBS will be updated to reflect jointly agreed to changes, additions or deletions from, including but not limited to, IBR reviews identified in Article IV, subparagraph H. above or changes in scope of work due to subsequent Agreement modifications. The baseline WBS for the Agreement is document D786-10158-1, version 16, FCS WBS SDD Proposal Baseline (Mar 14, 2003).

ARTICLE V: IDENTIFICATION OF WORK TO BE PERFORMED
A. Contract Line Item Numbers (CLIN)

1. The Government reserves the right to subdivide the CLIN below, subject to mutual agreement, in writing, of the Parties.

2. CLIN 0001 Performance of the FCS SDD phase as described in this Agreement.

Program Definitization
(i) **Item 0001AA**. Estimated Cost for Program Definitization through 30 September 2003

Total Obligated Amount: $113,109,880.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AA is fully-funded.

(ii) **Item 0001AB**. Base Fee for Program Definitization through 30 September 2003

Total Obligated Amount: $6,756,048.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AB is fully-funded.

(iii) **Item 0001AC**. Incentive Fee for Program Definitization through 30 September 2003

Total Obligated Amount: $10,134,072.00
ACRN: AA (see Attachment 12 for accounting details)
Notes: This sub-CLIN 0001AC is fully-funded.

(iv) **Item 0001AD**. Estimated Cost for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Estmated Cost: $52,204,560.00
ACRN:
Notes: This sub-CLIN 0001AD is not funded at this time.

(v) **Item 0001AE**. Base Fee for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Base Fee: $3,118,176.00
ACRN:
Notes: This sub-CLIN 0001AE is not funded at this time.

(vi) **Item 0001AF**. Incentive Fee for Program Definitization from 1 October 2003 through Definitization

Total Obligated Amount: $-0-
Total Incentive Fee: $4,677,264.00
ACRN:
Notes: This sub-CLIN 0001AF is not funded at this time.

3. CLIN 0002

(a) CLIN 0002 is not subject to Article VII, Award Fee. The intent of CLIN 0002 is to cover work that is not, or could not have been, reasonably anticipated to be covered under CLIN 0001. Grants Officer authorized Work Directives will originate from within the Government. If the Government decides not to pursue that work, the decision will have no impact on Boeing's performance under CLIN 0001. All work performed under this CLIN will be initiated, as determined by the Grants Officer, as work that is only feasibly accomplished by Boeing, by virtue of the work it is performing under CLIN 0001. The work performed will not be feasible to

compete and must be appropriate to be performed under a Section 845 Other Transaction Agreement.

(b) Grants Officer- issued Work Directives will specify the (1) particular tasks, (2) deliverables, (3) schedule, (4) the funds available for the work, and may include (5) the number of man-hours reimbursable. All effort expended under a Work Directive will be reimbursed on a Cost-Plus-Fixed-Fee (CPFF) basis. The Limitation of Funds clause at Article VI, Obligation and Incremental Funding Schedule, subparagraph D. applies.

(i) Upon receipt of a Grants Officer- issued Work Directive, Boeing will submit a proposal to perform the work described in the Work Directive to the Grants Officer within fifteen (15) business days from receipt of the Work Directive. Boeing will begin effort under the Work Directive as directed by the Grants Officer as soon as the Agreement is modified to provide the specific tasks, value, schedule and funding for the Work Directive.

(ii) In the event work under a Grants Officer-issued Work Directive must begin in an expeditious manner (e.g. "hot start") a single composite hourly rate, derived from a single location chosen by Boeing in order to develop the composite hourly rate, consisting of $148.00/hour estimated cost and $22.00/hour of fixed fee for a total of $170.00/hour. The composite hourly rate will be derived from a broad mix of labor categories (e.g., engineering, logistics, administrative, managerial, subcontracted, etc.) established in advance for the purpose of initiating such "hot start" effort under a Work Directive. When a Work Directive is based on a composite rate, Boeing will submit a proposal to adjust the amount of funds for the Work Directive based on a proposed estimate of cost. Boeing is required to submit the proposal to the Grants Officer within fifteen (15) business days after the start of effort under a Work Directive.

B. Accounting/Appropriation Data For Payment Office

1. To ease financial administration and in order to provide a single reference location, all accounting and appropriation data, including Accounting Classification Reference Numbers (ACRN), Accounting/Appropriation Data for Payment Office, etc., is located in Attachment 12, Accounting/Appropriation Data for Payment Office.

2. Attachment 12 also contains cumulative totals of the financial obligations made under, and cumulative funds allotted to, this Agreement.

ARTICLE VI: Obligation and Incremental Funding Schedule

A. Obligation

1. The Government's liability to make payments to Boeing is limited to only those funds obligated under this Agreement or by modification to the Agreement. The Grants Officer may obligate funds to the Agreement incrementally. In no case shall the Government's financial liability exceed the amount obligated under this Agreement. The Government funding amount is that amount indicated in the "Total Government Funds Obligated To Date:" block on the title page of this Agreement and subsequent amendments/ modifications, and is also cited in Attachment 12 to the Agreement.

B. Incremental Funding

1. The Government will provide funds under this Agreement on an incremental basis pursuant to the "Limitation of Funds" clause below, and as described in this section B., hereunder. A portion of the total estimated Agreement amount shall be obligated on the date of award.

2. By signing this Agreement, the Government undertakes to plan for, and provide available funding when and as required, per the schedules below. It is estimated that the incremental amounts are sufficient for the performance of work in each of the cited periods. Boeing shall so plan and execute the work required by this Agreement so as to expend and/or commit funds compatible with the schedule set forth in subparagraph C. below.

3. The Government intends, but cannot guarantee, that it will fully fund this Agreement.

4. The Government may provide, at its discretion, such funds on an incremental basis within each fiscal year. If the Government cannot provide funding when required, written notice shall be provided to Boeing to that effect, in a timely fashion, along with a projection of the extent of delay, and/or shortfall in funding, as applicable. Boeing, in turn will notify subcontractors and adjust subcontracts, as appropriate.

C. Funding Schedules

1. – CLIN 0001

Period	Amount
FY03 - Award through 30 Sep 2003	$130,000,000.00
FY04- 1 Oct through definitization	$60,000,000.00
Planned funding for balance of Program	
FY04 - 01 Oct 2003 through 31 Oct 2004	$1,379,600,000.00
FY05 - 01 Nov 2004 through 31 Oct 2005	$2,868,600,000.00
FY06 - 01 Nov 2005 through 31 Oct 2006	$3,736,800,000.00
FY07 - 01 Nov 2006 through 31 Oct 2007	$2,932,900,000.00
FY08 - 01 Nov 2007 through 31 Oct 2008	$1,411,800,000.00
FY09 - 01 Nov 2008 through 31 Oct 2009	$1,005,700,000.00
FY10 - 01 Nov 2009 through 31 Oct 2010	$ 856,700,000.00
FY11 - 01 Nov 2010 through 31 Oct 2011	$ 413,600,000.00
FY12 - 01 Nov 2011 through completion	$ 129,100,000.00

D. The following FAR/DFARS clauses apply:

52.232-22	Limitation of Funds (4/84)

ARTICLE VII: FEE TBD

ARTICLE VIII: MAKE/BUY, COMPETITION AND DIRECTED SUBCONTRACTS

A. Make/Buy

1. The Government reserves the right to participate in all program decisions, to include Make/Buy, competitive selection decisions, and if considered in the program's interest to direct placement of subcontracts. Any decision by the Government that results in an increase to Boeing's cost or schedule for performance, will entitle Boeing to a Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F) in accordance with Article XIII, Modifications. While the Government will generally not interfere with Boeing's internal processes, the Government reserves the right to disapprove any Make/Buy decision under Boeing's processes regarding systems, subsystems or components. Government approval includes, but is not limited to, all tactical and/or prototype FCS hardware and software at all levels except modeling and simulation.

2. The Army Acquisition Executive (AAE), or his designee, shall approve all Make/Buy decisions for FCS related hardware or software at the system or subsystem level.

3. The PM,FCS, or designee, shall have approval of the Make/Buy decisions for all lower level items. However, lower level decisions made by the Boeing IPT Leader, if agreed to by the IPT Co-Leader will require no additional approval. If agreement is not obtained at the IPT level, then the process at Article IV, subparagraph G. shall apply.

4. Procurement of the Systems of System – Common Operating Environment (SoS – COE) is subject to the following process:

Boeing has been granted approval by the Army Acquisition Executive to manage and control the SOS – COE, with the following conditions:

(a) SOS – COE shall be developed as Open System Architecture.

(b) Boeing shall not introduce any proprietary components unless explicitly approved by the Government. Each component will be reviewed within the SOS – COE sub-IPT and, if necessary to introduce a proprietary component the Government concurrence is required to proceed.

(c) Government shall have approval of Make/ Buy of components of the SOS – COE. The design decisions resulting from a detailed system engineering process that results in a decision of make or buy (sole source buy, limited source buy or competitive source buy) will be reviewed and concurred by Boeing and Government IPT representatives. In the event concurrence is not reached by the IPT, the Government PM,FCS, or his designee, shall have final approval authority.

(d) Boeing shall develop and submit for Government approval critical interface definitions.

(e) Boeing shall pursue aggressive risk management and mitigation for SOS – COE.

(f) Boeing will lead a working group or sub-IPT consisting of itself, industrial partners, and the Government in defining the following:

1) The SOS – COE Architecture and Component Partitioning;

2) SOS – COE standards and ICDs;
3) SOS – COE API specifications and compliance tests;
4) Managing the component competition, as required;
5) Component acceptance testing and SOS – COE integration;
6) Critical interface definitions;
7) This group will be chartered and be an ongoing effort throughout this phase.

B. Competition

1. Boeing is authorized to use best commercial practices under this Agreement. If in Boeing's judgment FCS program goals may be jeopardized, then relief of flow down provisions shall be identified, in writing, to the Grants Officer via the Boeing Contracts Manager. The Grants Officer shall approve, or disapprove, any relief from normal flow down requirements within ten (10) business days from receipt of request. If the Grants Officer does not either approve, or disapprove, Boeing's request within ten (10) business days, Boeing's request shall be deemed to have been approved.

2. During performance under the CTD Agreement, MDA972-02-9-0005, Boeing developed, and delivered to the Government, a best value competitive process to select major systems and subsystems, to include access to all source selection data, which the Government approved under the CTD Agreement. The Government and Boeing mutually agree that Boeing will follow the approved competitive process plan during performance of the SDD Agreement. Boeing shall have the right to subcontract for engineering and consulting services, that assist it in its role as LSI, without prior Government approval.

C. Directed Subcontracts

1. In the event the Government disagrees with a selection made by Boeing as the result of a competition, the Government may direct the subcontract award. Also, if existing technologies, systems and major subsystems already in development, by or for the Government, represent in the Government's view the best approach to achieving capability in the Operational Requirements Document (ORD), the Grants Officer may direct their use and Boeing will not be required to compete that item. Any decision by the Government that requires Boeing to use a directed subcontractor that results in an increase to Boeing's cost or schedule for performance, will entitle Boeing to an Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) in accordance with Article XIII, Modifications. Directing a subcontract may only be authorized by the Grants Officer. Attachment 9, Directed Subcontracts lists those directed subcontracts.

ARTICLE IX: PAYMENT AND PAYMENT RELATED ITEMS

A. Payment

1. Subsequent to definitization, scheduled for 180 days after award, the overall reimbursement structure of this Agreement will be Cost-Plus-Award-Fee (CPAF), for CLIN 0001, and Cost-Plus-Fixed-Fee (CPFF), for CLIN 0002. Prior to definitization, CLIN 0001 provides for cost plus base and incentive fee. The incentive fee for CLIN 0001 will be paid provisionally as described in

Article I, B. In consideration for performing Agreement activities, Boeing shall voucher and receive Government payments, subject to the "Limitation of Funds" clause (e.g., Boeing must notify the Government when costs expected to be incurred in the next 60 days, when added to all previously incurred costs, will exceed 75% of the total amount so far allotted to the Agreement by the Government), for all allowable incurred costs, in accordance with this Article and, subsequent to definitization, Article VII, Fee, as applicable.

2. The DCMA AAO will ensure DFAS payments for each voucher under CLIN 0001 and CLIN 0002 are correctly disbursed from the appropriate ACRN account.

B. CLIN 0001

1. Boeing shall use the Standard Form 1034, public voucher, for purposes of reimbursement.

2. For CLIN 0001, Boeing shall voucher at Cost and applicable Base Fee. Calculation of Base Fee will be based upon the ratio of cumulative costs incurred, to date, to the total estimated costs.

3. For CLIN 0001, Boeing shall voucher the Incentive Fee on a prorata basis over the 180 days, in accordance with Article I, B. At the completion of an Incentive Fee element Boeing is authorized to voucher the balance of the fee associated with that element not previously vouchered.

4. Subject to Program definitization, separate sub-CLINs under CLIN 0001 will be established providing for applicable Fee amounts when authorized. Cost and applicable Fee amounts may be vouchered as a consolidated voucher. Any consolidated voucher shall discretely identify Cost and applicable Base and Incentive Fee. Calculation of Fee amounts shall be in accordance with Article I, B, and explained/annotated within the voucher.

5. Boeing vouchers will identify sub-CLIN and the appropriate ACRN using an allocation methodology of applying oldest money first.

C. CLIN 0002

1. For CLIN 0002, Boeing shall voucher at Cost and applicable Fixed Fee. Calculation of Fixed Fee will be based upon the ratio of cumulative costs incurred, to date, to the total estimated costs. The voucher shall discretely identify Cost and applicable Fixed Fee. Boeing shall use the Standard Form 1034, public voucher, for purposes of reimbursement.

2. Boeing vouchers will identify CLIN and the appropriate ACRN. The Government agrees to assist Boeing in identifying costs, by appropriate ACRN, by providing the requisite information with each Work Directive. Requisite information to be provided by Work Directive includes, but is not limited to, (1) Work Directive Number, (2) corresponding ACRN, and (3) ACRN funding amount.

D. Voucher Content

1. For any given voucher, the Costs claimed for reimbursement shall be consistent with the accounting standards cited in Article X, Financial Management, subparagraph B.

2. The following information will be included on each voucher:

(a) Boeing name and address;
(b) Voucher date, number and time period covered by the voucher;
(c) Agreement number;
(d) Amount claimed; (*see Note for (d)*)
(e) Taxpayer Identification Number, if required;
(f) EFT banking information, if required;
(g) Payment Office;
(h) CLIN and/or sub-CLIN as appropriate;
(i) 2-digit ACRN.

Note for (d): Supporting cost details to substantiate the amount claimed, if not provided within the voucher itself, must be traceable to the voucher and available upon request to authorized Government representatives (Grants Officer, DCAA, DCMA, etc.).

3. The information above for each voucher is provided so that the Government Payment Office (DFAS) will not have to independently assign or determine the CLIN/sub-CLIN and ACRN from which funds will be disbursed.

E. Payment Process

1. Boeing may submit interim vouchers bi-weekly to the Government Payment Office, identified below. Electronic voucher submittal is encouraged, provided that the format and transmission method are mutually acceptable, and otherwise consistent with this Article.

2. Boeing will provide a copy of all vouchers to both the DCMA AAO and the Grants Officer, as routine distribution.

3. Payment will be made by the following DFAS office within fourteen (14) calendar days following receipt of a proper payment request:

Defense Finance and Accounting Service (DFAS) -- Columbus Center (HQ0339)
DFAS-CO/West Entitlement Operations
P.O. Box 182381
Columbus, OH 43218-2381

4. Final (completion-type) vouchers (or final invoices) for any discretely priced CLIN or sub-CLIN shall be submitted to DCMA, for review, approval, and forwarding to the payment office.

F. Payment -Related Clauses

1. Interest: All amounts that become payable by Boeing to the Government under this Agreement shall bear simple interest from the date due until paid, unless paid within thirty (30) days of becoming due. The interest rate shall be the interest rate established by the Secretary of the Treasury (as provided in 41 USC 611), which is applicable to the period in which the amount becomes due, and then at the rate applicable for each six-month period as fixed by the

Secretary until the amount is paid. Interest charges may be reduced following the procedures in FAR 32.614-2.

2. Payments by Electronic Funds Transfer – Central Contractor Registration (CCR): All payments by the Government under this Agreement, shall be made by electronic funds transfer (EFT) using Boeing's EFT information contained within the CCR database. If Boeing's EFT information is incorrect, then the Government need not make payment to Boeing until correct EFT information is entered into the CCR database; and any voucher request under this Agreement shall be deemed not to be a proper voucher for the purpose of prompt payment. If the Government makes an uncompleted or erroneous transfer because it uses Boeing's EFT information incorrectly, the Government is responsible for making a correct payment, including any prompt payment penalty due, and recovering any erroneously directed funds; if Boeing is responsible for an uncompleted or erroneous transfer because Boeing's EFT information was incorrect (or if Boeing revised the information within thirty (30) days of Government release of the EFT payment transaction instruction to the Federal Reserve System) and the funds are no longer under the control of the Government payment office, Boeing is responsible for recovery of any erroneously directed funds. If the funds remain under the control of the Government payment office, the Government shall not make payment until such time as Boeing's EFT information is corrected within the CCR database. Government payments shall be deemed to have been made in a timely manner in accordance with the prompt payment terms of the Agreement if, in the EFT payment transaction instruction to the Federal Reserve System, the date specified for payment is on or before the prompt payment due date, provided the specified payment date is a valid date under the rules of the Federal Reserve System. Boeing may assign the proceeds of this Agreement provided Boeing requires as a condition of any such assignment that the assignee register in the CCR database and be paid by EFT in accordance with this clause. The Government is not liable for errors resulting from changes to EFT information made by Boeing's financial agent. The Government shall provide Boeing the available payment information suitable for transmission as of the date of release of the EFT instruction to the Federal Reserve System.

3. Required Central Contractor Registration: Boeing is responsible for the accuracy and completeness of the data within the Central Contractor Registration (CCR) database, and for any liability resulting from the Government's reliance on inaccurate or incomplete data. Boeing is required to confirm on an annual basis that its information in the CCR database is accurate and complete.

4. Certification of Final Indirect Costs: (a) For the purposes of this certificate, Boeing and its subcontractors, will submit the standard FAR certificate of final indirect costs to the cognizant Government activity. If a subcontractor is not otherwise required to submit the standard FAR certificate for final indirect costs, then it shall submit the certificate below; (b) Subcontractors (as applicable) shall -- (1) certify, in below format, any proposal to establish or modify final indirect cost rates; and (2) have the certificate signed by an individual of the subcontractor's organization at a level no lower than a vice president or chief financial officer of the business segment of the subcontractor that submits the proposal. (c) Failure to execute and submit the certification described may result in final indirect cost rates being unilaterally established by the Grants Officer or Administrative Agreements Officer. The Grants Officer may request a copy of Boeing's, or its subcontractors, Certificate of Final Indirect Costs from the cognizant Government agency assigned (e.g. the Defense Contract Audit Agency (DCAA), DCMA).

Certificate of Final Indirect Costs

This is to certify that I have reviewed this proposal to establish final indirect cost rates and to the best of my knowledge and belief, all costs included in this proposal (identify proposal and date) to establish final indirect cost rates for (identify period covered by rate) are allowable in accordance with the cost principles of the Federal Acquisition Regulation (FAR) and its supplements, or in the case of a non-traditional defense contractor in accordance with Generally Accepted Accounting Principles (GAAP), applicable to the contracts to which the final indirect cost rates apply.

G. The following FAR/DFARS clauses apply:

52.216-7	Allowable Cost and Payment (12/2002) Tailoring: In paragraph (a)(1), the "authorized representative" for receipt of vouchers will be designated by the Grants Officer at the Start of Work meeting. In paragraph (a)(3), the fill-in is the "14th" day. Also, paragraphs (a)(3) and (g) notwithstanding, in the event electronic direct billing authorization is withdrawn by the Defense Contract Audit Agency (DCAA), any Government pre-payment audit will be performed by the cognizant Government agency of a specific Boeing payment request within five (5) business days following their receipt of the payment request, unless the Grants Officer authorizes an extension. The Government reserves the right to perform post-payment audits of Boeing vouchers at its discretion. In addition, the paragraphs (d)(4) and (d)(6) references to the Disputes clause, refer to Article XV: Disputes, under this Agreement. The Government intends that audit or other management oversight activities not interrupt or delay payment. The normal approach will be to allow payments to proceed while collaboratively working together to determine and correct any issue. If in the event that a systemic or process issue is considered to be of a magnitude that it would create the unacceptable situation of providing advance payments, then the Grants Officer may, at his unilateral discretion, delay or reduce payments until the issue is corrected.
52.216-8	Fixed Fee (3/97) Tailoring: This clause applies to CLIN 0002.
52.232-25	Prompt Payment (2/2002) Alt 1

ARTICLE X: FINANCIAL MANAGEMENT

A. Government Audit of Records

1. As used in this Article, "records" includes books, documents, accounting procedures and practices, and other data, regardless of the type and regardless of whether such items are in written form, in the form of computer data, or in any other form.

2. Boeing's relevant financial records are subject to examination or audit on behalf of TACOM by the Government for a period not to exceed three (3) years after final payment has been made under this Agreement. Boeing shall provide the Grants Officer, or Government designee, direct access to sufficient records and information to ensure full accountability for all funds paid, or proposed to be paid to it, under this Agreement. The Grants Officer will require annual audits of Boeing and its cost-reimbursement based subcontracts. A final audit will be conducted at the end of the SDD program; the final audit shall not duplicate or re-examine the results of prior year audits except to verify that any outstanding issues or newly determined issues have been resolved. Such audit, examination, or access shall be performed during business hours on business days, upon prior written notice, and shall be subject to the security requirements of the audited party. This clause shall not be construed to require any party, or entity, or subordinate element of such party or entity, that participates in the performance of this Agreement, to create or maintain any record that is not otherwise maintained in the ordinary course of business or pursuant to a provision of law.

3. The Comptroller General shall have access to the records described in this Article until three (3) years after the date of final payment is made by the Government under this Agreement. Boeing shall flow down this provision as indicated at subparagraph C. below. The Comptroller General, at its discretion, shall have access to and the right to examine records of any party to the Agreement or any entity that participates in the performance of this Agreement that directly pertain to, and involve transactions relating to, the Agreement. Excepted from this requirement is any party to this Agreement or any entity that participates in the performance of the Agreement, or any subordinate element of such party or entity, that has not entered into any other agreement (contract, grant, cooperative agreement, or "other transaction") that provides for audit access by a Government entity in the year prior to the date of the Agreement. The only records of a party, other entity, or subordinate element referred to in this paragraph that the Comptroller General may examine are records of the same type as the records the Government has had the right to examine under the audit clauses of the previous agreements that were entered into by that particular party, entity, or subordinate element. This clause shall not be construed to require any party, or entity, or subordinate element of such party or entity, that participates in the performance of this Agreement, to create or maintain any record that is not otherwise maintained in the ordinary course of business or pursuant to a provision of law.

B. Accounting Practices

1. Prior to the submission of vouchers to the Government, Boeing shall have and maintain an accounting system: which complies with Generally Accepted Accounting Principles or Cost Accounting Standards (CAS), whichever is applicable to Boeing under this Agreement; and which also complies with the requirements of this Agreement; and which further ensures that appropriate arrangements have been made for receiving, distributing and accounting for Federal funds.

(a) The contract cost principles in 48 CFR 31 and 48 CFR 231 (in the Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS)) shall apply to determine the allowability of costs charged to the Government.

(b) Further, the allowability of any expenditures incurred in the performance of any subcontract award will be subject to those Federal cost principles or accounting standards applicable to the particular type of organization concerned (e.g., full-, modified-, or no CAS coverage).

2. Boeing agrees to an adjustment of the Agreement cost allowance, as appropriate, if Boeing or a subcontractor fails to comply with this Article, subparagraph B.1, or fails to follow an applicable cost accounting practice consistently and such failure results in any increased costs paid by the United States Government. Such adjustment shall provide for no more than the recovery of the increased costs to the United States, together with the interest rate established by the Secretary of the Treasury as provided in 41 USC 611 for such period, from the time the payment by the Government was made to the time the adjustment is effected.

3. Within thirty (30) calendar days after subcontract award, Boeing will submit the following information to Boeing's cognizant Agreement Administration Office, with copy furnished to the Grants Officer, for transmittal to the subcontractor's cognizant Contract Administration Office:

(a) Subcontractor's name and subcontract number;

(b) Dollar amount and date of award;

(c) Name of Contractor making the award.

C. Lower Tier Agreements

1. Boeing shall include in all negotiated subcontracts which Boeing enters into the substance of this Article and shall require such inclusion in all other subcontracts, at any tier, including the obligation to comply with all Federal cost principles, as applicable, in effect on the subcontractor's award date.

D. The following FAR/DFARS clauses apply:

52.215-15	Pension Adjustments and Asset Reversions (12/98)
52.215-18	Revision or Adjustment of Plans for Postretirement Benefits (PRB) Other than Pensions (10/97)

ARTICLE XI: SECURITY

A. Program Security

1. This program shall be provided protection as required by the appropriate Security requirements required by DD Form 254, Contract Security Classification Specification, (see Attachment 3). The highest level of classification involved in the performance of this SDD Agreement is Top Secret. It is the Government's position that the highest security classification of any deliverable as a result of this Agreement is Top Secret. This Agreement document is unclassified.

B. Protection and Disclosure of Information – Public Release

1. Except for FCS Program information previously approved for public release by the Government under the FCS Program, Boeing shall not release any information, outside of Boeing and its subcontractors, to include Associate Contractors, at any tier, regarding the work performed under this Agreement without first obtaining approval for Public Release as identified in the DD254. All such requests will first go to the Grants Officer who, after appropriate review, will make a determination of the suitability to disseminate program information publicly. Subcontractors and Associate Contractors shall submit such requests through Boeing.

2. Boeing will use computer and communications equipment that meets the requirements identified in the DD254 or Program Security Guide.

C. Lower Tier Agreements

1. Boeing shall include subparagraph B. above in all subcontracts which Boeing enters and shall require such inclusion in all other subcontracts, regardless of tier.

D. Shipment of Controlled Materials

1. Unless otherwise directed by the Grants Officer, Boeing shall coordinate and send advance notice of shipment to the consignee transportation officer for all shipments of classified material, protected sensitive, and protected controlled material; explosives and poisons, classes A and B; radioactive materials requiring the use of a III bar label; or when a truckload/carload shipment of supplies weighing 20,000 pounds or more, or a shipment of less weight that occupies the full visible capacity of a railway car or motor vehicle, is given to any carrier for transportation to a domestic destination (other than a port for export).

E. The following FAR/DFARS clauses apply:

252.204-7005	Oral Attestation of Security Responsibilities (11/2001)

ARTICLE XII: GOVERNMENT FURNISHED EQUIPMENT, PROPERTY, INFORMATION, FACILITIES, AND SERVICES

A. General

1. The Government Furnished Equipment, Property, Information, Facilities, and Services (hereafter collectively referred to as "GFX") listed in Attachment 4 to this Agreement shall be provided based on the written approval of the cognizant Contracting/Grants/Agreement Officers through the period of performance of this Agreement. The Government will provide assistance to include, but not limited to, granting Government approval for Boeing to obtain encryptors, and where appropriate, formally request that the Government office with cognizance over the item release or provide to Boeing the requested item within the desired timeframe.

2. GFX identified in Attachment 4 will be provided on a rent free, non-interference use basis. No item may be listed in Attachment 4 or added in Attachment 4 prior to receiving approval for rent free, non-interference use from the Government office with cognizance for the GFX. Any changes to Attachment 4 will require modification to the Agreement.

3. The Government makes no representations as to the suitability of GFX provided. If a GFX item is determined not suitable for its intended purpose the Government will make a good faith attempt to provide a suitable item. It is recognized this may not be feasible. If the GFX item is essential for work under the Agreement, it may become necessary to eliminate statement of work tasks or otherwise invoke a Program Generated Adjustment (as defined in Article I, subparagraph F. Definitions) to the Agreement in accordance with the Article XIII Modifications.

4. The Parties mutually agree that accountability for GFX and Classified Information provided to Boeing under the CTD Agreement, MDA972-02-9-0005 will be transferred and authorized for use under the SDD Agreement, if agreed to by the DARPA Agreements Officer. Attachment 4a reflects items for which approval is being sought.

5. Boeing agrees to maintain and update the GFX list, as reasonably required, and to provide such updated GFX list via the Advanced Collaborative Environment.

B. GFX Added During SDD Performance

1. The Parties mutually agree to work together to identify and obtain, in a timely fashion, GFX requirements, not identified prior to Agreement award, requested during performance under the SDD Agreement. The Parties further agree to use the process described in general terms below to obtain new GFX requirements for the benefit of the FCS program:

(a) The respective IPT Leader identifies the need for additional GFX item(s) and obtains concurrence of the IPT Co-Leader;

(b) The respective IPT Leader, or Boeing designate, contacts either the Grants Officer Representative (GOR), or Functional Technical Representative (FTR) designated for GFX, to discuss the need and availability of the new GFX item(s) and provides the pertinent GFX information such as item name, quantity, need date, cognizant Government official with possession of the requested GFX item(s), if known, etc.;

(c) The GOR, or FTR designated for GFX, contacts the cognizant Government official with possession of the requested GFX item(s) and determines if the requested GFX item(s) is available. The GOR, or FTR designated for GFX, contacts the IPT Leader, or Boeing designate, and makes that person aware if/when GFX items(s) is available,

(d) The IPT Leader, or Boeing designate, contacts the Boeing Contracts Manager and makes that person aware if/when GFX item(s) is available.

(e) The Grants Officer and Boeing Contracts Manager will execute a bi-lateral Agreement modification to add the GFX items(s) if available. Boeing and TACOM mutually agree to formally modify the subject Agreement at certain block points, vice each time a request of this nature is submitted to TACOM for approval, in order to facilitate efficient Agreement performance.

2. When Boeing can identify the Government official with responsibility for the desired GFX, Boeing may request rent-free use of such GFX directly from the responsible official. In this instance, Boeing will furnish the GOR, or if applicable, the FTR designated for GFX, a copy of any authorization granted. In those instances where Boeing cannot identify the responsible Government official, Boeing may submit the request to the GOR, or if applicable, to the FTR

designated for GFX. The GOR, or FTR, will then determine the Government official responsible for the desired GFX and request rent-free use on Boeing's behalf.

C. The following FAR/DFARS clauses apply:

52.245-5	Government Property (Cost-Reimbursement, Time-and-Material or Labor-Hour Contracts) (1/86)–(DoD - Deviation, per DAR Tracking Number 99-O0008, 13 July 99, until FAR is revised) Tailoring: Property records will be accessible via the ACE; annual reporting of DOD accountable property will be submitted on DD Form 1662. Paragraph (h), change from "the Changes clause" to "Article XIII: Modifications of this Agreement".

ARTICLE XIII: MODIFICATIONS

A. General

1. At any time during the term of the Agreement progress or results may indicate that a change in the Agreement would be beneficial to program objectives. Recommendations for modifications, including justifications to support any changes to the Agreement, will be documented in a letter and submitted by Boeing to the Grants Officer Representative with a copy to the Grants Officer. This documentation letter will detail the (1) technical, (2) chronological, and (3) financial impact of the proposed modification. All of the available Agreement funds will be obligated to the Agreement. Therefore, any requested modification must also identify what work is being modified, reduced or deleted to accommodate the proposed change. Any subsequent modification is subject to mutual agreement, in writing, signed by authorized representatives of both Parties. The Government is not obligated to pay for any proposed change until the Agreement is formally revised by the Grants Officer and the Boeing Contracts Manager and made part of this Agreement. Boeing is not obligated to initiate work for any proposed change until such time as a bilateral modification is executed by representatives of both Parties. The Government will reimburse Boeing for proposal preparation costs for proposed changes in accordance with the definition of Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) and in accordance with Boeing's approved disclosure statement.

2. Modifications, other than those identified in subparagraph 3. below, will normally be bilateral. In the event the Grants Officer directs a unilateral modification, within the general scope of the Agreement, Boeing will identify a ceiling price for the impact of the directed effort and will have the opportunity to propose an Program Generated Adjustment (as defined in Article I: Scope of the Agreement, subparagraph F.) in accordance with Article XIII, Modifications. In the event the modification involves new work, the Grants Officer will advise Boeing of the availability of additional funding for the new work or if the new work needs to be accomplished within existing funding constraints. If the Grants Officer determines an Program Generated Adjustment is warranted, the Grants Officer and Boeing Contracts Manager will, in a timely fashion, modify the Agreement accordingly. Boeing will proceed with the directed work based on the Grants Officer direction, provided there are adequate funds on the Agreement to provide for the required work. If Boeing disagrees with the Grants Officer's determination of whether or not an Program Generated Adjustment is warranted, then the determination will be subject to Article XV, Disputes.

3. For minor or administrative Agreement modifications (e.g., changes in the paying office or appropriation data, incremental funding actions, changes to Government or Boeing personnel identified in the Agreement, etc.) no signature is required by Boeing. Modifications will not be required for changes to controlled documents provided the affected IPT Leader and Co-leader have concurred in or approved the change document in writing.

4. The Government will be responsible for effecting all modifications to this Agreement.

B. Cost or Pricing Information In Support of Modifications

1. The cost or pricing information submitted by Boeing prior to Agreement award did not require Truth in Negotiations Act (TINA) certification. The same level of cost or pricing detail must be provided for deletions or reductions of work as is provided for changes or additions. Cost or pricing information submitted after Agreement award to support Agreement modifications shall likewise not require TINA certification.

2. The kind, level of detail, and format of cost or pricing information to support Agreement modifications is identified below:

(a) If the price is controlled under law by periodic rulings, reviews, or similar actions of a governmental body, attach a copy of the controlling document, unless it was previously submitted to the contracting office.

(b) For a commercial item, Boeing shall provide, at a minimum, information on prices at which the same item or similar items have previously been sold, leased or licensed or has been offered for sale, lease or license that is adequate for evaluating the reasonableness of the price of the modification. Such information may include:

(1) For catalog items, a copy of or identification of the catalog and its date, or the appropriate pages for the offered items, or a statement that the catalog is on file in the buying office to which the proposal is being submitted. Provide a copy or describe current discount policies and price lists (published or unpublished), e.g., wholesale, original equipment manufacturer, or reseller. Also explain the basis of each offered price and its relationship to the established catalog price, including how the proposed price relates to the price of recent sales in quantities similar to the proposed quantities.

(2) For market-priced items, the source and date or period of the market quotation or other basis for market price, the base amount, and applicable discounts. In addition, describe the nature of the market.

(c) Boeing grants the Grants Officer, or an authorized Government representative, the right to examine, at any time the books, records, documents, or other directly pertinent records to verify the reasonableness of price for (a) or (b) above. For items priced using catalog or market prices, or law or regulation, access does not extend to cost or profit information or other data relevant solely to Boeing's determination of the prices to be offered in the catalog or marketplace.

(d) If neither (a) or (b) apply, then Boeing shall submit data in accordance with Table 15-2 of FAR 15.408. This data shall not require TINA certification.

(e) When the proposal is submitted to the Grants Officer, also submit one (1) copy each to the Administrative Agreements Officer and the cognizant DCAA auditor.

C. The following FAR/DFARS clauses apply:

52.242-15	Stop-Work Order (8/89) Alternate I Tailoring: In paragraph (b)(2), change from "30 days" to "90 days".
52.243-7	52.243-7 Notification of Changes (4/84) Tailoring: The "Notice" under paragraph (b) shall be sent directly to the Grants Officer with a copy furnished to the AAO. Also, the negotiable fill-ins for notification and response timeframes in paragraphs (b) and (d) respectively are hereby defined as "15 calendar days" in both of the two fill-ins.

ARTICLE XIV: AGREEMENT ADMINISTRATION

1. The senior program executives are as identified below:

BOEING: Dennis A. Muilenburg, Program Manager

GOVERNMENT: BG Don Schenk, PM, Future Combat Systems
Roland Asoklis, Deputy PM, Future Combat Systems
COL(P) John Bartley, Deputy for Program Integration

2. Administrative and contractual matters under this Agreement shall be referred to the following representatives of the Parties:

BOEING: Brian D. Wittmers, Contracts Manager, Tel: (253) 773-9981

TACOM: Gary Tucker, Grants Officer, Tel: (586) 574-7137

3. Items delegated to the Administrative Agreements Officer shall be referred to:
DCMA Boeing St. Louis: Pamela Burton, Administrative Agreements Officer, (314) 233-9105
Matthew Danter, DCMA Lead FCS Program Integrator, (314) 233-6859

4. Each party may change its representatives named in this Article by written notification to the other party. The Government will effect the change as stated in Article XIII, Modifications.

5. The Grants Officer may designate one or more technical or administrative representatives to act on his behalf, within specified areas of governmental responsibility and/or for specific functions. Each such designation shall be in writing, and a copy provided to the Boeing Contracts Manager and DCMA. Revocation may be made at any time. Under no

circumstances will such representative have authority to make any commitments or changes to this Agreement, or act beyond the specified scope of their authority.

ARTICLE XV: DISPUTES

A. General

1. The Parties shall communicate with one another in good faith and in a timely and cooperative manner when raising issues under this Article.

B. Dispute Resolution Procedures

1. Any disagreement, claim or dispute between TACOM and Boeing concerning questions of fact or law arising from or in connection with this Agreement, and, whether or not involving an alleged breach of this Agreement, may be raised only under this Article.

2. Whenever disputes, disagreements, or misunderstandings arise, the Parties shall attempt to resolve the issue(s) involved by discussion and mutual agreement as soon as practicable. In no event shall a dispute, disagreement or misunderstanding which arose more than twelve (12) months prior to the notification made under subparagraph B.3 of this Article constitute the basis for relief under this Article unless the Head of Contracting Activity (HCA) for TACOM, in the interests of justice, waives this requirement.

3. Failing resolution by mutual agreement, the aggrieved Party, either the Government or Boeing as the case may be, shall document the dispute, disagreement, or misunderstanding by notifying the other Party (through the TACOM Grants Officer or Boeing Contracts Manager, as the case may be) in writing of the relevant facts, identify unresolved issues, and specify the clarification or remedy sought. Within five (5) business days after providing notice to the other Party, the aggrieved Party may, in writing, request a formal decision by the Grants Officer, TACOM, who shall, in turn, render a decision within forty-five (45) calendar days from receipt of the aggrieved party's case. At the request of the aggrieved party, the Principal Assistant Responsible for Contracting (PARC) and a senior executive designated by Boeing will review the Grants Officer's decision. The request for review of the Grants Officer's decision that is in dispute will be made within thirty (30) calendar days after the Grants Officer's decision has been issued. The TACOM PARC, and Boeing's senior executive shall conduct a review of the matter(s) in dispute and render a decision in writing within thirty (30) calendar days of receipt of a request to review. Any such joint decision is final and binding. In the event a joint decision cannot be reached within thirty (30) calendar days, the TACOM PARC will issue a final decision. Such decision is not subject to further administrative review and, to the extent permitted by law, shall be final and binding. If Boeing disagrees with such decision, Boeing may bring a claim in a court of competent jurisdiction as authorized by 28 U.S.C. 1491.

4. Pending final dispute resolution as provided within this Article, Boeing shall otherwise proceed diligently with performance of the Agreement and comply with any directions of the Grants Officer. If an Agreement modification is appropriate in order to implement a final binding dispute decision, the modification will address how the issue of Interest is to be handled, if applicable, and may include appropriate liability release language that represents a full and complete settlement of the issue with no further recourse.

ARTICLE XVI: INTELLECTUAL PROPERTY RIGHTS

A. Data Correction and Update

1. Notwithstanding inspection and acceptance by the Government of data or software delivered under this Agreement, and notwithstanding any provision of this Agreement concerning the conclusiveness of acceptance, the Government shall have the right to require Boeing to correct (or update) any such data or software found deficient (or outdated), within three (3) years of the delivery of such data or software. Such correction, or update, shall be at Government expense funded under this Agreement or, if the Agreement is closed, funded under a separate contractual instrument.

ARTICLE XVII: PATENT RIGHTS

A. The following FAR/DFARS clauses apply:

52.227-1	Authorization and Consent (7/95) Alternate I
52.227-2	Notice and Assistance Regarding Patent and Copyright Infringement (8/96)
52.227-10	Filing of Patent Applications-Classified Subject Matter (4/84)
52.227-12	Patent Rights - Retention By the Contractor (Long Form) (1/97)

ARTICLE XVIII: DATA AND SOFTWARE RIGHTS

A. Definitions

1. "Data", as used in this Article, means recorded information, regardless of form or method of recording, of a scientific or technical nature, which includes but is not limited to, trade secrets and mask works. The term does not include financial, administrative, cost, pricing or management information and does not include subject inventions included under Article XVII, Patent Rights.

2. "Software", as used in this Article, means computer software documentation, computer programs, object code listings, source code, and related materials that would enable the software to be reproduced, recreated or recompiled.

3. "Government Purpose Rights", as used in this Article, means rights to use, modify, duplicate, release, perform, display, or disclose Data or Software, in whole or in part and in any manner, for Government purposes only, and to have or permit others to do so for Government purposes only. Government purposes include competitive procurements but does not include any commercial purpose or use. The Government Purpose Rights granted herein are without expiration.

4. "Limited Rights", as used in this Article, means the rights to use, modify, reproduce, release, perform, display, or disclose Data, in whole or in part, within the Government. The Government may not, without the written permission of the party asserting Limited Rights, release or disclose the Data outside the Government, use the Data for manufacture, or authorize the Data to be used by another party, except that the Government may reproduce, release or disclose such Data or authorize the use or reproduction of the Data by persons outside the Government if reproduction, release, disclosure, or use is:

(i) Necessary for emergency repair and overhaul; or

(ii) A release or disclosure of Data (other than detailed manufacturing or process data) to, or use of such Data by, a foreign government that is in the interest of the Government and is required for evaluational or informational purposes;

(iii) Subject to a prohibition on the further reproduction, release, disclosure, or use of the Data; and

(iv) Boeing or its subcontractors asserting the restriction is notified of such reproduction, release, disclosure, or use.

(v) However, such express limitation shall not apply to any Government Systems Engineering and Technical Assistance (SETA) contractors under contract to the Government for the purpose of providing systems engineering and technical assistance services and/or administrative support services; provided that, the parties to whom this Data is disclosed shall have a legitimate need-to-know, and are under contract subject to DFARS clause 252.227-7025 entitled, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends".

5. "Special License Rights", as used in this Article, applies only to Data or Software developed at private expense prior to the date, or outside the scope, of this Agreement. This designation may not apply to a required deliverable under this Agreement unless agreed to by the Government, e.g. for commercial Software or Data pertaining to commercial items. If the Government requests the Data or Software, asserted by Boeing, or a subcontractor, as subject to Special License Rights, a specific written agreement identifying use, purpose and access must be executed prior to the Data or Software being provided to the Government and made a part of Attachment 6, Data or Software to be Furnished with Restrictions. If the Government and Boeing, or a subcontractor, do not agree to satisfactory terms then the Data or Software shall not be provided to the Government.

6. "Restricted Rights", as used in this Article, applies only to noncommercial Software and means the Government's rights to --

(i) Use a computer program with one computer at one time. The program may not be accessed by more than one terminal or central processing unit or time shared unless otherwise permitted by this Agreement;

(ii) Transfer a computer program to another Government agency without the further permission of Boeing if the transferor destroys all copies of the program and related computer software documentation in its possession and notifies the licensor of the transfer. Transferred programs remain subject to the provisions of this Article;

(iii) Make the minimum number of copies of the Software required for safekeeping (archive), backup, or modification purposes;

(iv) Modify Software provided that the Government may --

(A) Use the modified Software only as provided in this Article; and

(B) Not release or disclose the modified Software except as provided in this Article;

(v) Permit contractors or subcontractors performing service contracts (as defined by 37.101 of the Federal Acquisition Regulation) in support of this or a related contract to use Software to diagnose and correct deficiencies in a computer program, to modify Software to enable a computer program to be combined with, adapted to, or merged with other computer programs or when necessary to respond to urgent tactical situations, provided that --

(A) The Government notifies the party which has granted Restricted Rights that a release or disclosure to particular contractors or subcontractors was made;

(B) Such contractors or subcontractors are subject to the use and non-disclosure agreement at 227.7103-7 of the Defense Federal Acquisition Regulation Supplement (DFARS) or are Government contractors receiving access to the Software for performance of a Government contract that contains the clause at DFARS 252.227-7025, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends";

(C) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the Software, or use Software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph(iv) of this clause, for any other purpose; and

(D) Such use is subject to the limitation in paragraph 6.(i) of this Article; and

(vi) Permit contractors or subcontractors performing emergency repairs or overhaul of items or components of items procured under this or a related contract to use the Software when necessary to perform the repairs or overhaul, or to modify the Software to reflect the repairs or overhaul made, provided that --

(A) The intended recipient is subject to the use and non-disclosure agreement at DFARS 227.7103-7 or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227-7025, "Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends"; and

(B) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to this clause, for any other purpose.

7. "Unlimited rights", as used in this Article, means rights to use, modify, reproduce, perform, display, release, or disclose Data or Software, in any manner, and for any purpose whatsoever, and to have or authorize others to do so.

B. Allocation of Principal Rights

1. This Agreement shall be performed with Government funding.

2. Boeing agrees to retain and maintain in good condition until three (3) years after completion or termination of this Agreement, all Data or Software developed under this Agreement necessary to achieve Practical application (as defined in Article XVII, Patent Rights) of deliverable items, components and processes. In the event of exercise of the Government's March-in Rights as set forth under Article XVII, Patent Rights or subparagraph B.3 of this Article, Boeing agrees, upon written request from the Government to deliver to the Government, Data and Software developed under this Agreement necessary to achieve Practical application of deliverable items, components and processes within sixty (60) calendar days from the date of

the written request. The Government agrees to pay the costs of delivering such Data and Software and agrees these delivery costs are not covered by payments to Boeing under this Agreement.

3. Boeing agrees that, with respect to Data and Software developed under this Agreement necessary to achieve Practical application of deliverable items, components and processes, TACOM has the right to require Boeing to deliver all such Data and Software to TACOM in accordance with its reasonable directions if TACOM determines that:

(a) Such action is necessary because Boeing or assignee has not taken effective steps within three (3) years after completion or termination of this Agreement, consistent with the intent of this Agreement, to achieve Practical application of deliverable items, components and processes;
(b) Such action is necessary to alleviate health or safety needs which are not reasonably satisfied by Boeing, assignee, or their licensees within three (3) years after completion or termination of this Agreement; or
(c) Such action is necessary to meet requirements for public use and such requirements are not reasonably satisfied by Boeing, assignee, or licensees within three (3) years after completion or termination of this Agreement.

4. With respect to all Data and Software delivered under this Agreement, the Government will subject to subparagraph B.6, receive Government Purpose Rights, or if subparagraph B.5 applies, Unlimited Rights. In the event of the Government's exercise of its right under subparagraph B.3 of this Article, the Government shall, subject to subparagraph B.6, receive Government Purpose Rights in all such Data or Software. With respect to all Data and Software previously delivered to the Government with Government Purpose Rights, the Government shall receive those same rights for the Data or Software.

5. The Government shall have Unlimited Rights in Data or Software that are:

(a) Otherwise publicly available or have been released or disclosed by Boeing, or a subcontractor, without restrictions on further use, release or disclosure, other than a release or disclosure resulting from the sale, transfer, or other assignment of interest in the Data or Software to another party or the sale or transfer of some or all of a business entity or its assets to another party;

(b) Data or Software in which the Government has obtained Unlimited Rights under another Government Agreement/contract or as a result of negotiations; or

(c) Data or Software delivered to the Government, under this or any other Government Agreement/contract or subcontract thereunder, with --

(1) Government Purpose Rights or Limited Rights and the restrictive condition(s) has/have expired; or

(2) Government Purpose Rights and Boeing's, or a subcontractor's, exclusive right to use such Data for commercial purposes has expired.

6. Attachment 6, Data or Software to be Furnished with Restrictions, lists Data or Software of Boeing, and its subcontractors, which will be furnished to the Government with rights which are more restrictive than Government Purpose Rights. This list is subject to the

subparagraph D. of this Article. Any subcontract which includes Data or Software to be included in Attachment 6 must be approved by the Government prior to Boeing entering into the subcontract. The list may be amended, subject to approval of the Government, based upon new information or inadvertent omissions. The cognizant IPT Leader and IPT Co-Leader must first approve any such requested amendment to Attachment 6. Amendments to Attachment 6 will be considered approved if the Government, via the Grants Officer, does not disapprove, in writing, within five (5) business days for Software that will not be incorporated into FCS systems and within ten (10) business days for Software that will be incorporated into FCS systems following receipt of the requested amendment. No Data or Software (other than with respect to subcontracts not subject to this Article as set forth in subparagraph D.) shall be delivered under this Agreement with rights, which are more restrictive than Government Purpose Rights unless included in Attachment 6. Boeing and TACOM mutually agree to formally modify the subject Agreement at certain block points, vice each time a request of this nature is submitted to TACOM for approval, in order to facilitate efficient Agreement performance.

7. Except for Data subject to Unlimited Rights or Special License Rights, the Government shall have Limited Rights in Data required to be delivered to the Government under this Agreement and are listed in Attachment 6:

(A) Pertaining to items, components, or processes developed exclusively at private expense and marked with the Limited Rights legend prescribed in this Article, or

(B) Created exclusively at private expense in the performance of an Agreement/contract that does not require the development, manufacture, construction, or production of items, components, or processes.

8. Except for Software subject to Unlimited Rights or Special License Rights, the Government shall have Restricted Rights in Software required to be delivered to the Government under this Agreement that were developed exclusively at private expense and are listed in Attachment 6.

9. The Government will receive a copyright license in any Data or Software item deliverables that are copyrighted. The license will permit the Government to copy, modify, and/or distribute the Data or Software item deliverables in any manner consistent with the restrictions in this Article on the Government's use and disclosure of the Data or Software in the deliverables.

10. Limited or proprietary information disclosed to Boeing or its subcontractors shall be controlled and protected in accordance with a Proprietary Information Agreement (PIA) or other appropriate instrument acceptable to the parties involved with the disclosure.

C. Marking of Data or Software

1. Any Data or Software delivered or provided pursuant to subparagraph B.4 above, shall be marked with the following legend:

"GOVERNMENT PURPOSE RIGHTS"

"The Government is granted Government Purpose Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

2. Any Data or Software delivered or provided pursuant to subparagraph B.5 above, shall be unmarked or marked with the following legend:

"UNLIMITED RIGHTS"

"The Government is granted Unlimited Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

3. Any Data or Software delivered or provided pursuant to subparagraphs B.7, B.8 or A.5, shall be marked with one of the following legends:

B.7 **"LIMITED RIGHTS"**

"The Government is granted Limited Rights to this Data. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

B.8 **"RESTRICTED RIGHTS"**

"The Government is granted Restricted Rights to this Software. Use, duplication, or disclosure is subject to the restrictions as stated in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

A.5 **"SPECIAL LICENSE RIGHTS"**

"The Government is granted Special License Rights to this Data or Software. Use, duplication, or disclosure is subject to the restrictions of a Special Data or Software Use Agreement as provided for in Agreement DAAE07-03-9-F001 between The Boeing Company and the Government."

D. Validation Of Asserted Restrictions -- Data and Software

1. Boeing shall maintain records sufficient to justify the validity of any markings that assert restrictions on Data or Software delivered or required to be delivered under this Agreement and shall be prepared to furnish to the Grants Officer a written justification for such restrictive markings in response to a request by the Grants Officer for such information.
2. Boeing agrees that the Grants Officer may transact matters under this clause directly with subcontractors or suppliers, at any tier, who assert restrictions on Data or Software. Neither this clause, nor any action taken by the Government under this clause, creates or implies privity of contract between the Government and Boeing's subcontractors or suppliers.
3. Requests for Information:

(a) The Grant's Officer may request Boeing to provide sufficient information to evaluate Boeing's asserted restrictions.
(b) Based upon the information provided the Grants Officer may --
(i) if Boeing (or the applicable subcontractor) agrees that the asserted restriction is not valid;
(A) Strike or correct the unjustified marking at Boeing's expense; or
(B) Return the Data or Software to Boeing for correction at Boeing's expense, or

(ii) Conclude that the asserted restriction is appropriate for this Agreement, and notify Boeing in writing.

(c) Boeing's failure to provide a timely response to a Grants Officer's request for information shall constitute reasonable grounds for questioning the validity of an asserted restriction.

4. Government Right to Challenge and Validate Asserted Restrictions:

(a) The Government has the right to challenge any restrictions asserted by Boeing on Data or Software delivered or provided for system or hardware performance under this Agreement. Except for Data or Software that is publicly available, or has been furnished to the Government without restrictions, or has been otherwise made available without restrictions, the Government may exercise this right only within the later of three (3) years after the date(s) the Data or Software is delivered or provided to the Government, or three (3)years following final payment.

(b) Only a Grants Officer's final decision or a court of competent jurisdiction that sustain the validity of an asserted restriction constitute validation of the restriction.

5. Challenge Procedures:

(a) A challenge must be in writing and shall --

(i) State the specific grounds for challenging the asserted restriction;

(ii) Require Boeing to respond within sixty (60) days; and

(iii) Require Boeing to provide justification for the assertion, in sufficient detail to enable the Grants Officer to determine the validity of the asserted restrictions.

(b) The Grants Officer shall extend the time for response if Boeing submits a written request with appropriate justification.

(c) The Grants Officer may request additional supporting documentation if, in the Grants Officer's opinion, Boeing's explanation does not provide sufficient evidence to justify the validity of the asserted restrictions.

(d) Notwithstanding challenge by the Grants Officer, the Parties may agree on the disposition of an asserted restriction at any time prior to a Grants Officer's final decision or, if Boeing has appealed that decision at any time prior to a decision by a court of competent jurisdiction.

(e) If Boeing fails to respond to the Grants Officer's request for information, the Grants Officer shall issue a final decision, in accordance with Article XV,: Disputes of this Agreement, pertaining to the validity of the asserted restriction.

(f) If the Grants Officer determines that the asserted restriction has --

(i) Not been justified, the Grants Officer shall issue promptly a final decision subject to Article XV, Disputes denying the validity of the asserted restriction; or

(ii) Been justified, the Grants Officer shall issue promptly a final decision validating the asserted restriction.

6. The Government agrees, notwithstanding a Grants Officer final decision denying validity of the asserted restriction, that it will honor the asserted restriction for a period of ninety (90) days, after which if there is no formal challenge to the decision, the Government may strike the restriction, remove the legends and there is no liability incurred by this action.

E. Lower Tier Agreements

1. Boeing shall include this Article, suitably modified to identify the Parties, in all subcontracts regardless of tier, including Boeing business units, who will be furnishing Data or Software to be provided to the Government in the performance of this Agreement. Boeing will not, as part of

the consideration for awarding the subcontract, obtain rights in the subcontractor's Data or Software.

ARTICLE XIX: Foreign Access to Technology

A. Definition

1. "Foreign Firm or Institution" means a firm or institution organized or existing under the laws of a country other than the United States, its territories, or possessions. The term includes, for purposes of this Agreement, any agency or instrumentality of a foreign government; and firms, institutions or business organizations which are owned or substantially controlled by foreign governments, firms, institutions, or individuals.

2. "Foreign Person" means any natural person who is not a lawful permanent resident as defined by 8 U.S.C. 1101(a)(20) or who is not a protected individual as defined by 8 U.S.C. 1324b(a)(3). It also means any foreign corporation, business association, partnership, trust, society or any other entity or group that is not incorporated or organized to do business in the United States, as well as international organizations, foreign governments and any agency or subdivision of foreign governments (e.g., diplomatic missions).

B. ITAR Compliance

1. Boeing shall comply with all U.S. export control laws and regulations, including the International Traffic in Arms Regulations (ITAR), 22 CFR Parts 120 through 130, and the Export Administration Regulations (EAR), 15 CFR Parts 730 through 799, in the performance of this Agreement. Unless otherwise granted an exemption, Boeing shall be responsible for obtaining the appropriate licenses or other approvals, if required, for exports of hardware, technical data, and software, or for the provision of technical assistance.

2. Boeing shall be responsible for obtaining export licenses, if required, before utilizing foreign persons in the performance of this Agreement, including instances where the work is to be performed on-site at any Government installation, where the foreign person will have access to export-controlled technical data or software.

3. Boeing shall be responsible for all regulatory record keeping requirements associated with the use of licenses and license exemptions/exceptions.

4. Boeing may request, in writing, authority to export ITAR-controlled technical data (including software) pursuant to the exemption at 22 CFR 125.4(b)(3). DASA DE&C may affirm the use of the exemption where the U.S. Army PM, FCS certifies the conditions specified by Boeing exist and provided the data does not disclose details of the design, development, production, or manufacture of any defense article.

5. If the U.S. Army PM, FCS directs Boeing to provide information or briefings, then Boeing will pursuant to ITAR section 125.4(b)(1), document the request and submit a written request to the U.S. Army PM, FCS who will certify the conditions specified by Boeing exist. The U.S. Army PM, FCS will provide the certification to DASA DE&C who may affirm the use of the exemption provided the conditions certified by the U.S. Army PM, FCS satisfies the ITAR. Such request will only be pursued when beyond the scope of ITAR section 125.4(b)(3).

C. Lower Tier Agreements

1. Boeing shall include this Article, suitably modified, to identify the parties, in all subcontracts.

ARTICLE XX: CIVIL RIGHTS ACT

1. This Agreement is subject to the requirements of Title VI of the Civil Rights Act of 1964 as amended (42 U.S.C. 2000-d) relating to nondiscrimination in employment.

ARTICLE XXI: BOEING INFORMATION

Taxpayer Identification No: 430400674
DUNS: 016544780
CAGE Code: 69236

ARTICLE XXII: ORDER OF PRECEDENCE

1. In the event of any inconsistency between the Articles of this Agreement and language set forth in the Attachments thereto, the inconsistency shall be resolved by giving precedence in the following order: (1) Until definitization if there is any inconsistency between Article I. B. and anything else, then Article I. B. will take precedence. (2) The Articles of this Agreement, (3) SOW, (4) other Attachments to the Agreement. In the event there is any conflict between a clause contained in full text in the Agreement and a referenced clause, the full text clause shall take precedence.

ARTICLE XXIII: EXECUTION

1. This Agreement constitutes the entire agreement of the Parties and supersedes all prior and contemporaneous agreements, understandings, negotiations and discussions among the Parties, whether oral or written, with respect to the subject matter hereof. This Agreement may be revised only by written consent of the Boeing Contracts Manager and the TACOM Grants Officer, or as provided in Article XIII, Modifications. This Agreement or modifications to the Agreement may be executed by the Parties using a faxed signature from the other party and these documents will be deemed as original.

ARTICLE XXIV: LIABILITY AND INSURANCE

A. Liability and Insurance

1. Boeing shall maintain the types of insurance listed in FAR 28.307-2(a), (b), and (c) with the minimum amounts of liability indicated, or commercial equivalent.

B. The following FAR/DFARS clauses apply:

52.228-7	Insurance-Liability to Third Persons (3/96)
52.246-24	Limitation of Liability - High-Value Items (2/97)
52.246-25	Limitation of Liability - Services (2/97)
252.228-7002	Aircraft Flight Risk (9/96) Tailoring: Aircraft in this clause also relates to "Unmanned Air Vehicles (UAV). Paragraph (d)(4), change from "the Disputes clause of this contract" to "Article XV: Disputes of this Agreement."

ARTICLE XXV: Ordering From Government Supply Sources

1. The Grants Officer authorizes Boeing to use Government Federal Supply Schedule Contracts in the performance of this Agreement.

2. This authorization is issued in accordance with provisions of 48 CFR subpart 51.1 "Contractor Use of Government Supply Sources" and can be used only to acquire goods and services required specifically for performance under this Agreement.

3. The Grants Officer will provide the Boeing Contracts Manager a copy of the authorization letter within ten (10) business days of Agreement award.

4. For each order placed to a Federal Supply Schedule vendor (1) a copy of the authorization letter must accompany the order, unless a copy was previously furnished to the vendor, and (2) the following statement must appear on the order:

> "This order is placed under written authorization from the U.S. Army Tank-Automotive and Armaments Command (TACOM) dated [Date of Agreement Award]. In the event of any inconsistency between the terms and conditions of this order and those of your Federal Supply Schedule Contract, the latter will govern."

5. Boeing is also provided authorization for subcontractor's to use Government Federal Supply Schedule Contracts.

6. Boeing's ordering authorization may be unilaterally withdrawn, or suspended, by the Grants Officer, in whole or in part, by providing written notice to the Boeing Contracts Manager.

ARTICLE XXVI: REQUIRED PROCESSES

A. Approved Processes

1. Boeing will continue to use the listed approved processes derived from enterprise-wide policy, program management best practices, and program requirements in the performance of this effort to the extent applicable.

B. List of Approved Processes

1. Program Management
2. Cost and Schedule Management
3 Technology Management and Transition
4. Cost Estimating

ARTICLE XXVII: SMALL BUSINESS SUBCONTRACTING PLAN

A. Goals

1.Boeing's Small Business Plan goals for the FCS Program are set forth below:

	FCS SDD Goals

	(% of Boeing subcontracted Dollars)
Small Business	17.5%
Small Disadvantaged Business	3.5%
Woman Owned Small Business	2.5%
Historically Underutilized Business Zone Small Business	0.3%
Veteran Owned Small Business	1.5%
Service Disabled Veteran Owned Small Business	0.2%

Note: These goals are based on dollars going to small business through and including the third tier of subcontracts.

B. Subcontracting Reporting

1. Boeing will provide a summary of its subcontracted effort with small businesses on a semi-annual basis, and at SDD Agreement completion, consistent with the information required by Standard Form 294, Subcontracting Report for Individual Contracts. Boeing will report all subcontracted effort to small businesses to include awards to small businesses from its first, second and third tier large business subcontracts. Dollars reported as Small Business awards will only be counted once. Boeing format for reporting requirements is acceptable.

C. Lower Tier Agreements

1. Boeing shall include the Small Business Plan goals as a requirement of all first, second and third tier large business subcontracts.

ARTICLE XXVIII: PRE-AWARD COST AGREEMENT

1. In order to reduce schedule risk to the Program, it is recognized that Boeing has initiated effort, beginning 21 March 2003, covered under this Agreement prior to Agreement award. Upon Agreement award to Boeing, those allowable and allocable costs incurred up to $9.7M by Boeing in pursuit of effort called for under this Agreement, will be recognized as allowable and allocable to the SDD Agreement to the extent they would have been allocable and allowable had they been incurred subsequent to award of the SDD Agreement. This effort consists of tasks in support of the transition from CTD to SDD such that Boeing can immediately perform SDD work upon award of this Agreement.

ARTICLE XXIX: COMPLEMENTARY PROGRAMS

A. The LSI's efforts, with respect to Complementary Programs, is set forth in Attachment 1, SDD Statement of Work paragraph 3.1.4.4.

B. The Government is responsible for managing the Complementary Program contracts and contractors. PM,FCS will facilitate cooperation between the Government Program Management teams to ensure cooperation from the Complementary Program contractors with Boeing to satisfy the needs of the FCS program. PM, FCS will facilitate the LSI with Complementary Programs SOW requirements by entering into Program Executive Office (PEO) Memorandum of Agreements (MOA) and Program Management (PM) Subordinate Memorandum of Agreements

(SMOA) with each Complementary Program. Model MOAs and SMOAs are incorporated in Attachment 14.

C. The LSI may be entitled to a Program Generated Adjustment as it pertains to Complementary Systems within the definition in Article I, when a product or piece of information from a Complementary Program fails to be suitable (including timely availability) for its intended use and there is a negative impact to the program. Any such adjustment will be in accordance with Article XIII, Modifications.

D. For any product, hardware, software or data, that needs to be provided from a complementary program, which is not available, then a Program Generated Adjustment, as identified in C. above, will be proposed to overcome the problem.

ARTICLE XXX: SDD TECHNICAL BASELINE

1. The SDD Technical Baseline is the FCS UA Increment I Capabilities Specification. Initially, all 14 April 2003 JROC ORD requirements will be reflected in the FCS UA Increment I Capabilities Specification as either products being developed as part of Increment I or as spiral systems for future implementation. The spiral systems identified in Appendix C of the FCS UA Increment I Capabilities Specification, and noted below, are not a part of the initial technical baseline for contract performance but may be considered for future inclusion based on affordability decisions. For those items designated as Increment I products the below trade processes will be used to determine the specific requirements for Increment I.

2. During the definitization process the LSI shall identify the schedule for completion of the Prime Item Development Specifications, Distributed System Specifications, Architectures, and Procurement Control Drawings that will become technical baseline documents when approved.

3. Trade studies and affordability assessments will be conducted for spiral systems at the request of the Government.

4. Changes impacting a KPP will require a contract modification. All other changes will be handled through the below indicated process.

5. Verification of the Technical Baseline will be accomplished as identified in the LSI's Integrated Test and Evaluation Plan (ITEP), D786-10074-1. The verification criteria of the ITEP will be superceded by Section 4 of the FCS UA Increment I Capabilities when approved.

6. Trade Processes

(a) If only an objective requirement in the JROC ORD now exists, the Specification will reflect either the objective capability or a "TBD" for threshold, and that requirement will be adjudicated through the trade study process.
(b) If the FCS UA Increment I Capabilities Specification does not, at minimum, meet the JROC ORD threshold capability, the requirement in question will either
(i) be brought into alignment with the JROC ORD and placed in the FCS UA Increment I Capabilities Specification or
(ii) be identified as a trade study candidate and placed in the trade study candidate pool.
(c) The trade study process will be implemented as follows:

(i) The requirement will be adjudicated through the approved Trade/CAIV joint process (with participation of PM, FCS, LSI and TRADOC at a minimum).
(ii) If the process determines that a change is necessary to the SoS Increment I Specification, a recommendation will be made to update both the SoS Increment I Specification and the JROC ORD simultaneously.
(iii) The FCS UA Increment I Capabilities Specification update will not be delayed awaiting ORD updates.
(iv) Once the discrepancies have been resolved through approved process, the FCS UA Increment I Capabilities Specification will have contractual precedence.

Note:
The Spiral Development Programs specified in Appendix C are currently:
(1) Unmanned Aerial Vehicle Class II,
(2) Armed Robotic Vehicle – Assault and Armed Robotic Vehicle- Reconnaissance variants
(3) Loitering Attack Munition and the
(4) Intelligent Munition System.

ARTICLE XXXI: FAR/DFARS Clauses

A. Commonly Used Terms

1. Terms contained within a FAR or DFARS clause including, but not limited to, (1) Schedule, (2) Contracting Officer, (3) Contract, (4) Disputes clause, (5) Administrative Contracting Officer, etc. are interpreted to mean (1) Agreement, (2) Grants Officer, (3) Agreement, (4) Article XV Disputes, (5) Administrative Agreements Officer, respectively. Any other commonly used terms not expressly included in this paragraph, contained within a FAR/DFARS clause, shall also be interpreted in terms of an Other Transaction Agreement, Section 845 as the FCS acquisition instrument and not in terms of a FAR procurement contract.

B. Clause Incorporated by Reference

1. This Agreement incorporates one or more clauses by reference, with the same force and effect as if they were given in full text, except if there is a conflict with a full text clause, in which case the full-text clause would govern. Upon request, the Grants Officer will make their full text available.

C. FAR Clauses Incorporated by Reference

52.223-3	Hazardous Material Identification and Material Safety Data (1/97) "To be provided to the Government during Agreement performance, as required."
52.223-5	Pollution Prevention and Right-to-Know Information (4/98)
52.223-7	Notice of Radioactive Materials (1/97)

	Tailoring: Paragraph (a), insert "30 calendar" as the fill-in.
52.225-8	Duty-Free Entry (2/2000)
52.249-14	Excusable Delays (4/84)

D. DFARS Clauses Incorporated by Reference

252.223-7002	Safety Precautions for Ammunition and Explosives (5/94)
252.223-7007	Safeguarding Sensitive Conventional Arms, Ammunition, and Explosives (10/2002)
252.225-7008	Supplies to be Accorded Duty-Free Entry (3/98) "All"
252.225-7010	Duty-Free Entry - Additional Provisions (8/2000)
252.225-7032	Waiver of United Kingdom Levies (10/92)
252.225-7043	Antiterrorism/Force Protection for Defense Contractors Outside the United States (6/98)
252.228-7005	Accident Reporting and Investigation Involving Aircraft, Missiles, and Space Launch Vehicles (12/91)
252.235-7003	Frequency Authorization (12/91)

ARTICLE XXXII: DESIGN AND SOURCE CONSIDERATIONS

1. The following DFARS clauses, while not required for the SDD Agreement, will be mandatory under any subsequent contract for Long Lead Items, Initial Production or Production unless Boeing requests a waiver for itself, or for any of its subcontractor(s), which is subsequently approved by the Government, provided the clause allows for such waiver request. Boeing shall consider the following clauses in its planning for transition to Production. Design limitations and supply chain management decisions required to comply with these clauses will be documented in sufficient detail, so that, in the event of any subsequent contract for Long Lead Items, Initial Production or Production, clause compliance can be demonstrated.

252.225-7001	Buy American Act and Balance of Payments Program (3/98)
252.225-7002	Qualifying Country Sources As Subcontractors (12/91)
252.225-7014	Preference for Domestic Specialty Metals (3/98) Alt 1
252.225-7016	Restriction on Acquisition of Ball and Roller Bearings (12/2000)
252.225-7022	Restriction on Acquisition of Polyacrylonitrile (PAN) Carbon Fiber (6/97)
252.225-7025	Restriction on Acquisition of Forgings (6/97)
252.225-7026	Reporting of Contract Performance Outside the United States (6/2000)
252.225-7030	Restriction on Acquisition of Carbon, Alloy, and Armor Steel Plate (10/92)
252.225-7031	Secondary Arab Boycott of Israel (6/92)

ARTICLE XXXIII: Termination Liability Amounts

1. There is currently no authorization or proviso for any liability beyond the funds obligated to the Agreement by the Grants Officer. Boeing has requested that the Army consider adding a Special Termination Cost Article to the Agreement. This Article will be similar in content to DFARS 252.249-7000, identifying the cost categories to those listed in the DFARS clause. 2. Within thirty days of award of the SDD Agreement the PM, FCS will forward the request to the Department of Army for consideration. If the requested clause is not approved for incorporation, the Govemment is not obligated to take any further action regarding this matter, nor can be held liable as a result of not incorporating such requested clause.

3. If DA approval is not received by July 31, 2003, Boeing will adjust its planned financial outlays to cover potential termination liability costs. This will be reflected in the subsequent financial reports.

4. Furthermore, PM, FCS and Boeing agree to pursue Full Termination Liability Cost coverage. PM, FCS agrees to pursue this request upon receipt of Boeing data required to support such request with the objective to have DA approval prior to definitization of the Agreement. If the requested clause is not approved for incorporation, the Govemment is not obligated to take any further action regarding this matter, nor can be held liable as a result of not incorporating such requested clause. If DA approval is not received Boeing will adjust its planned financial outlays to cover potential termination liability costs. This will be reflected in the subsequent financial reports.

ATTACHMENT 1

STATEMENT OF WORK FOR THE FCS INCREMENT I SDD PROGRAM

1.0 OVERVIEW

This document defines the Government's requirement for work to be performed by The Boeing Company, in its role as the Future Combat Systems (FCS) Lead Systems Integrator (LSI), to execute the FCS Increment I (see Article XXX) Systems Development and Demonstration (SDD) Program tasks as described below. The role of the LSI is not simply that of a traditional Prime Contractor, but is more that of the Government's partner in ensuring implementation of FCS through engineering a system of systems solution, competitive selection of industry sources for development of the systems comprising the FCS Family of Systems, and integrating and testing these systems to satisfy the Increment I requirements. While this does not preclude the LSI from being a source of individual systems/subsystems development, such development participation requires prior approval of the Government or selection through the competitive procurement process (Article VIII of this Agreement), which includes Government approval. To accomplish this, the LSI/Army Program Manager FCS (PM FCS) partnership will work closely in a collaborative, cooperative environment with TRADOC, and other Army organizations designated to integrate the FCS Family of Systems (FoS) work with the larger Unit of Action (UA) System of Systems (SoS) and Objective Force (OF) development efforts.

1.1 PROGRAM OBJECTIVES

The LSI has been selected by the Government to work in a collaborative environment with PM FCS, to ensure a successful development, production, fielding, and sustainment of the full complement of safe, reliable, suitable, and effective FCS materiel in accordance with (IAW) the FCS Operational Requirements Document (ORD) and the FCS UA Objective Capabilities Specification. The LSI is responsible for executing the FCS Increment I SDD program Statement of Work including support in integration of FCS SDD efforts with the Army's larger UA and Objective Force Doctrine, Organization, Training, Materiel, Leader, Personnel (Soldiers), and Facilities (DOTMLPF) development work to ensure the UA equipped with the FCS can employ concepts in the UA Operational and Organizational (O&O) plan to achieve capabilities in the O&O and FCS ORD. This SDD Agreement phase addresses the first of successive anticipated increment system designs/developments leading to the envisioned FCS Objective Force.

1.2 INCREMENT I SDD DESCRIPTION

The FCS SoS development effort is a complex integration task that implements a coordinated, comprehensive approach across the program elements of Training, Supportability, Networks, Systems, Interoperability, Force Development, and Testing. This high level, overarching integration ensures that the approved UA O&O plan, the Joint Requirements Oversight Committee (JROC) validated Mission Needs Statement (MNS), and the FCS Operational Requirements Document (ORD) guide the program approach to optimize force design, define requirements, ensure interoperability, demonstrate performance, reduce risk, and reach a balance of affordable performance throughout the life cycle. The LSI will define an incremental development plan for the

evolution of the FCS into a stable, interoperable, producible, supportable, and cost effective system that meets the Army FCS ORD through implementation of multiple capability increments. During this SDD Increment I, the LSI will design, integrate, build, support, and test the first capability increment (Increment I) of this incremental development plan. Some systems within the family of systems will achieve these capabilities prior to others and this will result in a phased completion of Increment I SDD. Refer to the FCS SDD Integrated Master Plan and Schedule (IMP/IMS) for detailed program listing and schedule.

1.3 SCOPE

This Statement of Work (SOW) defines the scope of work for the LSI relative to performing SoS management, engineering, procurement, integration, supportability, test, and evaluation during the FCS Increment I SDD phase. The defined scope of this FCS Increment I SDD includes the work necessary to ensure a successful IPD leading to Initial Production (IP) for all the FCS Family of Systems.

1.4 TECHNICAL PERFORMANCE REQUIREMENTS

FCS SoS performance requirements of the O&O and the ORD are used to derive the FCS UA Objective Capabilities Specification. The Increment I performance requirements are then derived from the FCS UA Objective Capabilities Specification and defined in the FCS UA Increment I Capabilities Specification at Agreement start and result in the configuration and capability baseline as defined in Article XXX of this Agreement. SoS Increment I capabilities and the implementing configuration are anticipated to evolve during SDD. Key Performance Parameters (KPPs) and ORD threshold requirements as allocated to Increment I in the FCS UA Increment I Capabilities Specification represent the minimum acceptable needs for the initial Increment I performance baseline. KPPs are non-tradable. Non-KPP ORD threshold requirements that are proposed to be traded will be worked in accordance with the trade process approved by the Government. Subsequent increments (for future procurement) will be defined during this SDD phase to ultimately result in a plan for achieving the full ORD objective capability. The Government will define metrics and criteria for the evaluation of each of the ORD requirements and to require the LSI to provide an Incremental Development Plan for achieving (singularly or in combination) each of the critical criteria in future increments.

1.5 SCHEDULE

The SDD program execution schedule is documented by the event-based Integrated Master Plan (IMP). The Integrated Master Schedule (IMS) is the management tool that schedules the program events and accomplishments found in the IMP.

2.0 APPLICABLE DOCUMENTS

The following documents as invoked in Section 3 provide guidance to and requirements for the LSI during SDD. Unless otherwise specified the version of each specific REFERENCE and COMPLIANCE document in effect at the time of usage shall apply. REFERENCE documents are to be used for guidance only. COMPLIANCE documents are a requirement. Second tier and lower documents (e.g., those documents cited or referenced within a first tier or lower document) cited in LSI COMPLIANCE

documents are contractually binding unless specifically designated as a reference within the higher tier document.

3.0 LSI TASKS

The following subsections describe the work scope for the LSI during SDD divided into three major activities:

a. **Subsection 3.1** describes the SoS Engineering Integration and Program Management effort to manage the overarching requirements and SoS design analyses. It includes the definition and allocation of requirements and flowdown of process guidance to the Integrated Product Teams (IPTs) and any associated development subcontractors for networked FoS product design, development, integration, and verification activities.

b. **Subsection 3.2** describes implementation of the SoS requirements into the networked FoS analysis, design, development, integration, and test efforts at the individual FoS level.

c. **Subsection 3.3** describes the LSI activities to coordinate and perform integrated FoS and SoS demonstration and test planning, execution, and evaluation in accordance with test milestones defined in the Integrated Master Plan (IMP) and Integrated Master Schedule (IMS).

d. Data deliverables associated with selected SOW paragraphs are identified by references {Axxx} to specific FCS SDD program Agreement deliverable items per Attachment 2. References to the Work Breakdown Structure are indicated by [WBS x.x.x.x] to the sixth level as appropriate.

3.1 SOS ENGINEERING, INTEGRATION, AND PROGRAM MANAGEMENT

The LSI shall perform the necessary program and engineering management activities associated with planning and conducting the FCS SDD Increment I program IAW the Applicable Documents listed in paragraph 2.0, above. The LSI will ensure that

the FCS design and processes support smooth transition to the objective capability as defined by the requirements documents and will assist TRADOC to integrate and synchronize the LSI FCS work with the larger UA and OF requirements as specified in the following subparagraphs. [WBS 1.1.1]

3.1.1 SoS Engineering and Integration Management

The LSI shall define, plan, and manage the systems engineering process IAW the SEMP and the Systems Integration Plan to transform the UA Increment I Capabilities Specification into a tested SoS Increment I solution suitable for IP initiation, conduct system reviews as defined in the SEMP and/or IMP, and prepare for the IPD. {A001, A029} [WBS 1.1.1.1, 1.1.1.2, 1.1.1.3, 1.1.1.7]

3.1.1.1 Objective Force Requirements Integration. The LSI shall support TRADOC in refining and allocating UA Operational Requirements; refining operational interfaces with joint, interagency, and multinational (JIM) organizations and forces; and refining joint operational concepts for implementation into final design. This activity is to be sustained on three levels: Unit of Action (UA), Unit of Employment (UE), and Objective Force (OF). The LSI will support refinement and maintain traceability of FCS requirements with operational concepts, force design, O&O, ORD, operational architectures, training and leader development, and operational interfaces with programs relevant to FCS (Attachment 11); perform Operational Analysis in support of force requirements; define and analyze future increment upgrades in terms of operational and force impacts; and force initialization, deployment, operations, support, and garrisoning requirements. The LSI will work collaboratively with TRADOC and Headquarters, Department of the Army (HQDA) to integrate FCS SDD work into the larger UA and OF development and demonstration effort in order to help the Army optimize force design and define/refine requirements in a continuous/consistent manner over time, including maintaining currency to the STAR. The LSI will support TRADOC/ UA Maneuver Battle Lab (UAMBL) in the horizontal integration and synchronization of FCS SDD efforts with TRADOC's larger OF/UA DOTMLPF domains. The LSI shall supply data in support of TRADOC documentation of operational requirements, findings, and conclusions that impact the FCS design, Operational and Organizational Concept, or requirements development, and shall ensure rapid dissemination to PM FCS and design engineers to ensure parallel work is effectively synchronized. The LSI will acquire insights from the experimentation, studies, and analysis conducted by the following TRADOC organizations: UAMBL, Combined Arms Center (CAC), Combined Arms Support Command (CASCOM), TRADOC Analysis Center (TRAC), and enhanced Objective Force Battle Labs (including support to UAMBL from other centers and schools as part of the Hub and Spoke concept). These insights acquired will be submitted to TRADOC to ensure their analytic validity and consistency with the UA developmental concepts. The LSI will also provide TRADOC with any insights from their FCS SDD work that could impact UA and OF operational considerations. {A002} [WBS 1.1.1.1, 1.1.1.1.2, 1.1.1.1.3, 1.1.1.1.4. 1.1.1.1.5]

3.1.1.1.1 Force Integration & Analysis. The LSI shall support TRADOC through PM FCS with UA level and FCS system of systems integration, interoperability, and force effectiveness trades necessary to achieve the allocation of ORD requirements to the FCS UA Objective Capabilities Specification. The LSI will support PM FCS and TRADOC in modeling and simulation efforts for trade studies, assessment, evaluations of force effectiveness, and for User Representative testing and training to include the

integration of Government and LSI modeling and simulation efforts. The LSI will also participate in TRADOC Integrated Concept Teams designed to synchronize and optimize all UA and OF DOTMLPF requirements. The LSI shall support planning, coordination, and execution of Unit of Action Maneuver Battle Lab (UAMBL) experimentation that impacts the FCS FoS design, and shall assist in refining Operational and Organizational concept and requirements development. The LSI shall document analyses, findings, and lessons learned. {A002, A003, A030, A044} [WBS 1.1.1.1.3, 1.1.1.1.4, 1.1.1.1.5]

3.1.1.1.2 TRADOC Site Representation. The LSI shall provide onsite personnel distributed at TRADOC force development sites based on needs identified by the UAMBL and HQ TRADOC (see Agreement Attachment 7 – Office Space and Administrative Support). These personnel shall coordinate the translation of operational concepts and force requirements and rapidly disseminate continuous requirements development and refinement emerging from UAMBL experiments to coordinate and synchronize operational concepts, force requirements, materiel development, and analytical activities. The LSI shall ensure that UA requirements efforts are current with emerging insights gained from subsequent FCS CTD increments being conducted in parallel with Increment I SDD. [WBS 1.1.1.1.5]

3.1.1.1.3 TRADOC Battle Lab Integration. Based on Attachment 7 and SOW 3.1.4.6 below, the LSI shall provide TRADOC's networked Battle Labs and schools with access to the LSI virtual prototype designs organized within the FCS ACE Distributed Product Description (DPD), to facilitate operational experimentation with latest baseline designs and also to enable rapid dissemination of User Representative feedback to designers as the UA is designed and developed in parallel with the FCS SDD. This work will be targeted at providing specific system and family of systems performance data through Army Materiel Systems Analysis Activity (AMSAA) to the TRADOC network of Battle Labs and schools. [WBS 1.1.1.5]

3.1.1.2 Interface Management. The LSI shall identify and manage the technical interface requirements among FCS FoS components and among the FCS FoS and complementary systems (including systems used "in-lieu of" systems listed in the ORD) as defined in Attachment 11 and Article XXIX. The LSI shall establish, monitor and maintain interfaces to systems external to FCS (legacy, higher echelon, Joint, Coalition, and other Government and Non-Government Agencies as defined in Attachment 11) and control internal FoS system-to-system interfaces. {A004} [WBS 1.1.2.1.3.2]

3.1.1.2.1 Interoperability Management. The LSI shall identify, update, and manage the interoperability requirements among the FCS FoS, Army, and joint, interagency, and multinational (JIM) organizations and forces listed in Attachment 11. This effort requires the LSI to monitor and control all FCS interfaces required to satisfy FCS interoperability requirements and includes participation in interface control working groups, development and maintenance of interface control documents, design of FCS interfaces, and verification that interfaces conform to approved Interface Control Documents. In coordination with TRADOC's OF and UA force development work, the LSI shall identify, update, and manage interoperability solutions to meet the User Representatives requirements among the FCS FoS as they relate to the Army's UA and OF developments work, and Army participation in development of JIM organizations, forces, and equipment, including addressing files, applications, standards, protocols and other relevant considerations. The LSI shall submit maintainability and reliability

considerations for interoperability to TRADOC (through UAMBL to CASCOM). The LSI shall submit information exchange considerations to TRADOC (through UAMBL to the Architecture Integration Management Directorate). {A035} [WBS 1.1.2.1.2.11, 1.1.2.1.3.2]

3.1.1.3 SoS Architecture Development and Management. In close coordination with TRADOC, AMC, and other Army organizations, the LSI will develop, integrate, and manage FCS SoS level Operational, System, and Technical View architectures and support TRADOC development of Operational View architectures reflecting O&O Plan and ORD maturation to provide an evolutionary roadmap for SoS architectures using DoD Architecture Framework 1.0 as appropriate. The LSI will manage and update the FCS interface requirements to higher (DoD and JIM) and lower level architecture views, implementing JTA, JTA-A, and JAUS requirements into these views as required. The system design approach shall comply with the applicable portions of the Joint Technical Architecture-Army. Any proposed technical designs that deviate from the standards and practices delineated in the Joint Technical Architecture-Army, either during the evaluation and/or subsequent execution of this Agreement shall be approved by PM FCS, prior to implementation. The LSI will provide FCS developed architecture products to TRADOC to support update and management of the Objective Force Operational and System Architecture-Conceptual (SA-C) architectures. {A005, A006} [WBS 1.1.1.2.2, 1.1.1.2.2.1]

3.1.1.3.1 System/Subsystem Design Description. The LSI shall develop and maintain a System/Subsystem Design Description (SSDD) as a single document to capture system-level (e.g., electrical, software, mechanical) design concepts and decisions and used as the basis for further system and subsystem development. In addition to system-level architecturally significant contents, the LSI will include design decisions and constraints at appropriate system/subsystem levels as necessary and applicable to meeting system performance requirements and to coordinate interfaces across multiple developers/products (e.g., IPTs, suppliers/platforms, vehicles, sensors). {A007} [WBS 1.1.1.2, 1.1.2.1.3]

3.1.1.3.2 FCS Specifications. The LSI shall update and manage the FCS UA Increment I Capabilities Specification reflecting the SDD Increment I compliant capability (as defined in Article XXX) including interfaces to Increment I complementary programs (Attachment 11). The LSI shall also develop and deliver a FCS UA Objective Capabilities Specification reflecting the full FCS ORD to provide overarching guidance for future incremental development planning (3.1.10). The LSI will develop, update, and manage all systems level performance specifications, Distributed System Specifications, Prime Item Development Specifications (PIDS), Procurement Control Drawings, and Software Specifications to reflect the Increment I capability only. {A003, A008, A009, A018, A044} [WBS 1.1.1.2.3.2, 1.1.2.1.3.6]

3.1.1.3.3 Requirements Analysis Management. In coordination with PM,FCS, TRADOC, the LSI shall translate operational requirements into systems requirements. This translation includes the development of systems and technical architectural views of the SoS, as well as the FoS that comprise the SoS. The LSI shall capture and appropriately allocate performance, functional, and other derived requirements to the specifications of 3.1.1.3.2. Further, the LSI shall develop and maintain dynamic traceability of requirements linking the ORD to the FCS UA Objective Capabilities Specification and lower tier specifications and system design, enabling identification of

change impact. The LSI shall develop and maintain a comprehensive integrated requirements database to capture: continuous FCS requirements development over time to objective capability; FCS requirements, including key attributes related to safety and mission critical functions; traceability between the system level requirements and the Hardware Configuration Item (HWCI) and Computer Software Configuration Items (CSCI) requirements they are allocated to; and traceability between HWCI and CSCI requirements and design components that implement them. {A009, A018} [WBS 1.1.1.2.2, 1.1.1.2.2.1, 1.1.1.2.3.2, 1.1.2.1, 1.1.2.1.3.3, 1.1.2.1.3.6]

3.1.1.3.4 SoS Architecture Development Plan. The LSI shall develop a SoS Architecture Development Plan that defines the SoS Architecture processes, management, and organization to be utilized in the development of architectures. Timelines and milestones for development of the SoS Architectures will be as documented in the IMP and IMS. {A010} [WBS 1.1.1.2.2]

3.1.1.4 Configuration/Data Management. The LSI shall provide configuration and data management (CDM) through the FCS ACE IAW the CDM Plan. The LSI will develop and manage processes and policies implemented in related program CDM organizations, including ensuring that architecture data is synchronized with and entered into the TRADOC Army Architecture Repository Management System (AARMS), managing the FCS data repository, and providing oversight of configuration management policies and processes employed by other LSI organizations and suppliers. The LSI shall manage the FCS interface control documents relating to SoS internal and external interoperability. The LSI will coordinate configuration management of FCS SDD products to ensure an appropriate level of interoperability/consistency with TRADOC, Army Test and Evaluation Command (ATEC), and AMC configuration management policies and procedures for operational and SA-C architecture products. {A011} [WBS 1.1.1.2.4, 1.1.2.1.3.3]

3.1.1.5 Manpower and Personnel Integration (MANPRINT). The LSI shall integrate MANPRINT into system designs to accommodate personnel health and safety, human factors, system safety, soldier survivability, skills/aptitude/development, training, and system manpower requirements. As a part of preliminary design, collaborate with appropriate AMC and other Army agencies, including the TRADOC System Manager (TSM) FCS, to resolve User Representative MANPRINT issues in the design and development of the FCS SoS. MANPRINT considerations and derived requirements must be maintained compatible with the capabilities and limitations of the User population. The LSI will provide policy and processes to ensure consistent incorporation of the MANPRINT program across all configurations. The LSI shall conduct MANPRINT design evaluation during system development, to include requirement, specification, design, test, and assessment and provide a report on results of evaluation. {A012, A013, A028} [WBS 1.1.1.2.4, 1.1.2.1.2.13]

3.1.1.6 Trade Study and Life Cycle Cost Containment Management. The LSI shall establish policies and procedures relating to the trade study process, including application of Cost as an Independent Variable (CAIV), coordination for studies that cross program elements, and recommendations for final resolution on any issues that affect SoS requirements. The LSI will utilize trade studies to provide support for technology and design decisions. The LSI will implement the FCS Life Cycle Cost Containment Plan defined in D786-10012-1 and IAW the Life Cycle Cost Estimation reporting milestones identified in the IMS. The LSI shall develop an overall plan

consistent with the Containment Strategy to achieve program affordability, implementing CAIV to balance cost, performance, and schedule, including development of Total Ownership Cost estimates to track progress toward meeting containment requirements and reducing operations and support costs. The LSI will resolve User Representative operational performance issues in conjunction with TRADOC in the design and development of the FCS SoS as well as the individual systems that comprise the FCS FoS. The LSI will ensure FCS FoS and system trades are synchronized and integrated with the larger UA and OF development and demonstration effort. The LSI will provide trade study data to TRADOC to support TRADOC's decision process regarding adjustments to FCS operational requirements and effectiveness. The LSI will support best choice decisions with documented evaluation. Requirements not incorporated into design concepts for Increment I, shall be reassessed as required. The LSI will flow trade study policy and requirements down to the major FCS network and platform development subcontractors. The LSI shall participate in and provide oversight to the conduct of the subcontractors' trade study processes. {A014, A015, A016, A034} [WBS 1.1.1.2.2.4, 1.1.1.2.8]

3.1.1.7 Software Management. The LSI shall establish a Software Process and Management Team, consisting of LSI, Government, and supplier representatives, to provide the overarching program-wide software management, coordination and guidance for processes relating to software. This software management team will ensure that the proper policies, processes, procedures, tools, and training are in place to provide an integrated coherent software management approach across all elements of the program and implementation of an open software architecture across the FCS FoS. The software management team shall update and maintain the FCS Software Development Plan and approve and coordinate changes to IPT and supplier Software Development Plans. The software management team shall assist and verify that the IPTs and their software suppliers implement and maintain organizational software development practices that are certified to at least Level 3 of the Software Engineering Institute Capability Maturity Model for Software (SEI CMM). The software management team shall develop a plan to achieve SEI Capability Maturity Model Integration (CMMI-SW) Level 5 certification by the end of Increment I SDD. The software management team shall develop and maintain a software progress measurement plan to establish software metrics and a measurement process to include audits and assessments. Using the FCS ACE, the team shall collect metrics from the software suppliers and perform analyses to assist IPTs in software defect prevention and reduction as well as cost and schedule adherence. {A017}[WBS 1.1.1.3]

3.1.1.7.1 Software Lifecycle Activities. The LSI shall conduct SoS software requirements, architecture, and design reviews to ensure the development and maintenance of the FCS SoS/FoS software solutions are integrated across all of the UA Battlefield Functional Areas, UE, and Home Station Operating Center (HSOC) to meet FCS requirements and operational architecture demands. The LSI shall also participate in other software reviews to ensure FCS SoS/FoS integration. The LSI shall prepare, deliver for approval, and maintain the FCS SoS/FoS software architecture description document (SADD). The SADD will address implementation and maintenance of an open architecture that enables industry to develop modular battlefield software enhancements to increase the operational effectiveness of the UA, UE and HSOC. The LSI shall develop a software transition plan to identify resources required to maintain and support delivered software. The will develop a phased software integration plan that includes initial development and a roadmap/plan for software upgrades, including tactical, that

support both Increment I, and subsequent increments, taking into consideration the Army Software Blocking Plan. {A017, A036} [WBS 1.1.1.3]

3.1.1.7.2 Software Configuration and Quality Management. The LSI is responsible for SoS/FoS software configuration management per the CDM Plan, including operation of the FoS level software configuration control board. The software management team maintains the software item database, software configuration management database, and software problem reporting database. The LSI shall ensure that all software developed or modified (including source code, firmware and supporting documentation) under this agreement shall be accessable through the FCS ACE and become Government property at the end of SDD. The LSI shall develop and maintain a software quality assurance plan. The team shall perform software quality product and process audits of LSI software activities and supplier software quality engineering. {A017} [WBS 1.1.1.3]

3.1.1.8 Performance Assurance. The LSI shall ensure SoS and FoS performance is effectively and efficiently achieved to specific documented criteria. The LSI will define SoS and FoS performance by such criteria as: Key Performance Parameters (KPPs), prioritized ORD threshold and objective requirements, Technical Performance Measures (TPMs), Measures of Effectiveness (MOEs), system security, producibility, parts/materials/processes, and affordability. The LSI shall conduct performance test and analysis at the small unit (company) level to establish integrated SoS effectiveness measures across the UA Battlefield Functional Areas (BFA). The LSI will conduct SoS level analysis to evaluate UA Force Effectiveness compared to the SoS specifications. {A020, A021} [WBS 1.1.1.2.5, 1.1.1.2.6, 1.1.1.4.4]

3.1.1.9 SoS Verification. The LSI shall conduct a verification program to support the decision to proceed with IP, and provide verification data for Government evaluation of SoS performance by the Joint Interoperability Test Command and Army Test and Evaluation Command. {A021, A022, A029} [WBS 1.1.1.2.7]

3.1.1.10 FCS Incremental Development Plan. The LSI shall define and maintain an event driven plan for integrating, scheduling, measuring, and controlling the evolution of the FCS System of Systems development, test, and fielding leading to Full Operational Capability (FOC) of the Unit of Action. This plan will integrate the elements of the FCS program including LSI, Government entities representing DARPA and AMC (Science and Technology Objectives), TRADOC, suppliers, and complementary programs and other services and Government Agencies associated with Objective Force Block #2 and #3 efforts.. The LSI will define risk reduction activities and affordability/Life Cycle Cost containment analyses with incremental development objectives for each program event. The LSI will include within the plan the methodology and details for incrementally improving capability throughout the FCS life cycle based on incremental upgrades and technology insertion to include spiral of Increment I deferred systems that comprise the FCS FoS. The plan shall include a logical roadmap to synchronize subsequent CTD work in an effective sequence from FCS Increment I capability to the FCS objective capability. The plan shall be structured to accommodate insights gained from subsequent FCS CTD work, AMC/DA Science and Technology Objectives efforts, and TRADOC continuous requirements development. {A023} [WBS 1.1.1.2.10]

3.1.1.10.1 Incremental Upgrade Strategy. Within the FCS Incremental Development Plan, the LSI will define Increment I configuration and corresponding capability and

provide baseline descriptions of future increments necessary to meet the objective ORD requirements. The LSI will also include in the plan both critical software upgrades that will be fielded between increments and regular software upgrades that will be implemented at increment boundaries. The software upgrade plan shall provide for continuous commercial innovation and development of software that will increase UA operational effectiveness consistent with the UA O&O plan. [WBS 1.1.1.2.10]

3.1.1.10.2 Technology Insertion. The LSI will monitor relevant maturing technology to identify opportunities for technology insertion either to ensure avoidance of system obsolescence and associated sustainment problems or to provide a high payoff system performance enhancement that results from technology that has matured between planned increments. [WBS 1.1.1.2.9]

3.1.1.10.3 Provisions for Growth. The LSI shall specify and implement FCS FoS and associated FCS System of Systems architectures that include provisions for design margin and growth consistent with the FCS Incremental Development Plan. The LSI shall include growth provisions and flexibility to accommodate future technologies to meet User requirements development/refinement. The LSI shall design the FCS to facilitate growth to full objective capabilities. The LSI shall conduct appropriate design studies IAW the Incremental Development Plan to determine needed design parameters enabling subsequent capability upgrades to be readily inserted without significant redesign and retrofit. The LSI shall design in additional capacity (such as space, weight and power), and shall also incorporate the design "hooks"/interfaces to facilitate adding the growth capabilities.

- The LSI shall analyze objective performance requirements associated with increment 1 Thresholds and design the Increment I FCS with capacity and interfaces needed to facilitate objective capability enhancements without significant redesign

- For systems identified as spiral development candidates (e.g. CL II UAV, ARV-A, ARV- RSTA, IMS, LAM), the LSI shall address the overall impact to the FCS (both at the System of Systems and at the platform/FOS level), to include impacts to network, C2, Workstations, supportability, etc, and identify appropriate growth provisions to be incorporated in the initial FCS design.

[WBS 1.1.1.2.10]

3.1.1.11 Technology Management. The LSI will define and monitor current and planned technology maturation and insertion plans across all planned increments. The LSI shall develop a maturation scheduling strategy, and perform analysis, risk identification, and planning for programmatic integration of critical technologies into Increment I. The LSI shall specify technologies and risk reduction strategies for proposed future increment technologies with technology readiness levels below TRL 6. The LSI shall coordinate with PM,FCS, TRADOC, AMC and DARPA to identify technologies requiring further maturation (i.e., those not sufficiently mature to use in Increment I IP) and provide associated SDD technology development data to assist in transitioning these technologies from SDD into Increment II CTD. This data shall be accessible through the FCS ACE. {A024} [WBS 1.1.1.2.9]

3.1.1.12 SoS Logistics Management. The LSI shall provide the planning, management and integration, of all logistics functions to include the implementation of Performance Based Logistics IAW DoD 5000 series, DoD Future Logistics Enterprise (FLE) - U.S. Army PBL Implementation Guide, and the guidance of TRADOC Maneuver

Sustainment Concept. In close coordination with the Army, the LSI shall conduct logistics planning, analyses, and testing, and develop and recommend technologies, processes, procedures, and performance metrics to achieve logistics footprint and operational support cost reduction and to ensure logistics and readiness requirements are met across the FCS SoS. The LSI shall submit maintainability and reliability considerations for interoperability to TRADOC (through UAMBL to CASCOM). {A025, A027} [WBS 1.1.1.7]

3.1.1.13 Programmatic Environmental, Safety and Health Evaluation (PESHE). The LSI shall update the PESHE including integration of ESOH design considerations. The LSI shall comply with applicable Federal, State and Local regulations and statutes. {A028} [WBS 1.1.1.6.4.4]

3.1.2 Simulation and Modeling for Acquisition, Requirements, and Training (SMART)

The LSI shall manage, coordinate, and as required develop, in collaboration with the Government and suppliers, SoS and FoS performance level modeling and simulation (M&S) capability for use in analyzing requirements, evaluating design performance, and supporting system and SOS level testing IAW relevant sections of the Simulation Support Plan. The LSI, in close coordination with TRADOC, AMC and other Army organizations, shall develop requirements for constructive and virtual simulations for trade studies, SoS force effectiveness and performance assessment, requirement validation, design analysis, and test planning and design to support demonstrations and tests. The LSI shall serve as the enterprise level integrator to ensure FCS M&S efforts addressing requirements, design, training, manufacturing, and production are not being duplicated among the efforts of the LSI, subcontractors, and Government, and to leverage reuse and commonality of M&S tools to include AMC RDECOM facilities and capabilities for materiel research, development and evaluations, as well as TRADOC Battle Lab and school facilities conducting experimentation efforts focused on Unit of Action DOTMLPF requirements development and demonstration. The LSI will ensure integration and cross leveraging of M&S between appropriate program elements. The LSI will ensure M&S representations are consistent among the Government, LSI, and suppliers. The LSI will ensure that the modeling and simulation capability developed in support of SDD also supports planned future increment processes and functions (e.g., training, post deployment software support, supportability, and interoperability). However, the LSI shall not develop models, simulations or architectural artifacts for which there are effective and efficient alternatives existing within the Government as defined in the SIL Development Plan unless specifically authorized by the Government. Government M&S capabilities include, but are not limited to: OneSAF/OTB, CASTFOREM, Janus, VIC, STORM, OASIS, JDEP, and Virtual Proving Ground. The LSI shall maintain and update Government furnished models and simulations as required. The LSI shall ensure that any models, simulations, architectures, and documentation (including source code) necessary for full functional use, maintenance and upgrade of the M&S developed under this agreement will be accessible through the FCS ACE and become Government property at the end of SDD, in accordance with 3.1.1.7.2. [WBS 1.1.1.4]

3.1.2.1 Force Effectiveness Modeling. The LSI shall coordinate and support, among LSI, Government, Industry sources and User Representatives, Operational Analyses, including modeling of interfaces, designs, and testing as necessary to

evaluate FCS Increment I Force Effectiveness. The LSI shall document and receive approval of Force Effectiveness SoS, FoS, and UA analysis results through an FCS ACE workflow (that includes: HQ TRADOC, TRAC and UAMBL). HQ TRADOC (ICW TRAC and UAMBL) shall approve both plans and results that in any way affect or represent the force effectiveness of either FCS FoS, SoS or the UA. The LSI will develop, provide analysis data in support of TRADOC development of scenarios. The LSI shall coordinate the maintenance and utilization of scenarios in support of Force Effectiveness evaluation and FCS design specific performance evaluations. All Environment (scenario, terrain, and weather) and Behavior (employment and TTP) data sets for analysis will be approved by TRADOC (specifically HQ TRADOC ICW TRAC and UAMBL). Army Materiel Systems Analysis Activity (AMSAA) certifies performance data. The LSI shall develop and maintain a library of scenario results within the FCS ACE for comparison as the design evolves. {A030} [WBS 1.1.1.4.2]

3.1.2.2 SoS and FoS Modeling and Data Description. The LSI shall develop or acquire Government accredited system level modeling and simulation of the following: responsiveness, deployability, agility and versatility, lethality, survivability, sustainability, training, interoperability, availability, vulnerability, and information management. The LSI shall develop simulation federation architecture design alternatives for virtual (realtime) and constructive (non-realtime) SoS simulations. The LSI will coordinate the use of this modeling and simulation capability across SoS and FoS development, testing, and other User Representative support as needed to evaluate FCS performance for selected designs IAW the Simulation Support Plan. [WBS 1.1.1.4.3]

3.1.2.2.1 System Modeling. The LSI shall coordinate and manage the integration of each system's variant models, emulations, and simulations into the SoSIL, other SILs, and test environments to support development and integration with other elements of the SoS and to ensure both SoS and FoS level demonstration and test objectives are met. The LSI will ensure that individual system-to-system interfaces are validated prior to SoS level integrated test and evaluation. [WBS 1.1.1.4.3]

3.1.2.2.2 Distributed Product Description (DPD). The LSI shall develop and maintain a DPD consisting of system/subsystem reference models for each system's variants, including physical, dynamic, behavior, and other models as required to support ongoing analyses and integration tasks, to verify and analyze performance and other considerations with respect to requirements in the SoS specifications, and to ensure commonality and affordability of system elements within the context of the FoS. The LSI, working in conjunction with Army Materiel Systems Analysis Activity (AMSAA) and other AMC organizations, shall provide performance data for FCS systems translated into inputs for the Army operational simulations (e.g., this includes but is not limited to ONE Semi automated forces (ONESaf) Test Bed, CASTFOREM, JANUS). The DPD feature shall be available for Government access via the FCS ACE. [WBS 1.1.1.4.3, 1.1.1.5.2.1]

3.1.2.3 Simulation Development, Verification, Validation, and Accreditation and Support. The LSI will provide and implement the necessary Modeling and Simulations (M&S) processes and standards to coordinate simulations development and utilization in support of FoS design evaluation and SoS performance verification. The LSI shall verify and validate models and simulations used for the FCS design, development, and test and evaluation in compliance DA PAM 5-11 and the LSI developed FCS Simulation Validation and Verification Plan, provide verification/validation data to support Government accreditation of models and simulations, and conduct validation and

verification of simulations that will support a virtual Operational Test prior to IPD. {A031} [WBS 1.1.1.4.3.3]

3.1.3 SoS Integration Laboratory

The LSI shall design, develop, use, and maintain a SoS Integration Laboratory (SoSIL) with data and analysis results accessible through the FCS ACE, IAW the System Integration Laboratory (SIL) development and maintenance plan for the program life cycle, for use in SoS development, integration, and test. The LSI will provide detailed design, interface, and utilization information in separate documents available for Government review and comment. The LSI shall establish system simulators at supplier sites as appropriate and provide a framework and detailed interface definitions to integrate simulators across the dispersed sources/User Representatives, including interfacing with complementary programs hardware, software, and SILs, in both industry and Government, IAW SoS test plans. The LSI shall provide interfaces to the DoD Joint Distributed Engineering Plant for interoperability testing, to the AMC RDECOM Laboratories, and to Army technical test capabilities (specific Government site locations requiring interfaces will be as mutually agreed to between the Government and the LSI). The LSI, shall facilitate through the DREN (Defense Research Engineering Network) a link for RDECOM's Laboratories, ATEC facilities, and TRADOC Battle Labs and schools to the LSI SILs and SoSIL to enable concurrent engineering design development and evaluation with User Representative continuous and consistent requirements determination and development to occur between LSI and Government virtual development and prototyping facilities and to avoid duplication of Government capabilities and events. The LSI shall furnish all emerging performance data to AMSAA for validation. {A032} [WBS 1.1.2.1.4.1]

3.1.4 System of Systems Program Management and Control

The LSI shall provide integrated program management, program control, agreement and subcontracts management, data management, and operations management associated with the LSI overarching management of the FCS SoS activities. The LSI shall conduct subcontract procurement activities in an open competitive environment IAW the Competition Process Plan to allow the selection of the best of industry or Government sources for major FCS products. The LSI shall support PM FCS in program contingency planning (e.g., funding changes, threat evolution, requirements changes). The LSI shall use Integrated Process and Product Development (IPPD) as defined in Article IV of this OTA. The LSI shall report management performance metrics at program management reviews. [WBS 1.1.1.6]

3.1.4.1 Program Management. The LSI shall provide the executive level leadership to implement and control FCS program cost, schedule, and performance activities through Agreement closeout. The LSI will conduct monthly PM FCS program status and management reviews and quarterly FCS SDD reviews to the FCS Board of Directors. The LSI will be the primary focal point to the Government FCS Program Management Office, conducting, coordinating, integrating, and administering all aspects of LSI program management IAW the SDD IMP and IMS and using the FCS Program Plan as guidance, leading to a successful Increment I IPD decision and completion of SDD efforts. The LSI will perform technical level management and administration for the development of SDD products. The LSI shall maintain on the ACE a current FCS roster, identifying members by IPT and by Working Group. [WBS 1.1.1.6.4]

3.1.4.1.1 Program Reviews. The LSI will conduct reviews IAW the FCS Program Plan Summary and IMP/IMS to assess SoS program/technical maturity. [WBS 1.1.1.6.3]

3.1.4.1.2 Program Risk Management. The LSI shall execute program risk management by identifying, assessing, and ensuring mitigation of program risks, with separate identification of risks associated with the SoS COE. Each risk identified shall include an assessment of technical, cost, schedule, and programmatic risks IAW the Risk Management Plan. {A033} [WBS 1.1.1.6.4.2]

3.1.4.1.3 Program Documentation and Briefing Support. The LSI shall coordinate generation of information requirements for IPD and other programmatic support, including providing data for PM FCS program briefings and participating on Government Working IPTs. [WBS 1.1.1.6.3.1]

3.1.4.1.4 Program Protection. The LSI shall provide for security of both classified and unclassified information, data, hardware, and software generated for the program. The LSI shall comply with and provide security procedures and processes to satisfy the security requirements identified in the DD Form-254, which specifies requirements for Top Secret-Special Compartmented Information (TS-SCI), Communications Security (COMSEC), National Industrial Security Program Operating Manual (NISPOM), NISPOM Supplement, NISPOM Overprint, Program Security Guides, Security Classification Guideline, DoD 5100.76-M, and AR-380-381 (Special Access Programs); and the Program Protection Plan. [WBS 1.1.1.6.4.4]

3.1.4.1.5 Data Management. The LSI shall coordinate, monitor, and deliver contractually required data items on the FCS ACE unless otherwise specified. [WBS 1.1.1.6.1.3]

3.1.4.1.6 Integrated Product Team Training. The LSI shall conduct IPT training for Level II and III IPTs within 30 days of their IPT Charter being established. The LSI will establish an IPT training program for individuals who are assigned to an established IPT after the initial training period. The IPT training shall address as a minimum the IPT's charter and structure; conflict resolution; cost, schedule, and performance baselines; Agreement modification process; and common practices.

3.1.4.2 Subcontractor Management. The LSI shall maintain competition throughout the life cycle at the subcontract level IAW the Competition Process Plan. The LSI will ensure utilization of Best Commercial Practices and Best Public-Private Partnerships to reduce cycle times and cost. The LSI will proactively participate in the FCS supply base Make or Buy plans, evaluation criteria, and decision-making processes. The LSI shall manage subcontractor activities to facilitate on-time delivery of quality products consistent with the contractual, cost, technical, and schedule constraints, and ensure coordinated and consistent direction aligned with program objectives. The LSI will coordinate with the suppliers through the LSI Integrated Product Teams (IPTs) and the assigned onsite Major Subcontract Managers (MSM) concerning subcontractors' scopes of work, data deliveries, and funding. The Competition Process Plan shall be available for Government review on the FCS ACE. [WBS 1.1.1.6.1.2]

3.1.4.3 Agreement Management. The LSI shall administer and comply with this Agreement. [WBS 1.1.1.6.1]

3.1.4.3.1 Export & Import Compliance. The LSI shall comply with applicable regulations and statutes regarding exports and imports. [WBS 1.1.1.6.1]

3.1.4.4 Program Management Coordination with Complementary Programs. The LSI shall ensure that the FCS systems developed under this Agreement incorporate the Complementary Programs listed in Attachment 11 needed to fulfill the requirements call out in the SoS Specification; and meet the Army's requirement for successful UA Increment I FOC, including those UE, Legacy, Interim, Joint, International and Multinational interfaces needed to make the UA operational. The LSI shall develop and implement a Complementary Programs Management Control Plan that shall include the process for identifying and managing Complementary Programs. The Plan shall include coordination and interfaces with the UA Supportability Strategy, Fielding Team activities and Material Fielding Agreements prepared by the Supportability IPT and Materiel Fielding sub-IPT. {A038}

3.1.4.4.1 The LSI shall develop a database of the Complementary Programs needed to establish interfaces and meet the FCS UA Increment I Capabilities Specification requirements in accordance with the CDRL. {A061}

3.1.4.4.2 The LSI shall integrate the complementary program schedules into the overall FCS program IMP/IMS. The LSI shall provide System of Systems recommendations for the SDD FCS Increment I phase Complementary Program integration from analysis of IPT inputs and EVMS data.

3.1.4.4.3. The PM FCS, with LSI support, will work with PEO GCS in establishing Memorandums' of Agreement (MOAs) with the Complementary Programs' Government Program Executive Offices (PEOs) and Subordinate MOAs (SMOAs) with the Program Managers of Army Material Command (AMC) item managers, Research Development Engineering Centers (RDECs), and other Government Agencies to help ensure the definition and management of program interfaces between FCS and complementary programs are adequate to effect required FCS performance. The LSI, with PM FCS support to the extent possible, will, concurrent with Government MOA and SMOA development, establish and manage Associate Contractor Agreements (ACAs), as necessary, with the prime contractors, subcontractors, and/or Original Equipment Manufacturers of identified FCS complementary programs. Complementary programs ACAs shall reference detailed Material Fielding Agreements (MFAs) which shall be developed during SDD by the Material Fielding sub-IPT in coordination with the responsible complementary program office personnel.

3.1.4.4.4 The LSI shall identify issues and recommend risk mitigation efforts associated with complementary programs development and integration.

3.1.4.4.5 The development cost of the Complementary Programs technologies required for the successful execution of the FCS SDD Program is not funded through this FCS SDD Agreement, except for the following aspects of specific Complementary Programs:

Complementary Program	Technology	Specific Configuration Changes Dependent upon Completing Current(s) Development	Hardware Required for Prototype Testing
CP387, Ground Standoff Mine Detection System (GSTAMIDS)	Ground Sensors, Procurement Package 12	X	X
CP143, Emitter Mapping (Prophet 2/3)		X	X
CP334, Class IV EO/IR (aka Advanced Electro-Optical / Infrared and ASTAMIDS –(Air Standoff Minefield Detection System)	Air Sensors, Procurement Package 14		X
CP49 Class 4A SIGNITPayload (Tactical SIGINT Payload)			X
CP403, Joint Tactical Radio System (JTRS) Cluster 1	Ground and Air Communications, Procurement Packages 24 and 25		X
CP176 Joint Tactical Radio System (JTRS) Cluster 5			X
CP32, ATIA-M	Manned Ground Vehicle	X	
CP80, CTIA	Manned Ground Vehicle	X	
CP264, One SAF Objective System RDTE	Manned Ground Vehicle	X	
CP184, Lightweight 120mm Cannon for Mounted Combat System	Manned Ground Vehicle (MGV) Mounted Combat System (MCS)	X	

[WBS 1.1.1.6.5, 1.1.2.1.2.11]

3.1.4.5 Business Management. The LSI shall implement the necessary business management functions to ensure all budget and schedule constraints are met during SDD and shall provide necessary schedule, financial, and other program progress reporting. {A039, A040, A041} [WBS 1.1.1.6.2]

3.1.4.5.1 Earned Value Management. The LSI shall implement an earned value management approach to ensure program leadership properly manages the use of LSI and subcontractor resources (dollars and manpower) and meets or exceeds all program schedule and technical requirements. This management system includes applying effective management control systems as set forth in Article IV of this Agreement that provide disciplined cost and schedule and technical performance data in a timely manner for program management decision making. [WBS 1.1.1.6.2]

3.1.4.5.2 Integrated Planning/Scheduling. The LSI shall ensure adequate plans are developed to support successful execution of all work projects and programs. This planning and scheduling shall be reflected in a single Integrated Master Plan (IMP) and Integrated Master Schedule (IMS), including demonstration, maintenance, and analysis of critical path for both prime and subcontracts. {A043} [WBS 1.1.1.6.2]

3.1.4.5.3 Government Furnished Property (GFP) Management. The LSI shall manage GFP in accordance with the terms and conditions of the Agreement. [WBS 1.1.1.6.2]

3.1.4.6 FCS Advanced Collaborative Environment (ACE). The LSI shall provide a well organized, intuitive, and rapid electronic collaborative access to a single integrated source of management information, product information, and technical data IAW the FCS Advanced Collaborative Environment (ACE) Implementation Plan. The LSI shall develop, track and routinely report metrics for the FCS ACE to monitor the utility, the support, and the User Representative satisfaction with the interface. The FCS ACE shall be developed to serve as the primary FCS program management decision support system. In addition, the LSI will develop, maintain, and mature the FCS ACE to serve as the primary means of creating, sharing, reporting, collecting, recording, accessing and approving program information between the LSI, authorized FCS major/critical subcontractors, and authorized U.S. Government personnel connected with the FCS program. The LSI shall develop a Distributed Product Description within the FCS ACE organized by the JTA-A views (Operational, Technical, System, System of System) as described in the Simulation Support Plan. The LSI will provide the FCS ACE application development, deployment, software and hardware support, training, infrastructure and sustainment as required. The LSI shall develop and deploy interfaces to selected Government data environments to include the Army Test Incident Reporting System (ATIRS) and Vision hosted by ATEC, and AARMS hosted by TRADOC. The FCS ACE shall support an emerging Interoperable Modeling and Simulation Environment (IMSE) by serving as the single authoritative source of data, and mapping product information to M&S data. The FCS ACE shall accommodate the exchange of information between the system engineers and User Representatives to enhance LSI design work as envisioned in SMART activities. For validation of design information by AMSAA prior to use in modeling, the LSI shall ensure that the FCS ACE provides a means to logically trace this design information to performance requirements. Nothing in this paragraph (3.1.4.6) shall require the LSI to provide infrastructure to Government sites. {A045, A062} [WBS 1.1.1.5]

3.1.4.7 Production Operations Planning & Product Assurance. The LSI shall develop an Enterprise Production Plan for production transition from SDD to IP and then to Full Rate Production (FRP). This planning will include identification of necessary IP Long Lead items, as well as IP-phase deliverable product quantities. The LSI shall provide product assurance and quality support at all levels of product development and manufacture. The LSI will ensure that production planning supports program objectives, risk mitigation, lean manufacturing, commonality, best practices, breakout opportunities, logistics production, and production readiness, and will ensure related facility planning supports program requirements throughout the program lifecycle. All long lead, initial production, and full rate production planning data will be IAW the Enterprise Production Plan which outlines the strategy, plan, and approach to manage and mitigate risk leading to IP. {A046} [WBS 1.1.1.8]

3.1.4.7.1 Production Operations Planning. The LSI shall provide management, oversight, and support to ensure accomplishment of production development, readiness, and supportability planning throughout the program lifecycle. The LSI shall determine and report on industrial capabilities. The LSI will provide management, oversight, and support to ensure facility development, readiness, and supportability planning meets program requirements for cost, schedule, risk, rate, and technology insertion at all levels

of manufacture for hardware platforms, common subsystems, and major/critical systems/components. {A047} [WBS 1.1.1.8.1, 1.1.1.8.3, 1.1.1.8.4]

3.1.4.7.2 Product Assurance & Quality. The LSI will use its product assurance and quality standards to ensure delivery of hardware platforms, common subsystems, software, and major/critical systems/components that meet program requirements and are available to support testing and demonstration during the SDD phase. [WBS 1.1.1.8.2]

3.1.4.7.3 Production Design Updates. Subject to Article XIII (Modifications), the LSI shall accept hardware and/or software design/code changes made during parallel FCS IP design activities to support ongoing SDD hardware and/or software efforts and incremental development planning. The LSI shall likewise assess completed design/code updates made to hardware and/or software in ongoing SDD efforts for incorporation into the next occurring IP effort. The LSI shall post design changes to the FCS ACE after approval of changes via the FCS change control process IAW the CM Plan. [1.1.1.2.4.1]

3.1.4.8. Home Station Operation Center (HSOC). The LSI shall develop and document the requirements and design for the FCS HSOC. HSOC requirements analysis and design definition activities shall define a networked, in-garrison, battle command planning capability, and interoperability requirements for seamless operations with FCS training and logistics systems. The LSI shall perform the systems engineering, design engineering, site surveys and configuration designs to identify the facility design criteria, the detailed list of equipment, communications connectivity, information protection, war fighter-machine interface, software configuration items, modes of operations, training and supportability provisions and the installation sites. The LSI shall maximize use of FCS embedded hardware and software functionality to satisfy HSOC requirements. The LSI shall also develop a detailed HSOC implementation and procurement plan. The detailed implementation plan shall identify cost, schedules, unique site installation requirements, implementation risk, and recommended facility modification suppliers. The LSI shall coordinate with appropriate customer organizations to assure expectations are being met. {A019}

3.2 FoS ENGINEERING, DEVELOPMENT, AND INTEGRATION

The LSI is responsible for the engineering, development, and integration, including all associated subcontractor performance of FoS units. The LSI shall ensure that a "pit stop engineering" like design approach is an integral and concurrent part of the design activities for the FCS FoS. This design approach includes: generation and application of a "pit stop engineering and maintenance" type efficiencies into the design philosophy and standards of excellence, training of the Integrated Product Design Teams on the "pit stop" design approach and illustrative examples, fabrication and use of scaled and full scale mock-ups, and the conduct of periodic interactive design reviews to apply standards of excellence and gage progress. Using a "pit stop" approach, the LSI will design to minimize logistics activities emphasizing MANPRINT considerations and supportability/maintainability issues in the battlefield environment. This philosophy takes into consideration ease of maintainability at the lowest possible level ensuring that all unit service/repair actions can be performed quickly in the battlefield environment. This philosophy shall also include embedded training to facilitate ease of use by the operator

and maintainer. The LSI shall flow down FCS UA Increment I Capabilities Specification interface, performance, and affordability requirements by ensuring provision for these requirements in the engineering, products, and services required to design, build, procure, and test real or virtual prototypes for the integrated Family of Systems. The LSI shall integrate complementary systems necessary to provide the required capabilities. The LSI will provide for competitive procurement and management of systems and subsystems to ensure best of industry and Government involvement in the development of the FoS elements. [WBS 1.1.2]

3.2.1 FoS Analysis and Integration

The LSI shall conduct performance, design, and affordability analyses/trades, and requirements flow down within the context of the FoS to maintain baseline performance, functional, physical, and logical integration. This includes MANPRINT at both the individual and integrated FoS levels. {A014} [WBS 1.1.2.1]

3.2.1.1 FoS Integration and Trades Analysis. In close coordination with PM FCS and TRADOC, the LSI shall perform performance analyses and trades across the FoS to ensure integrated Manned/Unmanned Platforms/Vehicles (MUPVs) and the supporting C4ISR network meet SoS requirements. The LSI shall analyze requirements/design to balance system operational performance characteristics (e.g., responsiveness, deployability, agility and versatility, lethality, survivability, sustainability, training, interoperability, availability, and vulnerability) to establish required performance and affordability parameters. The LSI will work with TRADOC to ensure trade decisions consider the larger impact of UA and other OF requirements development. Cost as an Independent Variable (CAIV), producibility, testability, and safety shall be included in the analysis/trades process. The LSI shall support efforts with ongoing Government analysis of a SoS supportability model to identify potential trades to reduce logistics footprint and life cycle costs. The LSI shall ensure that changes to performance requirements, such as reliability, availability, maintainability, and testability (RAM-T), resulting from trade studies are approved through the established configuration management process. {A014, A034} [WBS 1.1.2.1.3.1]

3.2.1.2 Technical Baseline Management and Control. The LSI shall perform tasks to manage and control the FoS technical baseline, including definition and conduct of FoS level trade studies, interface control for both software and hardware across the Family of Systems and from FCS FoS to complementary systems. Configuration Management shall be performed IAW with SoS CM guidance, including CM custodial responsibility for FCS to complementary programs ICDs as defined in complementary programs Government MOAs. The LSI shall create and maintain the Master Equipment List (MEL) and FoS architectures and specifications. The LSI shall manage and maintain a performance baseline of system and subsystem attributes necessary for SoS/FoS analysis, modeling, and simulation, consistent with the Army FCS UA Systems Book. {A011, A014, A018, A034} [WBS 1.1.2.1.3]

3.2.2 Distributed Network Development and Integration

The LSI shall define, design, procure, build, integrate, and test a Networked Battle Command System across the FoS IAW the Software Development Plan (SDP), SoS specifications, C4I SP, TEMP, and applicable segment and subsystem specifications.

The LSI will ensure the FCS ACE supports movement of data in and out of SILs to facilitate this Networked Battle Command/C4ISR capability.{A017, A037} [WBS 1.1.2.2]

3.2.2.1 Distributed Network Analysis and Integration. The LSI shall conduct performance and design analyses including all FoS elements with the integrated Networked Battle Command/C4ISR capability to maintain baseline performance, functional, and logical integration. The LSI will perform network performance analyses and trade studies, develop the network configuration, and manage the Distributed Network architectures and requirements including the interfaces to systems and platforms external to FCS and internal FoS system-to-system interfaces. {A006, A009, A018 } [WBS 1.1.2.2.2]

3.2.2.2 Distributed Network SIL. The LSI shall develop, utilize, and maintain the Distributed Network SIL to support analysis and testing of network functions IAW the SIL development plan. The DREN will use the actual Networked Battle Command system being developed to the maximum extent possible. {A032} [WBS 1.1.2.1.4.5]

3.2.2.2.1 System Development, Integration and Simulation. The LSI shall use Networked Battle Command/C4ISR element emulation, simulation, and hardware in the loop techniques to design, develop and integrate the diverse components of the integrated Networked Battle Command/C4ISR system and to verify that the proposed design meets the FCS SoS and Networked Battle Command/C4ISR Segment Specifications. [WBS 1.1.2.1.4.5, 1.1.2.2.2.4]

3.2.2.3 System of Systems Common Operating Environment. The LSI shall define, develop, procure, fabricate, integrate, and test the System of Systems Common Operating Environment (SoS COE) information management backbone and application interface structure for implementation of the distributed network. The LSI shall develop the information assurance applications and services that are common across the network, and perform information assurance risk assessments and mitigation. The LSI shall lead in an Application Program Interface working group consisting of itself, industry partners, and Government as co-lead to address and resolve all SoS COE services and interfaces. The LSI shall define and manage the implementation and configuration, including the interfaces of the SoS COE. The LSI shall develop a SoSCOE subcomponent migration plan that addresses the targeted technology for integration into the incremental verisons of FCS. The LSI shall establish a performance evaluation matrix to support procurement and testing of the SoS COE components. The LSI shall integrate and test the SoS COE system with platform/vehicle systems/subsystems. The LSI shall develop or acquire, and deliver (via the FCS ACE) all databases, data sets, and software required to operate the SOS COE, to include ontologies and task integration networks, and make the SoS COE fully functional under operating conditions. {A007, A018 } [WBS 1.1.2.2.4

3.2.2.4 Communication. The LSI shall define, develop, procure, fabricate, integrate, and test the networked communications. {A007, A018 } [WBS 1.1.2.2.6]

3.2.2.5 Intelligence, Surveillance and Reconnaissance (ISR). The LSI shall define, develop, procure, fabricate, integrate, and test the distributed ISR elements and application software, including soldier interfaces, common sensor interface, Level 1 fusion with organic and non-organic sensor feeds, and Sensor Data Management for the FCS. The LSI shall develop or acquire, and deliver (via the FCS ACE) all databases and

data sets required to operate the aforementioned software, to include all parameters employed by target recognition and fusion algorithms, and make it fully functional under operating conditions. {A007, A018 } [WBS 1.1.2.2.5]

3.2.2.6 Command and Control. The LSI shall define, develop, procure, fabricate, integrate, and test the distributed command and control application software, including soldier interfaces, mission planning, situational awareness and understanding, and battle management for the FCS UA. The LSI shall develop or acquire, and deliver all databases and data sets needed to operate the aforementioned software, to include default icons, topographic and cartographic data, and make it fully functional under operating conditions. {A007, A018 } [WBS 1.1.2.2.3]

3.2.2.7 Training Applications. The LSI shall define, develop, procure, fabricate, integrate, and test the common and unique training applications for the Distributed Network. {A018 } [WBS 1.1.2.2.10]

3.2.2.8 Supportability Applications. The LSI shall define, develop, procure, fabricate, integrate, and test an integrated Logistics Decision Support System (LDSS), Interactive Electronic Technical Manuals (IETMs), and a Platform Soldier-Mission Readiness System (PS-MRS) to support each MUPV system type. The LSI will define and recommend the interfaces necessary to incorporate appropriate in-lieu-of systems supportability requirements and information interchange applications IAW the Supportability Strategy. {A018 } [WBS 1.1.2.2.11]

3.2.2.9 Network Integration, Test, and Evaluation. Using the Distributed Network SIL, the LSI shall integrate network supporting applications onto the network information management backbone and evaluate their individual and integrated network performance IAW the SoS/FoS distributed network requirements. The LSI generates the formal test plans (including plans for utilization of the Army's Central Test Support Facility) and procedures for verifying network performance against requirements. The LSI will execute the network level verification tests and analyze/report the results. The LSI shall identify and implement corrective actions and perform retests as required. {A042, A048} [WBS 1.1.2.3.4]

3.2.2.10 Distributed Network Site Representation. The LSI shall provide onsite personnel distributed at C4ISR development sites as listed in Agreement Attachment 7 – Office Space and Administrative Support. These personnel shall coordinate the systems and technical architectural views with the operational views, coordinate and oversee sensor R&D and sensor integration efforts being performed in coordination with PM NV/RSTA and NVESD, and perform liaison with PM FCS, PEO C3T, PEO IEW&S and RDEC, to coordinate complementary programs within the PEOs, coordinate the procurement of "special access" systems (DCGS-A, SAR/MTI and UGS) being managed/procured by Ft Monmouth Program Management offices.

3.2.3 Manned/Unmanned Platform/Vehicle (MUPV) System Development and Integration

The LSI shall define and procure, from best of industry and Government sources per the SDD Competition Process Plan, the design, development, fabrication, integration, assembly, checkout, and verification test and evaluation of virtual and real prototypes for each MUPV system. The LSI shall ensure the design of each primary MUPV system

(and applicable variants) meets the requirements provided in the appropriate systems specifications. The LSI shall conduct analyses that balance life cycle cost considerations with requirements in the FCS UA Increment I Capabilities Specification while providing an open architecture approach to maintain commonality across applicable subsystems. The LSI will manage the selected industry sources to ensure FCS FoS level requirements are met and that interfaces between MUPV systems, Networked Battle Command/C4ISR networking nodes, and supportability and training systems are met. The LSI shall perform any required system-to-system integration necessary to validate individual system interfaces prior to SoS level test and evaluation. {A014, A034} [WBS 1.1.2.3, 1.1.2.3.4]

3.2.3.1 MUPV System Analysis and Integration. The LSI shall conduct performance and design analyses in the context of the FoS MUPV systems to maintain baseline performance, functional, and logical integration. The LSI shall perform system performance analyses and trade studies. The LSI shall establish and manage the system architectures and requirements including interfaces. {A006, A014, A034} [WBS 1.1.2.3.1, 1.1.2.3.4]

3.2.3.2 System Integration Laboratories. The LSI shall define, develop, procure, fabricate, integrate, utilize, and maintain SILs as required to support analysis and testing of MUPV system/subsystem functions IAW the SIL development plan. {A032} [WBS 1.1.2.1.4.2, 1.1.2.1.4.3]

3.2.3.3 MUPV Subsystems Development and Test. The LSI shall define, develop, procure, fabricate, integrate, support, and test MUPV subsystems. [WBS 1.1.2.3.2, 1.1.2.3.3]

3.2.3.3.1 Analysis and Integration. The LSI shall conduct analyses evaluating life cycle affordability considerations with requirements in the FCS UA Increment I Capabilities Specification to ensure affordability of subsystem elements. The LSI shall identify, develop and procure subsystems and common subsystems that result in Life Cycle Cost savings commensurate with ongoing developments, competitive procurements, supportability, schedule, future production, and performance considerations. The LSI shall ensure subsystem designs account for integration with their FoS end item systems to meet system level performance requirements. {A014, A034} [WBS 1.1.2.3.2, 1.1.2.3.3]

3.2.3.3.2 Design and Development. The LSI, based on the analyses of 3.2.3.3.1, shall procure prototype common and mission equipment hardware/software end items. The LSI shall develop preliminary and detailed design packages for the integrated common and mission equipment end items, focused on a producible, reliable, sustainable, maintainable, affordable design. The LSI shall define, document, and manage subsystem interfaces and maintain an open architecture design. The LSI shall obtain subsystem prototypes, models, and/or simulations as necessary to support development as well as the tests and demonstrations of 3.2.3.3.3. The LSI shall obtain system models and data necessary to support Government and LSI analysis, and training and decision support applications. The LSI shall procure adequate test hardware to enable required testing to be conducted prior to IPD. {A007, A018 } [WBS 1.1.2.3.2, 1.1.2.3.3]

3.2.3.3.3 Prototype, Modeling, and Simulation Testing and Demonstration. The LSI shall validate defined functionality and performance characteristics of common and mission equipment subsystem prototypes through tests commensurate with specification requirements. In the event a physical prototype is not required for SDD, the LSI shall conduct appropriate functional and performance demonstration through modeling and simulation of the end item to validate functionality and performance requirements. The LSI will ensure the FCS ACE supports movement of data in and out of SILs to facilitate development of the MUPV control software and system. [WBS 1.1.2.3.2, 1.1.2.3.3]

3.2.3.4 MUPV System Integration, Test, and Evaluation. The LSI shall develop and demonstrate a detailed production ready design for each MUPV system variant identified in support of the FCS Increment I capability, including the use of models, emulations, and where necessary, emulated hardware or software as required to provide the necessary data/demonstrations needed to verify readiness for IP. The LSI shall ensure functional, physical, and logical integration of each unique system developed including the distributed network, common equipment, and mission equipment. The LSI shall ensure the system performs within integrated (system-to-system) FoS specification requirements through verification of defined functionality and performance characteristics. To the extent practical, the LSI will ensure prototypes can be refurbished for future testing. [WBS 1.1.2.3.4]

3.2.3.5 Training Applications. The LSI shall define, develop, procure, fabricate, integrate, support, and test the common and unique training applications for the MUPV systems. {A018} [WBS 1.1.2.2.10]

3.2.4 Supportability

The LSI shall develop and document integrated "factory to foxhole" management, products, and services required to design, develop, assemble, integrate, field, sustain and upgrade (through spiral development) and test the supportability processes and supporting automated applications within the FCS SoS. The LSI shall prepare a UA Supportability Strategy that includes an end-to-end automated sustainment capability that integrates supply chain requirements of the UA, UE, and Enterprise Army. The LSI shall perform analyses to aid in life cycle product support decision making to include developing and implementing metrics, performance standards, warranty requirements, and incentives. The LSI shall include supportability product design/interfaces as required to address Army supportability implementation beyond the FoS and/or SoS levels for consistency with the existing and emerging U.S. Army supportability infrastructure. The LSI shall implement supportability architectures and requirements IAW the FCS UA Objective Capabilities Specification and UA Supportability Strategy during the design, development, fabrication, and test of MUPVsystems to achieve the transportability, deployability, and operational availability goals, to reduce life cycle sustainment burdens, and to establish the basis for Performance Based Logistics (PBL). The LSI shall define the Performance Based Logistics (PBL) business processes, develop the PBL performance metrics and standards, design the data management and analysis process, and update the PBL concept for sustainment in accordance with the UA Supportability Strategy. The LSI shall conduct analyses and provide recommendations on the implementation of PBL that considers public, private, and partnership capabilities, to include industrial base considerations. The LSI shall perform the duties of the Product Support Integrator (PSI) for FCS during SDD (e.g., logistics planning, modeling and simulations in order to mitigate risk and verify the reduced FCS logistics burden and

increased readiness and availability). The LSI shall integrate the products and services generated by the Product Support Provider (PSP), the LSI or its subcontractors, in order to meet SoS requirements for the UA. The LSI shall provide results of PBL implementation analyses at each major Increment I SDD program review. {A025, A027} [WBS 1.1.2.4]

3.2.4.1 Logistics Analysis and Engineering. The LSI shall utilize a progressive assurance approach to plan, implement, and manage a supportability and RAM-T program IAW the FCS UA Increment I Capabilities Specification and Supportability Strategy. The LSI shall ensure that the suppliers provide progressive assurance that all RAM-T requirements (hardware and software) are satisfied. LSI shall ensure that suppliers use best commercial engineering approaches to design RAM-T into the platforms and systems early in the design process. The LSI shall establish supportability metrics necessary to gauge the maturation and completion of supportability designs. Supportability metrics shall be tracked to performance under this agreement and shall include as a minimum Operational, Availability, Operations and Support Costs and Footprints. The LSI shall perform logistics support analyses, power management analysis, and engineering design analyses for MUPV systems, common and unique support equipment, and source and level of repair for SoS implementation. The LSI shall plan, develop, implement, coordinate, verify, and validate technical operational and maintenance procedures for each system. The LSI shall develop prototype embedded Class V Interactive Electronic Technical Manuals (IETMs) to support each SDD system type. The LSI shall conduct reliability growth testing, environmental stress screening, and other reliability assurance efforts as appropriate. The LSI shall provide results of RAM-T analyses at each major Increment I SDD program review. {A026, A049} [WBS 1.1.2.1.4.2, 1.1.2.4.2]

3.2.4.2 Logistics Product Integration. The LSI shall integrate supportability products into the SoS elements including diagnostics/prognostics functions. The LSI shall conduct Maneuver Sustainment analyses in accordance with the FCS Supportability Strategy. The LSI shall define Maneuver Sustainment functions common to applicable variants and mission unique products for each variant. The LSI shall identify medical items for integration into medical and combat vehicles. The LSI shall conduct logistics technical reviews at the system, vehicle, and component levels. {A025} [WBS 1.1.2.4.3]

3.2.4.2.1 *Supportability Strategy Development.* The Supportability Strategy shall define the planning, programming, and execution of the support program that meets operational support performance requirements in the most cost effective manner over the total life cycle of the FCS SoS. The supportability strategy facilitates development and integration of the following key integrated logistics support tenants: logistics management information; transportability and deployability; maintenance operations; manpower and personnel; product support management - including performance based logistics and ammunition; facilities; technical data; training and training support; fielding planning; computer resource support and reliability, availability and maintainability. The Supportability Strategy will include all system and equipment in the UA. (A025)

3.2.4.3 Supportability Data Management. The LSI shall develop and provide a database management system that provides access to complete life cycle data for logistics support, including access to supplier data through the FCS ACE. The database

shall include performance specification baselines for future FCS procurements contained in the DPD. The LSI shall ensure data requirements are mapped to sources (to include the diagnostic/prognostic devices utilized in FCS) and cross-walked from there to the supporting applications to include PS-MRS, LDSS, the IETMs, etc. {A051} [WBS 1.1.2.4.3]

3.2.4.4 Supply Chain Management (SCM). Within the construct of PBL, the LSI shall develop and implement a plan, including access to supplier data through the FCS ACE, for the collection of data supporting the integration of all SCM functions associated with FCS systems to ensure that they meet supportability related performance requirements. {A052} [WBS 1.1.2.4.3]

3.2.4.5 Supportability Test and Demonstration. The LSI shall conduct equipment testing and demonstrations for SoS and FoS supportability performance verification. The LSI shall validate Maneuver Sustainment, PBL, and other applicable support concepts during testing and demonstrations. The LSI shall ensure sensor collection of data for logistics decision support system software is adequate to support logistics modeling verification and validation efforts as well as operational PBL. {A026} [WBS 1.1.2.4.1]

3.2.4.6 Fielding. The LSI shall field all FCS Increment I SDD equipment and coordinate the fielding of all other UA systems to meet testing and training requirements. The LSI shall develop plans to support the fielding of Increment I FCS into the UA including IOC and FOC. The LSI shall conduct fielding analyses and recommend the most suitable fielding methodology for the Increment I of FCS into the UA. {A050} [WBS 1.1.2.4.4]

3.2.5 Training Systems

The LSI shall assist TRADOC in their UA Training Developments responsibilities by providing horizontal integration with FCS SDD work to TRADOC's larger UA and OF developments work. The LSI shall provide the management plans, products, verification and validation, and services required to ensure design, development, fabrication, integration, support and test of a UA training program and a FCS FoS and SoS training system capable of meeting FCS UA Increment I Capabilities Specification and System Training Plan (STRAP) objectives consistent with the Army's concept for OF and UA training. The LSI shall perform training management and planning in accordance with established policy, processes, and procedures. The LSI shall develop, document, and allocate an integrated set of training functional, performance, test, and affordability requirements. The LSI shall design the FCS training system as an integral part of the overall SoS design to meet Increment I requirements and provide for future incremental upgrades. The LSI shall develop and deliver a Training Management Plan that addresses the full range of training support products, architectures, infrastructures, and training development, and the management tools required to provide Increment I capabilities in the institution, operational, unit, and self development domains IAW ATIAS. The LSI shall identify, assess, and mitigate training risks as part of the SDD risk reduction effort and coordinate these risk reduction efforts with the SoS Engineering Technical Risk Manager. The LSI will support the distributed network and platform product development efforts as required to implement/include embedded and standalone training designs within FoS products as necessary to ensure these designs meet SoS specification requirements. The LSI shall establish training product design/interfaces to

ensure effective integration with the Army's larger UA and OF training concept and infrastructure IAW the LSI's SoS Architecture. {A005, A053} [WBS 1.1.2.5]

3.2.5.1 FCS Training Systems Engineering. The LSI will ensure training engineering design analyses are performed at FCS SoS and FoS levels and integrated with TRADOC's larger UA training developments, taking into consideration training for individual, maintenance, crew, unit, leader, and staff teams. The LSI shall determine and document training materials not limited to: operator, maintainer, Training Aids, Devices, Simulators, Simulations (TADSS). The LSI will assist TRADOC in their role in developing doctrine, tactics, and training products, as required to support the UA O&O and the Army's OF training concept under development, to include interoperability with complementary programs. The LSI shall perform individual system training analysis and will assist TRADOC in conducting collective task analyses IAW TRADOC Regulation 350-70, Systems Approach to Training Management and Processes, TRADOC Pamphlet 350-70-2, Multimedia Courseware Development Guide, and Advanced Distributed Learning Shareable Content Object Reference Model. The LSI shall develop and implement training architectures and requirements IAW the FCS UA Increment I Capabilities Specification. The LSI shall provide configuration and data management for FCS training products. The LSI shall perform system training analysis to identify potential common components and reuse between embedded training, mission planning, mission rehearsal, as well as other system hardware and software. {A014, A034, A054} [WBS 1.1.2.5.1]

3.2.5.2 Training Systems Integration Laboratory. In support of the SoSIL, the LSI shall develop, utilize, and maintain a training SIL as required to support analysis and testing of training functions and ensure this SIL provides integrated functionality with the SoSIL for both SoS and FoS interfaces. {A032} [WBS 1.1.2.1.4.6]

3.2.5.3 Training Product Development/Integration. The LSI shall, IAW TRADOC Regulation 350-70, Systems Approach to Training Management and Processes, develop and integrate FCS training products for UA training developments and FCS SoS and FoS elements, including simulator development, manned systems training, unmanned systems training, training facilities, training support packages, and system training plan. The LSI shall provide FCS FoS and SoS training performance analysis and system training data through the integrated UA level. {A055, A056} [WBS 1.1.2.5.2, 1.1.2.5.2.5]

3.2.5.4 Developmental and Operational Test – Training. The LSI shall provide training for Developmental and Operational Testing for FoS and SoS performance verification. The LSI shall coordinate with AMC and TRADOC to define and develop training plans and products to be provided in support of test and evaluation activities. {A053, A054, A055} [WBS 1.1.2.5, 1.1.3.2]

3.2.5.5 Training Facilities. The LSI shall assess, survey, recommend modifications or additions, and document the analysis of training facilities, support equipment, training articles, threat training systems and simulators, and simulation models/test beds, training areas, and ranges as necessary to support the training of UA equipped with FCS. {A057} [WBS 1.1.2.5.2.4]

3.2.5.6 Tactical Engagement Simulation System. The LSI shall conduct a trade study in coordination with TRADOC to review the range of options available for using a Tactical Engagement Simulation System (TESS). The LSI will use the results of this

study to develop short and long range plans to employ TESS within the UA. The LSI will ensure that TESS is fully interoperable with existing Combat Training Centers (CTC) and legacy training systems. {A014, A034} [WBS 1.1.2.5.1, 1.1.2.5.1.1]

3.2.5.7 Common Components/Services. The LSI shall conduct trade studies to review the use and implementation of FCS components/services in FCS applications (e.g., Network Battle Command C4ISR, M&S, Training, etc.), FCS common components, and FCS Training common components. The LSI will use the results of these studiesto develop short and long range plans for the FCS equipped UA and as a guide for implementation. {A014, A034} [WBS 1.1.2.5.1, 1.1.2.5.1.1]

3.2.5.8 Training Site Representation. The LSI shall provide onsite personnel distributed as listed in Agreement Attachment 7 – Office Space and Administrative Support. These personnel shall coordinate with the Army G-1 and UAMBL in the refinement of Manpower, Personnel and Training artifacts (MPT, TAD, MER, BOIPFD/QQPRI).

3.3 SoS INTEGRATED TEST & EVALUATION

The LSI shall perform FCS FoS integrated test and evaluation in the SoS environment to verify SoS and system level performance in support of the IP decision process. This verification shall be in accordance with the FCS UA Increment I Capabilities Specification requirements allocated to the SDD Increment I design and include verification of interoperability requirements and interfaces IAW approved interface control documents. This activity includes facilities, resources, test phases, planning, execution, evaluation, and reporting as described below and IAW the TEMP. The LSI shall ensure a contiguous thread of M&S support throughout testing. M&S includes representations of components, systems, forces (UA, UE, Joint, and opposing), and threats; scenario generators; environmental simulators; synthetic stimuli; and event controllers. The LSI will ensure M&S serves as input or nodes on the SILs and SoSIL and wraparounds or players in Limited User Test (LUT), Follow-on Development Test and Evaluation (FDTE), and the Initial Operational Test (IOT) implementing the Standard Simulator Database (SSDB) Interchange Format (SIF). The LSI will use M&S to augment Technical testing where available and appropriate. Where Government M&S are not available or appropriate, the LSI shall procure or develop applicable M&S (see 3.1.2). The LSI shall develop and supply all validation and verification data and artifacts necessary for ATEC accreditation before any M&S is used to support testing. All Environment (scenario, terrain, and weather) and Behavior (employment and TTP) data sets for analysis will be approved by TRADOC (specifically HQ TRADOC ICW TRAC and UAMBL). Army Materiel Systems Analysis Activity (AMSAA) certifies performance data. [WBS 1.1.3]

3.3.1 Test Planning and Execution

The LSI shall define and manage the phases of technical testing required to support the FCS Incremental Development Plan and ATEC System Evaluation. The LSI will participate in the combined test planning activities and provide the necessary test planning, test design, test integration, test execution, test assessment, test reporting, and test analysis. The LSI shall provide and/or obtain the necessary test resources/facilities, including use of modeling and simulation capabilities as discussed in 3.1.2, 3.1.3, and 3.3, to perform tests. The LSI shall develop and update the Integrated

Test and Evaluation Plan (ITEP) and provide updates for the Test and Evaluation Master Plan (TEMP) which describe the overall combined testing strategy and definition of the spectrum of integrated simulation, test, and evaluation activities associated with FCS. {A058} [WBS 1.1.3.1, 1.1.3.2]

3.3.1.1 Test Planning and Design. The LSI shall ensure adequate test planning and testing to support an iterative design and test process using the FCS ACE to distribute test data results IAW the ITEP and the TEMP. The LSI shall define the specific test phases corresponding to FoS development schedules with staggering/overlapping of testing to accommodate the different levels and parallelism of development planned, e.g., prototype vs. modeling/simulation, subsystems vs. integrated system capability. The LSI shall use these test phase definitions in the development of test plans/scheduling/coordination and test designs for the testing to be performed. The LSI shall plan pre-field and field tests, and plan integrated mission tests. The LSI will ensure test plan consistency with the TEMP and support the Army's Combined Test Organization to ensure close coordination with the Army test community. {A058} [WBS 1.1.3.2.1]

3.3.1.2 Test Integration and Execution. The LSI shall prepare test procedures and range documentation. The LSI shall execute SoS and system testing in accordance with the test plans and designs of 3.3.1.1 and the incremental integration process as FoS capabilities become available for test. [WBS 1.1.3.2.2]

3.3.1.2.1 Test Support Package (TSP). The LSI shall provide and administer TSPs capable of sustaining test and evaluation efforts. The TSPs shall be delivered to the appropriate test sites at least 30-days prior to start of each test. The LSI shall conduct maintenance and provide all repair parts, tools, test fixtures, and facilities except those the Government chooses to provide in response to the System Support Package Component List (SSPCL). {A059} [WBS 1.1.2.4.1.3]

3.3.1.2.2 Logistics Testing. The LSI shall provide technical analyses and operations support to all logistics demonstrations and simulations, maintenance training, and system verification, validation, and integration tests to ensure that requirements for RAM-T and supportability are met. [WBS 1.1.2.4.1.4]

3.3.1.2.3 Ballistic Survivability. The LSI shall support Ballistic Survivability testing by providing test planning, test operations, assistance in damage assessment, repair assistance, and procedures review. [WBS 1.1.3.2.1, 1.1.3.2.2]

3.3.1.3 Test Assessment and Reporting. The LSI shall perform requirements analysis, prepare test assessment and data collection plans, and prepare test assessment/data/corrective action reports. The LSI shall prepare the test resources validation/verification plan. The LSI shall establish a test site data management center, collect/reduce/control test data, and perform data authentication. The LSI shall assess the adequacy and quality of tests performed and report raw results of the testing at the conclusion of each test executed. The LSI will reschedule testing where such assessment warrants. The LSI shall provide the Government all requested data from component, system, and SoS level testing in a form usable by the Army Test and Evaluation Command (ATEC) to support Government independent technical and operational evaluation. The LSI shall develop and maintain a Data Acquisition System accessible through the FCS ACE to support data collection efforts during test operations.

Data shall include reports that document significant test incidents in standard Army Test Incident Report System (ATIRS) format and shall be entered into the ATIRS. The LSI will allow and support Government observation and validation of component, system, and SoS testing. {A060} [WBS 1.1.3.2.3]

3.3.1.4 Test Analysis. The LSI shall provide data and analysis of test results to demonstrate that performance requirements are met or an appropriate performance growth model that demonstrates performance progression. The LSI shall jointly review shortfalls with the Government to determine if design changes and/or retesting is required. {A060} [WBS 1.1.3.2.4]

3.3.1.5 Failure Reporting Analysis and Corrective Action System (FRACAS). The LSI shall establish and manage a FRACAS process to support resolution of test incidents through the corrective action process. The LSI shall write test incident reports for tests conducted at non-Government test locations and provide these data to the Government. The LSI will provide data for reliability and maintainability scoring conferences. {A060} [WBS 1.1.3.2.4]

3.3.2 Test Facilities and Resources

The LSI will partner with the Army to define applicable Government test facilities. The LSI shall plan and conduct testing to take full advantage of the existing investment in DoD ranges, facilities, and other resources (e.g., Aberdeen Proving Ground (APG), Yuma Proving Ground (YPG)) wherever practical. The LSI shall supplement the use of existing facilities with the design, development, modification, implementation, integration, and documentation of other required test facilities, support equipment, test articles, threat systems and simulators, test targets/expendables, and simulation models/test beds as necessary to perform the tests defined in 3.3.1.1. The LSI shall maintain the LSI's facilities and resources that are required to support the combined Development Test and Evaluation (DT&E) and Operational Test and Evaluation (OT&E) objectives, to include the equipment needed to perform software maintenance and modification. The LSI shall conduct validation and verification assessments of test facilities/support equipment. [WBS 1.1.3.2.5]

3.3.2.1 Test Support Equipment. The LSI shall design, develop, procure, utilize, and maintain test support equipment for use in the SoSIL. [WBS 1.1.3.2.5.2]

3.3.3 Operational/User Test Support

The LSI shall provide for Government Operational/User testing the equipment operations support, planning, maintenance, and training necessary to execute and complete Government Operational/User testing. This also includes participation in the planning, conduct, and monitoring of Battle Lab exercises. The LSI shall obtain approval from TRADOC prior to integrating doctrine and tactics training during tests. The LSI shall provide training to the Army for Army use of the SoSIL for OT&E. The LSI will participate in writing operational test plans and reports and participate in Operational Test Readiness Reviews (OTRRs) and ATEC System Team (AST) meetings. The LSI will provide data and information to support the Government in writing of: Test Incident Reports for tests performed at ATEC test sites, collection and reduction of data using FCS specific instrumentation and data collection, and gathering data and information required for the issuance of Safety Releases. The LSI shall participate in hardware and

software testing and provide data as necessary to satisfy safety concerns and hazards that have been defined, including SIL as well as field tests. [WBS 1.1.3.2.5.6]

DELIVERABLES LIST (HARDWARE)

At completion all residual Government property (e.g. prototype hardware and software, test hardware and software, software Integration Laboratory hardware/software, etc.) used in the performance of this Agreement will be dispositioned to the Government in accordance with FAR Part 45 unless specified elsewhere in the Agreement.

CONTRACT DATA REQUIREMENTS LIST					
A. Contract Line Item No. 0001	B. Exhibit Attachment 2		C. Category Other		
D. System/Item. Future Combat Systems			E. Agreement/PR NO. DAAE07-03-9-F001	F. Contractor The Boeing Company	
1. Data Item No. A001	2. Title of Data Item: Miscellaneous Program Management Data		3. Subtitle: System Engineering Management Plan Updates		
4. Authority (Data Acquisition Document No.) See remarks.		5. Agreement Reference Attachment 1, paragraph 3.1.1		6. Requiring Office SFAE-GCS-FCS	
7. Transmtl Mthd ACE	8. APP Code A	9. Frequency See Remarks	10. As of Date See Remarks	11. Date of First Submission See Remarks	12. Date of Subsequent Submission See Remarks
13. REMARKS 1. Updates to the SEMP (D786-10007-1) as required to maintain document to current LSI engineering management practices. 2. Maintain consistency with D786-10007-1for format and content. 3. SEMP updates shall be delivered to the FCS ACE and approved via the ACE workflow process. 4. Government will provide comments within 30 days of notice that data has been posted to ACE.

13. REMARKS

1. Document the results and operational lessons learned in accordance with SOW paragraphs 3.1.1.1 and 3.1.1.1.1 Objective Force Requirements and Force Integration & Analysis,accumulated from assisting TRADOC/UAMBL but not limited to, the following areas:

   a. [DOCTRINE] UA doctrine requirements integration; refining UA operational concepts to develop UA and FCS doctrinal products; initiation of UA field manuals; identification of new required UA-specific publications; development of program directives for UA doctrinal publications; defining proponent, select combined arms, multi-service, and as directed, multi-national FCS doctrine implications; standardization of UA doctrine that crosses functional lines; review of other doctrine for accuracy and horizontal integration; quality control of UA publications; periodic review of of publications for consistency/impact to FCS SDD and UA developmental work.
   b. [ORGANIZATION] Refining organizational concepts in the UA O&O Plan; development of personnel requirements; determining major FCS equipment requirements; determining the breakout of UA organizational elements; summarizing relevant information for equipment assignment, mobility, and concept of operations; obtaining approval for the UA Table of Organization and Equipment (TOE); developing the FCS FoS Basis of Issue Plan; recommending new manpower requirements criteria; Total Army Analysis process.
   c. [TRAINING] Developing individual training plans, course administrative data, and programs of instruction; developing training systems (training management plan, products, verification/validation, and services required to design, develop, assemble, integrate, and test a UA training plan/program); developing, utilizing, and maintaining a training system laboratory to support analysis and testing of training functions; integrating training products based on STRAP into the FoS elements; providing SoS performance analysis for training at the integrated SoS level; FoS and SoS performance verification test and demonstration for training.
   d. [MATERIEL] Refining materiel requirements documents; refinement of FCS ORD/Capabilities Development Document and KPPs for Milestone C; refinement of STRAP; refinement of Critical Operational Issues and Criteria in TEMP; refinement of FCS STAR; SMART process.
   e. [LEADER] Defining the Leader Development Support System and requirements.
   f. [PERSONNEL] Ensuring the Soldier is central in the development and design of the FCS FoS and that all personnel requirements/documentation, such as the Manpower Estimate Report, properly reflect TRADOC's requirements. Intent is to reduce the level of human specification.
   g. [FACILITIES] Determining new or unique facilities requirements to support FCS fielding and maintenance.
   h. [UE and OF BATTLE COMMAND REQUIREMENTS INTEGRATION] documentation of UE and OF Networked Battle Command development impact on FCS design.
   i. [OF MANEUVER SUPPORT REQUIREMENTS INTEGRATION] Documenting emerging OF Maneuver Support requirements impact on FCS design.
   j. [OF MANEUVER SUSTAINMENT REQUIREMENTS INTEGRATION] Document emerging OF Maneuver Sustainment requirements impact on FCS design.

(See page 3 for continuation.

CONTRACT DATA REQUIREMENTS LIST			
A. Contract Line Item No. 0001	B. Exhibit Attachment 2	C. Category Other	
D. System/Item. Future Combat Systems		E. Agreement/PR NO. DAAE07-03-9-F001	F. Contractor The Boeing Company
1. Data Item No. A002 (cont)	2. Title of Data Item: Technical Report - Study / Services	3. Subtitle: TRADOC Objective Force Integration Support Documentation	

13. REMARKS (cont)

2. This submittal may consist of multiple reports based on the individual items listed above. Each report shall be a standalone document with a dash number assigned to the Data Item number (i.e., A002-n, where n starts with 1) to distinguish one subject matter report from another. Assignment of the dash numbers shall be arbitrary but shall be sequentially assigned and controlled through LSI data management. A list of the dash number assignments shall be available under ACE using A002-0 as the data item number.

3. Report may be in contractor format using block 4 as a guide.

4. Report shall be delivered via the FCS ACE and approved via the ACE workflow process which includes TRADOC.

CONTRACT DATA REQUIREMENTS LIST					
A. Contract Line Item No. 0001	B. Exhibit Attachment 2		C. Category Other		
System/Item. Future Combat Systems			Agreement/PR NO. DAAE07-03-9-F001		F. Contractor The Boeing Company
1. Data Item No. A003	2. Title of Data Item: Engineering Change Proposal/Notice of Revision		3. Subtitle: FCS UA Increment I Capabilities Specification Updates		
4. Authority (Data Acquisition Document No.) See remarks		5. Agreement Reference Attachment 1, 3.1.1.1.1, 3.1.1.3.2			6. Requiring Office SFAE-GCS-FCS
7. Transmtl Mthd ACE	8. APP Code A	9. Frequency See Remarks	10. As of Date See Remarks	11. Date of First Submission SoSRR	12. Date of Subsequent Submission As required

13. REMARKS

1. Provide updates to the FCS UA Increment I Capabilities Specification (S786-50000) as required by Configuration Control Board (CCB) action.

2. FCS UA Increment I Capabilities Specification updates shall be consistent with S786-50000.

3. Each ECP shall be delivered to the FCS ACE and approved via the CCB process.

4. Resulting NORs shall be posted to the FCS ACE.

5. A minimum of 90% of all JROC ORD requirement discrepancies will be resolved prior to the SRR. Any remaining discrepancies (beyond the 90%) will have a corresponding plan of action and anticipated resolution date.

6. An 06 level review panel of TRADOC/PM representatives will evaluate the end product (SoS Increment I Specification) and all discrepancy resolution plans NLT 2 weeks prior to the SRR (3 OCT 2003).

G. PREPARED BY	H. DATE 28-05-2003	I. APPROVED BY	J. DATE

CONTRACT DATA REQUIREMENTS LIST					
A. Contract Line Item No. 0001	B. Exhibit Attachment 2		C. Category Other		
D. System/Item. Future Combat Systems			E. Agreement/PR NO. DAAE07-03-9-F001	F. Contractor The Boeing Company	
1. Data Item No. A004	2. Title of Data Item: SoS/FoS Interface Control		3. Subtitle: Interface Control Documents, Interface Specification		
4. Authority (Data Acquisition Document No.) DI-CMAN-81248A, DI-SESS-81632		5. Agreement Reference Attachment 1, paragraph 3.1.1.2, 3.2.1		6. Requiring Office SFAE-GCS-FCS	
7. Transmtl Mthd ACE	8. APP Code A	9. Frequency As required	10. As of Date SoS PDR	11. Date of First Submission See Remarks	12. Date of Subsequent Submission As required

13. REMARKS

1. Defines the required FCS technical interface requirements among FCS FoS components and among the FCS FoS and complementary systems via configuration controlled ICDs and Interface Specifications. Each of these interface control documents shall be a standalone document with a dash number assigned to the Data Item number (i.e., A004-n, where n starts with 1) to distinguish one interface control document delivery from another. Assignment of the dash numbers shall be arbitrary but shall be sequentially assigned and controlled through LSI data management. A list of the dash number assignments shall be available under ACE using A004-0 as the data item number.

2. Initial (draft) interface control documentation (e.g., ICDs, ISs) is required at SoS PDR. Each draft interface document shall be separately delivered to the FCS ACE and approved through the ACE workflow process.

3. Final interface control documentation is due at SoS CDR; subsequent updates as required through the CM process.

4. Contractor format is acceptable using the data item descriptions of block 4 as a guide.

5. Documentation shall be delivered to the FCS ACE and approved via the ACE workflow process.
